I am not criticizing necessary military appropriations, and I have willingly supported them, because I believe it is our duty to build up America's defenses to the highest point of perfection against the possibility of an attempted invasion which, pray God, may never come. No man on earth hates and abhors Hitlerism and all it stands for more than I do, but I am thinking in terms of what is best for America. If we have spent or obligated more than one-sixth of our national wealth, or the equivalent of the wealth of 27 States merely to prepare for war, what will be the strain on our finances if we get into a shooting war? The backwash of depression, poverty, and economic collapse that inevitably must follow such a venture would be simply indescribable.

If you who hear my voice want to save America, now is the time to get into action. There is one way you can make your influence felt and that is to telegraph or write to the Member of Congress from your district and the Senators from your State. I know something about Members of Congress and how they react, and I know that letters from constituents have a powerful appeal. I am not speaking now of form letters but of letters written in the constituent's own way, coming direct from the heart. Spelling and grammar do not matter. With the country trembling on the verge of war, a million letters to Congressmen protesting our entrance might mean the difference between future peace and our involvement in the most horrible and destructive war of all time.

We are at the threshold of a great and epochal decision. We must decide soon whether we will yield to war hysteria and pressures and enlarge the madhouse that already encompasses a large part of the world by joining the belligerents, or whether we will hold the line for the preservation of our traditional freedom and independence and for our right and opportunity to serve the world as a good neighbor. God grant that we may hold the line!

If we enter the war we will be just one more belligerent. If we stay out our leadership will be of inestimable value to mankind in helping to create a new and better world out of the ashes of the present conflict.

Never before was there such an opportunity for statesmanship. Of all the outstanding characters on the world's stage our President is the one best qualified to lead the world out of its wilderness of sorrows.

If he would call a conference of American republics, as proposed in my House Concurrent Resolution No. 20, and would tender the services of the Western Hemisphere as a mediator, proposing as a basis for permanent world peace the eight points of fundamental right and justice agreed to by himself and Prime Minister Churchill, at their conference on the ocean, he might be the means of ending the war. The belligerents will have to come to the peace table some time in any event; why not now and save the lives of millions? England, having already indorsed these peace aims, would inevitably concur, and I believe the world's psychology has developed to a point where the war-weary people of Germany, Italy, Russia, and Japan would drive the dictators to the peace table.

To denounce such a movement in advance as impractical is to discount the extent of the war sickness that is taking hold of people's hearts everywhere. The people all around the world are weary of war. They are weary of its horrors, of its griefs, and of the pain it puts in the hearts of wives and mothers. The world is crying for leadership, not for war, but for peace. If the President could see the signal to service that beckons from the homes of the common people—the cannon fodder—of every land on earth, and would lead a movement to stop the age of butchery he would, in my opinion, achieve the greatest triumph for humanity since first the morning stars sang together.

Away up among the snow-crowned heights of the Andes the face of Christ shines brightly. The colossal statue, the Christ of the Andes, was erected to commemorate a

concord reached by Argentina and Chile after a century of bitter strife. The inscription on the statue is as follows:

"These mountains must crumble to dust before the Argentines and the Chileans shall break the peace which they have sworn to maintain at the feet of Christ, the Redeemer."

Would it not be a grand thing if the moving hand of history were to write into the record of civilization this memorandum:

"In the year 1941 a great Christian President of the United States, with the assistance of the 21 American republics, brought a warring world to the feet of Christ the Redeemer."

Is it not worth trying?

Madison Square Garden Rally of Council for Democracy

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, August 21, 1941

ADDRESS BY REAR ADMIRAL BYRD

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the very admirable address delivered by Rear Amiral Richard E. Byrd at the mass meeting of the Council for Democracy in the city of New York, Tuesday, August 19, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Not very many months ago I was in the waters of the Antarctic, near the South Pole, on the Navy's ice breaker, the *Bear*. We were fighting a full gale during the polar night. There were icebergs around us, and rocks and shoals uncharted on our maps. The night was black and long and there was no lighthouse to show the way. We sailed alone, with none to rescue us should we hit the rocks.

Not a man on that ship had any thought but of the safety of all. On the bridge Captain Cruzen and his staff of navigators guided the vessel through the dangerous seas. Each member of the crew manned his station with courage and faith.

We knew that we had a common destiny that night, and in that knowledge we did not stop to quarrel about petty differences. We set no personal interests above the interests of all of us.

On a much greater scale we, as a nation, today face the same kind of crisis that the crew of the *Bear* faced in the icy South Polar waters. We, as a nation, will survive this crisis or we will perish; we will come out of it with freedom and self-respect or we will come out of it as slaves—the outcome depends on us. And if we hit the rocks, there will be none to rescue us.

Like the crew of that ship, I have no personal ax to grind tonight. There are no strings tied to me. I speak for no group, no party, no public official. I have no political ambitions. I have not consulted with the administration about what I shall say. I speak under the auspices of the Council for Democracy, whose only partisanship is for democracy. I have but one interest—to tell, as an American, the truth as I see it, with neither malice nor mud slinging.

Let us face the first truth boldly.

A WAR BETWEEN TWO IDEAS

This is a war between two ideas. This is the age-old struggle between democracy and tyranny, between freedom and slavery, between good and evil. This is everybody's war. This time the fight is to the death. And so far, as we all know, tyranny has won. Fifteen nations have gone down like torpedoed ships and the first to be invaded by Hitler's slave idea was Germany itself. The score is going very heavily against the free peoples of the world.

Adolf Hitler has declared that the world is not large enough for both nazi-ism and democracy. He believes that the easy-going people of a free nation cannot compete with the force of a superefficient dictatorship. He considers citizens of the democracies too selfish, too ignorant, too willful to be able to govern themselves. He substitutes might for right, force for freedom. For God he has substituted himself and the worship of a soulless mechanical efficiency. That is the picture of one of the two worlds in conflict as we see it tonight. What of the other?

Well, we of the democracies believe in the dignity and equality of man. We believe that reason and truth and compassion can be, in the end, weapons mightier than any bombing plane. We know that even from the purely mechanical standpoint, we are more efficient than the Nazi system, but in the direction of peace and freedom. It was our peacetime efficiency that invented and developed the very machines that Hitler has turned into hideous mechanized units to destroy free men. Our citizens are equal to those of any dictatorship in intellect, knowledge, and potentialities. If this Nation had worked for 9 years with no idea other than that of wholesale conquest of its neighbors, no one could have equaled in destructiveness our mechanized units, our airplanes, and war machines. No, there is no Nazi superiority other than a temporary capacity to destroy human beings. Only Hitler himself and a few thousand of his more fanatical followers believe in this exploded myth of a German superrace.

That is the difference between us—the free world and the slave world.

WORLD HAS SHRUNK IN SIZE

But there is a second great truth that we must face with equal courage. In comparatively recent times the world has shrunk in size. No one realizes that more than I do. In our own day there are Americans who don't realize what this high-speed transportation and communication mean. They deny that on this planet 2,000,000,000 human beings hurtle through space together. They deny that catastrophe, or disease, or war, erupting in one region, affects all other regions. They believe we can hide in our own little cabin in the wilderness and let the forest fire rage around us. They do not face the truth that the Atlantic Ocean, even with Hitler bitterly engaged, is not wide enough to isolate the Nazi "fifth column" from South America. Even our founding fathers realized, back in those sailing-ship days, that the Atlantic Ocean would not isolate us from Europe.

A false feeling of security may play into the hands of Hitler's agents, whose master dreams not only of European conquest but of world conquest, whose master is as interested in the wheatfields of Iowa as he is in the oil of Baku, for which he has invaded Russia.

If Hitler won, those of us who still dream of security in isolation would experience a rude awakening.

Unless we recognize the dangers that lie before us, unless we move immediately to cope with them before they close in upon us, we face so tremendous a dislocation of the trade structure of this Nation and the rest of the world that economic chaos will settle upon all humanity, whether we have war or not. Chaos is poisonous soil for the democracies, but the most fertile of all soils for the growth of tyranny. Therefore, no matter what may be the outcome of this war, we are headed straight for dictatorship unless we wake up before it is too late.

WE CANNOT STAND ASIDE

Let us review the facts that now stand out. First of all, we know that in this world-wide war of ideas we cannot stand aside. We may find ourselves forced into war with the whole dictator world.

Secondly, we know that America faces the grave threat of economic chaos whether we have war or not.

Thirdly, we know that complete economic chaos would inevitably result, as it did in Italy, Germany, and Spain, in dictatorship for a dis-United States of America.

We know these things. Why, in God's name, is this country unwilling to face them? What are we going to do about them? We are potentially the strongest nation on earth. But today we are soft, still unprepared for the tough kind of crisis we face. We have our democracy, the greatest workable idea any nation ever had. But today we still quarrel among ourselves, we are smug and lethargic, we take our freedom for granted, we suffer from the enfeebling disease of apathy.

I tell you the blunt truth because I want to awaken you.

We must bestir ourselves now, at once, before it is too late, to a spontaneous reawakening of all the people, determined on dynamic unity and sweat and sacrifice, exactly as if we were fighting a shooting war for our national self-preservation against the dictator world.

Since we have voluntarily assumed the responsibilities of a nation at war, I, for one, believe that we should live up to those responsibilities.

That is, I submit, the best and only possible way to prevent a shooting war.

Battles, whether they be economic or shooting, are won by planning and preparation in time of peace, not by a "business as usual" attitude. Let us make no mistake about this. The destiny of this Nation will be decided by what we do in the next 8 months. Either we become the citadel of liberty or we lose the last hope of liberty.

If we rise today in all our might, with the single purpose of doing our utmost to save our freedom, what on the face of the earth would we need fear? What dictator would dare to fight us? What economic disaster could possibly lick us? We would be doing today what most democracies put off till too late. We would expose the lie that freemen cannot equal the efficiency of Hitler's slaves. We would once again prove to the world that democracy, backed by unity and sweat and sacrifice, is the most potent idea in the history of mankind.

Surely the bitterest opponents of our involvement in this war should be the strongest backers of this proposal. Surely every loyal citizen will agee with this effort to build a mighty defense machine. We may disagree on the proper strategy to defend democracy against tyranny as personified by Hitler, but we cannot disagree that democracy must be defended.

Thus, be you an interventionist or a noninterventionist; be you for peace or for war; be you of English descent or German or Italian or French or Irish; be you a Republican or Democrat, a Catholic or Jew or Protestant, or nonbeliever; a rich man or a poor man; whether you like Roosevelt or whether you don't; whether you are a farmer, laborer, or businessman; whether you are a white man or a Negro—you are, if you still think

freedom is better than slavery, if you still believe in our way of life, an American first.

OUR COMMON DENOMINATOR

There lies our common denominator. There lies our kinship of brotherhood that, in the face of national danger, puts aside bitterness and family quarrels. There lies the common bond of faith in an idea that stands above our place of birth, or ancestry, our varying creeds, the color of our skins, the amount of money we make each year—an idea that makes the United States more important than any part of it.

On this brotherhood depends our Nation's potential strength and unity, a challenge to all who hate our way of life. As a democracy counts unity, we have achieved under our strong and courageous President even more unity than could ordinarily be expected. But, in a world that has changed so quickly and incredibly, our usual unity is not enough. It is under attack. The agents of Adolf Hitler are trying to divide the people of America, to set us one against the other, to foster and exploit religious and class suspicions, to set labor against capital, Protestant against Catholic, Christian against Jew, the Middle West against the East. They have used this method of divide and conquer because they have seen it work as a prelude to easy military victory in Europe. But it will not, it shall not, work here.

We must never see repeated in America the tragic story of schools and churches made a mockery, women dishonored—of spies everywhere in our midst, of firing squads, of that ultimate in degradation—fathers denounced to a Gestapo by their own sons—all the ancient earmarks of the so-called New Order that the Nazi tyranny would force upon a horrified world.

It is not enough to demand unity, sweat, and sacrifice. We must know what to unite on, what work to undertake, what sacrifice to make.

I say to you very frankly that, to meet the needs of the hour, we must modify our way of life, at least for the moment. Some of us have not allowed this crisis to change our habits of unrestricted speech and action. Except for the draftees and some of the defense industrial workers and a few dollar-a-year men, we have not changed from our usual routine.

STRIKES LIKENED TO LOST BATTLES

We still work short hours, riding the turtle, while Hitler lashes his subjects into a furious blitz tempo. Labor and business quarrel between themselves as though they did not realize that both would be ruthlessly smashed under a tyrant. Five million man-hours have been lost by strikes. Every plant closed is a battle lost. Prices and rents—even in the vicinity of the Army camps—are forced up steadily; certainly that is the opposite of sacrifice. Some politicians are still playing at politics at the expense of our defense effort. Can we be proud of the fact that the recent congressional vote on extension of military service was divided more along partisan lines than anything else? The philosophy of ease and comfort and pleasure has not changed.

Can we compete with nazi-ism that way? Nazi-ism, that has for years bludgeoned sacrifice and discipline out of the German people? Do we deserve freedom that way?

Let us be honest with ourselves and recognize that, to deserve liberty, we must adjust our concept of it to the realities of 1941. This means that the people of America will have to subject themselves to voluntary self-restraint in the exercise of their cherished rights. It means that we must create a new and long-overdue feeling of individual and group responsibility and accept those responsibilities quickly and willingly. It means that we must end the disgraceful time lag between our knowledge of crisis and our willingness to do something about it.

If there be those who will cry that such a program involves the destruction of democracy in the effort to preserve it, I say that there is a difference between the spirit of democracy and the institutional gadgets by which it works. When a foreign power threatens America, whether by military attack or by propaganda invasion, this democracy is elastic enough to adjust the gadgets to fit the crisis. Are we any the less democratic because we have taken realistic steps to cope with impending danger by adopting the selective-service law? Are we less democratic because we are ready to defend democracy? Are we less democratic because we choose to observe self-restraint in time of peril?

ROLE OF PUBLIC OPINION

The restraints are simple. They must not be enforced by law. That would be dictatorship. Therefore they must be enforced by public opinion. Let us agree that free speech shall not be exploited by those who prefer other political systems in which all our civil liberties would be destroyed. Let us agree that we shall not do anything, by word or deed, to comfort Hitler or to interfere with our defense effort.

That effort is the will of the majority. If we must criticize a course decided upon by the majority, let us agree to do so with fairness and moderation. Democracy guarantees debate, yes; but after the debate comes the decision by the will of the majority—and, as such, it should be respected and immediately acted upon.

Nor does this mean that we must stifle the honest debate and loyal constructive criticism that springs from the rights of freedom. No man, whether he be President of the United States, Member of Congress, or private citizen, is ever infallible, any more than unity is a one-way street. That mistakes must be made in every department of our activities is in the very nature of human affairs.

I do not merely affirm this fact. I urge you to do your part in criticizing, suggesting, expressing your opinion to our legislators and executives. That is the way of free people. Honest debate of many minds arrives in the end at more accurate judgment than is possible for one mind. Therein lies the superiority of democracies over the Nazi idea.

As an American, I affirm the right of any man to say that he does not want to see this country go to war. But we must never again point our finger at one patriotic group and say "warmonger" or at another sincere group and say "traitor." When our neighbor's home is threatened, we will defend it whether he be Jew or Christian, Democrat or Republican, worker or businessman, isolationist or interventionist. That was the principle on which we worked that night on the ice breaker *Bear*. Because the principle is sound I am alive to speak to you now.

And, incidentally, Captain Cruzsen, of the *Bear*, is of German descent, and his second in command, Lieutenant Niemo, is of Italian descent, both good Americans. There are millions of Cruzsens and Niemos in this country who, like Wendell Willkie, are anxious to do their part to help preserve American democracy if they are given the chance. Because this is true, we must guard against the injustice of distrusting fellow Americans simply because their names have a foreign quality, or because they speak with a foreign accent, or their customs are different from ours.

DANGER OF INDECISION

I have said that the ordinary habits of individuals and groups in normal times are inadequate to meet this crisis. It is true of the citizenry of America, and it is true of our Government. American democracy has always met dangers with leadership. At such moments quick, decisive action must be taken by the Commander in Chief on matters that ordinarily would be decided through slower processes. Our danger does not lie in action but in indecision.

And as I discuss leadership from this platform I find myself again back in spirit near the South Pole standing on the bridge of that polar ship in the darkness and the storm with the rocks around us.

Without a leader this Republic would be like that ship without the captain on the bridge. Just as the captain on that ship must be able to act quickly to avoid the rocks, our Commander in Chief often must act quickly to steer our ship of state safely through the storm that has hit the world.

I believe that history will say that President Roosevelt has had to contend with graver responsibilities than ever before faced a Chief Executive of this Nation. Lincoln was faced with the threat of losing a dozen States from the Union. Roosevelt is faced with the threat of losing all 48. Lincoln had the task of abolishing the enslavement of 5 percent of the population. This administration has the task of preventing the enslavement of all the people—and again let me remind you that this can come to pass without invasion by a foreign power.

By the orderly process of a free people, we have placed a great burden on the shoulders of the President and his associates, including especially that great statesman, Cordell Hull; on the shoulders of our representatives in Congress. The Government cannot bear this burden alone. It is the solemn duty of every loyal American to share that burden with our President and the rest of the Government.

The President has been accused of trying to get this Nation into war. I can give you my personal word that Roosevelt, the man, has a deep hatred for war—deeper perhaps than many who have made this criticism. Roosevelt, the President, has the task of carrying American democracy forward under God against any resistance, and it is his duty to do that above all things. If he can do it without war he will do it. But there are things infinitely worse than war, and the worst of these is slavery.

CALLS FOR COURAGE AND STRENGTH

Firmness, courage, strength, and more strength—that is the need of the hour. Our President has demonstrated all of these qualities in this emergency. This is a world half of which has already been driven back to a primitive state; a world where the weak and the timid are quickly wiped out; where animal eats animal; where betrayal, ambush, and murder are the rule.

Defeatism, appeasement, timidity—these have no place in our defense against this savage kind of world. There can be no division of opinion about that. But there is, as I have said, division of opinion as to how we shall defend ourselves. Some believe in positive action and others in passive defense. This is partly a military matter, and certainly it is a military fallacy to think it possible to defend ourselves by standing guard at our frontiers and waiting for the attack, with the enemy free to choose his own time and our weakest point.

In all history nothing but disaster has come from a passive attitude toward organized violence.

I have tried to tell you our duty in hard-boiled, realistic terms. I rest my case on those terms. But there is something in this crisis which transcends hard-boiled realism. I am thinking of the "terrible silence of the gagged millions of Europe." Isn't there a moral issue here, an issue that I cannot help but believe means something to most of us? It is the issue between human decency, common kindness, and sympathy, on the one side, and inhuman brutality on the other.

We know that the lust for world conquest, the brutal persecution of innocent human beings, the degradation of the human spirit, we know that these things are wrong. We know that we stand on trial today before the eyes of our Maker and before the generations of the years ahead, with this greatest of all choices. At the end of one choice lies hell.

At the end of the other lies the peace and freedom in which all men may repeat with the Psalmist: "Behold how good and pleasant it is for brethren to live together in unity."

Here at Madison Square Garden tonight we are enjoying the four freedoms of our Bill of Rights. There is your free press. Here on this platform is your free speech. You who listen to me worship as you please. And here in this meeting place is your free assembly.

What are we going to do to repay democracy for these freedoms? Are we going to sit back and enjoy them as though no one had ever fought and died for them, or are we going to make our personal sacrifices every day so that our defense effort may be furthered? Are we going to divide our national house against itself through dissension, or are we going to stand united behind the President as if at war with an unconquerable morale? Americans, what is your answer?

The Gas Crisis

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, August 21, 1941

EDITORIAL FROM WASHINGTON TIMES-HERALD

Mr. MALONEY. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Times-Herald of August 20, 1941, entitled "Is the Gas Crisis Real?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of August 20, 1941]

IS THE GAS CRISIS REAL?

Confusion grows worst confounded up and down the Atlantic seaboard as Petroleum Coordinator Harold L. Ickes strives to cut down gasoline consumption.

The 7 p. m. to 7 a. m. curfew seems only to stimulate motorists to tank up with gas shortly before 7 p. m. Some results may be had from the new ruling that gas stations are to have per month only 90 percent of the amount of gas each one sold in July—though the bookkeeping and kindred difficulties involved look enormous.

Meanwhile, charges are being bruited about that the gas crisis is a phony anyway; that there isn't any shortage, either of gasoline or gasoline transportation, for the Eastern States, or shouldn't be.

The Wall Street Journal sometime ago estimated that Great Britain requires not more than 250 tankers for war purposes. At the outset of the war, said the Wall Street Journal—

"She had 498. She later acquired 400 from Belgium, Norway, Holland, and France giving her a total of 798 ships, not counting the new tankers she has launched since the war began. This leaves her with more than 500 tankers in addition to those she has for her wartime requirements."

We haven't seen these statements denied. If they are true, what is Britain doing with those extra 500 tankers; and why was it necessary for us to give the British 50 tankers last May 1, with a gift of 100 more of them planned for the near future?

For one thing, according to at least one prominent oil man, the British are saving on dollar exchange by buying South American oil and shipping it to Britain. This trip is two and one-half times as long as the trip between Britain and the United States.

For another thing, according to rumors which go on circulating, the British are using a lot of tankers for ordinary commercial shipments of assorted export goods.

Britain's wartime oil needs are estimated at 91,000,000 barrels a year. Even under war conditions, it is alleged that no more than 200 10,000-ton tankers would be needed to carry 91,000,000 barrels of oil in a year from the United States or the Dutch East Indies to Great Britain.

IS IT WAR MEDICINE?

We doubt that a newspaper could get to the bottom of this matter and report the whole truth on it to the public. Obstacles would probably be thrown in the way by the British Government, and perhaps by our own Government.

But a congressional committee could get to the bottom of it, and could tell the truth about the gas crisis, if Congress had a mind to name such a committee and give it full powers.

Is the eastern gas shortage real? Is the present hysterical though half-hearted rationing necessary? Will strict rationing be essential sometime after Labor Day, as predicted by numerous persons?

Or it is all a big and disagreeable show, put on for the purpose of making people war-conscious?

It might conceivably be the latter, we think. There is a theory that you come to love anything for which you make sacrifices. Meatless days in the previous war steamed up a lot of people's love for that conflict. The recent aluminum-pot collection looked like a drive to bring home the war to the American housewife's mind and soul as much as to collect scrap aluminum. The U. S. O. drive for funds for soldier entertainment, though a worthy cause, had the same war-medicine flavor.

If a genuine tanker shortage exists, then the eastern seaboard States will just have to bear up under the resulting gasoline shortage as best they can. But up to now, we have only Mr. Ickes' say-so that the shortage is a real one; and these circumstantial reports that it is a "phony" keep on batting around.

Under such conditions, we do not think Mr. Ickes' say-so is enough. We do think Congress ought to have the whole question investigated by a competent committee, and the whole truth about the gasoline crisis told to the American people.

Why Buy Defense Bonds?

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ARTICLE BY REV. FRANK TRAVIS, OF CHILDRESS, TEX.

Mr. WORLEY. Mr. Speaker, I take pleasure in submitting for the consideration of the membership of the House an article written by Rev. Frank Travis, pastor of the First Presbyterian Church, Childress, Tex., which appeared in the August 12 issue of the Childress Index. This presents some very good reasons for buying defense bonds now.

[From the Childress (Tex.) Index of August 12, 1941]

WHY BUY DEFENSE BONDS?

Even from its inception, America has always been a peculiar land. The Pilgrim Fathers, the members of the Boston Tea Party, the creators and signers of the Declaration of Independence all were possessors of a peculiar spirit of freedom that startled the world by its daring courage that was sustained by a peculiar unanimity of sacrifice. The history of our country has had a peculiar slant and in turn it has produced a people who have developed a peculiar reaction to any philosophy of life that threatens any phase of personal or national freedom.

Today we have come to a period when such a philosophy has definitely appeared on the horizon. All that we have cherished in the past seems to be challenged today. The crys of a people who were once free ring in our ears as never before, they call to us for they feel that as long as we stand there is still a ray of hope for them. As long as America stands they are right.

This is your chance and my chance to help America stand. Every bond and stamp that you purchase is another star in the flag of freedom, and likewise, it is another thorn in the path of the tyrant.

Yes, America must stand.

FRANK TRAVIS,
Pastor, First Presbyterian Church.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

GEE AND HAW

Mr. DIRKSEN. Mr. Speaker, for many days Mr. Leon Henderson, Administrator of the Office of Price Administration and Civilian Supply, commonly referred to as OPACS, has been testifying before the House Banking and Currency Committee in behalf of a bill to confer authority upon the President to place ceilings upon prices and place a limit upon rents. It is one of the most all-inclusive measures ever proposed to the Congress and carries with it the power of complete control over our economic system. The idea, of course, is to head off inflation. While this measure was being discussed, the Senate was busy writing amendments into a bill passed by the House whereby cotton and wheat now in storage under loan would be frozen for the period of the war and thereafter until the Congress should release these commodities. They could be withdrawn only for relief, national defense, or exchange purposes. The announced purpose of this proposal was to increase the price of these commodities. Thus, while one branch of the Government seeks power to curb price rises, another branch provides legislation to increase prices—all of which is a bit of geeing and hawing.

THE IRREPRESSIBLE DITCH

Several years ago the President approved and the War Department engineers endorsed a proposal to construct a canal across the northern portion of Florida to shorten the route between the Atlantic Ocean and the Gulf of Mexico. In fact, the canal began as a W. P. A. project and about $5,000,000 was expended on preliminary construction. Thereupon the United States Senate took the matter in hand and literally blew the canal out of the water. Other attempts were made to revive the canal, but every attempt failed. Now comes a bill to authorize the improvement of rivers and harbors and after the committee had finished its labors it included the St. Lawrence waterway and also the Florida ship canal. Thus the irrepressible ditch bobs up once more and will be defended on the ground of national defense. How much will it cost? It is estimated at about ninety-seven millions. There is still a good prospect that Congress will either blow this ditch out of the water or will blow the water out of the ditch.

THE GENTLE ART OF BOOTLEGGING

Notwithstanding the fact that there are 127 registered distilleries in the country and that there are 485,000,000 gallons of spirits in warehouses, the gentle, or not-so-gentle, art of bootlegging continues to thrive. In the fiscal year 1940 the Treasury Department seized 10,663 stills and about six and one-half million gallons of mash. It is rather interesting to note that about 82 percent of all stills seized came from 14 Southern States where the traditions of mountain dew and the fragrance of the julep still persist. The new tax bill now pending before the Senate increases the tax on spirits by $1 per gallon, making the total Federal tax $4 per gallon. It is frankly expected that increased taxes on spirits will stimulate bootlegging and that additional enforcement personnel will be required to meet this problem. Thus the bitter fruit of prohibition is still with us.

COTTON HOSE

Several years ago, Dr. Louise Stanley, Chief of the Bureau of Home Economics in the Department of Agriculture, and Miss Ruth O'Brien, Chief of the Textiles and Clothing Division of the Bureau, appeared before a committee of Congress and recited their efforts to make American women cotton-stocking conscious. It was something of an uphill job. It was difficult to persuade the fair sex that the joy and pride of silk-encased legs should submit to a kind of economic patriotism so that we might use more surplus cotton. It was equally difficult to convince manufacturers to pioneer in the field of cotton hose. But the patient ladies in the Bureau stuck to their task. Not only did they have to contend with silk and rayon but with nylon as well. They worked on durability. They worked on attractive designs. They worked on new chemical finishes for cotton hose. But so long as anywhere from 200,000 to 350,000 bales of silk continued to flow to the United States from Japan every year persuading the ladies of our land that a calf in cotton was as attractive as a calf in silk made little real progress. Then came the war. Then came the imposition of priorities on silk. Then came the problem of supplying an adequate number of pairs of hose for the ladies. Thus under the impetus of war and diplomacy, Dr. Stanley and Miss O'Brien may suddenly find an ally in selling to American women the new designs in cotton hose. About one and one-third billion pairs of hose of all kinds are produced in the United States annually.

What Have We Got To Sell?

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ARTICLE BY SAMUEL CROWTHER

Mr. WOODRUFF of Michigan. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein an editorial written by Mr. Samuel Crowther entitled "What Have We Got To Sell?" appearing in the Made in America monthly of April of this year.

In view of the rapidly changing economic conditions throughout the world and the strides being made in almost every country toward becoming self-sufficient, the opinions of Mr. Crowther, who is one of the greatest authorities in this or any other country on domestic and foreign trade, are timely. I commend to the Members of the House and the Senate a careful reading of this editorial:

[From the Made in America monthly of April 1941]

WHAT HAVE WE GOT TO SELL?

(Guest editorial by Samuel Crowther)

This is now the silly season for projecting blueprints for a brave new world which we are to enter, once the carnage of war has ceased. The most popular plan is for some sort of British-American alliance which will establish free trade and democracy throughout the world, financed with Fort Knox gold and with a police force to keep al' trade free and everyone democratic. The least popular plan is Herr Hitler's. He would have the world trade on a Nazi plan, using Nazi tokens instead of gold, and with a police force to prevent trade from being free and people from going democratic.

There is no harm in anyone sketching Utopias. It is an ancient and entertaining pastime. But there is no reason to believe that this war, unlike all previous wars, will re-create lives and property as it destroys them and be a prelude to peace and good will. That is not the way of war. We can more reasonably accept as facts that when this war ends the people of the world will have lost their savings as represented by money or money instruments and that productive machinery for the goods of peace will be either worn out or smashed and the pall of hunger and poverty will descend on everyone but the politicians. Our own Nation will escape the physical destruction of its plant, but undoubtedly that plant will be worn out and, just as undoubtedly, our financial system will either collapse, as did all the European systems, or be kept in a state of suspended animation for a while through a system of insulation and isolation such as those of us who are proud to be called "isolationists" never dreamed of. Let us therefore keep our feet squarely on the ground, no matter where our heads may wander.

Nothing new is being said. I am not surprised to hear that the policy of our Nation in trying to collect its debts after the last war, while at the same time preserving its tariff barriers, brought on the present war, and hence it is up to us to do penance and to rearrange the world. That is the old debt-cancelationist stuff. The fact is that after the last war and the Hawley-Smoot tariff of 1930, our Nation still had the lowest average duties and the largest free list in the world. The imports under that free list and our tourist spendings were great enough to service both the war debts and the private loans. During this period—and this is usually forgotten—the exchange of instruments of payment was more important than the exchange of goods and hence the goods column is only part of the picture. It is also a fact that our private loans paid all the reparations moneys in Europe and also all the payments made upon our war debts. Those are facts which it is useful to remember, although there is no reason to believe that the facts can have any influence upon the internationalists' patter which is now urging a "union now"—which is just the old League of Nations on a more exclusive basis.

Trade, let us remember, is not some kind of quasi-religious rite. It is just trade. International trade is not more holy than domestic trade. International trade is not an affair of exchanging surpluses. The goods in international trade are made or grown for that trade, and surpluses can occur only in agricultural products. The world is no longer divided between raw material and manufacturing nations. That species of economy—on which the British Empire was founded—long since spent its course. A raw material exporting nation soon begins to manufacture at least part of its own goods, either with its own or with foreign capital. Then its economy changes. Our own automobile people, while backing free trade for the United States so that they could sell more automobiles abroad, were at the same time being compelled to erect factories in foreign lands to make the kind of cars the foreigners wanted. Events forced them to violate every principle they advocated.

We have seen our own country pass from the raw material to the manufacturing stage. So also have Japan, Canada, Australia, and now Brazil. Great Britain, the United States, Japan, and Germany were, before the war, trying to sell pretty much the same type of goods to pretty much the same peoples and were resorting to all kinds of trick financial methods to make a futile trade pay. All sorts of barter and exchange agreements, including our Hull treaties, added to the mess and put the politicians in charge. "Planned economy" in world trade has had its trial and failed. What is now being proposed is only a variation on what has failed.

This world some day is bound to settle itse'f into a series of comparatively self-contained economic areas. I sketched this progression back in 1934 in my book America Self-Contained. Since then it would appear that South America is developing into such an area, for the industrialization of Brazil is complementary to that of the Argentine. These world areas will have a natural trade amongst them in specialties. The areas may arise out of world poverty and exhaustion. That is a point of hope.

But in the meantime what will America have to sell after the war? We have lost our trade in cotton and the foodstuffs. That leaves machinery as our only large export. But only when nations are preparing for war do they need our machinery in considerable

quantities. We must either stop importing or pay in gold—while our workers remain idle.

So it would appear that our fanciful flights into an international utopia may be brought down to hard earth by the stark fact that we shall, after the war, have nothing to sell which the world cannot better buy somewhere else. It would seem the part of wisdom to study the facts of our economy before it is too late.

The Bald Battalion

EXTENSION OF REMARKS
OF
HON. U. S. GUYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. GUYER of Kansas. Mr. Speaker, last autumn a foresighted Kansas community, anticipating the need for civilian participation in the defense activities of our country, brought into being one of the most unique civilian defense organizations in the country.

"Colonel" J. All Evans, organizer and general overseer of this unique defense unit, holds to the opinion that a man who has lost his hair has reached the age of discretion and has given up whatever of radical ideas he may have held in his youth. On this considered opinion, baldness was made an absolute and primary requirement for membership in the Bald Battalion, of Olathe, Kans.

The administrative officer of the battalion is "Major" Chauncey B. Little, a Member of this House in the Sixty-eighth Congress. Under him are captains in charge of recruiting, publicity, medical corps, quartermaster, and other functions. In miniature there is a complete military organization, but in organization only, for its functions are not military and the members are not subjected to drill or military training.

Adhering strictly to the requirement that baldness is a requisite qualification, the membership includes representation from all activities in the community—professional men, businessmen, newspapermen, construction men, public officials, men retired from the hustle and bustle of life's activities, the clergy, and, last but not least, the tax collector.

The aims of the Bald Battalion are service to its community, its State, and its Nation. Its scope is unlimited. Locally it is active in promoting an interest in athletics among the youth of its community. Recently, when recruiting for a State guard unit was lagging in this community, Governor Ratner and Brig. Gen. M. R. McLean, Kansas adjutant general, sought the cooperation of the Bald Battalion. Recruits for the guard, to replace at home the National Guard now in training, had been coming slowly until the Bald Battalion took to the streets. It did not take long to turn the tide.

An offer of services has been made to Mayor Fiorello LaGuardia, as Director of Civilian Defense, and I assure him that if he has occasion to call for assistance in carrying out the functions of his office in Johnson County, Kans., he need give the matter no further thought if he turns it over to the Bald Battalion.

Besides Colonel Evans and Major Little, the officers are Capt J. Arthur Robinson, Capt. Charles S. Hoge, Capt. W. R. Pearce, and Capt. George W. Norris. The infant of the outfit is 25-year-old Wallace V. Nicholson, recruiting sergeant.

The roster of this unique organization now contains upward of 50 names, among which are those of Hon. George H. Hodges, former Governor of Kansas; the Reverend H. R Beers, pastor of the Presbyterian Church; Cecil C. Pember, postmaster; S. L. Daniel, vice president of the Patrons Cooperative Bank; C. F. Broadhurst, deputy sheriff and tax collector; H. B. Foster, an old United States Army man, now a barber; D. M. Alden, road patrolman; Dr. J. A. Knoop; Dr. D. E. Bronson; and the patriarch of the organization, H. G. De Merritt, retired, of the "spit and argue' club, which meets regularly in the public square to settle the questions of the universe.

All colors in the political spectrum are here represented, but all are united for community, for State, and for the United States of America. The Bald Battalion is at your service.

Awake to the Crisis—What Crisis?

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. BENDER. Mr. Speaker, the Washington scene is full of talk and portentous rumors. America is in danger, the administration says. Spokesmen of the White House from the President on down have reminded the people of our country that the seriousness of the international situation cannot be exaggerated. We stand in imminent peril.

All the talk reminds us of the classic line from Hamlet, "The lady doth protest too much, methinks." We have heard all this so many times in the last few years that everyone is beginning to wonder.

And we wonder all the more because every report from London, in the midst of the storm, burned down and partially destroyed, tells of overoptimism. London is warning against the feeling of confidence which is sweeping over the British Isles. No wonder Americans are asking, "Crisis, crisis, what crisis?" When England in the thick of the fight feels that the danger is diminishing, how can Americans, strong and secure, far from the conflict, feel that they are in peril?

Opinions of the Nation's Press

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EXCERPTS FROM EDITORIALS OF 22 AMERICAN NEWSPAPERS

Mr. GEARHART. Mr. Speaker, because the compilation of editorial opinion which the editorial staff of the San Francisco Chronicle has collected reveals comprehensively the reaction of millions of American people to the recent historic meeting on the high seas of President Roosevelt and Premier Churchill, I ask the unanimous consent of the membership of this body that it be spread upon the pages of the CONGRESSIONAL RECORD as a part of this day's proceedings.

The compilation follows:

[From the San Francisco Chronicle of August 16, 1941]

OPINIONS OF THE NATION'S PRESS

Chicago Tribune (Independent, Isolationist): "For Mr. Churchill the event would be, he could hope, that last step which would bring him what he has awaited as his salvation—the final delivery of Mr. Roosevelt's commitments, the delivery of the United States with all its manpower into the war at all points. As head of a nation at peace he (Roosevelt) had no right to discuss war aims with the ruler of a country at war. He not only likes to shatter traditions, he likes to shatter the checks and restraints which were put on his office. He is thoroughly un-American."

Chicago Daily News: "The eight points of the declaration are in line with the best American tradition. These words * * * mean that those who need arms will get arms. They are an added assurance of final victory."

St. Louis Star-Times: "The meeting is a declaration that the great democracies of Britain and the United States are indissolubly united in self-defense against the evil 'new order' which Hitler and the Axis seek to impose by fire and death and violence."

St. Louis Post Dispatch: "Have we heard all there is to hear from this * * * meeting? Is a statement of aims all the President and the Prime Minister drew up? If they talked about peace, did they not also talk about the war and its conduct? What precisely is the present state of American relations with the British and their struggle against Hitler? These graver questions remain unanswered."

Des Moines Tribune: "There has been absolute need of presenting the world a chart of purposes that will stand as an alternative—a more tolerable and finer alternative—to the "new order" proposed by Hitler. The presenting of it, even in this general form, will be important both as a part of war strategy and as a guide to what must follow the war."

Minneapolis Star-Journal: "In the first place it takes the initiative away from Hitler who had planned a 'peace conference' of his 'unified Europe' within the next 2 weeks * * * in the second place, the declaration answers a long and rising demand * * * for a statement of war aims."

Springfield (Ill.) Register: "Suffice in this tense moment to say that this declaration should bring more positive cooperation of liberty-loving peoples everywhere to crush the monstrous foe of human liberty * * * this declaration takes the United States no closer to war. It is a momentous peace offensive."

New York Sun (Independent): "It is implicit, in everything the joint announcement said, that that is no outline of a peace through present negotiation but an outline of a peace that can come only after the downfall of militant Hitlerism. Far more important than the things Mr. Roosevelt and Mr. Churchill actually say are the things about which for the present they are keeping silent."

Milwaukee Journal (Independent): "The Roosevelt-Churchill statement is notice to Hitler that peace can come only on recognition of the rights of humanity and of groups of human beings called nations. The meaning to the United States is that the President has pledged all we have and are to defeat Hitler."

Indianapolis Star (Independent, Republican): "Few will deny that the United States would be remiss in its duty to humanity if such a program were permitted to fail because we evaded our responsibility as the world's most powerful democracy and champion of human rights."

Dallas (Tex.) News (Independent, Democratic): "There is nothing new in the eight-point program. Embodied therein are the essential ideals of democracy. More important than the program is the inference that the United States ranges itself alongside Great Britain to fight for the preservation of democracy."

Kansas City Star (Independent): "The Roosevelt-Churchill statement presents noble aspirations on which there will be general agreement. It fails to present a program because a program would at once arouse dissensions and to that extent weaken the war effort."

New York Daily News (Isolationist): "It appears * * * that Mr. Roosevelt, who suggested the meeting, has sold Mr. Churchill on the 'four freedoms,' but with a notable omission. Nothing is said about the freedom of religion * * * there remain only freedom of speech and freedom from fear and want. This neglect to say nothing about freedom of religion is in deference, we take it, to our new ally, Joe Stalin. We have small doubt that Mr. Roosevelt * * * envisions * * * a world * * * with himself as President of the whole layout and Mr. Churchill as his Prime Minister."

Wall Street Journal (Independent): "Mr. Roosevelt has joined with the head of a warring nation in a statement of post-war aims, a performance which has always been the role of an active belligerent and which is bound to raise the question of how we can share in a peace if we do not share in the fighting."

New York Daily Mirror (Independent): "Unless President Roosevelt takes immediate and drastic steps to untangle the shocking muddle that has hog-tied this Nation's defense effort, his deeds will have committed America to a course of action that will exhaust both the wealth and the democracy of this last refuge of free men."

New York Herald Tribune (Independent, Republican): "The result (of the conference) is a powerful statement of a plan for democratic victory, the announcement of a hope around which all men may rally and the implication that behind this plan and this hope there is the joint economic and military power capable of realizing them with whatever action circumstances may demand."

New York Times (Independent, Democrat): "Hitler will denounce this assurance as a perfidious promise. But to the extent that British and American statesmanship can make the good faith of their promise apparent to the German people, they will rob Hitler of his greatest weapon—the present belief of the German people that the outcome of this war means life or death for the German nation. It is the beginning of a new era in which the United States assumes the responsibilities which fall naturally to a great world power."

Buffalo Evening News (Independent, Republican): "The overwhelming majority of the world will heartily approve and sincerely support the declaration of principles. These war and peace aims afford the outline for a better world. The world now knows not only what Britain and the United States are fighting and working against but also what they are fighting and working for."

Buffalo Courier-Express (Independent): "No one who believes in the democratic principles which Americans have professed for a century and a half can find fault with the basic philosophy of the Roosevelt-Churchill declaration. The paramount motive undoubtedly was this: To give new heart to free men resisting Nazi aggression and to those temporarily robbed of their freedom by Nazi invaders."

New York World-Telegram (Independent): "Mr. Roosevelt has great resourcefulness and great daring. Under his leadership, the country has been committed to a degree of participation in the affairs of the other hemisphere. At the same time he is pledged also to keep American troops out of the wars of that hemisphere. The immediate future may determine whether those two commitments can function side by side."

Sioux Falls (S. Dak.) Argus-Leader (Independent): "It is interesting to note that no penalties are to be imposed such as those which followed the World War. This feature may do something to allay the fears on the part of some of the German people who have been told by Hitler and his associates that they must fight to victory now because defeat would mean their enslavement."

Oregon Journal: "Churchill and Roosevelt have whacked away underbrush that obscured the site on which democracy hopes to erect a structure of permanent international justice and peace. Now, the world must see—America, especially—the blueprints, and where the stakes are to be driven, where the foundation is to be laid."

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. BENDER. Mr. Speaker, the Office of Production Management has recommended to the Maritime Commission the construction of an emergency fleet of 25 ore vessels with a capacity of 12,000 to 13,000 tons each at a total cost of $50,000,000.

The necessity for these ships is emphasized by the intention of the Office of Production Management to increase its steel-production program by 10,000,000 to 15,000,000 tons. A few days ago the Office of Production Management recommended that pig-iron production be increased by 6,508,950 tons.

In submitting its recommendation the Office of Production Management informed the Maritime Commission that it was essential construction of the ore ships be completed at the earliest possible moment. It was suggested that they should be in operation by the beginning of the 1943 navigation season.

This program for the construction of additional ore ships for operation in the Great Lakes is not only a primary essential of our defense program but it strongly supports the position of those Members of the Congress who see in the opening of the St. Lawrence River and the Great Lakes to foreign ocean ships the threat of a death blow to our ore fleet which in its present limited capacity is playing an important part in maintaining an unceasing flow of ore to the blast furnaces for the manufacture of steel.

Furthermore, the program emphasizes the value of the Great Lakes shipbuilding capacity for the construction of vessels for use in the Great Lakes, and the grave error it would be to attempt to transform those yards to the purposes of major naval construction. Proponents of the St. Lawrence waterway assert the Lakes shipyards could contribute greatly to national defense by construction of naval craft. These yards can contribute vitally to national defense by the building of smaller naval vessels for which they are now equipped.

It is utterly futile to argue their value in the construction of 10,000-ton cruisers when their facilities are required to turn out vessels to carry ore needed in unmeasured quantities for the manufacture of steel.

It is pertinent in this connection to note that the Office of Production Management, in authorizing the construction of the additional ore vessels, said that in case it approves a major over-all expansion of the steel industry, such as it now has under consideration, an additional and larger ore-boat program will be necessary.

President Roosevelt and other proponents argue completion of the St. Lawrence waterway and power project is "vital to the defense of the North American Continent." They do not support this argument by any facts or figures as pertinent as the decision of the Office of Production Management to engage the Great Lakes shipyards in the construction of ore vessels to expedite the manufacture of steel.

The Great Lakes area is vital to the defense of the continent, and it is playing its part now to the limit of its capacity. That capacity should and will be increased to any requisite extent. The type of vessels needed to convey the products of that great section of the country to the furnaces and factories can and will be built in the Great Lakes shipyards.

Such defense advantages as the President and his supporters see in the completion of the St. Lawrence project is predicated upon its operation 4, 5, or 6 years hence at the cost of probably more than a billion dollars to the hard-pressed taxpayers of the United States and Canada. It is an undertaking that would open the lake region and the territory bordering the route of the St. Lawrence to the competition of cheap foreign products carried as ballast cargo in foreign tramp ships. This would be competition that might drive from the Lakes the ore

vessels which are now and will, if properly protected, feed our steel mills with an increasing flow of ore.

The lake region has natural barriers to foreign competition, which would be destroyed by construction of the St. Lawrence project. These defensives against the output of foreign mines and factories constitute today contributions to our defense program. In its present natural situation the Great Lakes area is a storehouse of the primary necessities of defense. They require protection and further development. It is to these last we should set our hand, not to the business of contributing to their possible destruction.

I think it pertinent in this connection to place before the Congress an editorial from the New York Journal of Commerce in which the danger to our existing and projected ore fleet from foreign competition is realistically discussed. It would be well for Members of Congress to note the warning that if we permit foreign competition to reduce our lake-ship reservoir, future emergencies will find us in a precarious position.

The editorial follows:

THE LAKE FLEET AND THE SEAWAY

The value of the St. Lawrence seaway project as a defense measure has been stressed by advocates of the plan since it was revived last October. Hearings before the House Rivers and Harbors Committee centered upon this phase of the development. Proponents have stressed the need of the electrical power for defense production, the larger output of seagoing vessels that would be possible if the waterway is completed, and the benefits that would accrue to industry from the deep waterway. Opponents have contended that the project cannot be completed in time to be of help in the present emergency. The validity of this latter argument, of course, is debatable; but there are other reasons why the seaway might not be in the best interests of defense over the longer term.

Practical observers are convinced that opening of the Lakes to larger ocean-going foreign ships will deal a vital blow to the Great Lakes ore fleet, which is playing such an important role now. This season this fleet of some 300 vessels of nearly 3,000,000 gross tons capacity per trip, expects to carry about 75,000,000 tons of iron ore from the mining areas of Michigan, Minnesota, and Wisconsin to the steel plants in the lower Lakes area.

Without this fleet, or with a less-efficient fleet, steel production would be seriously crippled. If the waterway were completed, many believe that foreign ocean-going ships would move large quantities of foreign ore to American steel mills. Already some 15 percent of the ore consumed by American mills is coming from foreign mines. Movement of such supplies has been particularly heavy from Chile and Brazil to the eastern seaboard.

Currently, the necessarily high cost of shipping ore from the seaboard to inland steel mills affords natural barriers to the imported ore, but completion of the seaway would alter this situation. Fleets plying in inland waters would be reduced and in the future emergencies these ships would not be available to meet greatly increased iron-ore requirements such as have developed in the present national emergency. Further, if ocean-going vessels should win a larger share of the traffic in various commodities in the inland waters, the lake-ship reservoir that could be drawn upon in a future emergency would be much smaller.

Current defense consideration must be proven to outweigh by far such longer-term possibilities before Congress votes in favor of the St. Lawrence development.

During July ore shipments on the Great Lakes reached a new high record of 12,007,723 tons. It is estimated that the steadily expanding steel program will require the transportation of 75,000,000 tons of ore this season. It is now necessary to include 8 or 10 Canadian vessels in delivery to American ports.

No section of the country contributes more vitally to the national defense than the Great Lakes area. Anything that would limit its productivity or the means of transporting its products would be calamitous. As one prominent engineer has said:

As long as the iron mines on Lake Superior and the coal mines last, and as long as wars are still possible, the transportation system built around water carriage on the Great Lakes will be one of the greatest elements of military and naval strength. No area in the world the size of the Great Lakes has available for low economical movement of its commodities more shipping facilities. To disrupt, impair, or curtail the Great Lakes fleet, so imperative for transportation, particularly of ore and grain for domestic use and so vital to the national defense, deserves the most serious consideration.

During the World War No. 1 the Great Lakes fleet contributed valiantly to national defense. Then every available ship and barge was employed in the transportation of ore. Canadian vessels were pressed into service, carrying ore to American ports. During the present emergency the fleet of 300 vessels, with the addition of Canadian vessels, is engaged to capacity, and in the current season will, it is estimated, carry tonnage in excess of the high mark of 1917. The proposal to increase the fleet by 25 ships is an evidence of the necessity of a large lake fleet to national defense and any undertaking that would limit its capacity or through foreign competition reduce the number of vessels in lake trade would weaken our defense position in future emergencies. There is little doubt that the importation of foreign ore through the St. Lawrence seaway would have that effect upon the lake fleet.

According to figures recently compiled by the Lake Carriers Association and the Great Lakes Protective Association, and published in their August bulletin, the lake fleet in 1917 moved approximately 62,500,000 tons of ore. The operating companies used 193 steel steamers and 20 steel barges, with a total capacity of 1,787,000 tons per trip. Independent interests had 208 vessels and 1 steel barge in operation, with a trip capacity of 1,374,000 tons. After June 26, 1917, Canadian vessels were permitted to move ore to the United States ports, and a total of 26 such vessels and 1 steel barge with a trip capacity of 153,400 tons were engaged.

The movement of ore is dependent upon lake vessels. The railroads could not possibly furnish sufficient cars to feed the blast furnaces. The constant production of steel requires expansion of the ore fleet and the national defense requires protection of that fleet from foreign competition of every sort now and in the future.

It is pertinent to the national interest that millions be spent on new ore-carrying vessels rather than that we should expend millions on a project that threatens a death blow to existing production and the means of distribution.

But Strikes Continue

EXTENSION OF REMARKS
OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIAL FROM THE BIRMINGHAM NEWS

Mr. PATRICK. Mr. Speaker, anyone taking pains enough to examine will find that in Congress I vote to sustain the rights of labor. It has been my belief that the workers in this country are, as a rule, patriotic, sincere, and farsighted enough to hold out ultimately for the general good of the Nation, and I have openly defended them against attacks charging selfishness. But I am becoming worried about the behavior of organized labor in some parts of our country. In that connection I hope Members of Congress who have been taking the course I have will read this editorial which appeared this week in the Birmingham News:

[From the Birmingham News]

WHO IS RESPONSIBLE NOW?

Strikes in this country's defense industries are just about as numerous as they were before Germany attacked Russia. Airplane plants, shipyards, and munitions factories are being shut down by labor troubles as they were before June 22.

This fact must be a severe shock to some persons, those who so readily ascribed all strikes in defense industries to the work of Communists. It must be difficult for them to explain the strikes since the Moscow-inspired Communists now have every reason to want production speeded up.

Undoubtedly some labor trouble was fomented before June 22 by Communists clinging to the old Marxist hope of a proletarian revolution. But if there were many such we should now be noting a pronounced decrease in labor troubles. That no particular decrease is observed should be proof that an unthinking need for a scapegoat was responsible for much of the talk about Communists in labor troubles.

This observation, of course, is no defense of communism but simply cites evidence of the fact that some persons were guilty of gross exaggeration of the power and influence of Communists in this country.

Much has been said also about German "fifth columnists" in this country, and some of them have been discovered working in industrial plants, but the general supposition seems to have been that they were more intent on sabotage and espionage than on fomenting discord. Possibly Nazi "fifth columnists" have been more active than Communists in agitating for strikes. It has been established that some Nazi agents have posed as Communists, and certainly, before Germany invaded Russia, German "fifth columnists" and "red" agitators sometimes

worked together. Of course, these Nazis would be subtle enough in stirring up discord to keep most workers from recognizing the source of the agitation. We still have the German "fifth columnists" to reckon with in defense industries.

The fact is, of course, that most strikes arise out of differences between employers and employees, and have no connection with foreign influences. Such influences, however, constitute enough of a danger not to be neglected.

The Destiny of the Four Freedoms in the Light of Experience

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. DITTER. Mr. Speaker, in his address on the state of the Union, the President coined the phrase, "four essential human freedoms." With that phrase came the positive assertion that freedom of speech, freedom of worship, freedom from want, and freedom from fear, "everywhere in the world," is "no vision of a distant millennium." According to the President, "it is a definite basis for a kind of world attainable in our time and generation." The reports of the recent rendezvous of the President and the British Prime Minister would indicate that a new world order based primarily on the illusory "four freedoms" was decided upon as an adventure for the American people. For the most part a veil of obscurity has been thrown around the part we are to play in, and the price we are to pay for, our participation. The haze of uncertainty hangs heavy.

If ever there were a time when the American people should be realistic in their thinking, that time is now. It is one thing to say that the four freedoms are "a definite basis for a kind of world order attainable in our own time and generation." It is quite another thing to make the vision a thing of flesh and blood. Obstinate facts must be dealt with. We have been inclined to disregard them. Emotion rather than reason has prevailed.

Hard-headed common sense has been discounted. Experience has been thrown on the bargain table. The sales tag on facts has been lost in the shuffle. What it is hoped conditions may be in the future, regardless of what they are now or what they were in the past, has dictated our policies. Instead of thinking our way through our problems—thinking clearly and coldly and dispassionately—we are urged to let our feelings fashion our future. An idealistic "on order" rather than a practical "on hand" appraisal is advocated. Our philosophy has been idealistic rather than realistic.

The President has made much of the four freedoms. The conference with the Prime Minister dramatized them. What their destiny is, and what our destiny is to be in our search for them, are problems which should prompt practical thinking. Past experiences should be invaluable if this approach is to be made. Obviously, those experiences can be valuable today only as we are willing to subject the records of yesterday to an unemotional, exhaustive, and pitiless examination. I realize that this suggestion will invite the displeasure of those who are persuaded that our destiny should again be committed to an intrepid knight errant. They were so persuaded when we were bent on making the world safe for democracy. I wish that I too might be so persuaded. But I cannot lightly dismiss my deep disappointment over the futility of our lofty altruism when it clashed before with practical problems in Europe. Out of that duel, I believe, lessons can be learned. Time will tell.

The American people were filled with high hopes at the armistice that the time had now come when a peace would be made which would be enduring, which would end all war and which would establish democracy over the earth. It was that hope which had inspired them to join in the battle. It was that hope for which they had sacrificed and suffered. The wars which endangered the peace of the world had always come out of Europe. The Americans were confident the New World would bring to the Old World a formula and a plan by which men could be saved from the futility of continually recurring conflicts. We had fought a war to end wars. The defeat of Germany was to be a means to that end. But, as the means is always secondary to the end which is sought, so the defeat of Germany was not the primary purpose of our engagement. The battles which had beset Europe for centuries were to be ended. President Wilson represented that idealism of the American people. He was convinced, and he had convinced many other that his plans would prove to be "a definite basis for a kind of world attainable" in his time and generation. Undoubtedly Wilson and his ardent associates were enthusiastic enough to believe that the kind of world which they envisioned was not a vision of a distant millennium. Events proved otherwise.

The President's ideas were set out in the 14 points announced on January 8, 1918. They were expanded by the 4 principles on February 11, the 4 ends on July 4, and particularly the 5 particulars stated by him on September 27 and his elaboration of self-determination. Then, as now, great stress was laid on words and phrases.

The American program was received enthusiastically by all of the Allies. It was at once acclaimed as the genesis of a new era for mankind. It was hailed by all of them as the plot plan for the long-hoped-for utopia. It was so inspiring that the ideas caused weakening division among the people of enemy countries. Friends and foes seemed sensitive to the appeal for Samaritan neighborliness.

Taken in combination, President Wilson's ideas represented a clearance of all injustice, all oppression; an assurance of the healing of age-old hates, of the control of power politics; a guaranty of a dissolution of malevolent military alliances of armament burdens; a basis for the establishment of law and equity in international relations. Democratic ideals, self-determination, collective security against aggression were incorporated in the President's plan which was to bring peace at last to war-torn Europe and to a war-worried world. It is not too much to say that the idealism out of which the 14 points, the 4 principles, the 4 ends, and the 5 particulars grew led us to violate the 140 years of American traditions by a military intervention outside our hemisphere.

The Allies left no room for doubt of their endorsement of Wilson's idealism. They avowed that it had become the heart of their gospel. At a review of the American Army near Paris on July 5, 1918, Lloyd George made common cause with the President as to the purposes for which the Allies were contending.

President Wilson yesterday made it clear—

Lloyd George declared—

what we are fighting for. If the Kaiser and his advisers will accept the conditions voiced by the President, they can have peace with America, peace with France, peace with Great Britain tomorrow. But he has given no indication of an intention to do so. Because he will not do so is the very reason we all are fighting. What are we fighting for? Not because we covet a single yard of German soil, not because we desire to deprive the German people of their legitimate rights. We are fighting for the great principles laid down by President Wilson.

Could a more complete or a more comprehensive commitment have been made? The Peace Conference had not convened.

In September of 1918 Lloyd George reaffirmed his unequivocal endorsement of the Wilson position which he had made previously in Paris. Discussing possible peace terms in an address at Manchester on September 12, the British statesman declared:

There have been other terms indicated. I have stated them repeatedly on behalf of the British Nation. They were so moderate that they commanded even the support of the whole of the labor representatives of this country. President Wilson has stated them from time to time and we stand by them.

The Germans had proposed the armistice on October 6, on the condition that the basis of peace would be the 14 points and the "particulars." In his note of October 23 Mr. Wilson confirmed this, referring at that time to the—

explicit assurances of the German Government that it unreservedly accepts the terms of peace laid down in his address to the Congress of the United States of the 8th of January 1918, and the principles of settlement enunciated in his subsequent addresses, particularly the address of the 27th of September.

Having succeeded with the Germans, the President submitted these bases of peace negotiations to the Allied Governments. The fortunes of war compelled German acceptance in toto. The Allies, no longer desperate for assistance, indicated that some reservations might be expected to all our idealism by accepting the proposals, except the second—freedom of the seas. Shortly the armistice was signed. American aid was no longer needed to stem the tide. Diplomacy,

the studied art of European career men, could now feel free to disown the insecurity of idealism.

The attitude of Allied statesmen toward America changed at once with the armistice. The amazing promptness of the change made it all the more bold and brazen. It was immediately crystal clear that they were jealous and fearful of the part America might play in the peace. Lloyd George, Clemenceau, and Orlando, resenting the possible power of the President, determined that they would make the peace. After all, the war was over. The American Army no longer needed the inspiration of a lofty altruism with which to time its drumbeats.

There could be no misunderstanding of the attitude of the three masters toward Mr. Wilson and the United States as soon as the armistice was signed. The United States had really had but a little part in the war; the American people had made no comparable blood sacrifice; the Americans were a foolish people, pliable to Allied propaganda; President Wilson was a visionary idealist, wholly out of tune with European realities; winning the war was the warrant for sharing the spoils; Europe could be saved only as they established once and for all their power over it. The 14 points, the 4 principles, the 4 ends, and the 5 particulars were brought down from the lofty pillars of idealism to the sordid level of power politics. Still hopeful that further economic benefits could be gotten out of the United States, the master map makers of Europe continued for a time a lip service and the propaganda of flattery, and set themselves to the practical problem of devising ways and means of escaping the repayment of the war loans. Instead of accepting the Wilson creed as the fundamentals of a faith for a new world order, the Allied diplomats assumed the role of deft surgeons and proceeded to place the idealism of the President on the operating table for the purpose of performing a skilful surgical operation. As a living organism, it had no value to them. As a dismembered thing, it might have some use in their future experiments. The Allied statesmen were eager to do a complete clinical dissection of the 14 points and the various particulars. The merits and demerits as such of the proposals were brushed aside as inconsequential. The vivisectionists were concerned lest the idealism became a living thing.

The 14 points were really never skillfully dissected. They were hacked at. Point 1:

> Open covenants openly arrived at * * * no private international understandings * * * diplomacy * * * frankly in public view—

Was eliminated by private understanding among the Allies before the President reached Paris.

Point 2—that is, "freedom of the seas," a fundamental of Wilson's concept of freedom at large—was, as I have said, still-born before the armistice. The Germans had accepted the 14 points as the basis of peace. For 10 months after the pronouncement the Allies made no protest. On October 29, a few days before the armistice, the Allied statesmen met in London, at which time the British declared flatly that they would not subscribe to the "freedom of the seas" doctrine. Wilson was helpless. To resume a war that was already won could not be justified. Instead of seeing his idealism take form, as he had every reason to believe it would, Wilson, disillusioned, was compelled to agree to the feeble compromise that this vital point "would be discussed" at the peace table. The discussion proved to be as feeble as the compromise. One of the primary purposes of our entry into the war was thus defeated.

The third point, on the removal of international barriers to commerce, never became a part of the vision of any one of the 21 nations of Europe. Anxious opportunists refused to reckon lofty altruism as of any value in the market place.

Disarmament, the subject of the fourth point, was construed as an approval of a military domination of Europe by the Allies, and not as a goal for the peaceful adjustment of differences between the nations, toward the attainment of which the energies of all men might be directed.

Mr. Wilson had developed in his "Particulars" an idea of international trusteeship under the League of Nations. He had incorporated this idea in his fifth point:

> Impartial adjustments of colonial claims * * * in the interest of the populations concerned.

The proposal was advanced a notch further by the suggestion of General Smuts that this trusteeship of former colonies should be administered by mandates to the different powers. As difficult as this nut appeared to be to crack, the spoilsmen were equal to the task. They skillfully managed it through a prior agreement as to who was to be the "mandate" for what. On this point a joint memorandum by Lloyd George and Clemenceau is illuminating. In it this pertinent passage appears:

> Surely the victors, if they want it, are entitled to some more solid reward than the theoretical map makers working in the void may on abstract principles feel disposed to give them.

It is painfully apparent that idealism had become "abstract principles" to those who now insisted on the adoption of the old doctrine, that rich "rewards" were the rightful spoils of the victor. It should be noted, however, that the mandate method was resorted to for the dismemberment of Turkey.

The sixth point sought to assure to Russia—

> the unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy.

To implement the "independent determination" five different armies were subsidized to attack her with arms and men furnished by British, French, and Japanese.

As to Mr. Wilson's further "Principles" and "Particulars"—such as "self-determination," "provinces are not to bartered about"—they were clothed with flesh and blood by the unblushing cession of Shantung to Japan, and the transfer of great groups of Hungarians, Russians, and Serbs to Rumania, of Russians to Poland, and Germans to Poland and Czechoslovakia. Bartering took on a wholesale form.

The important thesis that military alliances and the balance of power were now to be thrown overboard as medieval junk was destined to receive the same treatment that was accorded to other lofty sentiments. It is doubtful if the spirit of this proposal ever registered seriously in the minds of the European diplomats. It was a language they had never learned or, for that matter, ever tried to learn. Here was a storm center of intrigue and machinations that had raged for centuries. Clemenceau had accepted the suggestion that "the great game now discredited of the balance of power" should come to an end. Yet, 6 weeks after his acceptance, he repudiated the proposal in a declaration to the French Chamber. This repudiation takes on added significance when it is recalled that the disavowal by Clemenceau was made 2 days after Mr. Wilson had, in no uncertain terms, denounced the whole doctrine of balance of power in a speech at Manchester. In the end Clemenceau, with customary adroitness, was successful.

The propaganda eulogies of American idealism and the fulsome flattery of President Wilson were studied efforts of Allied statesmen long before our entry into the war. They continued until the practical problems of the peace table presented themselves. Then came the change.

As I have said, the Allied statesmen had accepted Mr. Wilson's principles openly, fully, and freely prior to the armistice. Treaties, of course, were still in existence. The President had insisted that the acclaim and acceptance by the spokesmen for the Allies were tantamount to a dissolution of these treaties, since they violated every word of his "points." Not so. Every beneficiary demanded his pound of flesh. The New World Order was an ideal—a millennium. But the old order of things persisted, despite the idealism and the hoped-for millennium. Agreements, understandings, commitments, treaties must never be forgotten. They are the proof of the implacable forces which dominate Europe. They are factors which must be taken into account as "a kind of world attainable in our time and generation" is held out as an incentive to the American people. As long as they stood uppermost in the minds of the Allied statesmen, the acceptance of the 14 points could be nothing more than lip service.

The important part played by these treaties prompts a reference to some of them at this time. In the main, they consisted of—

First. An Allied treaty with Rumania in 1916 by which she was to receive large masses of Hungarians and Russians. She was even to have a part of Serbia, even though that nation was then fighting on the side of the Allies. Of this, Serbia was not informed until the war was over.

Second. Various treaties between Great Britain, Russia, France, and Italy, from

1915 to 1917, providing for the division of Persia, a neutral state, as well as of all Turkey. Turkey was to be carved up piecemeal—Russia was to have the Dardenelles and the northeast provinces; France was to have Syria; Italy was to have Smyrna and its hinterland; while Britain was to have most of the rest which included the oil.

Third. A treaty with Italy in 1915 by which she was to have slices of Serbia, of Turkey, of Africa, and a multitude of islands.

Fourth. A treaty between Great Britain, France, and Japan in 1917 by which Shantung, an integral part of China, went to Japan, while Germany's Pacific islands were divided between Japan and Great Britain. China was not informed of this arrangement when she subsequently joined the war.

Fifth. A treaty between France and Russia giving the left bank of the Rhine to France and a part of Poland to Russia. Apparently the British were not aware of this agreement which had been made by her closest ally.

Sixth. A treaty between the British and the Arabs of which the French claimed ignorance—tit-for-tat on the Rhine-Poland arrangement between France and Russia.

With a patchwork of agreements of this kind to deal with, a patchwork interwoven with intriguing understandings, Wilson must have soon realized that his points and principles had little chance to survive. Suave sentences might describe a millennium, but they could not hope to be a foundation sturdy enough to withstand the shock of power politics of Europe.

Despite the difficulties encountered by Wilson's proposals as a result of the treaties, the proposals might have fared better had the attitude of the Allied statesmen been favorable to them. On this point there has been little room left for doubt. British and French leaders have not been hesitant to voice their opinions which give a clear-cut picture of their attitudes. In his War Memoirs, Lloyd George, in referring to the 14 points, makes this pertinent observation:

> We never formally accepted them, and they constituted no part of the official policy of the alliance.

Again, at a subsequent page, we find this reference:

> As for Wilson's 14 points, they might be, and in the main were, in harmony with our desired terms, but they were in places phrased in the language of vague idealism, which, in the absence of practical application, "made them capable of more than one interpretation."

Interpretations count.

In his memoirs of the peace conference the British statesman describes Clemenceau following Wilson's movements—

> like an old watchdog keeping an eye on a strange and unwelcome dog who has visited the farmyard and of whose intentions he is more than doubtful.

Continuing, Lloyd George says:

> I really think that at first the idealistic President regarded himself as a missionary whose function it was to rescue the poor European heathen from their age-long worship of false and fiery gods.

In the same work Lloyd George sets forth the attitude of Mr. Churchill by referring to a meeting of the British Cabinet and the Dominions Premiers in December 1918, at which time Churchill—

> considered that the only point of substance was to induce the United States to let us off the debt we had contracted with them and return us the bullion and scrip we had paid over on the understanding we should do the same to the Allies to whom we had made advances. If President Wilson were prepared to do that, we might go some way toward meeting his views. * * * For the rest we should be civil and insist on our essential points.

Has time mellowed the Premier? Has he grown less practical with the years? Are age and experience an ally of idealism?

Quotations from the observations of Mr. Hughes, member of the British Cabinet and Dominion Premiers, indicate a brutal frankness when he suggests that Lloyd George and Clemenceau—

> could settle the peace of the world as they liked. * * * It was intolerable, however, for President Wilson to dictate to us how the world was to be governed. * * * Speaking for Australia, he wanted to know what Australia was to get for the sacrifices she had made.

Idealism had not dispelled the pound of flesh idea.

Clemenceau, in his book Grandeur and Misery of Victory, does not hesitate to give his reactions to the idealistic endeavors of the United States. In discussing the American Expeditionary Force the French leader says:

> Mr. Wilson, when he sent us the American Army, had put to us the famous 14 points. Were we prepared to cease fighting on the day when the Germans accepted these various points? If I had refused to reply in the affirmative, it would have been nothing less than a breach of faith, and the country would have denounced me with one voice, while our soldiers would have disowned me, and with good reason.

Neither the British nor the Americans were flattered by the observation of the French diplomat:

> England, in various guises, has gone back to her old policy of strife on the continent, and America, prodigiously enriched by the war, is presenting us with a tradesman's account that does more honor to her greed than to her self-respect.

Resorting to a satirical style, Clemenceau discloses his attitude when he says:

> Mr. Wilson had produced a marvelous effort of ideology when he proposed systematically and in accordance with their interdependence, to solve a mass of European problems which had long been the source of disturbance in the civilized world. At the word of the President-savior, the old injustices were to be redressed.

It need not be argued that the idealism of America went for naught when it met face to face the age-old hates, the historic disagreements, and the merciless intrigues of the Old World. That is painfully apparent. Neither the praise nor the censure of Wilson can explain away the hopelessness of the effort from the very beginning. I doubt whether any man could have done better on a mission such as he selected. The fault was not primarily in the methods of the man but in the mistaken notions he entertained. Forces were then in existence—as they always had been and which, I fear, are still present—which made it humanly impossible to make of his ideals a thing of flesh and blood. It had a spirit, but the form could not be fashioned. It is because I have grave doubt whether the Old World has progressed to the point where such ideals can take on form and substance that I am apprehensive of the destiny of the "four freedoms."

World conditions become more involved and more complex day by day. The future is a blank. We have no prophet in our midst. Only an estimate can be made. If in the making of that estimate any value is to be given to past experiences, we cannot ignore the fact that the 14 points and the principles involved were "more honored in the breach than in the observance." Have we any reason to suppose that it would be otherwise today? What new and dependable factors can be counted on to implement the efforts which proved so feeble before?

Aside, however, from the apparent impotency of the instruments in our hands is the fact, which we cannot disregard, that the task to be done is much more difficult and more intricate than it was when the previous attempt was made. Ours is a vastly more disturbed and unstable world. And yet there are those who urge that what we attempted then we should try to do now—draw the plans, prepare the specifications, select the materials, supervise the work—and pay the price for the building of a new world order. Sufficient time has elapsed since our former failure to enable us to adjudge the circumstances and the condition deliberately and dispassionately. The frailties of human nature are plain in retrospection. Our nearness to the present problems makes the same impartial adjudication difficult. To do this means that we must be practical and realistic.

That the four freedoms spring essentially from the same rootstock as Mr. Wilson's points and principles will not be disputed. The similarity of the stem and the foliage is too apparent. Nor should anyone deny the seed of idealism from which both were grown. But to bring the plants into flower is another matter. Admitting that both proposals have much merit, they are of little value unless they can be put into practice. That is the rub. How this can be done we have not been told. In this respect, the striking similarity of the four freedoms and the measures which have been adopted to solve our domestic problems do need emphasis. We may legislate idealistically, but as many of us know only too well, the machinery for enforcement is in the hands of men. Try as we will, the obstinate fact persistently obtrudes that the how of such proposals is vastly more important than the why of them. An emotional appeal may be intriguing but its value should be measured in terms of its possible practical application.

A part of our course has already been charted for us. If the striking parallel between the four freedoms and the Wilson idealism is understood impulsive and imprudent jerks of the wheel may be avoided. To weigh the parallel may at least have a steadying value. To disre-

gard it, or to refuse to recognize it, is not, in itself, as I see it, a badge of patriotism. The converse I also believe to be true.

We dare not ignore the destructive forces of aggression which have been let loose in the world. Every ounce of our energy and every atom of our resources should be available and usable to give us a strength superior to these forces. The ties of a common tongue and of a common tradition with one in adversity make a natural claim on us. That claim has been recognized.

Some would have us do more. That test is still to be made. We may grope our way blindly through the haze of obscure and impractical idealism. Or we may avail ourselves of the light of experience.

Parallel With France

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIAL FROM THE BALTIMORE NEWS-POST

Mr. SHAFER of Michigan. Mr. Speaker, that all of the editors do not agree with the present policies of our Government is evidenced by the editorial appearing in the Baltimore News-Post of Wednesday, August 20. The editorial points out the dangers that lie ahead in both our state and financial policies.

The editorial follows:

[From the Baltimore News-Post of August 20, 1941]

PARALLEL WITH FRANCE

Is the communistic administration at Washington heading toward the abyss in which France finds herself?

The parallel between the two countries becomes more striking every day, now that the Roosevelt regime has allied itself actively and ideologically with "red" Russia.

The decay of France began with an alliance between the government of Leon Blum (often called the Roosevelt of a New Deal France) and Josef Stalin.

This was a military alliance as well as a trade alliance.

Today the administration of President Roosevelt is involved in both a military and a trade alliance with Soviet Russia.

When Blum made the Soviet alliance which spelled the political and moral death of the French Republic it set in motion every subversive element in the country.

The parallel in this respect between the Blum government and the communistic administration in the National Capital is made manifest in the new lease of life that all the "reds" and radicals in America have taken on.

They are now 100 percent behind the Roosevelt administration, just as the "reds" and radicals of France were 100 percent behind the Blum administration.

The parallel goes still further

When France was sold down the river to Moscow by her government, the great majority of the French people were not communistic and wanted no truck with Stalin.

The alliance of the Roosevelt administration with Communist Russia is likewise opposed by an overwhelming majority of the American people.

But we, too, have been sold down the river to an enemy that has plotted for 20 years to destroy our form of government.

That which weakened France and put the "red fifth column" on its feet is precisely that which will weaken the United States whether Stalin wins or loses.

That force is communism which the New Deal Government is supporting abroad and encouraging at home.

For 8 years the New Deal Government has shown its communistic proclivities by its constant appeasement of Soviet Russia.

It has recognized Russia as a legitimate government, although it is nothing but a cabal of murderous tyrants which was never selected or elected by the Russian people.

The New Deal administration has appointed time and again "reds" and their fellow travelers to office.

One of them, Thomas Amlie, of Wisconsin, nominated as Interstate Commerce Commissioner, was rejected by the Senate, so strong was the left-wing-radical odor that emanated from him. He was then made an Assistant Attorney General.

This communistic administration has never shown any real antagonism to the "reds" at home or abroad.

The alliance with Russia was, then, the most consistent thing this administration can brag of.

Step by step, our diplomacy in regard to Russia is following Blum's France.

France today is an enslaved state because she made an alliance with her natural enemy—Russia.

We have done the same thing.

Home Defense

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. BENDER. Mr. Speaker, men and women throughout the world are pretty much alike. They thrive on excitement. When their elected representatives disagree on any important issue, that disagreement makes the headlines. When they agree, their agreement is often buried in the want ads.

Here in our own country, one of the greatest debates in our history has been going on for 2 years. That debate furnishes perfect illustrations of the point I am making. On every major problem where there has been disagreement, the Nation's press has featured the story from Maine to California. Where there has been agreement, it is next to impossible to find it.

Yet this tremendous discussion of American foreign policy has many more elements of absolute agreement than most people recognize. Let me remind you of them.

First and foremost, we are agreed on the urgent need for strengthening our own defenses. To achieve this purpose, billions of dollars have been voted by Congress with scarcely a dissenting vote. There have been absolutely no partisan divisions on these issues. Funds intended to fortify outlying possessions of the United States as far away as Guam and Wake Island have been voted. Both Houses have completely disregarded party lines. Appropriations to equip the territory leased from Great Britain in our own hemisphere have been sanctioned by Congress irrespective of political differences.

Let there be no mistake about this fundamental basis of agreement. Let those totalitarian nations which seek to emphasize what they call "internal dissension" understand that American disagreement is part of our republican tradition. Let them take warning that we are the most strongly united people in the world, in spite of the headlines.

We are in agreement on still other fundamental matters of national policy. Almost unanimously Congressmen from every section of the Nation look upon Japanese aggression in the Far East with complete abhorrence. The entire Nation is united in the belief that nothing can possibly justify the Japanese invasion of China and the ruthless slaughter of unprotected men, women, and children. More than this, Republican Members of Congress have been protesting for 7 years against the administration's policy in the Far East. We have protested against the shipment of oil and metals to Japan to strengthen her aggression while we were simultaneously lending every assistance possible to China to keep Japan at bay. Only this last month the President conceded the failure of his policy in Japan. Today, the administration, its supporters, and its opposition in Congress are in complete agreement on this vital element of our foreign policy.

But there are still other matters of the utmost importance on which all of us agree. Americans have always hated aggression. We have condemned it wherever it has occurred. Nazi Germany's assault upon her smaller neighbors is regarded with abhorrence by all Americans. We sometimes forget this in the heat of argument. But even those men and women who urge our Government to consider its own needs as paramount—subordinating aid to Great Britain to a minor place—never for 1 minute forgive the German destruction of Czechoslovakia, Denmark, Norway, Belgium, Holland, France, and Greece. We are united in our opposition to Nazi conquest and Nazi purposes.

Of course, there have been violent cleavages of public opinion on the question of our aid to Britain. There are people in our country who regard the British Empire with grave suspicion. They point to its history as the world's greatest imperialism and tell us to make haste slowly in our dealings with England. But faced with the specific issue of a German victory with a Nazi-dominated world or a successful defense against such an outcome, the American people have certainly made up their minds—we are convinced that only the end of dictatorship can bring peace to our troubled world.

The steps which we must take to assure this objective have given rise to the most significant discussion in the last

generation. The issues of aid to Britain, conscription, convoys, and property seizure have all grown out of this debate. But it should be observed—and observed carefully—that each of these problems concerns itself with method. Americans have disagreed on methods before. Go back through our history. We had almost unbelievable differences of opinion during the Revolutionary War. The Tories and the Liberty Boys, the Friends of Great Britain and the Friends of Independence, rioted on our streets. A few years later we had violent arguments over the Embargo Act passed during the Napoleonic Wars. The Civil War is, of course, a perfect illustration. Our people have fought each other over our national policy in China during the Boxer Rebellion, over the Platt Act for Cuba, over our position in the World War of 1914.

Yet in everyone of these separate instances, our country has emerged from the controversy without the slightest impairment of its strength. I submit that our strength as a nation lies in our ability to disagree violently during our discussions, and to battle side by side for the majority decision once the conclusion has been reached. On this score, there remains much to be said. There are many issues ahead which have been scarcely considered.

The No. 1 item on any American discussion these days must be the progress we are making in building American defense. No matter what you may call yourself, interventionist or noninterventionist, isolationist or internationalist, the paramount interest of our country is today, as it always must be, American defense. It is our job to build the strongest military, naval, and air defense in the world. We have good reason to believe that the productive capacity of our country can do this without dislocating our entire national economy.

But we are not doing the job. I say that you owe it to yourselves to understand that we are lagging behind. Take the most important single weapon produced by the present war in Europe—heavy aviation. The difference between victory and defeat for any nation today may lie in its ability to produce flying fortresses. Great Britain needs them at its huge base in Singapore. It needs them for the protection of its islands. We need them at Manila and at Pearl Harbor. Only a month ago the President told us that by the end of next year we should be turning out 500 four-engined bombers a month.

Now we learn that it will take at least another year before we begin to approximate this goal. A few months ago we heard talk of an air fleet of 50,000 fighting planes to defend our country. No one in Washington can tell you today when we shall have this fleet. We have heard optimistic but obviously uninformed leaders of our National Government saying that American aviation is the finest in the world. But no aviation expert will tell you this. On the contrary, what they say is far from comforting. We should have the best air force on the globe, but we decidedly do not have it. Other countries are turning out war planes that are faster, more maneuverable, better protected than ours.

Well, then, what is the reason for all this? The basic reason is exactly the same as it has been for the last 2 years. We have not had the plans on hand. Our Government has imagined wonderful schemes. It has dreamed up a military system which sounds well-nigh invulnerable. But it has failed completely at the job of translating these ideas into action, because it has no one in Washington to handle the job of putting all these schemes into effect It was only a few months ago that the decision to manufacture our new flying fortresses on a large scale came through. You thought that such a decision was reached a year ago.

Here is one example of delay which hurts American defense.

I believe that there are other problems which are no less important to the safety of our country. One of these crucial issues is the issue of defense unemployment. Three months ago, in a talk which I made on the floor of the House of Representatives and which I repeated over the air, I called the attention of the administration to the unemployment problem being created by our defense boom. On that occasion I discussed the specific difficulty confronting the automobile industry. There are 400,000 men engaged in the selling, repairing, and maintenance of American autos. Dealers and their salesmen, garage owners and their mechanics, advertising agencies and their employees will inevitably feel the pinch of a reduced automobile output. In the factories that turn out new cars, 215,000 men are expected to lose their jobs if Leon Henderson is permitted to cut down auto production by 50 percent.

What about the silk-stocking industry? We have 175,000 men and women who earn their livelihoods in the Nation's silk mills. Our Government has ordered a complete shut-down of the silk-processing industry. So far we have had a few promises by the Government to offer some assistance to the factories and their employees. Substitute materials are to be made available. My point is that this kind of problem was foreseeable. It should have been anticipated just exactly as the automobile curtailment should have been anticipated. Planning for this eventuality might have done much to ease the shock.

Those of our people who are engaged in the home-building industry, in the manufacture of household equipment, washing machines, refrigerators, vacuum cleaners, in selling gasoline, will find themselves on reduced pay rolls. Where are they to go?

I believe that these problems are definitely related to the defense of America. They arise directly from the rearmament program of our Government, and every one of them should have been met with a definite plan by our Government.

This problem of defense unemployment is only one more instance of our national administration's failure to plan ahead. The recurring epidemic of strikes after a brief interlude of peace in industry points to still another important Government failure. By this time, after 8 years of N. R. A., N. L. R. B., and anti-injunction legislation, you would imagine that our Government would have evolved some kind of definite national labor policy. Today we are reaping the harvest of our indecision. We have suddenly become aware of a new type of industrial difficulty, the "jurisdictional dispute." Employers who are ready, willing, and frequently eager to cooperate with labor organizations now find themselves shut down because two contending organizations claim to be the proper "bargaining unit" for the entire establishment. Certainly this kind of argument ought to be easy enough to decide. Let the employees vote. Clear up the issue and then let the work go on.

Under our present Government policy it doesn't work out this way at all. The National Defense Mediation Board has done a good job with many of the cases that have come to its attention. But it has stopped short of determining the fundamental shop issue in many others. No one can blame the Board. It is waiting for the national administration to enunciate a clear policy which will serve as a guide to the solution of these problems. At the present rate, we shall have to wait a long time.

In France a few brief years ago conflicts between labor and management helped to paralyze all resistance to the invading Nazi armies. The so-called popular front played a large part in creating the frictions, the stoppages of production, the bitter attitude of labor toward employers, which were sources of endless comfort to the enemies of France. We are not willing to see America torn apart by the same antagonisms. And one sure way to prevent this from happening is by the establishment of a firm, clearly stated, fixed policy toward labor and management. What that policy should be must be determined by the honest, intelligent discussion of business, labor, and Government leaders. But once the policy is fixed, let it be observed. Let there be a thorough understanding that we have agreed upon the strongest possible defense for America in the shortest possible time. With that understanding there can be no compromise. There can be no talk of subordinating the interests of one group to those of another when we have agreed upon the ultimate goal. All private interests must be directed toward the achievement of our objectives, the building of a home defense for America.

You will observe that I have concerned myself in this talk with many matters. Some of them may seem to be unrelated to the subject of American defense. Yet I believe that every area of our daily lives which is affected by the policies of our Government is intimately connected with the defense of America.

We have watched nations which were proud of their freedom going down to slavery. Some of them resisted bitterly. Others were betrayed. Still others yielded without a struggle because they did not understand what they had. In many a European nation working men and women regarded their freedom and their liberty as worthless possessions. They shrugged their shoulders and told

their friends that they would be just as well off under Hitler as they were under a government of their own choosing. They have discovered how far wrong they were.

In our own country, too, there has been discontent and real suffering during the depression of the last 10 years. We know that men and women have been sick at heart. But we shall not make the mistake of those nations which surrendered.

Our people are united in their determination on a national defense.

I am a member of the minority party in Congress. We are sometimes accused of obstructionism and partisanship. I recognize these terms as part of the language of America. The party in opposition is always abused by the majority. Occasionally we forget the fundamentals in our bitterness over the incidentals. I am firmly convinced that all those who make these accusations are emphasizing the background and forgetting the picture.

We have agreed upon the course which America must pursue. A strong defense, a people protected in their relations with nations abroad, secure at home, eager to protect their basic and fundamental liberties because they understand and cherish them—these are the elements upon which American greatness today must rest. Whatever may be the course of history in the trying and troubled days ahead, I am certain that our country will stand fast.

Today, as always, the United States of America is preparing to rely upon its own sure source of help—the men and women of America. Aid to one country or to another may serve as a means of defense. The record of history shows unmistakably that those nations which relied for their survival upon others have done so at their own risk. Today, as always, we are preparing to rely upon ourselves.

There, in the long run, is where our real security lies. In the shops and factories of America, on the fertile farms of the world's richest land, in the homes of a stalwart, self-reliant people—here is where our defense lies. Here is where it will continue to lie, no matter what may be our policy, no matter who may be our administrators.

The Greatest Danger

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ADDRESS BY ASSOCIATE JUSTICE FRANK MURPHY

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Associate Justice Frank Murphy, delivered before the Knights of Columbus Supreme Convention at Atlantic City and published in the Washington Post of August 20, 1941:

THE GREATEST DANGER—THE UNITED STATES AND THE RUSSO-GERMAN WAR

(Address by Associate Justice Frank Murphy)

The world today is engaged in the most titanic conflict of all history. Two-thirds of mankind is in battle array and the other third is tremendously concerned with the outcome. This is a conflict which is straining not alone the spiritual and material resources, the manpower and armament, of the nations involved; far more than that, it is straining the capacity of all peoples, including our own, for clear thinking and firm decision.

We, the United States, so recently arrived at our national adulthood, find ourselves in a position of leadership in the family of nations. Upon us the war has placed a heavy responsibility to all civilization. It is a responsibility which we can hope to fulfill only if we are sound and realistic in charting our course along the confusing paths of national interest and foreign policy.

Before the fall of France a year ago it was still possible to assume that what happened in Europe and Asia could not seriously affect or menace our national security. Our concern with the principles and practices of national socialism was more academic than real. We might fulminate against them, but it was difficult to believe or imagine that we were face to face with a crisis in world history, the outcome of which might profoundly affect and eventually determine our own future position in the world and safety of our institutions and way of life.

Not until we became aware of the tremendous power of the German military machine and the world-wide reach of Nazi aims and political machinations did we find it necessary to think of this crisis in terms of similar crises in the past, as when the free nations of Europe were called upon to resist the onrushing power of the Ottoman Turks in the fifteenth century, or oppose the grandiose ambitions of Napoleon Bonaparte in the early nineteenth century.

In the face of this new challenge to world peace and a free international order, we have been obliged to reconsider the comfortable assumptions which have previously conditioned our thinking—assumptions of hemispheric detachment and security of freedom from outside interference and safety from attack, even the basic assumption of an orderly world in which nations respect each other's integrity and conduct their national affairs according to law and morality and elementary decency.

For a nation whose thinking and foreign policy have long been conducted on the basis of such assumptions and an honest desire to live at peace with the world it has been difficult to become reoriented and think in terms of a different order of things requiring the use of economic and military sanctions for the protection of our interests. We are coming to see, nevertheless, that as things are, with powerful nations resorting to military action in support of a program which threatens to isolate us from the rest of the world and eventually challenge our position and freedom of action as a strong and independent state, we, too, must give practical consideration to military interests in the conduct of our foreign affairs and to the adoption of suitable tactics, both military and economic, to neutralize and offset the dangers that threaten us.

We are at one of the crossroads of history. In the light of what we have seen and the evidence already available, there can be little doubt that a complete German victory would mean a profound reshaping of the world. Not only Europe and Africa but South Africa as well would conceivably fall under the sway of the Nazi economic and political philosophy, directed and upheld from Berlin by a thoroughly ruthless government, supported by a military juggernaut of matchless power and skill, and dedicated to political doctrines which are the very antithesis of principes we hold sacred and fundamental to individual freedom and happiness. Large areas of the Asiatic Continent, with its teeming millions, would be exposed to a similar fate.

Whatever you or I may think as individuals, as a nation we have in effect committed ourselves to the policy of aiding those countries which are offering resistance to the aggressions of Nazi Germany and her associates. As formally expressed in the terms of the Lend Lease Act, these are countries whose defense the President deems vital to the defense of the United States. If we like to think of ourselves as an arsenal of the democracies, the truth of the matter is that our Government and our people, the great majority of them, are convinced that our position in the world and our very safety as a strong and independent Nation, enjoying the freedom of intercourse with other peoples and an equal voice in world affairs, would be compromised and endangered by a complete Nazi victory. We of the present generation, as prudent and responsible men and women, having the welfare and the destiny of the Nation temporarily in our charge, cannot afford to let it happen.

At a time like the present it is of crucial importance that we keep our minds on the main issue and not allow ourselves to be diverted or confused with respect to our real interests and the fundamentals of our policy. Knowing what we do, therefore, of the methods and aims of the Nazi Government, its utter disregard for the rights and aspirations of other nations, and, above all, the vast striking power of its military organization, we must not allow ourselves to be confused and misled by its latest maneuver, the attack on Russia.

In ordinary circumstances we could afford to be indifferent to such a conflict. For men and women who cherish freedom of religion and the other fundamentals of democratic rule, there is little to choose from between the communism of Soviet Russia and the nazi-ism of Germany. We want neither in this country. But we know that nazi-ism, with its superior competence and perverted intelligence, its extraordinary energy and missionary zeal, its profound belief in racial superiority and destiny, its fanatical intolerance, and, above all, its tremendous military power and skill, is by far the greater menace to free nations and free institutions. It is at present the real menace.

In thus defining our attitude toward war between communism and nazi-ism, it is not a question of allying ourselves with the philosophy of communism. We know that with only negligible exceptions the American people are unequivocally and unalterably opposed to communism. We reject it for its denial and contradiction of elemental human wants. We reject it for its desertion of religion and its suppression of religious bodies. We reject and oppose the communism of Soviet Russia for its opportunism in resorting to the aggression which in others it has so stringently condemned. We know from the records of our courts of law that its agents have sought with premeditation to undermine our democratic form of government.

On this point there can be no doubt. We stand against communism as a thing that is completely out of accord with our freely chosen way of life. But we should not permit this to blind us to our own interest and to the major fact that the great and immediate threat to our position and standing as a great Nation, commanding the respect of the world

and dealing with other nations on terms of peace and equality, is Nazi Germany with its inordinate ambitions, its hated philosophy, and its superb military organization.

With a fire raging in the neighborhood which threatens to take your house, or with a dangerous animal loose in the streets, you aren't too concerned about the religion or politics of those who join in the effort to put it down. In present circumstances any nation resisting the might and aggression of Nazi Germany is, whether intentionally or not, advancing our interest as well as its own.

In launching the attack on Russia the Nazi leaders piously proclaimed that they were fighting the battle of western Christian civilization against the godlessness of Soviet Russia.

In doing this it was doubtless their hope to divide and confuse opinion in this country, especially among the people of the Catholic faith, who are notoriously abhorrent of the tenets and practices of communism. But a glance at the record will remove any doubt about the hypocrisy of this claim.

In that singular prophetic volume Mein Kampf, Adolf Hitler wrote as follows of the Christian faith: "The individual may realize with pain that with the appearance of Christianity there came into the much freer world of the ancients the first instance of spiritual terrorism. He cannot, however, dispute the fact that thenceforth the world was oppressed and dominated by this force; force can only be broken by force and terrorism by terrorism. Only by these methods can a new condition of affairs be brought about."

Very evidently at the time of the writing of these observations the Nazi leadership did not regard itself as a defender of "western Christian civilization." On the contrary, the implication is clear that it considered itself obliged to bring about, by force and terrorism, a new condition of affairs. But this was in the early years.

What has been the Nazi Party's view in more recent times when it has wielded the power of government? One answer is provided by the words of Reichsbishop Mueller, speaking with reference to a German Christian meeting in 1934. "The time will come," said Bishop Mueller, "when only Nazis will conduct services and when only Nazis will occupy the pews. We want one people, one state, and one church."

Two years later, at a party congress in Nuremburg, the philosopher of the party, Dr. Alfred Rosenberg, reaffirmed this policy in more specific terms: "That the Catholic Church, and with it the Protestant Church in its present form, must disappear from the life of our people is clearly evident to me and, I believe I can assert, also to our Fuehrer."

In 1936 the Voelkischer Beobachter, personal journalistic organ of Herr Hitler, served notice that "we are armed and prepared to continue the battle against Catholicism until the final frightful decision, until the point of total annihilation."

But let us not judge by words alone, however damning they may be. Let us consider deeds. On the 8th day of July 1933 a concordat was solemnly entered into between the Vatican and the German Reich. It was signed for the church by Cardinal Pacelli, now Pope Pius XII, and for Germany by Ambassador Franz von Papen. In this treaty Chancellor Hitler pledged freedom of worship for the Catholics of Germany, and the respective function of the church and state were carefully described. As to the manner in which the agreement was carried out, I shall quote from the encyclical letter issued by Pope Pius XII on March 14, 1939:

"In the difficult and eventful years which followed the concordat, every word and every action of ours was ruled by loyalty to the terms of the agreement; the unwritten law of the other party has been arbitrary misinterpretation of agreements, evasion of agreements, evacuation of the meaning of agreements, and, finally, more or less open violation of agreements. In the furrows in which we labored to sow the seeds of true peace others * * * sowed the tares of suspicion, discord, hatred, calumny, of secret and open fundamental hostility to Christ and His church, fed from a thousand different sources and making use of every available means.

"On them, and on them alone, and on their silent and vocal protectors, rests the responsibility that now on the horizon of Germany there is to be seen not the rainbow of peace but the threatening storm clouds of destructive religious wars."

Enough of the facts have emerged to provide a clean-cut picture of the conditions referred to in the Pope's late encyclical. It is a picture of a systematic and sustained endeavor to drive a wedge between the Catholics of Germany and their traditional faith. It is a picture of the closing of churches, monasteries, convents and schools on invented accusations and flimsy pretexts; of the regimentation of Catholic youth and the abolition of their youth organizations; of the elimination of Catholic action societies and publishing houses, the surveillance and supervision of priests, and the destruction of business establishments through boycotts and blacklists. It is a picture of stealthy and demoralizing persecution.

That this program of suppression has continued to this day there seems little doubt. On July 6, 1941—2 weeks after the start of the alleged German "holy war" against communism—the archbishops and bishops of greater Germany protested bitterly against the actions of the Government in a joint pastoral letter. Specifically, they charged that all diocesan publications have been completely suppressed; that numerous convents had been closed without reason; that all Catholic schools have been suppressed; and that all religious instruction has been stopped in other schools.

From Poland the news has been vastly more shocking. In a report published under the authorization of the Vatican, Cardinal Hlond last year told of the murder of hundreds of priests, the imprisonment and brutal persecution of thousands of others—clergy and laymen alike—and the defilement and destruction of hundreds of churches and other homes of religion.

The people of Poland are tragically aware that it is no champion of the cross who occupies their land. That knowledge is shared by the people of Norway, of Holland, of Austria, and, above all, by the Christian people of Germany itself. They know that the Nazi regime is a Christian regime only when it is good military strategy.

In citing evidences of Nazi opposition to the Catholic Church and its communicants, I do not wish to imply that people of other faiths have not also suffered persecution. The sad plight of the unfortunate members of the Jewish faith under Nazi rule is only too well known. Fresh in our minds also is the recent declaration of the Lutheran bishops of Norway, crying out against the systematic rule of terror by the Nazi storm troopers and continued interference in the affairs of the church. And the prayers of the whole Christian world go out to that brave and gallant figure of German Protestantism, Pastor Niemoeller, who has been subjected to the privation and terrors of the concentration camp for opposing publicly the politics of the Nazi Government. I am addressing this appeal to members of every religious faith not to be confused or deceived by the recent turn of events in Europe.

Such, in part, is the record of those who now ask us to accept them as crusaders for Christianity against the godlessness of communism. It is a record which shows beyond doubt the futility of looking to the Nazi leaders of Germany as allies in the defense of the Christian faith. Not only have they proved by word and deed their hatred of Christianity, but they have shown the folly of placing trust in their pledged word.

From this record and from other evidence it should be abundantly clear to anyone that under Nazi rule no religion would remain free. Any concessions thus far made to religious bodies have been made solely for reasons of convenience and opportunism. The only religion acceptable to the Nazi Party would be under the direction and control of the Nazi state.

While the Communist philosophy remains a danger to the Christian religion, it is not today the greatest danger. The overshadowing menace—and the one from which we must not let ourselves be distracted—is the philosophy of nazi-ism embodied in the present German military regime. In that philosophy and that regime we face not merely godlessness but godlessness which even now is in grave danger of carrying out its ruthless program—a program for which history may have no adequate parallel since the days of Nero and his successor tyrants on the throne of ancient Rome.

We shall not therefore be deceived by this sham crusade in behalf of Christianity and Western civilization. Our hope and our safety lie not in a triumph of Nazi arms and the Nazi creed. We want no part of this or any other form of totalitarian doctrine. Our hope lies in the triumph of democracy. Our democracy will not fail us if we are willing to act together as one nation with a single policy, determined to preserve and safeguard the heritage that has been bequeathed to us by our fathers.

Today, no less than in the beginning of our national life, the religious faith of our people is the chief source and pattern of our morality. Wisely did the framers of our fundamental laws provide against any interference with the free exercise of religion. This is a right which has been jealously safeguarded by the courts, but in the exercise too much neglected, I fear, by many of our citizens. Let us hope that in the stress and strain of the unhappy period through which the world is now passing the people of this Nation will remember what they owe to their religious inheritance and be willing to make whatever sacrifice may be needed for its preservation.

It is from the simple precepts imparted to us by Holy Writ, impressed upon us from day to day and week to week by our religious exercises, that we as a people have derived the qualities of sobriety and honest and moral integrity that make democracy possible. Under the benign protection of the great document of government which defines and safeguards our basic liberties, religion has been free to grow and flourish throughout the land. It ministers to our needs in many forms, whether in the sacrifice of the mass or the sacred books of Jew and Mormon. It finds noble expression in the hymns and prayers of the great Protestant communions and provides spiritual manna in the simple devotions of the Quaker.

In that historic meeting at Philadelphia which produced our charter of government, no statesman or delegate of that day thought it necessary or meet to propose the adoption of an ersatz religion under the control of the state as a means of insuring national unity among the several elements of the new Republic. Their concern was that religion should be free and untrammeled. For whether we hearken to the great prophets of Israel or follow the Star of Bethlehem, whether we turn for spiritual guidance to other creeds and symbols, let us never forget that we are members of a common brotherhood searching and striving for the ideal of peace on earth, with charity and justice for all men. God speed the day.

A Tariffless World?

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIAL FROM THE MADE IN AMERICA MONTHLY

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include therein an editorial appearing in a recent edition of the Made in America monthly and written by Mr. F. X. A. Eble, managing editor.

Mr. Speaker, the Made in America monthly is a splendid publication and is devoted to the development of our domestic economy. The editor and publishers of this publication recognize the fact that all other nations are endeavoring to make themselves self-sufficient as rapidly as possible. The opinions expressed in this editorial are those of a man who has spent many years of his life in the study of world economic developments. Because of the inexorable working of economic law, assisted by the scientists of the world, many of the nations are approaching their objective in the not-distant future. I commend to the Members of the House and the Senate the opinions of Mr. Eble as expressed in this editorial:

[From the Made in America monthly]

A TARIFFLESS WORLD?

Now that Europe is again in the throes of a great war, a new crop of self-appointed world saviors is in the making. Vying with one another for the headlines in the daily press they also compete with one another with their balderdash. Various plans and programs, designed to save the world from going completely to the "bow-wows" are offered. Some of them are merely dusted off blue prints resurrected from the morgue of fantastic philosophies rejected 23 years ago. Reintroduced by new sponsors, usually individuals who are outstanding in their respective fields of endeavor, whose honesty and sincerity of purpose are above reproach, these new plans and ideologies, shorn of their whiskers, are dressed up with renewed dignity and are given respectful and even sympathetic attention by an ever credulous public.

A new world with international free trade, free credit, an international police force, and with unemployment a thing of the past all over the world was predicted by a noted industrialist in a Nation-wide speech over the radio 2 weeks ago. Higher standards of living and better wages for all peoples developed through world abolition of tariffs were major features of a plan proposed as this country's objective by the editor of an outstanding monthly publication, before the consumers conference held in the Pennsylvania Hotel, February 18, under the sponsorship of the Advertising Women of New York.

The greatest losers under such a fantastic scheme would be the American workers, American farmers, and American producers, especially those who have but one market in which to sell their wares because of their high-production costs in keeping with our American standards.

Take the two individuals referred to above, one a manufacturer of a popular 5-cent beverage, the other a member of the staff of a successful monthly magazine. Neither of these eminent gentlemen ever sat behind a desk in a factory or mill and burned midnight oil while worrying and grappling over the problem of meeting the weekly pay roll when threatened with the loss of their home markets because of the inroads of competing foreign products that displaced their wares on the shelves and counters of the retail establishments throughout the Nation.

Another manifestation of the shortsightedness of these quasi-economists who believe that tariffs are the cause of the ills of the world and therefore must be abolished is that they do not differentiate between buying power and selling power. The buying power of any nation is the gage or yardstick of its standard of living. Not alone has the United States the highest standard of living in the world, but the buying power of our Nation is greater than that of any other nation, and no nation in the world has such an attractive market for its own products.

The buying power of our country is created and sustained by the wages paid to the workers in every commercial, industrial, professional, agricultural, and scientific endeavor throughout the Nation. In short, the buying power of a nation depends upon the amount of money earned by its citizens, whether such money be earned through labor, capital invested, or services rendered. Our buying power is also reflected in our ability to pay decent wages. For instance, $1 is paid per hour to certain workers in the United States pottery industry. That same dollar will buy 14 hours' labor in the Japanese pottery industry in the same class of work.

It is this displacement of American man-hours of labor by the cheaply manufactured foreign products—not alone of Japan but from all parts of the world—that plays havoc with our national economic life.

Now what is selling power? This is the ability to sell at prices that are lower than all other competitors; yes; even without sacrifice of quality of the products involved. The United States, with its high standards of living, higher costs of production, and higher wage rates, has many instances wherein it successfully competes with nations with lower wage rates and lower living standards because of highly mechanized equipment, mass production, and the use of scientific methods of manufacture. The American automobile industry is an outstanding example. It does not need any tariff protection, but industries in this class are limited.

Low wages, low standards of living, and low production costs create and sustain high selling power and nations unable to compete must protect themselves in their home markets against the influx of competitive products through tariffs. The United States is in this class, for anything that displaces and competes with that which we produce ourselves curtails employment, and the incidental distribution of wages reduces buying power, lessens consumption, and eventually curtails production, which is the very essence and life of American business.

Now, as to standards of living, take Japan, for instance. Japanese industrialists do not want any change in the living standards of their people. They even resent the idea or thought that the living standards of their people are low. Let us read from a letter written by a Japanese industrialist to a friend of his in France. The letter was published in the Bulletin Des Soies et Des Soieries under date of August 25, 1934.

"You English and Europeans think of your profits and of the high standard of living of your labor while we think of the necessity to find work for our labor and to the vital needs of the millions of Asiatics, Africans, and South Americans, our customers, who live quite modestly. You reproach us with paying our labor what you term starvation wages. We protest. If our labor dies of hunger, it cannot continue to produce, and we have proven that the Japanese worker produces more per hour than his European competitor.

"The difference lies herein. The standard of living of our Japanese labor is not lower than yours; it is a different standard of living. Our labor lives on rice and fish, yours on cereals and meat. Our climate permits us to live in wooden houses with little furnishings, while your labor requires houses of solid construction and high building costs and more furnishings. Can we help it if our manner of living is less costly than yours?

"Don't think that because of our manner of living that our people are more unhappy than yours. If we offered them your houses and your food, they would certainly reject them, for they are attached to their time-honored customs. We must also tell you that our workers are able, with their average wage of 30 yen ($9) per month, to build savings as evidenced by their deposits in savings banks."

So you see this Japanese manufacturer rejected the idea of even adopting a European standard of living for his people. Perhaps our American economic missionaries would be more successful. Wouldn't the traditional American ham and eggs for breakfast, and a sirloin steak with onions, topped off with strawberries and cream for dinner, be more alluring to the Japanese than their present diet of rice, fish, and soya beans? I wonder?

F. X. A. E.

British Flood American Markets While Businessmen of United States Beg for Help

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ARTICLE FROM CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, because the Government has come in to impose priorities on steel, iron, aluminum, and many other materials regarded as indispensable in the national defense and aid-to-Britain programs, hundreds of small industries manufacturing nondefense products are threatened with extinction and their employees are facing economic ruin. A recent survey indicated that 64 percent of the small industries of America will have to suspend operations unless they are given defense contracts or materials with which to manufacture their usual products.

During the past 3 weeks hundreds of operators of so-called small business concerns have flocked to Washington in an effort to find a solution to their disturbing problems. All tell the same story—to the effect that they must close their factories unless materials or Government defense contracts are obtainable. In the meantime reports reaching Washington from England indicate there are no shortages of materials there, and the importation of English goods in the "buy British" campaign is rapidly increasing. It appears to me that the

American manufacturer and his employees are being "sold down the river." It is about time that steps should be taken to protect America against the pilfering of our markets by a nation whose war we are subsidizing.

In this connection, I ask permission to insert a newspaper article showing the increase of British imports under the campaign now being conducted by the nation we are aiding. The article follows:

[From the Chicago Daily Tribune of August 19, 1941]

ENGLAND SELLS GOODS HERE AS UNITED STATES CUTS OUTPUT—ALUMINUM PRODUCTS ARE AMONG METALS SENT IN

NEW YORK, August 18.—Importers here still are able to obtain British goods made in whole or in part of metal, despite the fact that American manufacturers already have been forced to curtail production in many similar lines.

In some instances importers have insured against future shortages by smart forward buying in America. One such case is that of Alfred Dunhill of London, Inc. This Fifth Avenue importer of pipes, lighters, gifts, and a variety of smokers' accessories for a luxury trade also features a line of Habana cigars encased in individual aluminum cartons—at 25 cents and up per cigar.

Although American housewives were asked to give up pots and pans in a 20,000,000-pound aluminum-collection campaign, Dunhill confidently expects to be selling its exclusive aluminum-carton product for at least 2 years through stocks bought here. The American-made cartons are filled in Cuba.

DELIVERIES BEING MADE

At Dunhill's it was said that the situation is becoming "very tight" on imports from Britain of metal cigarette cases and some similar accessories, but that deliveries still are being made. Although saying "We're afraid it can't last much longer," officials cited only one instance of cutting down so far. This is that smokers no longer are provided with a spare aluminum filter tube when they buy a Dunhill pipe.

The absence of any slackening in the "buy something British" campaign to maintain English exports to the United States is illustrated in the August buyers' index of importers, published by the British Empire Chamber of Commerce in America.

More than 250 listings are included of companies with stocks of British goods on hand, compared with less than 100 in the first issue last April. The 8-page gloss paper job with a big red V on its first page is going to 10,000 department-store buyers and merchandise managers, compared with the initial circulation of less than 5,000 copies.

REPORT STEADY FLOW OF GOODS

The British Chamber of Commerce reported a steady flow of goods from Britain, with increased sales in the United States. It said Britain apparently still is allotting sufficient material—including metals—to permit manufacturers to supply the trade here.

One exception is that no food listing is included in the index, it being explained that continued export of luxury foods "made a bad impression when so many shortages exist in England." A Fifth Avenue shop, however, is featuring fancy tin packs of English biscuits and cookies at 85 cents, $1.10, and up for a package.

Spices and both India and Chinese teas, packaged in tin in England to keep them fresh, are listed in the index and are in higher priced stores.

AN OUTSTANDING SUCCESS

The chamber of commerce also noted that the "buy something British week" promoted here last month by the Committee to Aid Britain by Reciprocal Trade, was such an outstanding success that there is every reason to anticipate similar promotions in other cities throughout the United States this fall and winter.

Almost no British substitution or curtailment of metals has been found by Abercrombie & Fitch, exclusive sporting goods store, catering to the Long Island trade. Aside from tax questions, which have caused more trouble than all other matters arising from war conditions, its chief trouble has been delays. But forward buying has fixed that.

Almost 20 percent of all the store's sales are British imports and no more than a minor reduction has occurred in shipments. Illustrative of the British view, an instance was cited of a manufacturer who wrote there would be a slight further delay in obtaining a product in which aluminum normally is used. He said he could substitute another metal and make immediate delivery, but that he was sure his customer would prefer the slight additional delay to have the product right.

Extension of Military Service—the Hard Choice

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. GEARHART. Mr. Speaker, on the day following the passage of the bill to extend the period of the service of selectees, National Guard men, and reservists beyond the 12-month period of training fixed by existing statutes by the startlingly close vote of 203 for to 202 against, there appeared in the Washington Daily News a brief editorial which, because of its timely comment upon what will come to be regarded as an historical event, should, in my opinion, be spread upon the pages of the CONGRESSIONAL RECORD.

In order that that may be accomplished, I include it herein, as follows:

[From the Washington Daily News]

THE HARD CHOICE

The Congressmen who voted by a whisker to extend Army service will have a hard time explaining to the families of soldiers back in the home districts.

It may be well that some of the Representatives have risked their political lives.

They could have taken an easy way out. They could have voted to let the young men go home—and saved themselves the political anguish of explaining. But they knew that the easy thing to do was not the right thing to do.

They had listened to the testimony of the Army's Chief of Staff, General Marshall, that demobilization might prove a "national disaster." They had heard him say that at the end of a year in service the men would still be only partly trained. They knew that if these partly trained men were sent home they would be placed in the Reserves, subject to immediate call if America became involved in war. They knew that while our entry into war is not inevitable, it is possible. And they knew, what all military experience has demonstrated, that when untrained or partly trained men are sent into modern warfare they are killed off like flies.

The Congressmen may have risked their political lives by voting to require the young men to complete their military training. That was far better than casting a vote which might have meant heedlessly risking the physical lives of these same young Americans.

Taught To Think

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of August 18, 1941:

[From the Washington Daily News of August 18, 1941]

TAUGHT TO THINK

Two freshmen on the House District Committee, each, in fact, serving his first term in Congress, did a swell job for the people of Washington last week. They are OREN HARRIS (Democrat, Arkansas) and SAM RUSSELL (Democrat, Texas).

For several weeks a subcommittee cat-hauled the police department. Certain of its members went in with preconceived notions of why Washington was wallowing in a stew of unsolved crimes. Witnesses were summoned but not permitted freely to testify. With leading questions subcommittee members testified for them. Recommendations that the police rule the District with an iron hand resulted.

Among the recommended changes was an amended habitual criminal act. When this measure reached the full committee it was harsh and inelastic. On a second conviction of felony the judge was required to impose the maximum penalty: on a third conviction one and a half times; and on the fourth conviction, twice the maximum penalty. The judge was given no discretion.

At the outset of debate it looked as if the bill would meet no opposition. Then Representative HARRIS spoke up quietly. He had been a prosecutor back home. He suggested mildly that if a poor man were driven by hunger to enter another's house and steal a piece of bread it would be a felony. He said the judge, even in a second offense, should have discretion and not be required to send a man to prison for 15 years, the maximum penalty.

Representative RUSSELL, also a mild-mannered debater, then spoke up. He had been not only a prosecutor but a judge in Texas. He told a story to support his thesis that statutory penalties could be made so severe that juries would not convict men of minor felonies.

For half an hour the two endured a verbal hammering by the strong-arm advocates. Then, one by one, beginning with Representative EVERETT M. DIRKSEN (Republican, Illi-

nois), committee members joined them until, finally, the bill was sent back to its draftsmen to be made not more lenient but more flexible for second offenders. So, on this basis, it has been redrafted, passed by the House, and awaits action in the Senate.

The two southern Democrats, without gestures or loud words, had prevented enactment of intolerances. Of equal importance, they had arrested the ordinary course of its meetings and made the House District Committee think.

Philippine Affairs

EXTENSION OF REMARKS
OF
HON. JOAQUIN M. ELIZALDE
RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

RADIO ADDRESS OF HON. JOAQUIN M. ELIZALDE, RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS

Mr. ELIZALDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over the Columbia Broadcasting System national hook-up on August 13, 1941:

In the southwestern Pacific lie a group of small countries encircling the China Sea. Today that area is of tremendous importance to American policy and to the future of the American people. Surrender of this area to control by imperialistic powers, by appeasement or as the result of war, would have a permanently crippling effect upon the efforts of the United States and other democracies to preserve a free world. Freedom of trade routes in every part of the world and the accessibility of essential raw materials for American industry are among the immediate interests at stake.

The Philippine Islands comprise the remotest American outpost in the Pacific, and they form the final American link to the lands of continental Asia, the Dutch East Indies, Singapore, Burma, and India. More than that, the Philippines possess the best strategic location of all countries bordering on the China Sea. It is detached from continental Asia, and it lies exactly at the crossroads of important ocean routes connecting Japan, the United States, China, southeastern Asia, and Oceania.

Moreover, in the Philippines there are 16,000,000 people who personify American culture and American form of government in the Orient.

Forty-three years ago today, on August 13, 1898, American forces under Commodore Dewey, General Merritt, and General Arthur MacArthur, occupied Manila. Subsequently these troops extended their occupation to all parts of the Philippines.

They found a Christian nation, with 300 years of Christian history and a wealth of western culture. They found schools and colleges, including the Santo Tomas University, which is even older than Harvard. They found an abundance of tropical products, many not available in the United States. Among them were manila hemp, coconuts, hardwood trees, sugar, and tobacco. Since then, large mineral resources have been unearthed, including gold, manganese, iron, chromite, and copper, which, incidentally, are particularly appreciated today.

But, over and above this, Americans found a vigorous people who for many years had been fighting for freedom and self-government. Time and again they had revolted against their foreign rulers. They continued this fight under Gen. Emilio Aguinaldo for a considerable time after American occupation.

The four decades which have followed have been full of spiritual and material blessings for the Philippines. We have made astounding progress in every field. The years of the United States tutelage in our country are recognized by all today as a blessing to our people. For that reason we now revere the 13th of August as the beginning of our association with a great benefactor.

Surely it was inevitable that in the years intervening there should have been some dissensions and difficulties between two progressive peoples such as yours and ours. In the process of development and adjustment there were many plans, policies, and ideals which had to be reconciled. This collection of differences in the past is now popularly referred to as the "Philippine problem."

Actually, there have been no controversies of importance. In the long run we have been able to meet each other half way. It is true, of course, that in the past 40 years we have had to adjust a great many problems. There was, for instance, the political matter of independence aspirations—the desire of the Filipinos to run their own local affairs. The regulation of our trades with the United States was another.

Meanwhile, during this same period the Filipinos were passing from the conservative Spanish atmosphere and educational system to the modern American way of life. Today most of our leaders in government and business are products of the American system. Many of them have graduated from schools on the American mainland, bringing us a much closer understanding of America.

In this span of years we shared with the United States the difficulties of the first World War and the unprecedented world economic depression which manifested itself in the United States and had its corresponding repercussions in the Philippines. This brought us a realization—if realization were needed—that our economy was becoming more and more dependent upon that of the United States.

Today, all of us are involved in a titanic world struggle to uphold freedom, liberty, and tolerance. This is a struggle in which none can stand aside. The whole world is in its grip, divided into two hostile camps. In this division we in the Philippines have unstintingly pledged our whole support and loyalty to the democratic cause proclaimed by the United States.

I have the most solid conviction that unless democratic ideals survive in this world struggle, and unless individual freedom is finally triumphant, there will be no possible life for small countries, nor place for them in the world of the future.

Our own interests involved in the victory of democracy are twofold:

First, to uphold the ideals which we share with America; and

Second, to help make possible a world in which our aspirations may be realized.

To this great task the Filipino people, under the leadership of President Manuel Quezon, have dedicated themselves with their whole spirit, their full manpower, and all their resources.

I am hopeful that the assistance which we can offer will now be of value to the United States. Militarily, we have turned over to the United States 140,000 of our finest young men, who have received their basic military training under the supervision of Gen. Douglas MacArthur, former United States Chief of Staff and son of the General MacArthur who led one wing of the American forces into Manila 43 years ago today. All our military facilities and preparations, carefully worked out by the Philippine Commonwealth in the past 6 years, have now been turned over to the newly created United States armed forces of the Far East.

The American Navy, which maintains its far eastern base of operations in Manila Bay, has also been given every assistance and cooperation.

In the economic field we have submitted ourselves to a rigorous system of export control which has drastically curtailed our export trade and imperiled a number of our industries.

Meanwhile the war-born shortage of shipping in the Pacific is bringing us an economic depression of the greatest gravity. Our produce will have to be stored, with no immediate prospect of marketing. This spells the blackest disaster for Philippine economy. And, unfortunately, no immediate relief appears likely in the midst of the prevailing world-wide confusion.

From a civilian standpoint we are actively preparing for all eventualities. Manila has undergone air-raid precaution practices and repeated black-outs. In fact, our entire population is conscious of a closeness to the danger of war.

Let me now refer to the Philippine independence movement, about which there has been so much misunderstanding in this country. This movement has often been misrepresented as one of ingratitude and unfriendliness toward the American people. Nothing is further from the truth.

An easy way to understand the Philippine desire for independence is by analogy. The youth who reaches maturity and longs to leave the family home for a life in which he must depend on himself is a close parallel to our situation. In his father's house the boy may enjoy great comfort and protection from want; going out into the world may be uncertain and fraught with terrible hardships. From the standpoint of his immediate well-being the son would be well advised to stay close to the family table. Nevertheless, he is ready—even determined—to take all the knocks and set-backs necessary to make him finally an upstanding citizen and member of the community.

The Filipinos are that youth. They have been taught by their parent country—the United States—the virtue and desirability of freedom and self-determination. The Filipino people would be unworthy in their own minds, and certainly by the measure of American standards, if they did not have that urge toward self-government. I am sure that the American people understand a trait which is so thoroughly characteristic of the American himself.

Yet this aspiration interferes in no way with our friendship and devotion to the United States; nor does it detract from our present desire to be of utmost service to America in the critical times which face us.

All of us are preparing to meet increasingly serious and difficult problems. Hence it is no light undertaking when I say that I am proud to take advantage of this anniversary of the date when the American flag was first raised in my country to pledge in the name of my countrymen complete loyalty and service to the objectives and ideals of the United States.

National Debt—One-Way Street

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. BENDER. Mr. Speaker, nobody observed it, but this week there occurred

a notable event in American history, the day when our national debt passed the $50,000,000,000 mark. We are now spending more than $16,500 a minute. And if you think these figures are staggering, ponder a moment on the observation of Price Administrator Leon Henderson. He told us last week that if we are to exceed Germany's war production, we shall have to treble our spending.

The one obvious and clear-cut way in which we might easily lop off a fair chunk of our expenditures, the reduction of nondefense items, has been simply sidetracked by the administration. It obviously wants no part of any reduced spending. Apart from defense items, the old saw attributed to Harry Hopkins still holds good, "We shall spend and spend, tax and tax, elect and elect."

Borough of Tyrone, Pa., Endorses Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

RESOLUTION OF TYRONE (PA.) BOROUGH COUNCIL

Mr. VAN ZANDT. Mr. Speaker, the members of the Borough Council of Tyrone, Blair County, Pa., on June 24 passed a resolution approving the Townsend plan.

Tyrone, Pa., is a typical thriving central Pennsylvania community, and the population of this community, through the members of their borough council, are of the opinion that something must be done to provide adequate pensions for the deserving senior citizens of the country.

The resolution is as follows:

BOROUGH OF TYRONE, PA.,
June 24, 1941.

We, the undersigned members of the Borough Council of Tyrone, Blair County, Pa., believe something must be done to provide adequate pensions for our deserving senior citizens, and at our regular meeting have adopted this resolution:

"Whereas the members here assembled endorse the Townsend movement as being both patriotic and economic; and

"Whereas the Townsend plan will restore a purchasing power in the hands of the 42,000,000 people that this administration claim are undernourished and give employment to six and one-half millions of people that are unable to secure a position so far in this rearmament program; and

"Whereas it will act as a cushion toward warding off any further man-made depressions in the United States of America: Now, therefore, be it

"*Resolved*, That we most respectfully urge upon Congress of the United States of America to consider the basic principles of the Townsend bill (H. R. 1036) now in committee; and be it further

"*Resolved*, That one copy of this resolution be forwarded to each of the following: The President of the United States, Franklin D. Roosevelt; the Honorable Robert L. Doughton, chairman of the House Ways and Means Committee; the Honorable James E. Van Zandt, Congressman."

RAYMOND A. HAGERMAN,
Burgess of Tyrone Borough.

Attested:

J. H. HARKLEROAD,
Secretary, Tyrone Borough Council.

James W. Cole

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. CAMP. Mr. Speaker, in the death on Sunday last of James W. Cole, Deputy Second Assistant Postmaster General, all of us, Democrats and Republicans, have sustained the loss of one of our best friends, and the country has lost one of its most loyal and faithful servants.

His career of 43 years in the Postal Service of the United States is a model of distinguished service and devotion to duty.

He believed in working, and his example in the Department where he spent his life is most outstanding. Born in my own home county of Coweta, in the State of Georgia, on a modest farm, he struggled until he qualified himself for a job in the Railway Mail Service, from which position he arose to one of the most important desks in the Post Office Department. He knew human nature perhaps better than any man I have ever known, which accounts for his eminent success as a post-office inspector. To him were assigned many of the most difficult cases, including the one involving theft of mail from the late ship *Leviathan*, and it was only after Jim Cole took hold of that case that it was solved. He concealed himself in that great vessel until he found who was stealing the securities from the mails to Europe. His career is well summed up in the following editorial from the Atlanta Constitution of August 19, 1941:

[From the Atlanta (Ga.) Constitution of August 19, 1941]

JAMES W. COLE

One of the most efficient departments of the United States Government lost one of its soundest thinkers and workers in the death Sunday of James W. Cole, the Deputy Second Assistant Postmaster General, who came out of the rural regions of Coweta County to win recognition in Washington.

Critics here and there delight in leveling their guns at various departments of the Federal Government, but all citizens speak respectfully of the operations of the Post Office Department and its thousands of employees. This is particularly amazing because, of all Federal departments, the Post Office Department alone handles a difficult, personal job every day for most of the citizens of the United States. The average citizen merely hears about the work of the other departments; he sees for himself what the Post Office Department is doing.

In this field of skilled organization, James W. Cole rose from a job as railway mail clerk between New Orleans and Atlanta, 43 years ago, to a desk in Washington, where he has been for 5 years handling some of the most difficult problems of the Department for the Nation. He has spent a number of years in Atlanta as chief inspector of the Atlanta and Chattanooga divisions. He had handled involved assignments in Cuba, South America, and Europe. Two years ago he headed a deputation of postal officials from this country at a conference of postal representatives of Pan America.

"Jim" Cole won recognition for his sound judgment and his deep-rooted loyalty to his job. One of the best-posted men in the Postal Service, he moved quietly upward through his every-day exercise of those reliable traits that made him the leaning post of those around him.

St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EXCERPTS FROM A LETTER TO HON. LOUIS C. RABAUT, OF MICHIGAN, FROM A. C. CARTON

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpts from a letter addressed to the Honorable LOUIS C. RABAUT from Mr. A. C. Carton, chairman of the Michigan Great Lakes Tidewater Commission:

MICHIGAN GREAT LAKES
TIDEWATER COMMISSION,
August 14, 1941.

Hon. LOUIS RABAUT,
House of Representatives,
Washington, D. C.

MY DEAR MR. RABAUT: As chairman of the Michigan Great Lakes Tidewater Commission, I want to congratulate you for the contribution which you have made to the deep-waterway connection between the Atlantic Ocean and the Great Lakes through the little publication entitled "Pertinent Questions and Answers Concerning the St. Lawrence Seaway and Power Project."

In view of the statements made by the opponents of this project, it was not strange that a great many matters pertaining to this proposed improvement should be somewhat mystifying to the average individual, but your publication answers clearly and unequivocally practically every adverse criticism made by the opponents of the seaway.

* * * * *

Other countries and other localities have battled long and contributed much to obtain deep-waterway connections with oceans so that they would not be handicapped with an uneconomic transportation system, but a portion of our people seems to have lost sight of the great importance of an adequate transportation lane, and have even joined with the selfish interests in an effort to delay, if not completely prevent, the improvement of the St. Lawrence River so that ocean-going boats can reach the heart of this great country of ours.

* * * * *

A cheaper transportation system has always been looked upon as an advantage to the producer, because what the producer gets is

the market price less the handling charges and the transportation costs of getting his goods to that market. A statement that the producer would not benefit by a cheaper transportation cost is silly in the extreme, and even the men who make such statements know better.

Cheap transportation from the head of the Great Lakes down has made the Northwest and West possible, and has developed the agricultural resources and the mining industry as nothing else could have done.

The Great Lakes and connecting waters have 4,500 miles of shore line, and Michigan alone has 1,624 miles of shore line and from 30 to 50 harbors that would become ocean ports.

I think there is one thing that has been somewhat overlooked, although I emphasized this in my statement to the Rivers and Harbors Committee, and that is after this war is over we are going to live in a highly competitive marketing world, and the 40,000,000 people in the interior of this United States should be given all of the advantages from a transportation standpoint that naturally belong to them.

Another point which I emphasized was the fact that the Michigan farmers have had to attune their agricultural program to the local needs of our country. One-third of the Michigan farmers' income is from dairy products, 10 percent from the poultry industry, and about the same percent from the production of small fruits. In addition, we are becoming a great truck-crop State and are going to continue along that line until we are the leader among all of our sister States.

With the improvement of the St. Lawrence River it is reasonable to expect that shipbuilding and other industries of all kinds will find a place along the shores of these Great Lakes on account of their remoteness from damage in case of war.

We have in the heart of this great country the iron, the copper, the limestone, and easy access to the coal; and, above all, we have a food supply that could adequately take care of 100,000,000 industrial workers that might gather on the shores of these Great Lakes. The men who work in the shipyards, the factories, the quarries, and the mines would furnish a market for the produce of the fields, the herds, the orchards, and the vineyards of this great agricultural section.

I have no desire to go into the matter of national defense and the contribution which this proposed power and transportation development would make to the security of our country any more than to say that any man of ordinary intelligence, such as I hope I possess, should appreciate the fact that a protected deep-water lane 2,000 miles long from the Atlantic seaboard to the heart of the Middle West, the granary and the workshop of the world, would add to the welfare of our people; neither would I be presumptuous enough to discuss the value of the power development to our national defense, and the contribution which it would make to the economic advancement of our people after the World War is over.

There is so much reliable information available for all those who care to have it, in regard to the cost and need for this power development, that the advantages which would accrue can properly be left to those who are in a position to speak intelligently in regard to its importance and necessity. Suffice for me to say that we all should know that cheap and abundant power is necessary in the production of aluminum for our planes and for power to manufacture tanks, guns, and a hundred other instruments.

* * * * *

Please accept my congratulations for the splendid work which you have done in connection with this proposed improvement, and rest assured that when this deep-water lane is completed, and the flags of all nations are flying from the mastheads of ships plying our Great Lakes and connecting waters, the men and women who represent the true spirit of Michigan will arise and call you blessed.

Very respectfully yours,

A. C. CARTON,
Chairman, the Michigan-Great Lakes Tidewater Commission.

Churchill-Roosevelt Alliance Means War for the United States

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ARTICLE FROM THE NEW YORK TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of August 21, 1941:

[From the New York Times of August 21, 1941]

EIGHT POINTS DECRIED AT PEACE RALLY—PLEDGE TO DESTROY NAZI-ISM MEANS WAR, DR. MACCRACKEN TELLS AMERICA FIRST GROUP

Dr. Henry Noble MacCracken, president of Vassar College, told an America First Committee rally at Carnegie Hall last night that if America really committed itself to the destruction of Nazi tyranny, as pledged by President Roosevelt and Prime Minister Churchill, it meant war for us.

"We cannot destroy it by diplomacy, or just by aid to Britain; no amount of aid can do that," he declared.

Dr. MacCracken envisaged the consequences of such a war, and came to the conclusion that even if we won we would lose more than we gained. He spoke on the same program as former Governor Philip F. La Follette, of Wisconsin; Michael Strange, author; and John T. Flynn, who presided.

FIVE HUNDRED POLICEMEN ON DUTY

A capacity crowd of 3,000 inside the hall repeatedly booed references to Winston Churchill, aid to Britain, and leading interventionists here. An overflow crowd, estimated by the police at 1,500, listened through loudspeakers on Fifty-sixth Street. Elaborate police arrangements, with 500 men on duty around the hall and inside, ruled out even minor disorders. The Fight for Freedom Committee was permitted to distribute handbills outside the hall without interference.

Mr. Flynn characterized the Council for Democracy rally in Madison Square Garden on Tuesday night as a "Communist meeting addressed by a Justice of the United States Supreme Court and an admiral in the United States Navy."

Apparently referring to Rear Admiral Richard E. Byrd, who spoke there, he said: "They've been looking for a hero, preferably a flier, and they got one, a trans-Atlantic flier who fell into the ocean."

Former Governor La Follette declared that "The Tory government in England, always opposed to our interests," was still really in control, despite cabinet shifts; Ernest Bevin and Morrison are functioning there like Sidney Hillman, a front for Stettinius and Knudsen.

"If you really want to knock the props out from under Hitler and Stalin," he continued, "the best way to do it is to put on a living example here to show that Hitler's challenge of either dictatorship or starvation for the people is a lie; let us take off our coats and work and show that men can be free and still have economic security."

DR. MAC CRACKEN'S VIEWS

Dr. MacCracken, in discussing obstructionism, declared that "the real obstructionists" were "those who want to block the true road and want to force us off the road into a detour by way of Suez, Singapore, and Vladivostok before we get back again to the true road, which is the American road, the Washington-Jefferson road, of honest friendship with all nations—entangling alliances with none."

"Why quit our own to stand on foreign shores?" he asked. "That is the American question. Washington asked that question a long time ago, and we ask it now."

The eight-point program announced by President Roosevelt and Mr. Churchill, Dr. MacCracken called a treaty, adding that since President Roosevelt had no power to sign any such treaty it must be regarded as a Churchill treaty. He said it represented wishful thinking for world improvement, and continued:

"But the commitment to the final destruction of Nazi tyranny and permanent disarmament of all aggressor nations in the future, as well as the respect for existing obligations, which are all mentioned in the treaty, what about these? Are we to be committed to these aims by accepting the idealism of the other aims?

"Are we to be so completely committed to the integrity of the British Empire by scrambling our Wilsonian idealism with that integrity so completely that it can never be unscrambled again? That is the real question before all American citizens. That is what gives us pause as we contemplate the treaty of the sea in its entirety.

A PLEA AGAINST WAR

"If we really were to commit ourselves to the final destruction of Nazi tyranny, that certainly would be war. We cannot destroy it by diplomacy, or just by aid to Britain. No amount of aid can do that. On that point both the war party and the peace party in the United States are agreed. The war party insists that we must make war, and make it now, in order to crush Germany. The peace party has no hope of crushing the Nazi rule at this time. It looks for democratic regeneration of Europe from within after the fury of war shall have spent itself.

"But if we go to war now, what kind of war would it be? About that question the war party has left us in no doubt. Three hundred billions of dollars, 10,000,000 men under arms, 100,000 airplanes, thousands of ships, and an equipment so vast that we could not make it before 1945. But that is the least of the cost. It will cost millions of American lives; the total starvation of Europe so far as blockade can accomplish it, with no doubt 40,000,000 deaths from starvation; the total destruction of European cities by bombing; the exhaustion of world resources in oil and metals to accomplish this.

"And in the meantime, what of us? How much democracy will be left in these United States when for 5 years we have, like Germany, become a militarized state? How much credit, how much financial stability, how much private enterprise will be left? How much freedom of trade unions to bargain with employers? How much freedom of our business to sell to the American public? How many ships and railroads and utilities and banks and factories will be left in private hands? These are questions that must be answered before our Senate sanctions this treaty of the sea by its two-thirds vote. Democracy and total war seem to us to be incompatible terms.

THE QUESTION OF VICTORY

"Can we win such a war? Is it disloyal to ask such a question? We do not doubt the courage of our soldiers, of their tactical skill. But many of us do question the Army organization, the genius of our General Staff, the composition of the personnel of our senior officers.

"We question the nature of our equipment, our ability to land in Europe, to maintain supplies both to Britain and to such an Army at the same time that our Navy is fighting a two-ocean war. We question also the ability to sustain the morale of our people in a war that is to be fought in the East Indies, in Egypt, in Morocco, and Iran, as well as in Europe.

"We do not know of any authoritative military man who has told us how Germany can land in America, or how we can conquer Europe and Asia. Can a military equipment, which is admittedly built to match Germany's, overtake and destroy that of which it is an imitation? We are not mere defeatists. We believe that perhaps it can. But we must ask the question and are entitled to an answer.

"If we can win such a war, is it well that we should win it? We had a President once who prayed for peace without victory. I confess myself to be of Wilson's mind. For I do not see how such a victory could leave us with any idealism to carry out the points of the sea treaty. Instead we should be an empire, either a part of the British Empire, as some would have us be, or an American world empire, the old independent United States forever gone. We should have garrisons in Germany, Japan, and Italy, commissars of raw materials all over the world imposing an Anglo-American peace on the world, with one indispensable condition as its basis, the integrity of the British Empire.

"The imperialistic temptation to be lord of all the kingdoms of the earth is the greatest of all temptations to a rich and powerful democracy. We know what happened to Athens when she maintained such a peace; what happened to Rome when she went the imperialistic way; and what a dilemma now confronts Britain as she tries to develop democracy at home and empire abroad. You cannot evade that issue. Democracy and empire are incompatible terms. What our country needs is not empire abroad, but a new birth of freedom at home if government by the people is not to perish from the earth."

NEWSPAPERS ARE ASSAILED

Both Mr. La Follette and Mr. Flynn devoted a good part of their addresses to attacking the New York Times and the New York Herald Tribune as the principal interventionist organs in the country. Mr. La Follette declared that Hanson W. Baldwin, the Times military expert, believed that if the United States stayed out of the war it would be the most powerful Nation in the world and absolute mistress of the seas at the end of the war.

"Times editorial page, see your own military correspondent," Mr. La Follette shouted.

Mr. Flynn declared, while ushers took up a collection from the audience, that both the Times and the Herald Tribune had expressed great curiosity as to where the America First Committee funds came from and added that they came mostly in small contributions. There were, however, at least a dozen prowar committees whose source of income might be investigated, he said, adding:

"I challenge the New York Times and the New York Herald Tribune and the Fight for Freedom Committee to go down to Washington with me and demand an investigation of all the groups—prowar and antiwar. The 80 percent of the people in this country who oppose war are entitled to know who wants to get us in, and who wants to keep us out."

Mr. Flynn said his group had 35,000 contributors in New York City alone and that the number was growing rapidly. The collection taken last night included five $100 notes and hundreds of smaller contributions. The exact total was not announced.

The Bloody Jigsaw Puzzle That the War Crowd Seeks to Sell

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. MUNDT. Mr. Speaker, an old copy-book axiom has it, "Be sure you are right—then make full speed ahead." That is good advice. But in these days when even the best-informed in Washington have so few facts with which to be sure they are right, it is always possible that full speed ahead might take us most rapidly in the worst possible direction. Wise direction is of even more importance than speedy action in getting to the place where a person wants to go in the shortest time.

For example, even the reports reaching our military staff these days make little sense out of the confusion in the Russo-German war in which both sides censor so fully and claim so freely that one side would long ago have completely wiped out the other if the reports of either were altogether accurate. Unless a decision is reached on that front in the near future there is a grave danger that each side will have claimed more casualties for the other than full strength of the respective armies.

CONFUSING ACTION WITH DIRECTION

For a more specific test of the difficulty of determining direction before calling for action these days, try this one on your own stationery. Now, while censorship so effectively cloaks Japan, try writing a logical description which will at least satisfy your own sense of logic of American policy toward such countries as France, Finland, Russia, and Japan. Solving jigsaw puzzles becomes child's play compared with the job of weaving together such facts as the following in defining the logic of American attitudes. David Lasser is cut off the Federal pay roll by a congressional roll call because he is charged with helping Russia while being paid $4,800 per year of taxpayers' money as a Federal official. But Stalin is offered millions of dollars of taxpayers' money at the same time for use in helping Russia. If the part is bad, how can the whole be good? And if all of us are to help Russia by paying higher taxes to supply her with encouragement and armaments, why crack down on David Lasser for his individual crusade; to say nothing of Earl Browder, former head of the Communist Party in America, who now languishes in a Federal penitentiary for trying to do 12 months ago what has become a popular project now?

And, while we ponder about that, poor, little, honest Finland, oldest democracy in Europe and only foreign state to pay her war debts, finds herself now denied either credit or supplies in this country as she struggles to rid her territories of Russia, while we actually help enemy Russia hurt friend Finland, whereas we already admire Finland and abominate Stalin with the same repugnance that we feel toward Hitler and Mussolini.

THE PUZZLE GROWS MORE PERPLEXING

But the puzzle grows more perplexing as we switch from consideration of "dictatorial" Finland and "democratic" Russia to the problems presented by France, China, and Japan. About a year ago we were supplying airplanes and armaments to France to help her defeat Hitler whom we all abhor, and, until a few days ago, we were supplying aviation gasoline and other war materials to Japan to help her whip China whom we all admire. But we also loan millions of dollars to China and lend-lease her both planes and pilots to help her defeat the Japan which we in turn have helped. Confounding our complexity, we find ourselves now aiding those who would hinder the French whom we have previously helped, while the French whom we sought to help seem to be helping Germany whom we seek to hinder and to be aiding Japan whom we seek to both help and hinder.

Out of such a confusion of pronouns and policies, America struggles to bring the four freedoms to a warring world which does not want them by not fighting a war for which we have already spent over $50,000,000,000 getting ready to fight. And as one cynic said yesterday, "If we do succeed in imposing the four freedoms on Russia it will simply mean that the hammer and sickle will fly over more liberty than the stars and stripes because that will give Russia five freedoms, since they already have free love over there."

WHERE THE WAR CROWD WOULD HAVE LED US

One sometimes wonders what would now be the status of America had we followed the impatient urgings of the war crowd in this country who have been calling for "action now" almost from the very beginning of this war. When Russia was invading Finland the war crowd was urging the United States to send our ships, sell our planes, loan our resources, and deploy our fighting men to help the Finns beat back the communistic aggressors. Today, the same war crowd urges the United States to take the same steps and make the same sacrifices to help the Russians beat the Finns. Apparently if the interventionists had imposed their policies upon this country they would now have our armies standing up to their arm pits in the mud of some Russian bog, midway between Helsinki and Moscow, shooting in both directions with first one volley poured into the manpower of Finland to protect the democracy of Russia, sic, and next a volley fired into the armies of Russia to protect the democracy of Finland. Fighting on both sides of such a war might be quite a job for even Uncle Sam to undertake.

The war crowd has shown more enthusiasm for pushing us into war on other fronts as well than it has exactitude in determining whom we should

fight and for what cause. We now have a hundred American fighting planes on the French island of Martinique. They were sent there because interventionists had argued that Uncle Sam should help the French help the British.

Today, however, the same crowd is urging that this country get all the way into a war to help the British defeat the French who are to all intents and purposes aiding and abetting Hitler. Had we followed the impatient advice of those who always cry for war, our A. E. F. might have had to fight from rafts in the English Channel with guns trained on both coasts and alternating broadsides fired first toward England to "help the French" and then toward France to "help the British."

INTO ALL THE WARS—BOTH SIDES OF HALF OF THEM

Constantly changing events in Europe, Africa, and Asia indicate that had we followed the careless and confusing advice of the crowd now asking for war they would by this time have had our American fighting men involved in all the wars in the world, and we would have been fighting on both sides of about half of them. Obviously, either the early or the present advice of the war crowd was very, very bad advice for America to follow. And it seems just possible that both the early and the present advice of those who want us to mix up in the shooting and the killing overseas is much more impetuous than it is intelligent.

All of which is not intended to accuse anybody of anything nor to criticize any of my countrymen. It simply is recorded here to emphasize the difficulties of the situation and to point out to those who simply cry for action now how hard it is to be sure one is right these days. There is real significance for Uncle Sam today in the philosophy of the ancient Chinese proverb which says "Wise man make haste slowly when walking in a circle."

Maybe we Americans should determine carefully and completely which way and why before demanding full speed ahead.

Still Wanted—A National Labor Policy

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. BENDER. Mr. Speaker, after 8 years and more than 8,000 decisions, the national labor policy of the present administration remains as obscure as it was before 1933. Last week more than 1,500,000 man-hours of labor were lost because of strikes. The construction of ships valued at almost $500,000,000 was delayed. Tank factories, aircraft-engine production, gun manufacture, ammunition turn-out—every one of these highly important elements of our national-defense program stopped at least momentarily because of disputes.

For at least 2 years it has been apparent that something must be done to see to it that production of essential equipment for our armed forces continues, no matter what may be the nature of labor disputes in any plant. What point there may be to a defense program which operated at the whim of either labor or management no one has yet been able to discover.

A national labor policy is still in the making, we are told. It has been in the making for a long time. While it is being formed, our Army is drilling with brooms.

Why I Voted for the Service-Extension Bill

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

Mr. SABATH. Mr. Speaker, my reasons for voting in favor of the service-extension bill are as follows:

First. Because it will release all married men whose wives are not employed from active training and service under the Selective Training and Service Act of 1940;

Second. Because it will release all those who have attained on or before July 1, 1941, their twenty-eighth birthday;

Third. Because it will release from military service those persons or those whose families would suffer undue hardship if retained on active duty;

Fourth. Because I feel it will not be necessary for trainees to be in service for the additional 18 months and most of whom will be released long before, in corroboration of which in the recent announcement that over 200,000 draftees will be released before Christmas 1941;

Fifth. Because the American Legion has advocated preparedness and military training and, in this instance, the extension of time of service for those in our armed forces;

Sixth. Because the American Federation of Labor and all other labor organizations have urged defense, preparedness and training;

Seventh. Because I am interested in the future safety and well-being of America, its democratic institutions and its people; and

Eighth. Because I would rather have my country prepared to fight and not fight, than to be forced to fight without being prepared.

The war is moving closer and closer to us. And we are in danger not alone from military attack but also in peril on the economic front which endangers our freedom and our American standard of living.

In 1920 I strongly advocated our entrance into the League of Nations in the hope that our participation therein would be a vast force for good in the ending of all wars. In brief, my whole life until 1938 had been motivated by a deadly antipathy to everything which smacked of militarism.

In March 1938, however, on the basis of knowledge and information that I had obtained, I stated on the floor of the House:

Hitler is ready to take Czechoslovakia, the Polish Corridor, Poland, Rumania, and other small adjacent countries. Due to the division in France he may be able to defeat and crush that country, to take the Ukraine, and by then may be strong enough to defeat and dismember Great Britain, to move on South America, and to take Canada, with the result that we may have Mr. Hitler right at our door.

At that time I was attacked by the Nazi-Fascist appeasers, but, unfortunately, all came to pass, and more. Two years ago I pointed out that millions of dollars were being expended by Hitler propagandists in our country, as well as in Central and South America, in an effort to bring discord and disunity—the same pattern of action he had practiced and accomplished in 14 other countries whose freedom and liberty Hitler crushed. According to the pan-German method, a country is first divided against itself, its powers of resistance thus broken, after which panic is spread in the civilian population by means of bombing and machine gunning from the air, thereby rendering conquest easy, with a Quisling or Laval on hand ready to collaborate. We have had plenty of evidence of this insidious type of invasion.

It is to be regretted that some of our citizens do not realize the actual danger confronting them and are being misled by the tricky Nazi-Fascist propaganda. I have been combating this propaganda and the Hitler false charge that a democracy cannot function and must be destroyed.

I appreciate and realize that a majority of our people are opposed to war. So am I. So is President Roosevelt. And it is for the reason that I am opposed to war that I feel we must prepare and demonstrate our readiness to defend our country and the principles near and dear to us. By building up a strong defense, I feel that Hitler, Mussolini, and the Japanese war lords will hesitate to carry out their threats against us.

I have voted to give all possible aid short of war to Great Britain. I have stated on the floor of the House many times that I am opposed to sending a single one of our boys to foreign lands, as the Roosevelt and New Deal enemies within both the Democratic and Republican Parties have been charging our President of planning. By the aid we are giving Great Britain it may be possible to stop Hitler's grandiose dream of controlling not only the continents of Europe and Africa but also Central America, South America, and, eventually, our own country.

When Russia was attacked, as I prophesied, I felt that we should, in order to reduce our danger from Hitlerism, aid not only Great Britain but also Russia by selling her needed supplies which we possess to enable her to defend not only herself, her land, and her homes, but also

to aid Great Britain and, indirectly, our country.

Unfortunately, no one can foretell today whether or how long Great Britain and Russia can withstand Hitler's combined forces, consisting of the Axis Powers, reenforced by France, Bulgaria, Rumania, Hungary, and Finland, and further strengthened by the millions of subjugated peoples whom he has enslaved in the production of his implements of war. Today's newspaper headlines reveal that Nikolaiev, Russia's great Black Sea naval base, and Krivoi Rog, iron-ore center, have fallen; that Hitler's forces are about to take Leningrad and Odessa; that they have advanced hundreds of miles into the Ukraine; that most of Russia's tanks and air force have been destroyed; that the Japanese war machine is waiting to attack Vladivostok. With France's cooperation with Hitler and the close proximity of the French possession of Dakar to Brazil, we are in danger of attack from both the north and the south.

To creat prejudice the unscrupulous Nazi-Fascist propagandists and appeasers are now assailing Russia in an effort to make us forget the Nazi atrocities against religious leaders who have been imprisoned or thrown into concentration camps. In short, the Nazi-Fascist propagandists are devoting themselves in attacks upon Russia for causes that the Nazis themselves are trebly guilty of. But they cannot blind many of the American people to the fact that Hitler has been guilty of religious persecution and atrocities, where, on the other hand, Russia, months ago, granted and guaranteed freedom of religious worship. In this connection let us read what Mr. Justice Murphy of the United States Supreme Court has to say as to this situation. I quote from an editorial appearing in today's issue of the Washington Post. It reads, in part:

PROPAGANDA AND FACT

Fortunately, the great majority of Americans are well aware of the realities of the situation. While regarding communism with the same abhorrence as nazi-ism, they recognize, as Associate Justice Frank Murphy, of the United States Supreme Court, pointed out in an address to the Knights of Columbus meeting in Atlantic City Tuesday, that nazi-ism constitutes "by far the greater menace to free nations and free institutions."

Mr. Justice Murphy made it very clear how utterly fraudulent are the Nazi claims that the war on Russia is a crusade. For, from the very beginning, Hitler and his cohorts have proved themselves enemies of religion. Jews, Protestants, and Catholics have been mercilessly persecuted. Speaking as a Catholic to Catholics, Mr. Justice Murphy reminded his listeners that Nazi treatment of the Catholic Church in Germany is "a picture of systematic and sustained endeavor to drive a wedge between the Catholics of Germany and their traditional faith." "It is a picture," he said, "of the closing of churches, monasteries, convents, and schools on invented accusations and flimsy pretexts; of the regimentation of Catholic youth and the abolition of their youth organizations; of the elimination of Catholic-action societies and publishing houses, the surveillance and supervision of priests, and the destruction of business establishments through boycotts and blacklists. It is a picture of stealthy and demoralizing persecution."

In yesterday's Washington Times-Herald, under the column Voice of the People, I read a most effective answer to the Nazi appeasers. This article, written by E. F. Strand and headed "Roosevelt Can Stop the War if He Wants to," reads as follows:

The President could stop the war if he were a traitor to the principles of freedom and international decency—causes which it has taken the race thousands of years to place in constitutions and international law.

In light of what Hitler has repeatedly declared in his interviews and speeches and Mein Kampf with respect to the democracies, it is rank stupidity to think of a negotiated peace with the Axis Powers now or at any time.

This war must be fought to but one conclusion, and without compromise—the victory of the democracies—no matter the cost. Better for the race to go forward from where it is to higher levels of democracy than to experience a black-out only to ultimately resume the bloody climb up again to the present social and political levels.

I read with satisfaction another news item in yesterday's paper, which quoted extracts from a radio address given by Col. Robert McCormick, publisher of the Chicago Tribune, who opposed the service-extension bill and who assailed those who had the courage to vote for the extension to give our boys the proper training. The news release follows:

Col. Robert R. McCormick said in a speech prepared for broadcast over the Mutual Broadcasting System that German private soldiers have had "vastly more instruction than our Regular soldiers, than our National Guard officers, than our Reserve officers."

Terming it "the most momentous statement of my life," McCormick asserted:

"With all the billions we are spending on armament, we have not yet begun a system of training which would allow our boys to stand up for a day against these educated German soldiers."

"The valor of our soldiers has been shown in every war and on every field. But valor without military education means only suicide."

Mr. McCormick's statement shows very forcefully and clearly the dire necessity of an extension of training for our boys, for which I voted, and I congratulate Colonel McCormick upon coming to the conclusion that training is vital and necessary and upon making the fact plainly clear that sufficient training must be given to those who may be called upon—though I pray God they may not—to defend with their lives the most sacred and precious possessions we possess—our freedom and liberty.

I fully appreciate that no mother and father desires their boy to go to war, but I do know and I am satisfied that 99 percent of the American people value the freedom and liberty which this country affords them, and I know that they are willing and ready to defend it at any cost.

I regret that most of the communications I have received which contained sentiments opposed to my vote on this bill were signed by German-Americans, but I do know that they did not represent the 98 percent of old-line German-Americans who appreciate the freedom and liberty which they and their children enjoy. I am sure that these communications came from those who were permitted to enter our country within the last few years, in whom the foolhardy Nazi ideology has been inculcated, who became members of the bund and other Fascist and Nazi organizations, and who are guilty of unwarranted and unjustified subversive activities. Such activities would not be tolerated for an instant in the Nazi-controlled countries; and persons carrying on such activities, if apprehended, would be thrown into concentration camps and subjected to all the inhuman tortures and punishment, and even death, as only the Gestapo can inflict. Just today I noted in the press an article in which the writer reports that the death penalty is decreed for those persons who criticize the Nazis. The headline and article reads:

DEATH PENALTY DECREED FOR CRITICIZING NAZIS

"Anyone speaking against Germany will be hanged," says an order issued by the gauleiter of Alsace-Lorraine. The order also states that "anyone who speaks French, although he knows the German tongue, will be arrested and punished by 1 year in a concentration camp."

This same order is also in force in Poland, Holland, Czechoslovakia, Yugoslavia, and other subjugated countries, and should bring home to the American people the cruel, inhuman, and un-Christian treatment to which the unfortunate peoples of those countries are subjected under Nazi rule and domination.

Mr. Speaker, in contrast to the world-wide prevailing conditions, no one can justly deny that this is the freest and best country in the world and one which deserves to be defended and will be defended against any and all enemies, regardless of whom they might be.

These have been and are my reasons for voting in behalf of the recommendations of our military and naval experts. And I am satisfied that if the American people would clearly understand the situation confronting our country, they would not be misled in the slightest by the high-powered Nazi propaganda by the Quislings, and so forth, which has been going on in our country. The majority of our people, according to the Gallup poll, are in full sympathy with President Roosevelt and the Congress in aid to Great Britain and in our own preparedness program, which proves that the deadly policy of appeasement—the ruination of so many European countries—has not yet fastened its death-dealing grip upon this country's throat. Appeasers in Great Britain believed they could not be attacked, but they know better today. The will to be free and to live, not like slaves and serfs, but as a free and independent people, is, please God, still burning in the hearts and minds of most of our people. In casting my vote in favor of the service-extension bill I have kept the faith with these loyal and true Americans, with their children and their children's children yet unborn, and with my beloved country—the United States of America.

Iowa Newspapers Call St. Lawrence Project a Fanciful Dream and a Presidential Hobby

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIALS FROM IOWA NEWSPAPERS

Mr. VAN ZANDT. Mr. Speaker, despite the fact that advocates of the St. Lawrence project have laid down a barrage of statements that the people of Iowa and her sister States in the great Midwest are jubilant over the proposed St. Lawrence seaway and power project, the editorial comment of leading Iowa newspapers expose such manufactured exuberancy as a skillful part of the torrent of propaganda now flooding the Nation in an effort to win support for what is termed the President's hobby ever since he was Governor of New York

The editorials give the Canadian viewpoint, deride the preposterous claim that the St. Lawrence project is necessary for national defense, urge steam plants to cope with any possible shortage of electric power, and expose the fallacy of diverting billions of dollars and much needed manpower to a project that is only a Presidential hobby.

The editorials referred to are as follows:

[From the Marshalltown (Iowa) Times Republican of June 21, 1941]

WATERWAY CAMPAIGN OPENED

President Roosevelt has turned loose all his available batteries in his efforts to induce, inveigle, or force support in Congress and in administrative circles of his pet hobby, the St. Lawrence waterway. The national-defense plea is being stressed, and it is a potent weapon in influencing timid Members of Congress and those who follow the New Deal leadership blindly.

Arthur Krock, Washington correspondent of the New York Times, asks a timely question which comes very near to answering itself in the negative. The question is, Can a long-range defense program be executed at the same time an immediate one—all aid to Britain—is taxing all the resources of the United States?

Further, Mr. Krock questions the wisdom, from the standpoints of Britain and our own rearmament program, of diverting men, money, and materials to a project which cannot be functioning for several years—probably not within a period of 4 to 5 years. There is sharp division of sentiment in administration circles in Washington, including the Congress, and a determined effort to override the strong arguments of the opposition. Although there are differences of opinion among those constituting the Office of Production Management, the services of the big chiefs in that department have gone on the verbal firing line, inclusive of Secretary of War Stimson. Even that ordinarily level-headed Secretary of State, Mr. Hull, has been induced to lend his support to the waterway project.

To the opposition it seems incredible that a Government which, by the confession of the President's first report on lease-lend shipments, has hardly begun to furnish essential aid to Great Britain in its time of growing exigency, should insist on diverting any effort or resources to a long-range project. Already there is a labor shortage for work in hand, and the strikes have delayed important armament construction. There are present and approaching shortages in arms materials. While the requested initial sum of $200,000,000 is mentioned almost contemptuously by the spenders of the tens of defense billions, it would build many airplanes and ships, the prime requisites of the British.

Efforts are being made in Washington to induce Canada to lend its moral and financial support to the proposal. Power shortage is a reality in Canada because of war demands of the mother country, but this handicap could be overcome by the building of steam power plants along the border with the aid of United States capital. The administration brushes aside such suggestions.

[From the Council Bluffs (Iowa) Nonpareil of March 24, 1941]

SEAWAY INEXPEDIENT

An agreement to start the perennially discussed St. Lawrence seaway has been signed by the United States and Canada, but there is still hope that this highly inexpedient project can be postponed again and indefinitely. The agreement is subject to approval by our Congress and the Canadian Parliament, and both should go thumbs down on it.

Impractical and unnecessary at any time, the St. Lawrence seaway is almost ludicrously so now when every financial resource and every ounce of manpower in both nations is being called into play on the war-emergency defense effort. It could not be completed in less than 4 or 5 years and would divert labor badly needed in more immediate ways. If power is desired, steam plants will produce it far more speedily and economically than the seaway. It is likewise true that railroad lines are more than able to take care of all the traffic in the area and that they represent a great established investment that needs business to make it profitable.

Incidentally, under the proposed set-up the United States would pay most of the cost while Canada would reap a major share of any benefits from either construction or operation of the seaway. The seaway would be bad business for us from every angle, and Congress should put its foot down hard. It really isn't as though we needed heavy additional appropriations on the American taxprayer, even if the feasibility of the project were as sure as it is doubtful.

[From the Boone (Iowa) New Republican of March 25, 1941]

THE SEAWAY AT LAST

Probably no public project has been subject to so much controversy as the St. Lawrence seaway. Not even the Panama Canal nor the World Court provoked so much discussion. It started way back in 1909. All the Presidents are said to have been for it, although we distinctly remember that when this paper advocated it as a help to farmers, Mr. Coolidge was against it.

It is hard to determine whether the St. Lawrence seaway is a potential asset or a plaything. The general opinion is that it is a New York State project. There has been a good deal of argument over it even in New York. Al Smith was for it. The New York Harbor heads are opposed to it. The present New York Assembly is against it, one chamber having passed a resolution against its construction, with the other chamber about to follow suit. Of course, all the proponents of the Great Lakes to Gulf waterway are against it.

Nevertheless, the probabilities are that the seaway will be constructed. It is now a national-defense measure. Mr. Roosevelt has arranged an agreement between the United States and Canada under which a simple majority in Congress is sufficient to get the measure through. A treaty making the seaway possible would probably not get the necessary Senate ratification. It never has and making two-thirds of the Senators see the project as a defense measure and thus justifying the expenditure of many millions would be no easy task. But a majority vote can do it now.

The fact of the impracticability of the seaway was demonstrated by the way it went into limbo after its last defeat in the Senate. The only thing that could possibly resuscitate it was defense. But how much a canal which will not be finished for 5 years, and maybe not then, is going to help our national defense is hard to see. The 300 millions and more could be better spent on other things.

The 27-foot St. Lawrence channel planned will not permit the construction of vessels of any size in Great Lakes shipyards. Big ships could not use it, only coastwise vessels and tramp steamers. It would be closed to navigation by ice for half the year. Its benefit to the Western farmers has become extremely doubtful. Even Canada, as can be seen by Prime Minister King's note of March 5, 1941, is not convinced of the need of the St. Lawrence project.

Just the same we'll probably get it.

[From the Atlantic (Iowa) News Telegraph of March 22, 1941]

ST. LAWRENCE WATERWAY

The St. Lawrence River power project is again before the public, this time as a defense measure. As a matter of fact, this power project is about as essential to the national defense as a dam across the Nishnabotna, but the President wants it, and sees in the current defense crisis an opportunity to force his favorite project down the throats of a Nation which has once already rejected the scheme.

This characteristic in the President is one which creates grave doubts concerning his sincerity in the minds of many people. He has his favorite schemes, which is natural, but his willingness to use any emergency which arises as a means of furthering his pets, makes his constituents feel that he is not acting fairly with them. No doubt the St. Lawrence project is a fine thing. However, it will cost a tremendous sum, it is not essential to the defense program and is not necessary to the welfare of the country in any other connection, therefore its construction should be deferred until such time as it is needed, or until the Nation is in a better position to afford it.

[From the Atlantic (Iowa) News Telegraph of March 27, 1941]

PRESIDENT'S THINKING

President Roosevelt has long been recognized as a man of dreams but lacking in organization ability and a knowledge of management. Even now the Nation is littered with the remains of dozens of his dreams which were too ethereal in quality to stand the test of everyday life. The Passamaquoddy tidal-power project in Maine and the Florida ship canal are two notable and expensive examples of Presidential dreams which turned into nightmares for the taxpayers and were finally abandoned partially completed.

The St. Lawrence waterway promises to develop into another of these white elephants unless Congress has the stiffness of spine to stop the Presidential plans in this direction. Typical expressions of the President's careless thinking concerning such matters are his comments on the necessity for this waterways project. He says he desires the project so that it may furnish power for defense industries, but engineers state that no power could be made available before 1947 at the very earliest. They point out further that Canada is now exporting surplus power and

that this country has tremendous quantities of power available and at present unused in the Fort Peck, the Grand Coulee, and other dams over the country. They also argue that if power becomes an immediate necessity, steam plants can be built much more easily and speedily than any such project as the St. Lawrence waterway. To this the President replies that the building of such plants would require skilled labor, which is not available, ignoring the fact that the water project would also require skilled labor in large and unavailable quantities.

Another argument which the President is fond of advancing in favor of this his latest pet project is that, once it is finished, seagoing vessels could be built in Great Lakes shipyards. What advantage there would be in this is hard to see, because in times of peace most of those shipyards already in service along the coast stand idle, while surplus ships rot at their docks. If the ships of which he speaks are needed in this present war, he has started too late on this project to do much good. In this argument he also overlooks the fact that before seagoing vessels could be accommodated in Great Lakes ports these ports would have to be deepened and their facilities rebuilt. This would cost millions.

Another incidental which the President has overlooked, but which engineers are worrying about, is the matter of handling the ice in the river. In the spring 500,000 tons of ice an hour swirl down the great stream. Obviously some provision must be made for caring for this load. (We might suggest a housing project for Eskimos.)

Finally, this dream will cost the hard-pressed taxpayers about half a billion dollars, and the Nation just cannot afford it at this time. Of course, these details make little difference to the happy dreamer in the White House, who sees only the fancied need for this waterway as a defense measure. He is working hard for this project, so do not be surprised to hear that it has been inaugurated one of these days.

We cite the above as a classic example of the way in which the President's mind operates. It is nothing against him that he is not as practical as he should be in matters of so great moment, but it is something to be held against him that he does not recognize this weakness in his make-up and compensate for it by listening to the advice of practical men, men who know and understand the costs and difficulties involved in making the Chief Executive's dreams come true.

[From the Maquoketa (Iowa) Community Press of April 17, 1941]

OUR NATION HAS NO USE FOR THE ST. LAWRENCE POWER PROJECT

Like the perennial dandelion, the St. Lawrence River project is again before the public, this time as a defense measure. In our opinion this power project is about as essential to the national defense as a dam across the Maquoketa River in Jones County to produce electricity on a national scale. The real reason that this matter is being pushed now is that "the President wants it," and sees in the current defense crisis an opportunity to force his favorite project down the necks of a nation which has already rejected the visionary idea. It is a project that should be given thumbs down by our National Congress.—Monticello Express.

[From the Oskaloosa (Iowa) Herald of April 7, 1941]

ST. LAWRENCE—NEW STYLE

Seven years ago President Roosevelt submitted the St. Lawrence River seaway and power project to the Senate in the form of a treaty that required a two-thirds vote of approval to make it effective. The Senate failed to approve it. Now the President returns to the same subject, this time with an agreement—signed at Ottawa—which will not require a two-thirds vote of approval but merely a majority vote to provide the necessary money.

For this method of whipping the devil around the stump some justification might perhaps be found if the St. Lawrence project could be described as an imperatively needed defense measure. But how can this be said of a project which, by Mr. Roosevelt's own definition, cannot be completed until 1945? The President offers the explanation that we are today appropriating money for the construction of warships, which also will not be completed until 1945. But this comparison is less an argument for supporting the St. Lawrence project than it is a reason for doubting the wisdom of clogging our shipways by laying down battleships that cannot be completed for 5 years when our shipbuilding facilities are so urgently needed for merchant ships and destroyers that can be turned out quickly to meet the threat of Hitler's all-out attack on sea.

The plain facts are (1) that the St. Lawrence project cannot possibly be of the slightest use, either to Canada or the United States in a crisis, this year or next year or the year after that or the year after that; (2) that if Canada and the United States need more power for defense work they can get it much more quickly, either at Niagara Falls or by building steam-electric plants; (3) that instead of promoting defense the St. Lawrence project promises to get squarely in the way of it by diverting an army of men, colossal amounts of material, and whole trains of railway cars to the St. Lawrence at a time when there is crying need for planes, tanks, guns, and ships.

The President has chosen an unfortunate method of reviving a favorite project. On grounds of defense efficiency his request for appropriations to support it ought to be rejected.—New York Times.

[From the Dubuque (Iowa) Telegraph-Herald of April 9, 1941]

NO PRICE BENEFITS

Proponents of the St. Lawrence seaway have argued that lower-cost transportation by this proposed route will mean higher prices for shippers of grain.

But the Food Research Institute of Stanford University, after a study of the subject, says:

"We conclude, therefore, that even from the standpoint of the proponents of the St. Lawrence seaway a good case cannot be made out for benefit to American wheat growers; and the opinion prevails in Europe that 'so long as the initiative of importing rests with the importer, and the exporters press abundant supplies upon Europe the importing continent will receive the benefits of improvements in transportation resulting in lower costs from distant farms in exporting countries.'"

The European buyer, in other words, will fix the price. The American farmer cannot dictate prices when he is carrying tremendous surpluses. And the European price will be the lowest obtainable; the advantages, therefore, of a lower-cost transportation system will go to the buyer, not the seller.

The only possible advantage to the seller will be the opportunity to offer a lower price and get a market. But whether that will be offset by the subsidy Uncle Sam will have to carry will depend on how much Uncle Sam pays for the seaway.

[From the Ottumwa (Iowa) Courier of March 28, 1941]

UNWISELY TIMED

Late last spring a comprehensive report came out on the St. Lawrence seaway, which completely showed the project to be economically unsound. It was issued by the Niagara Frontier Planning Board, Buffalo.

This survey is of renewed importance now, the St. Lawrence project having been presented to Congress. It is not the first time it has been sent to the lawmakers by the President. The New York Times, in a recent issue, sketched the project and legislation sought for it.

The St. Lawrence River seaway and power proposal was submitted to the Senate by Mr. Roosevelt 7 years ago. Then it was in the form of a treaty. Treaties require a two-thirds majority to be approved. This one failed to get it. Now the project has been sent to the Senate again. This time it is in the form of an agreement, and an agreement only requires a majority vote to get an O. K. and the necessary money.

If the St. Lawrence project were an imperative defense measure, its staggering cost would have a better chance of being overlooked. But it is not vital to this Nation's protection against war or enemy.

In the first place, by the President's admission, it can't be completed for 4 years. So how can it be of any benefit to the United States or Canada until 1945? If the two nations must have more power for defense, they can get it at Niagara Falls or by building steam-electric plants. It seems to us the Roosevelt administration has gone crazy on power plants, as it is. We certainly can't need many more, for defense or anything else.

Even for normal times, the cost of the proposed waterway is tremendous. In times like these, when we are spending money so lavishly for needed defense projects, it would be nothing short of tragic to enter on any such unnecessary project as this. Our country needs all its money, men, and materials for defense programs. Proponents claim the St. Lawrence project would do just the opposite. It would get in the way of defense because it would divert men, colossal amounts of materials and transportation facilities to the St. Lawrence just when there is a crying need for planes, tanks, guns, and ships; together with men to make them, and railroad facilities to transport them.

The St. Lawrence seaway proposition is uneconomical, extravagant, and untenable at this time. The President chose unwisely when he selected the present to revive a favorite project. The Senate should reject his request on the grounds of efficiency in defense, if for no other.

[From the Storm Lake (Iowa) Pilot Tribune of April 17, 1941]

WONDER IF IT'S NEEDED

About every so often the proposed St. Lawrence River canal and the even more famous proposed Florida canal break into the news.

The Florida project isn't quite so moth eaten as the St. Lawrence River proposal. We've been hearing about the St. Lawrence canal years and even recall once 12 or 15 years ago when the late Governor "Bill" Harding made a speech in Storm Lake in favor of its immediate construction. Of course, Ex-Governor Harding was being paid to boost for the canal but at that, he advanced some pretty good arguments.

Nothing came of it at that time and the project went into a coma for years. Then along rolls the war. The St. Lawrence Canal comes to life again. This time it is being promoted in the name of national defense.

Observers of conditions say, however, that it is a 5-year job to get the St. Lawrence project to working. Even the worst pessimists believe the war will be over before then.

It is estimated that it will cost a billion dollars to complete the St. Lawrence seaway and power project. Certainly, we can use a billion dollars to better advantage than in the construction of something that seems to

have little bearing upon our future prosperity.

While boosters are putting out arguments that it will be possible to save 3 cents per bushel in carrying charges on grain, that's quite problematical. It reminds us of arguments for the Missouri River dredging project that we've been dreaming about for so many years. If northwest Iowa farmers have benefited from the millions that have been spent to make the old Mizzoo navigable, we'd like a specific statement as to how, when, or where.

Looks more as though the taxpayers of the United States are being asked to subsidize a hydroelectric power development along the St. Lawrence that is of no special benefit to the Midwest and in reality will give Canada an opportunity to compete with our industry and labor later. We're fornenst it, whether it is disguised as a defense move or out in the open.

[From the Council Bluffs (Iowa) Nonpareil of March 24, 1941]

ST. LAWRENCE SHIP CANAL

The St. Lawrence ship canal will soon be before Congress again as a result of the agreement signed between the United States and Canadian Governments to cooperate in the construction. It is to be pushed as a defense measure.

An engineering report on the cost estimates the over-all total as $266,170,000, of which $38,578,000 would be for works solely for navigation, $96,804,000 for works primarily for power, and $130,788,000 for works common to navigation and power.

Immediate objectives are an outlet for shipbuilding facilities on the Great Lakes and an increase in the power derived from the St. Lawrence.

The President insists that additional power will be needed as the defense program expands. He recently declared that one of the most serious handicaps to rapid expansion of airplane production was the difficulty of finding the large supplies of high-load factory power required for aluminum production.

Despite the present expansion of electric facilities, he said that by the time the new St. Lawrence power becomes available other sources of cheap power will have been largely allocated.

On the deep waterway phase of the project Mr. Roosevelt said a great expansion of shipyards would be necessary for defense; that if the war were protracted, the number of shipyards required would be several times those now available; and that many of these can be had most readily and economically in the Great Lakes area.

It is difficult to see how the proposed development can have any great effect on the defense program. It cannot possibly be completed for 5 years. It looks like just another of the President's schemes to get Congress to approve a pet project rejected in the past.

The St. Lawrence Canal would be of little or no benefit to the Middle West. Our grain export markets are lost, perhaps forever. The canal might even hurt the farmers. Not so long ago a number of small ocean-going boats from South America came through the circuitous St. Lawrence route and unloaded their cargoes of grain in the Midwest. This raised havoc with grain markets in the area.

A completed St. Lawrence Canal would enable South American countries to dump vast quantities of corn and wheat and other products on the very doorsteps of midwestern farmers.

If western Senators and Congressmen are awake, they will vote against any appropriation for this project at this time.

[From the Sheldon (Iowa) Mail of June 11, 1941]

With the prophecy and warning that at least 3 or 4 years of unlimited emergency and European war may well be in prospect, still President Roosevelt urges spending $285,000,000 upon the St. Lawrence seaway and power project. Just why he urges this vast expenditure, which cannot be accepted as a defense measure, is difficult to explain.

Imperative National Defense

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

RADIO ADDRESS BY HON. TOM CONNALLY, OF TEXAS

Mr. BARKLEY. Mr. President, the distinguished Senator from Texas [Mr. CONNALLY], chairman of the Committee on Foreign Relations, on Saturday last delivered over the radio an address which cogently and ably sets forth the imperative need of national defense. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Government of the United States is making heroic efforts to provide for the national defense. Flanked by two oceans, I have always felt that we should build a navy superior to any afloat. If we dominate the Atlantic and the Pacific, no enemy, either from Europe or Asia, could ever land on American soil. We are now building a navy which will excel any in existence. It will include aircraft and auxiliary arms.

Armies still require infantry, artillery, and auxiliary services. The United States has adopted a program under which an army of 1,400,000 men, consisting of the Regular Army, the National Guard, and selectees shall be trained and equipped in the most modern manner. The gallant young manhood of the Nation has responded with patriotic ardor and training camps are now functioning in many States.

An army requires food, clothing, housing, modern equipment, arms, munitions, and a great variety of supplies. The integration of industrial plants for the production of defense articles has been organized.

The most vital instrument of warfare is the airplane. For our own armed forces and for lease-lend purposes the production of airplanes has been vastly increased.

During the World War the modern tank first appeared on the battlefield, though it did not prove a dominant factor in that war. The tank has become of high importance. We are now building small and medium tanks in substantial volume.

For military reasons exact statistics as to airplanes, tanks, artillery, and other equipment should not be divulged, but the country is entitled to know that the War and Navy Departments are vigorously prosecuting the increased production of these essential weapons.

The new Garand rifle is being manufactured in increased volume. The Army has on hand 3,000,000 of Springfield rifles. The Ordnance Department has established plants for the manufacture of powder and explosives, shell loading, and other ordnance plants.

Why is the United States making herculean efforts to arm the Nation? We are not a warlike Nation. History proves that we do not covet nor plan the conquest of our neighbors' soil. Free Cuba is a denial of imperialistic ambitions. The independence of the Philippines is our witness that we do not harbor schemes of empire. Why, then, do we arm?

We arm to defend our liberties against the poisonous Nazi philosophy, the ruthless Nazi tyranny, the frenzied Nazi ambition, to conquer by arms, at the sword's point, by the shock and concussion of the bomb, and by the deadly thrust of the lurking and covert submarine peaceful and inoffensive nations. Nazi ambition is not confined within geographic boundaries. It pauses at no frontier. It acknowledges no limit, either upon land, or upon the sea, or in the air to the sweep of its arms. Like the Count of Monte Cristo, it exclaims, "The world is mine."

The world is familiar with the withering march of Nazi legions—Austria, at a single sword thrust, collapsed. Czechoslovakia, by a single stroke of the mailed fist, was subjugated. Poland, resisting, was manacled and, upon war's operating table, dissected in a fashion more cruel than her three dismemberments more than a century ago. Norway, Denmark, Holland, Belgium, engaged in peaceful pursuits, innocent of aggression, were brutally bludgeoned into servitude. Bulgaria and Rumania, seduced by flattery and assailed by threats, succumbed. Jugoslavia and Greece were harried, machine-gunned, and bombed into submission.

Turning upon his supposed ally, Hitler suddenly and without apparent provocation, thrust his armies into Russia. However much we may disagree with Russia's theories and economic concepts, the Russian people have an undeniable right to live upon their own soil, in their own homes without being butchered by a cruel conqueror. The Russians have gallantly resisted the invasion of their homeland. Notwithstanding losses, they continue to fight valiantly.

Events speak a language more clearly than do words. Transactions carry a meaning which do not dissemble. Deeds are more revealing than cryptic or ambiguous phrases. What has happened in Europe, battles, conquests, the bombing of women and children more clearly reveal the schemes of Nazi Germany than any diplomatic note or speeches of the Fuehrer.

What we have already witnessed is proof that if Russia collapses, the engines of death and destruction will be turned upon Great Britain in a desperate design to conquer and enslave that historic land. It is proof that Spain and Portugal may fall before the Nazi march. The action of the Vichy Government of France and its servitude to Hitler may render it easy for him to master northern Africa, and to acquire the French Fleet. France arouses a deep sense of pity. Marshal Petain and Admiral Darlan have broken with a great and glorious past. In 1918 American soldiers shed their blood in the defense of French liberty. Now the Vichy Government embraces the former enemy and her recent conqueror and, deserting the historic fight of a century and a half of democracy, plunges into dark and hopeless totalitarianism under foreign tyranny. Americans, revering the memory of Lafayette weep for France amid her tragedies and humiliation.

The United States has pledged to defend the Western Hemisphere against foreign aggression. We have reaffirmed the pronouncement of President Monroe. We have declared that no non-American nation shall set up any part of its system in the Western Hemisphere. Already sporadic incidents in Latin America reveal Nazi infiltration and plotting to saturate Latin America with Nazi philosophy.

It requires no penetrating vision to foresee that, if Nazi armies master the Continents of Europe and Africa, their ambitions may soon leap across the seas to the Western Hemisphere. Modern aircraft and modern warfare can span the Atlantic in far less time that it took Columbus to reach the shores of the New World. We arm to resist the tide of conquest. We arm to challenge the defiance of international law, and the denial of the freedom of the seas. We arm to resist the enthronement of the sword as the ruler of the world.

The Congress, under its constitutional powers and with the sanction of the people of the United States, has adopted a policy of aid to Great Britain and the democracies resisting aggression. Within itself this was a national-defense measure. It was for defense that we acquired Atlantic naval and air bases, stretching from Newfoundland to Trinidad. In the national defense and at the invitation of its Government, our armed forces have occupied Iceland. For the national defense, if Vichy undertakes to permit German control of Martinique or any territory in the Western Hemisphere, we shall seize that island or any such territory, and hold it by armed force. Aid to the democracies, maintenance of the Monroe Doctrine, and our own safety and defense require that the Nation continue the gigantic program of national defense until we shall be so well armed and so strongly fortified that no foreign aggressor shall ever undertake an attack upon any point in the Western Hemisphere.

America has already, with a generosity unparalleled, given of her resources toward the achievement of these objectives. Stupendous sums have been expended. Congress is about to enact a tax bill which will require new sacrifices and heavier burdens.

These heroic measures are all dedicated to insure the safety and the lives and the liberty of our people. More than a century and a half ago the Colonies, moved by a conception of independence and free government, dared to fling defiance at the foot of a throne. Ragged continental armies suffered and starved and struggled through 7 years of blood and anguish under Gen. George Washington. By their fortitude, their courage, and unflagging faith independence was won. On the battlefield the royal standard was pulled down and in its place were lifted the banners of a free people. We have grown and prospered and expanded under constitutional institutions and under the processes of democratic government. We do not propose to surrender one item in all the shining catalog of American achievement. We refuse to erase a single line from the Constitution, ordaining free government. We refuse to bow our necks to any foreign yoke. We shall yield not an inch of territory nor yet an atom of our freedom to any conqueror, or totalitarian dictator, whether he comes from Europe or from the far reaches of Asia. We shall continue to arm. We shall continue to build an impregnable defense. We shall lift higher the ramparts of our freedom. We shall strengthen and fortify the citadel of our liberty. This is our America. It was our fathers' America. By all the sacred pledges that flow in our blood it shall be the America of our sons and their sons.

The Freedom of the Seas

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by the distinguished junior Senator from Pennsylvania [Mr. GUFFEY] on August 22, 1941, on the subject of freedom of the seas.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Freedom of the seas is not a new idea for America. The navigation acts under King George III first restricted our commerce, and every schoolboy knows they were one of the causes of the Revolution. "Freedom of the seas" was the battle cry of the War of 1812. It was a factor in the War between the States, when the Alabama claims incident arose between the United States and Great Britain. It was involved in the Battle of Manila Bay, when the British Fleet stood by to prevent German warships from intervening against Admiral Dewey. In the last World War it was a vital part of the democratic system we fought to preserve.

A great President, who has handled the foreign affairs of our Nation brilliantly throughout the years, that saw the rise of Hitler in Europe, and the growth of Japanese militarism in the Orient, now warns us that freedom of the seas is again threatened. He speaks from his own experience as the head of our Nation, with full knowledge of the facts and their background. I cannot think of any man in the world as well qualified, by ability, experience, and true regard for the interests of America, to advise us on such matters.

Yet there are many who will not listen. No hostile fleets have opened fire on our shores—yet. No flights of enemy bombers have spread death and desolation across America—yet. We do not yet see war; we do not yet hear it. The Atlantic lies across the path of the conqueror, and all too many feel it is our moat, protecting the castle of our supposed "splendid isolation."

Can this be true? Can we depend upon the Atlantic on the one side, the Pacific on the other, to protect us from the wave of barbarism that has swept across Europe, washed against the shores of the British Isles and rolled alarmingly onward toward the rest of the civilized world?

The isolationists tell us it is true. They ask why should we "meddle" in the affairs of nations far away, why should we concern ourselves over the fate of Britain, why, in effect, should we not just stay at home minding our own business? It sounds plausible. Many are deceived by it, including not a few of the isolationists themselves. Many believe because they want to believe. It is inconceivable to them that the world we have known can end, and because it is inconceivable, because in so many ways it is utterly fantastic, they simply reject it. I say fantastic, for who would have dreamed that so much of the face of the world would be changed in the months since September 1939, when Hitler invaded Poland?

We all long for isolation from the brutal ruthlessness, the savage barbarity, of the conflict abroad. But there is no isolation. There cannot be, in a world of long-range bombers, a world of conquest by propaganda and "fifth columns," a world of economic warfare. Were the Axis to win we would not be isolated; we would be surrounded. We would be blockaded. We would be imprisoned on the North American Continent. We would be starved out economically, the lifeblood of our trade shut off, the vital materials for our industrial machine bottlenecked by foreign dictators.

The isolationists tell our people, and tell each other hopefully, that America is economically self-sufficient, that we can build a fence of guns and warships around our continent and live in peace and prosperity inside it. This is a tragic delusion, for we would soon find ourselves in a vast Nation-wide concentration camp.

I want to tell you why this is so. Those of you who live in the great seaport cities of America—Boston and New York, Philadelphia and Baltimore, New Orleans and Galveston, San Francisco and Seattle—and in the other large and small seaports which dot our shores, have watched the ships loading and unloading. Others, in midland cities, on the farms of the great Middle West, have not seen the cargoes pouring into America from the seven seas. But every American, young or old, has enjoyed the fruits of that commerce.

We cannot doubt that, if Hitler and the Japanese militarists were to control the seas, they would waste no time in shutting off not only our exports but also our imports of vital raw materials. They would unquestionably launch an economic war against us, for their own dictatorships would never be safe so long as one citadel of democracy still remained standing anywhere in the world.

Let us see just what would happen to us, assuming for the moment that they would not turn their military machine against us—in other words, that they would leave us to our so-called isolation.

We need manganese and cannot produce enough of it at home to run our steel mills. Most of it comes from Russia, India, Africa, and the Philippines. If the Axis controlled the seas, how would we get manganese?

We have a chromium shortage also. Ore reserves of manganese and chromium are being developed here, in Brazil, and in Cuba, but only in limited quantities. We have enough chromium to carry us for only a brief period after our present stocks are gone, and they may be gone in 6 months at our present and prospective production rate. If the British Fleet were to fall and Japan were to control the great eastern gateway of Singapore and the Indian Ocean, our steel mills would have to shut down.

Manganese is a real vital defense material. The Office of Production Management production schedule calls for a consumption of 1,300,000 tons this year and 1,500,000 tons in 1942. This year we will produce only 40,000 tons of manganese in the United States, and without greatly increased Government assistance we will be able to produce a maximum of only 150,000 tons next year, with little if any increase the following year. I am in favor of encouraging manganese production at home, and will work and vote to

achieve that objective. Tungsten, antimony and tung oil are vital defense materials and a great quantity comes to us over the Burma Road, indicating the practical necessity for immediate aid to China.

When we speak of Singapore we think of it as the protector of the sea lanes for our supplies of tin and rubber, as well as quinine and other drugs. We know how important tin and rubber are. If they were cut off, we would have only a small supply on hand. We are preparing to manufacture rubber substitutes, but present plans provide for only 80,000 tons a year, and we normally use 600,000 tons of rubber. Were we cut off from the Dutch East Indies and the Malay States, as Japan is now threatening by its moves in Indo-China and Thailand, we would be forced to depend upon substitutes and reclaimed rubber. For inner tubes and side walls of tires, crude rubber is essential. This would mean drastic curtailment of every industry, defense or otherwise, which uses rubber—not least among them the automobile industry. Japan would simply have us throttled.

Tin is another vital metal that would be shut off. Stock piles are being built up, substitutes are encouraged, conservation measures have been taken, but we would still be in a desperate situation if our sea lanes to the East could not be kept open. Some think we could salvage tin cans, but out of 80,000 or 90,000 tons of tin needed each year less than 1,000 tons can be salvaged from tin can scrap. During the last war, in spite of maximum efforts, only 400 tons of tin from cans and containers were salvaged in 1918. We have contracted for about 20,000 tons of tin a year from Bolivia, and are building a smelter for it in Texas, but this accounts for less than one-fourth of our normal needs, to say nothing of defense requirements, and even to transport this we must keep our sea lanes open.

There are other materials for which no adequate substitutes have been found. Graphite is one of them. It is used in crucibles, and crucibles are the backbone of defense production. It comes from Madagascar and Ceylon, although we have a supply of an inferior grade being developed in Alabama. The stock pile of this material is virtually nonexistent, and even now our industrial machines are consuming it as fast as the boats arrive.

Mica is another important material. We get a fairly good grade from South America, and we have a great deal in our own country that is satisfactory for electrical work, but we have to go to India for the mica in the spark plugs that keep our own air force flying and for the vast bulk of all strategic uses. Our supplies on hand are only enough for less than a year's reserve. The Malay States furnish us kapok, used in Navy life preservers, and extracts of essential barks used in the tanning of leather. Palm oil, an essential element in the steel industry's tinning process, comes from the East Indies. Burlap and jute, necessary for sacking and electrical cables, come from India.

All of these materials, and many more, are transported from the far corners of the earth, under the protection of the guns of the British and American Fleets, to make our industrial life possible—to say nothing of our defense production. They depend on free access to the Indian Ocean and that depends on Singapore.

If the British were to be conquered, and the protection of their Navy removed—if Singapore and the other great British bases were to fall—if the Empire were to be divided and conquered—if the Axis navies were to control the seas—how could America get these materials?

We have a magnificent Navy, and will have an even stronger one in the near future, but it would be utter folly to plan, cold-bloodedly, to match it against the combined navies of Germany, Italy, and Japan. It would be insanity to expect it to patrol and guard the tens of thousands of miles of sea lanes which must be kept open. Yet that is what the isolationists apparently expect us to do.

It may be argued that a negotiated peace with Hitler would solve all our problems. We should remember that Russia negotiated a peace with Hitler before he invaded Poland. Your daily newspaper will tell you what happened to that peace if you do not feel sufficiently warned already by the fate of Belgium, France, the Netherlands, Greece, and the other countries which now lie prostrate under the swastika.

The very materials which make possible our great production of consumers' goods, giving us our high standard of living, are also essential to armaments. If Hitler controls the seas, you may be sure he will take care that we do not get them. Without them, we would lack the means of defending even our "isolation," to say nothing of our world trade and sources of supply.

The impossible dream of isolation breaks down in the face of such realities as our need for tin and rubber, tungsten, manganese, antimony, graphite, mica, and the other imported articles without which our mills and factories cannot operate.

Both our defense effort and our normal economic life depend upon the outcome of the battle of the Atlantic and the battle of the Pacific. Our future is at stake, as well as Britain's. Our bread and butter is just as much involved as our ideal of democracy is involved. Once the Axis controls the seas, we become at once a have-not nation, rich in resources but lacking the essentials to make these resources useful.

All this means but one thing: We could be conquered economically, reduced to a second-rate power, our industry disorganized, our standard of living lowered, our mills and factories shut down or forced to work on inferior and even unusable substitutes, all without firing a shot, all by the simple but rigid enforcement of that "isolation" some well-meaning people look upon as a goal to be achieved.

I can only repeat that it would not be isolation but imprisonment; not freedom but stagnation. We have seen what the "isolation" of European countries has meant—Hitler has isolated them so that he might conquer them individually where he could not conquer them collectively. God help America if it is ever so isolated, for such isolation brings "not peace, but a sword."

Preservation of Basic Freedoms

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ADDRESS BY MR. JUSTICE BLACK

Mr. THOMAS of Utah. Mr. President, on August 23 last our former colleague, Hon. Hugo Black, now Associate Justice of the Supreme Court of the United States, was the recipient of the honorary degree of doctor of laws, conferred upon him by the University of Alabama, at Tuscaloosa, Ala. On that occasion Mr. Justice Black, whom I had the honor of succeeding as chairman of the Committee on Education and Labor of the Senate, delivered an inspiring address, replete with real Americanism and clearly depicting the danger now confronting America. I ask unanimous consent that the address delivered by him may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies, and gentlemen, I am genuinely happy to be with you on this occasion—happy because I am in Alabama, because I am at the university, and because of the honor the university has seen fit to bestow upon me. It has been 35 years—half the normal span of life—since I stepped upon this stage to receive a degree from President Abercrombie. That you, Mr. President, and those who act with you have chosen to call me back to this stage today is a pleasant instance of an alma mater's partiality to her sons, one for which I, always proud to be a member of her splendid family, am deeply grateful.

And I appreciate also the opportunity to speak at this summer-school commencement, particularly now. This is not one of those relatively comfortable times when the greatest issues of the day are in the arena of political controversy—where free people, all accepting liberty, justice, and happiness as their goals, contend among themselves only over the means by which these may best be achieved. To be sure, those relatively comfortable times are troublous enough. No graduating class has ever left this stage, or the stage of any American university, not confronted with a present and future full of problems that challenge the mind and heart. Every American generation has had its measure of blood, sweat, and tears, and has felt the defeat of seeing changes passionately wanted rejected and changes stubbornly opposed made. But each has been able to start out bravely, knowing that the sacred right to seek change is its heritage. And at no time since 1776 has that right been a mere image preserved with decent reverence. It has been given life and vigor by the constitutional guaranties that people may freely exchange their views in their homes, on their streets and places of assembly, at their jobs and in their churches, in their schools and in their universities. And we have learned over and over again the wisdom of John Milton, who said 300 years ago: "Give me liberty to know, to utter, to argue freely, according to conscience, above all liberties."

Political disagreement, nourished by liberty of expression, has been a staple of American history. But however much disagreement there may have been upon particular issues of governmental policy, Americans have always agreed that the basic freedoms on which our Government rests must be preserved. Today the very premises of a people's government—premises accepted as indispensable for civilized life even by those of most diverse beliefs and faiths—are challenged, and I believe, threatened with forceful destruction. It is not a time for any American with this belief complacently to close his eyes, insulate his mind, and seal his lips.

Specifically I refer to the threat of Hitler and his Axis underlings in Germany and elsewhere. Were Hitler satisfied to plant his guns and his philosophy only on German land and in German minds, even were he satisfied to conquer the bodies and souls of the peoples of Europe, Asia, and Africa, it might be asked with some plausibility, "What has an American to fear?" But where is there any basis for the belief that Hitler's ambition is so limited? Certainly not because Hitler has recently thought it in his interest to deny aims against the United States. For both before and after Munich we have heard his similar denials with respect to other countries, followed by ludicrous pretexts for breaking his word. Aesop tells of a wolf, of

ancient times, who used the same technique. Once upon a time, Aesop says, a wolf drinking at a stream saw a lamb drinking a little lower down. "There's my supper," he said. "Now for an excuse." "How dare you," he called to the lamb, "muddy the water from which I drink?" The lamb meekly answered: "If the water is muddy up there, I cannot be the cause, as the stream runs down from you to me." "Well," said the wolf, "why did you call me bad names this time last year?" "I could not have called you bad names last year," said the lamb, "since I'm only 6 months old." "I don't care," snarled the wolf, "if it wasn't you, it was your father," and leaped upon the lamb and began to tear it to pieces. All the lamb could do was say with its last expiring breath: "Any excuse will serve a tyrant."

On no more convincing pretexts, almost while the sound of his promises was still in the air, Hitler has broken his word to nation after nation. One by one, they have been invaded, pillaged, and enslaved. Comparing Hitler's talk with Hitler's deeds, this country can conclude only that his word to us is worth no more than it was to the others.

I believe there is, however, a book which, although unreliable in other respects, can be taken as an authentic statement of Hitler's philosophy, ambition, and objectives. I rely on it not because it is written in Hitler's words over his own name, nor because, written in 1926, it may have preceded the development of his skill, perhaps the most expert in world history, in spreading falsehood. I rely upon it principally because the credibility of its expressed intentions has been tragically proved by subsequent events. Nothing is more important at this time than making all our people fully aware of what those intentions are and of the possibilities of carrying them out. For any complacency and indifference that remain in this country would disappear with a Nation-wide understanding that Hitler's intentions and acts threaten our lives and safety. The best means I know of reaching such an understanding is the reading of Mein Kampf. Indeed, Mr. President, were I here as a hard-working member of your faculty instead of as the beneficiary of your gracious kindness, I should request your permission to conduct a seminar on this revolting and frightfully revealing book. If such a seminar did nothing more than cause students to read the text, it would convince them of the world-wide scope of Hitler's ambition. For in this book, amidst a torrent of hooting and hate, there appears in clear terms a comprehensive plan for world conquest and enslavement. The partial fruition of that plan is the great tragedy of our times; accomplishment of the remainder would suffocate every breath of true happiness on this continent. For, taking a hypothesis that Germans are a superior race destined by God and designed by Nature to rule the world, Hitler announces as his objective that Germany shall put shackles on the minds and bodies of every other people on earth.

In outlining the particularities of the clash of Hitler's principles and beliefs with our own, we can begin close to home. This university, for example, dedicated to the diffusion of knowledge, came into existence under a State statute passed by a popularly elected assembly. Its first assets were land given it by the United States Government pursuant to a policy first expressed in the Northwest Ordinance of 1787, as follows: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." In willing and complete harmony with that policy, the original Alabama Act authorizing the creation of this university declared that "no person shall be excluded from any liberty, liberties, immunity, office, or situation in said university on account of his religious persuasion * * *." And throughout its history the University of Alabama, like all other great American universities, has held the primary purpose of education to be the preparation of men and women for citizenship in a country at peace.

Contrast German education under Hitler. German schools admit students as we admit cattle to a fair. Only those of approved stock, that is, of pedigrees prescribed by Reich leaders, many of whose own pedigrees incidentally, are carefully guarded state secrets, can hope to be accepted in any German educational institution. Unapproved religious beliefs are, of course, a further disqualification. If the tests of blood and religion are satisfied, German children are admitted to the benefits of an education whose primary aim for males is preparation for war; for females, preparation to bear children to fight in more wars. To quote the language of Mein Kampf, "military service has to be considered * * * the education of the average German" and "the training of the mental abilities * * * of secondary importance." Hitler despises the educational system which educates "engineers, technicians, chemists, lawyers, journalists, and professors," instead of preparing soldiers. And he would imbue and unfortunately has imbued German youth with a "fanatical, even hysterical passion" for German superiority and world conquest as opposed to what he terms the "bourgeois virtues of peace and order." In passionate words he demands that "everything, beginning with the child's primer down to the last newspaper, every theater and every movie, every billboard and every bare wall be (used to place) in the mind of the smallest child * * * the burning plea: '* * * God, bless our arms; * * * Lord, bless our battle.'" Thus is the educational system described by Hitler in the present-day German bible the exact antithesis of ours. Ours is built upon the basis that the people, all of them, are to be prepared for the enjoyment of a full life in a peaceful world. Hitler's purpose is to train those of German blood to be warriors and masters of non-German slaves.

And so it is with every other privilege and liberty without which we think peaceful society would be impossible and life intolerable. Freedom of speech, press, and religion; trial by jury and habeas corpus; representative government; the protections of the American Bill of Rights—each of these comes under Hitler's avalanche of epithets, and on all he has declared eternal warfare.

Parliamentary democracy, with all its facets, is the object of his most venomous hatred. He refers to it as "a witches' cauldron," "a world plague," "one of the most serious symptoms of mankind's decay." With the servicer of German soldiers hardened to ruthlessness he would stamp it out wherever it exists. Hitler's Reich conceives of its primary function as putting the world—and I am quoting Hitler's language—"into the service of a higher (German) culture." "By the victorious sword of a people of overlords," Germany will establish, Hitler says, "a revolutionary new order on this globe."

And this so-called new order, which utterly disregards the dignity of man, which holds that might alone makes right, that the enslavement of a people merely proves the right of the conqueror and the weakness of the victim; which, ignoring religious, humanitarian points of view, glorifies brutal attack—this new order clearly includes the United States within its compass. Mein Kampf specifically refers to us as the "gigantic American state colossus" and speaks with a tone of envy of our "enormous wealth of virgin soil." Significantly, Hitler also extols the "blood which a man spills for this earth" as the "most sacred sacrifice" a man can make, and remarks that "only the might of a triumphant sword will in the future assign us territory." It is equally significant, in the light of subsequent Japanese collaboration with Germany, that even in 1926 he placed great value upon the aid that Japan could give to a possible enemy of what he called the aspiring American Continent. Whether Hitler intends immediately to attempt to deprive Americans of their sacred privileges or not, his book leaves no possible doubt that he wants to, that he will try as soon as he thinks he can, and that he expects his so-called master race to enslave the Americas along with the rest of the world.

Had Mein Kampf been but the arrogant boasting of one destined to remain a powerless dreamer, we could pass it by. But Hitler's armies, pouring out death and destruction on a large part of the earth's surface, are frightful proof of his satanic capabilities. Today he seeks to win control of Europe, Asia, Africa, and the islands of the sea. If successful there, he would have the vast wealth of three continents and the labor of hundreds of millions of subjugated people entirely at his disposal for the continuation of the world conquest he envisions for tomorrow. The Western Hemisphere would become the last free area in a globe of Hitlerian slavocracy, and the western nations' spirit and resources would then inevitably be tested against the forces that could be raised against us from all the rest of the world. I say inevitably not alone because the desire for conquest and more conquest is an incurable disease of the Nazi system, nor because the wealth and land of this hemisphere and the forced labor of its people would be an irresistible prize to habitual plunderers; nor because a people whose life is war cannot take up peace while there is still someone left to attack. Even on the impossible assumptions that world domination would willingly be abandoned as an Axis aim, and that greed, fed by the spoils of three continents, would be sated, and that the conditioned reflex of fighting could be unlearned, a mortal clash with this hemisphere would be inevitable. For Hitler or his successor could not afford to allow a voice of freedom to remain on earth. He could not run the risk that such a voice might be even faintly heard by his enslaved millions, or that the indignation of outraged humanity might rise against him. Any realist, and Hitler is nothing if not that, would do everything in his power to remove this last possible danger that might upset his empire. In such a last mortal clash, we should be surrounded by a prodigious and constantly growing Axis arsenal, separated only by oceans constantly narrowing as better and speedier hostile ships and airplanes were produced in greater numbers.

We cannot stand by and wait until the Americas stand alone against the rest of the world, molded into one vast, unified instrument of warfare by Axis tyranny. Whatever the cost may be, we must avoid that. We can avoid it, but only through the victory of those millions of brave men and women on the western and eastern borders of the present German Empire who now gallantly face death in order to stop Hitler. Hitler's enemies we should gladly and gratefully accept as our friends. Having placed their fortunes and their lives on our side in the common defense against world-wide Nazi domination, they deserve every possible aid that our country can supply. Without stint, they should have it.

The task of selecting the particular means of aiding the enemies of Hitler is appallingly difficult. In the nature of things it has to be delegated to our legislative and executive representatives, each acting in proper constitutional sphere. These representatives may properly ask, as President Jefferson did, for that measure of confidence which may give firmness and effect to the legal administration of affairs. That a realistic respect by the electorate of their officials' better ability to command a view of the whole ground need not diminish the vitality of democracy has been superbly demonstrated in England for the past 2 years. We cannot with safety permit ourselves in this country to view every swift move of our selected officials with a

suspicion that breeds resentment, inefficiency, and disunion.

Many centuries ago Aristotle said that good governments "should have for their object rest and peace" and that "rendering a people fit for war that they may enslave their inferiors" ought not to be an aim of the good state. He recognized, however, that even a peace-loving government should render its people fit for war "that they may not themselves be reduced to slavery by others." We are a people of peace. We hate the wars that Hitler loves. But for our way of life Hitler would substitute brutality, deceit, intolerance, inhumanity, goose-step, and Gestapo, and—most odious of all—he would make us slaves. More than peace we love freedom. That we shall spare no effort to preserve—peaceably, if we can; forcibly, if we must.

The American Dairyman's Market

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ARTICLE BY HON. HUGH A. BUTLER, OF NEBRASKA

Mr. BUTLER. Mr. President, there were recently issued some regulations by the Food and Drug Administration which I feel will seriously affect the domestic market for dairy products. Some of the provisions contained in the new "definition and standard of identity" for oleomargarine seem to me rather extraordinary. For example, preservatives, and other chemicals may be added to oleomargarine, although the use of the same items is expressly forbidden in the manufacture of butter. In a recent issue of the Nebraska Farmer, published by Samuel R. McKelvie at Lincoln, Nebr., there appears an article prepared by me covering this threat to the American farmer's right to supply his home market. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nebraska Farmer of August 9, 1941]

THE AMERICAN DAIRYMAN'S MARKET

(By Senator HUGH BUTLER, of Nebraska)

A new threat to the American farmer's right to supply his home market has appeared in the form of regulations issued by the Food and Drug Administration, specifically giving oleomargarine manufacturers the privilege of adding all the ingredients necessary to make their lower-priced butter substitute taste, feel, and behave as much as possible like butter, plus even elements which are forbidden in butter manufacture. Any expansion of the oleomargarine market will necessarily curtail sales of butter, thus adding to the butterfat surplus and depressing the price, while the increase in margarine sales will not materially expand markets for American-grown products, since most of the additional fats and oils will have to be imported.

Some of the provisions contained in the new "definition and standard of identity" for oleomargarine seem rather extraordinary. For example, preservatives (sodium benzoate and benzoic acid) may be added to oleomargarine, although use of such preservatives is expressly forbidden in butter manufacture. Another fact that comes as a shock to friends of the American dairy industry is that the new standard goes even beyond the very liberal regulations enforced until recently by the Bureau of Animal Industry for oleomargarine made from animal fats, and that the Bureau has further relaxed its rules to conform with the new definition and standard. For example, the Bureau of Animal Industry has always forbidden use of benzoic acid and the flavoring diacetyl in margarine, but will now permit them to be incorporated.

Some of the specific ingredients which will be permitted in margarine under the new regulation, issued over protests of American dairymen, are as follows:

Benzoic acid and sodium benzoate as preservatives. Preservatives may not be used in butter.

Diacetyl, a flavoring which gives a butter taste. The sole purpose of adding this substance is to make consumers think and feel that they are getting butter or its equivalent. It has been expressly forbidden under Bureau of Animal Industry regulations until the new order by the Food and Drug Administration.

Lecithin or glycerin derivatives, which prevent "splattering" and make oleomargarine suitable for cooking purposes. Through addition of these substances oleomargarine hopes to displace butter in the kitchen as well as on the dining table.

Vitamin A, an essential dietary ingredient which is naturally present in butter and all dairy products. Oleomargarine manufacturers want to add this vitamin in order to imitate butter more closely. Until a few months ago the Bureau of Animal Industry did not permit use of this ingredient.

The total effect of all these regulations is to permit oleomargarine to imitate butter as closely as possible. Only the tax on yellow margarine prevents it from being colored, in which case this substitute would generally be made to look like butter, as well as imitating it in other respects. As it is, the coloring is commonly sold with the margarine, so that the purchaser can color it himself and then pass it off as butter as he sees fit.

The intent of such practices is to permit margarine to be substituted for butter. There can be no other purpose. If oleomargarine manufacturers merely wanted to make their product more palatable to the taste, they would not have to use diacetyl, the flavoring which tastes just like butter. There are plenty of other flavorings, each with a distinctive, pleasant taste. Why don't they use vanilla? Evidently they want to make their customers think they are getting something just like butter, or something "just as good." Likewise, there are other dietary constituents, such as vitamins C and D, that are just as important as the vitamin A naturally found in butter. Clearly margarine manufacturers want to add vitamin A in order to make their customers think of their product as a close substitute for butter.

The result of this policy of imitation of butter and substitution for it can only be to deprive butter of a part of its natural market, to add to the butter surplus, and to depress its price and the prices of all other dairy products.

Spokesmen of the oleomargarine industry like to pretend that sales of that product will not infringe on the butter market nor replace butter sales. The experience of recent years does not support this contention. The official figures on butter and oleomargarine indicate that during the past 18 years per capita consumption of the two table fats combined has been almost exactly 20 pounds and that this figure has not varied as much as 3 percent in any year from the average. In general, whenever butter consumption has expanded oleomargarine consumption has contracted; and as margarine consumption has increased, butter consumption has declined. Although the size of the combined market has, of course, expanded with the rise in population, and presumably will continue to expand, this market is definitely limited by the size of the population. There can be no doubt, therefore, that butter and oleomargarine are directly competitive and that any expansion in the market for margarine will cut directly into the market for butter.

The price premium which butter has been able to command over margarine has varied widely, according to the amount of the butter surplus. We have found in recent years that the only way to get rid of even a slight surplus of butter is to let the price of butter fall so drastically that butter can cut into the low-price market usually supplied by margarine. The extent of the price decline necessary to bring about this expansion of sales may be realized when it is recalled that during the late twenties butter ordinarily sold at a premium of about 20 cents over margarine. In the early thirties butter fell to a point only about 10 or 12 cents above oleomargarine in order to dispose of a surplus of only about 5 percent. In recent years, with the spread of the practice of adding various artificial ingredients to margarine to enable it more effectively to masquerade as butter, it has been increasingly difficult to maintain a reasonable price premium for butter, even though butter supplies have not been as excessive as they were 8 or 10 years ago. During the last 3 years butter prices have averaged only about 12 cents above equivalent prices on vegetable margarine, although butter has had no larger a share of the combined market than during the late twenties, when the premium was 20 cents. It is apparent that the possibility of substituting for butter the present-day type of oleomargarine with all these artificial ingredients sets a virtual ceiling on the price of butter at a point not much above the price of oleomargarine. It is this type of competition which is to be continued and intensified by the new ruling.

We know by experience that dairy farmers and creameries cannot easily adjust their production according to the demands of the market. Time and again, a relatively slight butter surplus has knocked the bottom out of prices. Under present conditions and with the present production capacity of dairy farms and creameries, it appears probable that the intensified competition from oleomargarine will result in disastrously low butter prices, as creameries attempt to get rid of their surplus in the only way they can. Indeed, it seems likely that the harm resulting to butter will be much greater than the improvement felt by oleomargarine and its constituent raw materials. Oleomargarine sales can hardly be expanded very much since, as a normal thing, the butter produced is sold at whatever price it will bring, the balance of the market being supplied by oleomargarine. The chief effect of the stiffer competition will be to continually narrow the price difference between butter and its substitute, and these prices for butter will inevitably be reflected in the prices of other manufactured dairy products and back to the price the farmer receives for his whole milk.

The joke of the whole affair is that the new regulations do not seem likely to benefit even the cottonseed crushers or the cotton farmers, who have been the chief exponents of oleomargarine. In recent years, and in all probability in the years to come, domestic food industries have supplied and will supply a market for all the cottonseed

oil that could be produced and a bit more besides, which had to be imported. Production of cottonseed oil cannot be increased, because it is a byproduct, and the amount produced annually is dependent on the market for lint cotton, which has been steadily dwindling. This year, for example, the Department of Agriculture estimates only 23,102,000 acres of cotton will be harvested, which will likely supply barely 1,100,000,000 pounds of cottonseed oil, over 400,000,000 pounds less than the normal domestic consumption of the oil. Only if we return to an annual cotton crop of thirteen and one-half million bales will there be sufficient domestic cottonseed oil to supply the domestic market as it has averaged during recent years. Any expansion in sales of a product made from cottonseed oil, therefore, will merely result in the importation of more cottonseed oil, which will effectively keep down the American price of the oil to a point equal to the world price, plus the amount of the duty and the cost of transporting it. Foreigners will get most of the benefit.

Southern farmers, then, cannot expect any substantial increase in the quantity of oil sold, since they cannot increase production; nor in the price they will receive, since that is determined by world prices of cottonseed and other vegetable oils. The recent increase in the price of cottonseed has been due purely to the shipping shortage, which has prevented competing vegetable oils from being imported. Dairymen have no quarrel with the cotton farmers of the South. They are willing to do anything within reason to assist another branch of agriculture—for example, by protecting domestic cottonseed oil with higher duties against foreign competing oils. But we cannot be expected to sit quietly by while our markets are taken away from us and we are replaced, not by American cottonseed oil, but by Brazilian cottonseed and babassu nut oil and coconut oil from the Philippines

American dairymen believe in preserving the American market for the American farmer to the extent of his ability to supply it. They expect this for themselves, and they are willing and anxious to accord it to other groups. They also believe that all branches of agriculture should be treated fairly and equally, but they do not believe that an established market should be taken away from one branch of agriculture and given to another through subterfuge and imitation, particularly when that other branch does not even supply the market it already has, and when the net result of the whole process will be, not assistance to any domestic crop or livestock product, but an increase in the importation of competitive agricultural commodities.

Defense Production

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ARTICLES FROM THE BALTIMORE SUN AND THE WASHINGTON POST

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Baltimore Sun entitled "Mr. Byrd versus Mr. Roosevelt," and an article by Walter Lippmann entitled "The Underlying Mistake."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of August 24, 1941]

MR. BYRD VERSUS MR. ROOSEVELT

In his impressive speech in the Senate on Wednesday, Senator HARRY F. BYRD, of Virginia, one of the solidest and most conscientious Members of the Upper House, made public certain figures as to the production of ships and munitions.

So far in the defense emergency we have been given very few production figures. The theory has been that making such figures public would be of advantage to Hitler. For the most part, what we have received have been so-called percentage figures, which, Mr. BYRD said, really don't tell anything. Moreover, though Mr. BYRD did not say this, it is obvious to everyone that a smoke screen set up to deceive Herr Hitler could be equally efficacious as a screen behind which the failures of the defense effort were hidden from our own people.

Mr. Roosevelt himself saw fit to take issue with Senator BYRD. In a carefully prepared interview with the correspondents, he made the general point that the Senator had been "sold down the river" on his figures and substituted for them some figures of his own which, he said, were the true figures. But—and this is an important point—the President did not deny the approximate accuracy of the BYRD figures on airplane production. He made no comment on the BYRD figures with reference to shipbuilding, which was just as well, for the Senator was able to show that he had received these figures from Admiral Land himself. Admiral Land is the Chairman of the Maritime Commission.

Thus the situation is this: Mr. Roosevelt has admitted that airplane production, which is surely basic in the present situation, is precisely as unsatisfactory as Senator BYRD says it is. He has not criticized the figures on ships, for the obvious reason that the Senator got them from the highest source available. And ships, as we know without being told, are second only to airplanes as the prime essential for the national defense.

As for the other figures—those concerning tanks, anti-aircraft guns, anti-tank guns and howitzers—there is this to be said. We know that Senator BYRD marshaled his facts for this speech with his usual care. We know, from the examples given, that he went to the best sources for them. We know, moreover, on the basis of the Senator's record in the Senate, that he is one of the men in that body best qualified to handle facts and figures. It may be possible, on occasion, to say that he does not always draw the only possible deduction from the facts and figures which he assembles. But it has rarely been possible to accuse him of using figures carelessly.

On the other hand, it is equally well known that whatever virtues as a political and national leader he may have, Mr. Roosevelt has little head for figures or taste for them, and that he is capable, through incapacity or distaste, of using figures in such a way that they confuse rather than inform the public. The famous speech of last year, in which he listed the goods of war on hand or "on order" is still fresh in the national memory. It is necessary to bear this shortcoming of Mr. Roosevelt in mind in judging the merits of his argument over figures with Senator BYRD.

But when Senator BYRD produced his figures he did not produce them with the sole idea of breaking through the veil of secrecy which has so far surrounded this vital subject. He was concerned not primarily with the figures, as figures, but rather with the situation which underlies our failure, to date, to get ourselves geared to the production rate of which we are surely capable. The suggested causes for the situation in which we find ourselves constituted the real meat in Senator BYRD's speech. Here the Senator made two charges.

The first of these charges was based on unimpeachable figures gotten from the Navy and War Departments. They showed that since the first of the year strikes in defense plants have cost the Nation no less than 5,000,000 man-days. Mr. Roosevelt did not discuss the significance of this figure.

He did not discuss it, we believe, because it throws into relief one of Mr. Roosevelt's most serious shortcomings. Save in half-hearted words, he has done almost nothing to make organized labor conscious of its responsibilities in the present crisis. Instead, he has temporized either personally or through his Mediation Board with most of the issues which grasping labor leaders have seen fit to bring up. His pro-labor record in the past, which surely gave him the right and the authority to speak firmly to the unions about the national need and their duty to make sacrifices for it, has somehow seemed to paralyze his ability to act in the present. His one direct intervention—in the case of the outrageous strike at the North American Aviation plant in California—was drastic in its sweep, perhaps too drastic. But it has not been followed up by the steady and inflexible insistence on duty which alone can prove to the labor leaders that he means what he says.

But, most of all, in his speech Mr. BYRD stressed the shortcomings in the defense organization at the very top. "The first and most important thing to do," he said, "is to eliminate the conflicting authority that now exists between the different officials and the different agencies at Washington. Anyone observing the situation first hand * * * must be greatly alarmed at the great delay occasioned by the very apparent inability of our different governmental agencies to function in coordination and cooperation to produce these materials without unreasonable delay. There must be one head of our defense program, and this head should have the power and authority to give orders and enforce his decisions."

This is not the opinion of Senator BYRD alone. It is the opinion of competent men within the administration. It is the opinion of competent industrialists who are seeking to work as diligently and efficiently as they can for the national good. It is the opinion of high-ranking Army officers concerned at our laggard progress.

It may even be the opinion of Mr. Roosevelt himself. For only recently he appointed his intimate friend and adviser, Judge Rosenman, to go into the situation and make recommendations about the all too obvious conflict between the Office of Price Administration and Civilian Supply (O. P. A. C. S.) and the Office of Production Management (O. P. M.). These are two of the key agencies in the defense set-up. If they are in conflict—and Mr. Roosevelt has tacitly admitted that they are in conflict—then the fundamental criticisms of Senator BYRD are proved.

Therefore he has done a patriotic thing in bringing forth his figures, both the accurate ones and those in which he was slightly in error. For no industrial organization can long be efficient, or can produce its products in increasing numbers, if there is friction and conflict at the top. The time to cure such evils is to get at them before they corrupt the whole structure.

It is difficult, of course, for a man in a position like that of Mr. Roosevelt to admit he has made errors in administration and in personnel. It is especially difficult for a man with a temperament like that of Mr. Roosevelt, who has a habit, attractive enough in some of its aspects, of making intimate personal friends of those with whom he works.

But the national need takes precedence over Mr. Roosevelt's personal biases and personal amiabilities. Senator BYRD has courageously disclosed a situation which may yet paralyze our whole defense effort. Thanks to his speech, the dangers in the situation are no longer the private concern of Mr. Roose-

velt and his intimates. They are now the inescapable concern of the whole country. Mr. BYRD has already accomplished that much. May he keep up the fight until it is won.

[From the Washington Post of August 23, 1941]

TODAY AND TOMORROW

(By Walter Lippmann)

THE UNDERLYING MISTAKE

Commenting on Senator BYRD's recital of the figures showing the meager output of tanks, guns, and airplanes, the New York Times says that "such figures form a startling contrast with the huge sums that Congress has appropriated for defense. The causes for that contrast deserve the country's serious study." They do indeed. Almost everyone must have asked himself how one can reconcile the dark picture painted by Senator BYRD with the much brighter picture which has so often been painted by defense officials and supported by the President's remarks.

No doubt the outlook is not quite so bad as one might gather from the Senator's speech. But it is not nearly so good as one might infer from the President's remarks. For while Senator BYRD has not quite got there yet, he is on his way to uncovering a basic misconception in the planning of the defense program.

To make the thing clear to ourselves, let us consider the planning of a program for the production of apple pies. You make an estimate that you need 30 apple pies. If you ask the cook to bake 1 pie a day for 30 days, you will have produced 30 pies. That is one way to get a lot of pies. But there is another way, and that is to hire 30 cooks to bake 30 pies in 1 day. If you follow the first method—1 cook making 1 pie a day—you do not have to bother the other 29 cooks. If you follow the second method—30 cooks making 30 pies in 1 day—you get the pies quickly. If your first guess was wrong and you really need 60 pies, you can get them quickly, and you finish with the pie-making business quickly.

Speaking very, very roughly and broadly, the O. P. M., with the President and the War Department agreeing, decided last year to have 1 cook make 1 pie a day for 30 days, leaving the 29 other cooks free to fry their own fish. That is why Senator BYRD can now say truthfully that there are as yet very few pies and why the defense officials have been able to say truthfully that there are going to be many pies.

The broad figures tell the story. There are about fifty billions to be spent. Less than two billions were spent in 1940, and seventeen billions are to be spent in 1941, twenty-three billions in 1942, and nine billions in 1943 and after. In the long run this will mean a lot of equipment. But the long run may be too long, and, anyhow, what counts is not whether we accumulate, say, 50,000 planes eventually but how soon we can reach the point where we produce planes at the rate of three or four thousand a month. We needed not an order for 30 pies in 30 days but a program for being able to bake 30 pies in 1 day. Then we could produce such an avalanche of pies that no one near it could bear to think of apple pies for years to come.

The reason we adopted the wrong method is that a year ago neither the President and the new dealers nor the businessmen in O. P. M. were willing to place defense ahead of business as usual. The administration was afraid of temporary unemployment, due to the change-over from civilian to military production, and it was afraid of labor, and it was afraid to ask the people to accept a reduction in their standard of life. And the businessmen were for the most part in agreement with Mr. Knudsen, who believed all last summer that the defense program should be superimposed on normal business.

That in substance is why the defense program is moving slowly and is inadequate. It has been planned as a kind of annex and superstructure to an immense boom in private business. That is why we have just produced more private automobiles than have ever been produced and sold anywhere at any time. That is why the raw materials, the skilled labor, the managerial ability, and the machine tools needed to produce this record-breaking output have not been enlisted for national defense.

It has often been said that we need centralization of authority in Washington. That is true. But most of all we need a central authority with a true conception of the task, which is that is massive output eventually will do us no good but that by a massive capacity to product in the near future, this war can be won. And then we need to realize that the only, way to get quickly a massive capacity to produce is to cut drastically into civilian consumption and force the productive capacity, which now serves civilians to work for defense.

The time has come to put on forced draft—to make up our minds to produce this year what under our leisurely plans we do not expect to produce until the spring of next year—to make up our minds to produce in the first half of 1942 what we now plan to produce in the whole of 1942. This can be done. The British, when they were at last aroused after Dunkerque, did just that kind of thing. We can do it if we have the will and the courage to do it.

If we could really make up our minds to do that at no matter what sacrifice of our convenience and of business as usual, we could acquire a power in the world which would give substance to our words; with our whole industrial energy mobilized, we should be irresistible and invincible. The outcome would not be in doubt nor too long delayed. For if the American people will really work like the very devil for the next 12 months, they will have won—and at no tragic cost—the second American war of independence.

That war cannot be won except after long years of waste and suffering as long as we lack the character to choke this fantastic and disgraceful boom, and go all out for defense.

Address by Senator Barkley at Philadelphia, Pa.

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD the very able address delivered by our distinguished majority leader, the Senator from Kentucky [Mr. BARKLEY], under the auspices of the Veterans of Foreign Wars at Philadelphia, Pa., August 24, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, I am deeply grateful to the Veterans of Foreign Wars and the committee in charge of this great gathering for the honor conferred upon me by the invitation to address you at this time.

It is a source of great inspiration to look into the faces of this great audience who have assembled here for no mercenary or selfish purposes, but to demonstrate their loyalty to American institutions and give proof of their determination that these institutions shall not perish.

I stand today before the great Hall of Independence, in which Thomas Jefferson and his colaborers wrote the Declaration of Independence. In all the course of human history no document was ever conceived by the mind or penned by the hand of man which gave greater hopes to the masses of humanity than did this Declaration.

Those who wrote this immortal document were not cowards. They realized when they promulgated it that they must hang together or hang separately. They realized that if the cause of American liberty should not survive, those who instigated the American Revolution would suffer the penalties inflicted upon the sponsors of an unsuccessful war.

They were not afraid to take the risks. They did not count the cost in dollars or in blood or in human life. As Patrick Henry had said in the Virginia Convention, "I know not what course others may pursue, but as for me, give me liberty or give me death."

The great cause of American liberty, sponsored by these immortal men and epitomized in the Declaration of Independence, was successful. But before it succeeded and before the American Republic was established, 8 years of sacrifice, of bloodshed, and of incredible hardships were suffered by the Revolutionary patriots, and the fight was made harder and longer because there were among the 3,000,000 people who then inhabited the colonies those who were not in sympathy with the cause of liberty or who, for mercenary, social, or political reasons, withheld their support to the cause of the new Republic.

It is a glorious and inspiring fact that today the Nation which was created by this Declaration of Independence and the nations from which our forefathers declared their independence are today standing shoulder to shoulder and heart to heart for the preservation and perpetuation of the very doctrines and principles for which our forefathers labored, fought, and died.

It is a glorious and inspiring fact that today these two great nations—the United States of America and the Kingdom of Great Britain and her vast associated dominions—stand across the pathway over which Adolf Hitler and his brutal satellites are attempting to obliterate human freedom and the great fundamentals of human liberty and Christianity.

It is because of this that the people of the United States and the people of Great Britain, and the people of every other self-governing nation, most of which have in the past 2 years been the victims of a ruthless invasion at the hands of the barbarian, applaud the magnificent fight for self-defense which is now being waged by the people of Russia against this same ruthless invader.

In sympathizing with the fight to defend their homes and their country now being made by the Russian people, neither the United States nor Great Britain thereby espouses the internal policies or the political philosophy which since the World War has guided the Soviet Republic. But they recognize the right of the Russian people to adopt and live under any form of government which they may prefer. They recognize the right of all nations to adopt and live under any form of government which they may prefer. But they also recognize that whatever may have been the shortcomings or the distastefulness of the theories of the Government of Soviet Russia, the Russian people

and their rulers have not constituted and do not now constitute a world menace comparable to the insidious and diabolical program of Adolf Hitler and his puny little human hand plants, who, in their automatic echoings of Hitler's philosophy, make Charlie McCarthy look like an original thinker.

It is in the midst of a world like this that the American people and the American Government are confronted by a crisis which has not been exceeded in importance and far-reaching influence since the Declaration of Independence was adopted here in 1776.

This world in which we stand today is not of our making. We did not contribute to the causes of the first World War in 1914 nor to any of the wars which preceded it in all human history outside the Western Hemisphere. We did not contribute to the causes of the present war, unless perchance we stopped fighting too soon in 1918.

From the day of the armistice on November 11, 1918, until the outbreak of the present world conflict, the American people worked and prayed that enduring peace might settle down upon the earth. Disarmament treaties almost without number were signed by us and other nations, all of them culminating finally in the Briand-Kellogg Peace Pact, by which practically all the nations in the world, including Germany, agreed to banish war as a means of national policy.

Lulled into a sense of false security, practically all of the peace-loving nations who signed these treaties in honor and in good faith settled down to the reconstruction of their domestic and international relationships and relied upon these solemn commitments to preserve the peace of the world and save humanity from further slaughter.

But as soon as Adolf Hitler came into power in Germany in 1933 he began to conspire against all his neighbors and all the peace-loving nations which men had set up and hoped to preserve. He violated his agreement with his neighboring nations as soon as he came into power and felt that he was strong enough to take the risks. You may trace his entire course in his dealings with other nations from 1933 until this hour and you will find that it has constituted an unbroken record of perfidy and dishonor. The pettiest thief who sneaks into the back alleys of our cities possesses a higher sense of human integrity and honorable purposes than does this mad bandit whose vile footsteps have brought suffering to mankind which even Alexander the Great, Genghis Khan, and Napoleon Bonepart never conceived of in their wildest dreams of conquest.

If any American believes that I am overdrawing this picture, let him look at Austria. Hitler told Austria, through her Premier, Dollfuss, that he had no designs upon the Austrian people. Then he had Dollfuss murdered and devoured Austria like a lion would devour a mouse.

He told the people of Czechoslovakia that he had no territorial designs upon them at first. Then he told them he only wanted the Sudeten Germans to have the right of self-determination. Then he sent his armies into Czechoslovakia and drove out the constituted government and added all their territory to the German Reich.

He told Poland that he only wanted a correction of the Polish Corridor and some readjustment in the free city of Danzig, and he told Chamberlain at Munich and announced to the world when the Sudeten Germans had been added to the Reich that he had no further territorial ambitions in all of Europe. But he invaded Poland and drove out her constituted government and has murdered probably more than 3,000,000 Poles, whose only offense had been their love of their homes and of their country.

He told Denmark that he had no designs upon her. But one morning, before the sun had arisen, his Nazi legions were in possession of Denmark. He told Norway the same. He told Holland the same. He told Belgium the same. And the strange thing is that these small nations either believed him or had waited too late to prepare to resist him. He told the people of France and England that he had no designs upon them and no intention of invading them, that what he really wanted was to extend his boundaries eastward into the territory of Russia, but he invaded France and the French Government, because of lack of preparation and because of internal dissension, collapsed like a house of cards, and while the indomitable spirit of the French people still burns within their bosoms, they are now in the clutches of a puppet government which has announced its collaboration with Hitler and Mussolini and all those who seek to destroy the very things for which France has stood since the French Revolution, liberty, equality, and fraternity.

Hitler told Rumania that he had no designs upon her. He told Hungary the same. He told Bulgaria the same. He told Yugoslavia the same. He told Greece the same. But when Greece resisted the efforts of Italy, under the strutting caricature known as Mussolini to lay impious hands upon her people and were driving the Italian Army back across the land over which they had marched, Hitler sent his panzer divisions into heroic Greece and drove her government out of the country and devastated her historic land and cities.

And in all these conquered countries, the right of free speech, the right of free assembly, the right of free worship, the right of a free press have been buried in the conquered soil. Nowhere in all this vast region can more than three men assemble on a street corner without being dispersed by the mailed hand of the military authorities and cowardly suspicion. In all these vast overridden regions, the social and economic and intellectual life of the people have been subverted to the predatory designs of the Nazi juggernaut. And all through these devastated and humiliated regions, millions of men, women, and children who cannot speak or understand the English language, are praying that some power somewhere may stop the ruthless conqueror in his tracks and that they themselves may be revived as nations, dedicated to the moral, intellectual, and economic advancement of their people and to nations of self-respect and decency among the people of the earth.

Not only have these things happened to Europe, not only are they happening in Africa or will happen if Hitler wins, not only are they occurring in Asia where Japan is crawling like some monstrous dragon out over the territories of China but over the seas and the islands of the seas and all that portion of the Pacific. For 10 years we have seen this dragon encroach upon the innocent and unhappy people of China for no reason except that Japan desires what China has and thought she might obtain it without war, if possible, but through war if necessary.

There is no fundamental difference between the immoral and despicable philosophy of Hitler and Mussolini and the military clique that now dominates Japan and seeks to drive her on.

In the midst of these world conditions we are asked by a little coterie of American ostrichs to trust Hitler and to believe him when he has once or twice stated that he has no designs upon the American people or upon the Western Hemisphere. If the American people are lulled into a feeling of security; if they are unwilling or unable to profit by the lessons of countries throughout the world, under the pagan influence of Hitlerism; if they are so naive or unsuspecting as to listen to the insidious advice of the serpents in our Garden of Eden; if they are so unimpressed by this array of indisputable evidence, created in all parts of the world by the slimy trail which Hitler has followed; then we may wonder whether after all the sacrifices made by our forefathers from 1776 to 1941 mean to us what we claim they mean to us.

Regardless of all pretenses to the contrary, this is not a war to readjust a few international boundaries. It is not a war to adjust inequalities brought about by the Treaty of Versailles. It is not a war to eliminate corridors. It is not a war to relieve minorities of some injustice inflicted upon them by boundary lines.

This may have been the pretext upon which it was begun. But its genesis lies deeper than mere physical delineations upon a map. It is a war of ideas, a war of philosophies, a war of conquest, a war to impose upon the world a system of moral, economic, and political controls to which it has never been subjected in all its history. These controls and these ideals are diametrically opposed to the theory of freedom and democracy. They are opposed to the doctrine of self-government. They are avowedly antagonistic to Christianity or any form of religion except worship of the state, that state to be under the autocratic domination of authoritarian theories and processes which deny the people any voice in their government or in the fashioning of their society. The result is economic bondage. It is religious bondage. It is political bondage. And it is intellectual bondage. You cannot have intellectual freedom where the soul of man is enslaved. You cannot have economic freedom where the political rights of man are trampled under foot.

If any American, conscious of what in going on in the world and familiar with the threats which have been made by Hitler and his spokesmen, has any doubt of the intentions of Hitler to impose this revolutionary system upon the whole world, then let such an American take note of what he and they have said about it when they were not seeking to deceive anybody.

Although Hitler calls it a revolution of young nations and young peoples against old and decadent nations, we have already recognized it for what it is, an inhuman and bestial revolution against every freedom for which men have striven and fought and died through centuries of hardships.

If any American doubts the purpose of the Nazi juggernaut, let him read the speech of Hitler's Reichminister of Agriculture given in May 1940, a speech made at Hitler's instigation to a group of leading Nazis called together for that purpose.

In that speech he forecast the invasion of the Low Countries and the penetration of the Balkans. In that speech he predicted the economic organization of all the territories which were to be overrun by and for the benefit of the German Reich. In that speech he predicted the mastery of two continents. He predicted that they would inaugurate a system of slavery by which he took pains to explain that he did not mean slavery in any sense except the sense of absolute subjection to the will and power of the conqueror. He stated that slavery was not to be understood as a parable or as a rhetorical term but that he had in mind a modern form of medieval slavery which they would introduce because they urgently needed it to fulfill their purposes and he predicted that they would be denied the blessings of education or literacy but that this boon would be reserved for the German population. After expatiating at length upon what they were going to do to Europe he expressed his opinion as to their objectives in the United States. He referred to the United States as a pseudo-democratic republic. He stated that they had accounts to settle with the United States. He referred to the fact that the United States holds a large portion of the gold of the world to which he said the Nazis were entitled because most of it had been dug out of the ground since conquered by Germany.

He predicted in that speech that the United States would be forced by Germany to complete and final capitulation, and that instead of having 7,000,000 unemployed as a result of German conquest we would have 40,000,000 unemployed.

He predicted that President Roosevelt would beg Hitler on his knees to purchase not manufactured goods but raw materials from the United States at prices which Hitler would dictate. And he stated that the United States was so demoralized and corrupted that, like France and England, it need not be taken into consideration as a military adversary.

In another speech delivered by Walter Funk, president of the Reichsbank of Berlin, he made predictions of the same character and in a later speech made by Hitler himself, he stated, "We shall soon have an S. A. in America. We shall train our youth. We shall have men which degenerate Yankeedom will not be able to challenge. National Socialism alone is destined to liberate the American people from their ruling clique."

"I shall undertake this task simultaneously with the restoration of Germany to her leading position in America. The German component of the American people will be the source of its political and mental resurrection."

This is an offensive insult to millions of American citizens of German ancestry who are as loyal to the principles of American democracy as are any other class of our people.

Again quoting Hitler, "I guarantee that at the right moment a new America will exist as our strongest supporter when we are ready to take the stride into overseas space. We have the means of awakening this Nation in good time. There will be no Wilson arising to stir up America against us."

There may be no new Wilson to speak for America and in defense of her undying principles as he spoke for them a quarter of a century ago, but there is a new Roosevelt who has risen up to be the spokesman and the leader of the indomitable and unconquerable people of a free and mighty nation, and he is supported in that leadership by men and women of all political parties, of all religious faiths, of all colors, and all nationalities.

In the light of these prophecies and threats by Hitler and his trusted satellites, can we doubt that one of the motives of this war is economic domination of the world? Can we doubt that economic domination will be followed by political intrigue and infiltration; and that economic and political domination will produce a prodigious effort at military domination in all the countries upon which this system shall be imposed?

If Hitler wins, we shall face a hostile world. If he wins, he will control all of Europe. And if Mussolini should survive, through him, or over him, or under him, they will control all of Africa. If he wins in Europe and in Africa, we must presuppose that Japan as one of the Axis Powers, will control, if she does not occupy all of China and the entire Pacific west of Hawaii, including Malaya and the Dutch East Indies, and possibly the vast stretches of the South Pacific, including all the British possessions in that region of the world. Should the Axis Powers win, they will have a naval strength two and a half times that of the United States at present, including the Japanese, the Italian, and the German Navies, and the French Navy which they will control, leaving out of consideration the British Navy, and this strength would be still further augmented by the capture of all or any considerable part of that navy.

Can we doubt that with such a situation existing in Europe, Africa, and Asia, the American continent, including North and South America, would be the immediate objective of these aggressive dictators? Already we have seen in portions of South America the efforts of the Nazis to gain a foothold. Bolivia was compelled to declare a state of national siege a few weeks ago in order to protect herself against Nazi designs. These designs have been manifested in other parts of South America and it is to the incalculable credit of the Latin-American republics that they have joined with the United States in the concerted effort to avert such disaster as control of their economic, social and political life by so ruthless a group of gangsters as are now seeking to dominate 2,000,000,000 human beings throughout the world.

It is because of these things that the Government of the United States has been compelled to concentrate its huge efforts in the defense of our own country and the defense of the entire Western Hemisphere to which we are committed.

One hundred and eighteen years ago James Monroe announced the Monroe Doctrine, by which he stated that any effort on the part of any European nation to gain a foothold in America would be regarded by the United States as an unfriendly act. The Monroe Doctrine was at that time made applicable to Europe because it was Europe alone then which sought to recapture much of the territory lost by the South American revolutionists which established their own independence. But the same doctrine which then applied to Europe now applies to Asia with equal force. We have maintained this doctrine for nearly a century and a quarter, and we shall continue to maintain it, not only because we desire to see the republics of the Western Hemisphere maintain their own independence, but because we know that if any European or Asiatic power should now gain a foothold anywhere in the western world it would constitute an active and perpetual threat to the independence, the sovereignty, and the interests of the people of the United States.

This is the sort of world in which we find ourselves today. It is a world that threatens everything for which the United States of America has stood. It is a world that threatens all the things for which the Declaration of Independence was promulgated. It is a world that threatens a return of barbarism and paganism that millions of men and women have given their lives to destroy. It is a world in which our way and method of living are grievously involved; and it is a world in which we cannot afford pretended ignorance, no matter what the sacrifice may be to preserve our traditions.

It is because of these things that we have been compelled to increase our national debt to unprecedented figures. It is because of these things that we are now compelled feverishly to build a two-ocean Navy. It is because of these things that we are now compelled to train our young men for military service in the event such service should become imperative. It is because of these things that we have levied unprecedented taxes upon our people and must levy still further burdens upon them. It is because of these things that the American people are willing to submit themselves to whatever restrictions and restraints may be necessary in order that we may preserve this country and hand it down to the generations yet unborn free and strong and proud.

We are told that if we do these things we will surrender our democracy and our liberty. During the Revolutionary War, George Washington pleaded with Congress to give him more soldiers and greater power, although at the very time he pleaded for these things he was fighting for the establishment of liberty and democracy.

During the War between the States, Abraham Lincoln pleaded with Congress for greater power and secured it, and so did Jefferson Davis, president of the Confederacy. These powers were granted, but as soon as the war had ended they were again returned to the people.

During the Spanish-American War, President McKinley had powers conferred upon him necessary in the conduct of that war. During the World War, unprecedented powers were asked by and conferred upon President Wilson—powers that no democracy would confer upon any President except in a period of great emergency. These powers were necessary in order that the momentum of American efforts might be concentrated at the point of greatest importance. But when the war was over and peace had returned to the world, these powers were returned to the people by the Government of the United States.

We are not at war. We are not engaged in military operations. We are not fighting an invading army, nor are we sending out of this country an invading army, but we are in the midst of this war because we cannot escape its consequences. We are in the midst of it because we cannot assure ourselves that the conflagration that is burning elsewhere may not scorch our own shores and our own institutions. Under these circumstances we are compelled to confer unprecedented authority and power upon the head of our Government. We are willing to surrender some of these liberties and some of these freedoms temporarily to the Government of the United States in order that we may not be compelled to surrender them permanently to Hitler and nazi-ism.

I would rather surrender a few of our liberties for a short while in the preservation of our defense than to surrender them permanently to Hitler and his crew of nation wreckers.

We probably have not been called upon yet to make all the sacrifices which will be required of us, but the American people know how to make sacrifices when they are convinced of the necessity. A century and a half ago, 3,000,000 people fringing the Atlantic seaboard took the risks. Again, in 1812, they took the risks. In 1848 they took the risks. In 1861 to 1865 they took the risks. In 1898 they took the risks. In 1917 they took the risks. We do not want war. We abhor war. We believe and hope that our material aid to the nations now fighting aggression will be all that we need to put forth to preserve the things which are dear to America; but if, as a last resort, the American people are compelled to fight to defend their country and their freedom and their way of living, they will not prove less responsive to this call in the future than they have proven in the past. God grant that this last resort may not have to be faced, but whether it is or not, we beseech the American people to believe that their President and the Congress and their responsible Government are putting forth every possible effort with the light which God has given them to protect and preserve and perpetuate American ideals, American standards, American democracy, and American civilization.

Americans All

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

EDITORIAL FROM OMAHA EVENING WORLD-HERALD

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial appearing in the Evening World-Herald, published at Omaha, Nebr., by a former distinguished Member of this body. The editorial is entitled "Americans All."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Omaha Evening World-Herald of August 19, 1941]

AMERICANS ALL

Republicans are American citizens, too.

Democrats and independents who are in disagreement either with the President's war policies or his methods of imposing them are American citizens, too.

These citizens pay their full share of taxes. They carry their share of the debt load. They must endure the hardships and losses incident to war priorities, price and credit limitations, dislocations of industry, and all other unpleasant features of a regimented and controlled economy. When it comes to fighting their manpower will figure in the casualty lists in full proportion to their numbers—and those numbers are very large.

These groups are represented, as it is imperative they should be, in the Congress.

Yet often—too often—when the President deems it necessary to confer with members of the House and Senate on matters of vital concern to all the people, no representatives of these groups are admitted to the conference.

On his return from the historic deep-sea conference with Prime Minister Churchill, the President decided to give to certain Congressmen an accounting of the international situation. Unquestionably that was proper. For Congress is a coordinate branch of our Government. It alone has the power to declare war. It controls the purse strings. The Executive can spend no money it does not authorize and appropriate. And if it is to exercise these duties intelligently it needs to be informed.

So Mr. Roosevelt called a few "key men" into his study to tell them, confidentially, some things he thinks they should know.

But he invited only Democrats. And, of the Democrats, he invited only such as are in agreement with him on foreign issues and affairs. Even with these, says the Associated Press report, he "continued to keep his own counsel on the broad world strategy worked out with Churchill, and the belief was he would use deeds—not words to disclose it when the time is ripe."

Probably, if this be an accurate statement, the conference did not amount to much. Probably there was little or no opportunity for a free exchange of opinions, for a serious discussion. The President was simply "telling them"—within the careful limits of his own discretion.

All the more reason, it would seem, why some unconvinced Congressman, some "unreconstructed rebel," some member of what the wise British value as "the loyal opposition," might have been permitted to be present. At the very least some one Republican—and there are a good many of them in Congress—who goes along with the President on war policies.

There is a constant plea for unity, for loyal support of our Government in an hour of great peril. But how is this to be expected unless unity is invited and met half way? Ours is still a two-party country. There is still a two-party Congress. If ever this ceased to be true we should have, under whatever name, a one-man government. Unity then might be compelled, as in Germany and Russia. But among a free people whatever degree of unity it is possible for any leader to secure must be won, earned, deserved.

If Mr. Roosevelt were not so addicted to "conferring" only with his "yes" men, so intolerant of opposing opinion, he would get along better with the country. And the country would get along better, too.

On the field of battle no "plunging cannon shot" will distinguish Republicans from Democrats.

Address by Senator Bunker at Reno, Nev.

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

RADIO ADDRESS BY HON. BERKELEY L. BUNKER, OF NEVADA

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered over KOH radio station, at Reno, Nev., by the junior Senator from Nevada [Mr. BUNKER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to be back in Nevada again. It is like a tonic to come home, if only for a few days, after experiencing the turmoil of Washington in these past months of such vital importance in our national life.

Since September 1939, when Hitler charged upon democracy, the civilized world has been living under a Damocles sword of armed might.

Every day a new assault is made upon civilization. Let us look back at the headlines that have marked before us reflecting the various chapters of the war. We read that Austria was commanded to join the Reich. Her Government refused, and German soldiers overwhelmed her. Then Czechoslovakia; next Poland was devastated. Then Norway, Denmark, Holland, Belgium, and finally France, possessing lands which Hitler coveted and liberties which he abhorred, fell befor the German military force. Bulgaria and Rumania were defeated. Next it was Yugoslavia's turn to be bombed into submission, and then Greece, after a courageous fight, felt the ax of the conqueror.

And for the past 3 weeks the headlines carried to us the news of Germany's war on Russia. We hold no brief for the dictatorship of Russia. We uphold only the democratic ideals of liberty and the pursuit of happiness—ideals impossible under the regime of any dictator, whether Hitler or Stalin. But it is provident that Germany has diverted a part of her war machine from the pathway, temporarily at least, of Britain. We are grateful for two reasons. One, that Hitler's partial preoccupation with Russia gives us time, badly needed time, to carry on our own program of national defense. And two, it teaches us, if it has not already been made clear, that Hitler will allow nothing to stand in the way of his goal of world domination.

Perhaps in the end Germany's invasion of Russia will work to the disadvantage of Britain. It is yet too early to tell how the pendulum will swing. In Washington, it is the belief that Germany will defeat Russia and that Hitler will have Russia's raw materials and other resources at her disposal. Hitler was driven to attack Russia by a mixture of worry and confidence. Worry over his inability to conquer Britain, the economic shortcomings of his European domain, and America's aid to Britain. Confidence in his ability to smash Russian resistance and thereby gain the resources needed to sustain a long war against the English-speaking powers. But no matter what the outcome, Germany's attack on Russia is an admission of failure. The German armies have now a glittering succession of victories on a dozen battlefields. But the final victory which loomed so close a year ago, at the time of the fall of France, is still beyond his reach. So Hitler has found it necessary to strike out once more and this time seek to draw from Soviet lands the wheat, the minerals, and the oil which the Reich desperately needs. But the price Hitler may find it necessary to pay for these supplies may prove a heavy one.

In the meantime, we must make full use of this breathing spell to further our own defense.

The United States set out on a very well-defined and, I am happy to say, realistic course. By an overwhelming vote of their representatives in Congress the American people have pledged all-out aid to Britain. I have every sympathy for the cause of England and the ideals for which she is so valiantly fighting. But the reason I favor our foreign policy is not because of my sympathy for England but rather it is because of love for my country. Hitler undoubtedly hopes that by putting himself forward in the guise of a St. George fighting the dragon of bolshevism to confuse public opinion and swing our sympathy away from Britain. Perhaps he might have had some chance for success on this score if our policy was one built on sympathy. But it is not. It is a policy built on absolute realism. It is a policy most pragmatic and practical—that of defending the United States of America. Our policy is built upon the realization that who helps England helps the United States. I reiterate that I am opposed to sending American boys to fight abroad. But I reiterate also that I favor sending to Britain every implement of warfare that we can spare without endangering our national defense. For our own defense is our single objective.

It has been said frequently that Hitler will not invade the United States. He has announced that he has no intention of invading America. But it will be remembered that after the invasion of Czechoslovakia he declared: "This is the last territorial readjustment I will seek." There were people in many European countries who believed that. Today those people live in slavery. It has become clear to us—and we need no further proof than the invasion of Russia—that Hitler's aim is world domination. We have Hitler's own word for it in Mein Kampf that his aims include the Americas, and his promises in that book are the only ones he has ever kept. Furthermore, no conqueror in history, from Xerxes of ancient Persia to the Kaiser in this century, ever stopped his conquests until he was stopped by force. Shall we sit back and try to stop Hitler at Buenos Aires and Brazil, or shall we help to stop him at the cliffs of Dover?

Thus, it becomes obvious that for our own defense the position of the United States in the present war is that of serving as arsenal for Great Britain and those who assist her. The American problem is a problem purely of production. Our purpose and our aim is to stay behind the lines, and through laws that have been passed by great majorities to supply the Allies and to supply our own defense warehouses with guns, ships, planes, and munitions. This means unity of purpose, of total effort—an effort on the part of each of us, on the part of all groups, to do everything within our power toward the goal of producing.

And we are doing a fine job of producing. As for actual production records, we are now producing some 1,600 planes per month—double the number put out last November. We are engaged in the biggest shipbuilding program ever undertaken.

But we must not become overly optimistic about these figures. We must remember that we have had to revise our schedule of plane production downward on three occasions. It is true that Germany has had from the beginning—and still has—a great superiority in bombing strength.

So it becomes apparent that while our production has increased by leaps and bounds, and while our record is one of which we can well be proud, the task before us is one of great magnitude. Given time, given unity of purpose and the spirit of sacrifice, the job ahead can be done, but, so far, we have just begun.

In our concentration on the great needs of our defense program we must ever bear in mind, and never lose sight of, the basic objective of all our effort. That objective is the protection and preservation of the freedom and the institutions of the present and future citizens of the United States

But to protect these institutions we must put our shoulder to the wheel. We must devote every possible ounce of strength to the job before us. It means sacrifice on the part of all. The surest guaranty that none of us will have to die for democracy tomorrow is that all of us will live for democracy today.

The question now on the tongues and in the hearts of every good American is, What can I do to help? The Government has provided an answer to this question for every man, woman, and child in the Nation. We can invest in democracy, invest in America, by purchasing United States defense savings bonds and stamps. These bonds are not for a few Americans, they are for all Americans. Even children can save their pennies to buy stamps exchangeable for defense savings bonds. There is no other single way in which so many people can become partners of their Government in facing this emergency. It is the hope of the collector of internal revenue, Mr Robert L. Douglass under whose leadership this campaign will go forward in Nevada, that every loyal citizen of our State will join the Nation and the President of the Nation in demonstrating anew our faith in America by purchasing savings bonds and stamps for national defense.

We in Nevada have a right to be proud of our contributions and our potential contributions to the defense program. We are a wealthy State, sound in financial structure and rich in natural resources. We have vast resources to offer to our Nation in this time of emergency—our minerals, our farm and ranch products, our vast expanses of land, especially valuable for military purposes. It has been my privilege to discuss with the President the place of Nevada in the defense program and he is cognizant of our great potentialities.

The Nation well remembers that in the Civil War it was the stores of Nevada silver and gold that saved the Union. We are proud that in this present crisis, Nevada will again come through and hold up more than her share of the burden of defense.

Not so very long ago we celebrated throughout the United States, I Am An American Day. At this time, thousands of our adopted American citizens and millions of American-born citizens affirmed their allegiance to our flag and to our country. It was well for us to reexamine then, and to reexamine often, what it means to be able to use that coveted phrase: "I am an American."

It has been said that America is God's last chance to make a world. And it is right that we should be the people chosen to carry on the spirit of democracy. The revolving wheel of destiny has made our leadership a necessity in one of the great crises of civilization.

Despite all that has been said by the Lindberghs and other administration critics, America's position in this international crisis will secure the future safety of our people. The decisions that have been made by our President and the position taken by our Government is worthy of America.

In this crisis the American people will rededicate themselves to Americanism. I have confidence in the future of America because I have confidence in the people of America. We whose Government was founded to ensure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, will, through mutual trust and mutual sacrifice, lead the world from this darkness into a brighter day of a nobler and finer civilization.

Radio Censorship

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

STATEMENT BY JIMMIE FIDLER

Mr. NYE. Mr. President, those who are at all conversant with the radio know who is Jimmie Fidler, a radio commentator of wide renown, who, with his sponsors, has recently seen fit to transfer his program from one chain to another because of what appears very obviously to be a control in some manner over radio broadcasting by the moving-picture industry. Mr. Fidler issued a statement for release on August 18, 1941, entitled "Radio Censorship Unbearable." I ask unanimous consent that it may be printed in its entirety in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Due to a policy of censorship of speech imposed by the Columbia Broadcasting Co. on me and which has proved oppressive to me, I have asked my radio sponsor (the Tayton Co., manufacturer and distributor of cosmetics) to cancel its contract, or obtain a release of its contract, with that network and permit me to carry on my program over another broadcasting system.

In accordance with this request, and with a full understanding of the difficulties with which I have been confronted in my effort to compile and deliver to the public an unbiased, frank, interesting, and constructively critical discussion of motion pictures and the industry's personnel, my sponsor has canceled its contract with C. B. S.

Consequently, my broadcast of Friday, August 15, marks the end of my association with Columbia. On the Friday following, August 22, my programs will be carried over the facilities of the Mutual Broadcasting System.

Such a drastic move, right in the middle of a new series and just as my programs have begun to establish a steady listening audience, was to my mind necessary, else it would never have been made, since it entails considerable loss of time, money, effort.

During the 6 weeks of my current series over Columbia, their censorship policy has hampered and worried me to the point that I have felt and feel that I have been denied the right of free speech. I consider the fetters that have been imposed by Columbia officials as resulting in my carrying on a program so "old ladyish" as to constitute a slap in the face of this right of free speech so long recognized as the inalienable privilege of a citizen of this country.

Despite the fact that I am a recognized motion-picture authority and critic with 21 years' experience, the Columbia Broadcasting Co. insisted that I must give a "favorable" notice (three or more bells) to all so-called "big pictures reviewed by me, and no less than two bells and favorable notice to any "B" product reviewed by me.

In other words, even though a picture was downright bad, I was not permitted to say so. If I reviewed it at all, I had to give it good bell ratings and praising reviews. In such case I chose the only other path left open; I refused to review bad films.

The only motion pictures the Columbia network would permit me to review honestly (if they deserved panning) were movies produced by independent or small companies, or in other countries. Obviously, then, Columbia was censoring me not because officials of the broadcasting chain believed my reviews biased or inaccurate but for reasons best known to themselves and at variance with a frank, unbiased review of motion pictures on my part.

Had I been willing to compromise my own honest opinion by telling listeners that pictures I deemed bad were good and had I been willing to speak only praise of the film industry, I might have continued my Columbia Broadcasting System association. But I would have moved about with a hanging head, ashamed of my own deceit.

My Hollywood column is published in well over a hundred daily and Sunday newspapers from coast to coast. These newspapers are decent, honest, fair, and American. Certainly they are not going to jeopardize their good reputations by publishing editorial matter that is dishonest, malicious, or unfair. Yet these newspapers have on many occasions published material that the Columbia Broadcasting Co., in its "righteousness," has censored "for policy reasons."

I have never made a statement on the air which was prompted by any malicious motive any more than I would do so in my column. As a motion-picture authority, I have fairly criticized certain people and customs of the studios. The criticisms have often incurred the wrath of studio executives, and I know for a fact that some heads of the film industry, unable to "take it," have gone to my sponsors and Columbia in protest and have tried to "get my job."

In my opinion, it is largely because of these studio protests that I was forced to bear such rigid censorship—a censorship that caused me to beg my sponsors for relief.

I am sending a copy of this statement to the Federal Communications Commission. It seems to me members of that Commission will be interested in Columbia's attitude concerning the rights of fair comment and free speech. Broadcasting systems are not a public utility, but they certainly must owe their public a reasonable responsibility.

It seems to me that there is a serious question whether a network discharges its public duty when it restricts a commentator who is a recognized authority, and who had been broadcasting along established lines for 7 years, so that he cannot continue to speak as an authority and as he has always spoken, but instead must submit to censor and editing of his material to a point making fair and frank comment almost impossible.

I once stated publicly: "Freedom of speech will always exist in the United States. If ever an American Hitler arises, and, by dictatorial methods, succeeds in stifling the right to speak freely, that will be a sorry day for our people; and if ever the time comes when I cannot be honest with myself, my listeners, and my readers, I will cease broadcasting and writing."

That is still my opinion.

Opposing Involvement in War

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

LETTERS FROM MOTHERS OF LOS ANGELES

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters from the Mothers of Los Angeles, signed by Lany Lewis Renard, chairman, one addressed to the President of the United States and the other addressed to the President of the Senate. The letters, which were flown to Washington by Miss Laura Ingalls, the noted aviatrix, oppose the entrance of the United States into war.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

LOS ANGELES, CALIF.

To THE PRESIDENT OF THE UNITED STATES,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: We, the Mothers of Los Angeles, solemnly ask you to remember and hold sacred the pledges you made the American people during your campaign of 1940. Those pledges clearly committed you not to take our sons to fight in foreign wars.

We, the American people, want unity; but in order to achieve this unity, the President of the United States must keep the promises which he makes.

You were elected on the promise to keep the country out of war. That promise must not be violated. Its threatened violation has already disrupted unity in America and its continued violation will create wider dissension and destroy the confidence which the people should give to the President.

At least 80 percent of the American people concur in this view.

We think it our duty to notify you that to obtain the unity which we all desire, your efforts should be confined to arming America, in the full knowledge, which should be communicated by you to the American people, that they are entirely capable of defending themselves.

We further respectfully state it is our unalterable conviction that this free land must not be committed to military alliances with other power, but shall maintain through progressive national defense, our independent destiny.

Faithfully yours,
LANY LEWIS RENARD,
Chairman, Mothers of Los Angeles.
ANNE GFELLER, *Secretary.*

LOS ANGELES, CALIF.

To the PRESIDENT OF THE SENATE,
Washington, D. C.

MY DEAR MR. PRESIDENT: We, the Mothers of Los Angeles, have requested Miss Laura Ingalls to fly to Washington as our representative to deliver a letter to the President of the United States and also to the House of Representatives, together with this letter to the Senate of the United States, stating our unalterable opposition to engaging this Nation in a foreign war.

We rely upon you to keep us out of war. Under our Constitution, Congress alone has the right to declare war, and we believe it to be your solemn duty not to permit any undeclared war to be fought.

We demand that you live up to the position and power which the Constitution has conferred upon you.

We pray you not to declare war, and to stop by your authoritative action the carrying on of any undeclared war.

Faithfully yours,
LANY LEWIS RENARD,
Chairman, Mothers of Los Angeles.
ANNE GFELLER, *Secretary.*

Alleged Gag on Letter Writers

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ARTICLE FROM SPOKESMAN-REVIEW

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Letter Writers' Gag Is Charged," appearing in the Spokesman-Review, of Spokane, Wash., under date of August 21.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Spokesman-Review, of Spokane, Wash., August 21, 1941]

LETTER WRITER'S GAG IS CHARGED—SPOKANE MAN SENDS PRESIDENT CRITICISM AND HAS SECRET SERVICE MAN CALL

Writing letters to the editor is a harmless diversion which gives readers an opportunity to blow off steam and furnishes entertainment and possibly edification to other readers. But when writers attack the President of the United States—particularly if they send him copies of their letters to the editor—they may find themselves waited upon by a representative of the United States Secret Service. Part of their duties is to safeguard the President from attacks of all kinds.

James A. Tozeland, E3129 Sixteenth, recently found this out. Many of his letters have appeared in the Spokesman-Review Forum on many subjects over several years. He sent a recent letter to the White House. In it he said, among other things:

RAPS AMERICAN TORIES

"What right has this madman (President Roosevelt) to claim he has a united people behind him in such a traitorous attack on democracy? Will this American Tory be permitted to give America back to Tory England and send American youth to rot in jungle slaughter pens defending British pound sterling? * * * Where do English or American Tories get the authority to claim that their total war has the sanction of Christianity? Only hypocrites or madmen claim that Christianity can be saved by acts of total war, deeds which are too vicious and vile for beasts of the jungle, where greed is a virtue. This is indeed a national emergency, a testing time to see if Americans are dumb, driven cattle or freemen worthy to have a true democracy to live in. Make no mistake, it takes more courage to defy a dictator at home than one across the sea."

SECRET SERVICE CALL

The receipt of this letter at Washington brought a Secret Service man to the door of the Tozeland home. Mr. Tozeland explains it:

"The Secret Service man asked me to identify it as my work. He also had a post card I had addressed to the President. I have been sending a great many of these cards with clippings pasted on them with comments by me.

"If I had a guilty conscience, I would be scared stiff by a visit from a Secret Service agent. My record, evidence of which may be found in the forum, is proof I am opposed to the use of force to settle anything.

"The Secret Service agent told me every letter of a threatening or obscene nature addressed to the President is turned over to them. I pointed to my post card and said, 'Is there anything threatening in that?' He grinned and replied 'To tell the truth, I haven't read it.' So he proceeded to read it. He admitted he could find nothing of that nature in it.

"I do not know what their definition of obscene is. They—the warmongers—act as if the truth is obscene and not to be considered by the public."

WRITES PRESIDENT AGAIN

Mr. Tozeland wrote the President again after the Secret Service man interviewed him, protesting against any attempt to curtail free speech. In his second letter, Mr. Tozeland wrote the President as follows:

"I have no complaint to make against the man from the Secret Service who was sent to investigate me because I have been writing post cards to you objecting to the unconstitutional, provocative acts of war by your administration in defense of the British pound sterling. However, I consider his last question most significant.

"He asked me if I intended to continue writing such cards. I hope I made it plain to him that I consider the exercise of free speech most essential in times of crisis and that if your administration succeeds in creating an incident to push America into undeclared war against the will of the people, you will find there are still free men who are prepared to face a firing squad if necessary in defiance of those dictators who are most dangerous to democracy, namely, the home-grown kind."

CHARGES INTIMIDATION

In a note to the Spokesman-Review, Mr. Tozeland adds:

"If there was anything unlawful in what I write, they would not hesitate to send me up for trial. It is quite clear they are trying to intimidate those of us who are outspoken in our criticism of warmongers."

America's State of Preparedness

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, August 25, 1941

ARTICLES FROM THE WASHINGTON POST

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD several articles dealing with America's state of preparedness, published in the Washington Post.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of August 20, 1941]

GUNS FOR SOLDIERS

An officer at Fort Meade pointed at 29 dummy antitank guns lined up in a row.

"Look at them," he beamed. "They look almost like the real thing. We called in all the welders in the outfit and went to work and made them ourselves."

The officer noted the cynical smiles that greeted his enthusiasm.

"We've got to do something to keep the boys' chins up," he concluded apologetically.

This incident is being duplicated every day in practically every training camp in the United States.

American soldiers simply haven't got the guns, the tanks, the planes, the equipment to make them thoroughly trained combat troops.

No official in Washington denies this condition. From every source the answer is the same: Sufficient time has not elapsed for quantity production. Plants are being built. Tools are being made. Plans are being changed and expanded.

Army and Government officials proudly point to the accomplishments of the past year. They call attention to the miles of cantonments, to a million and a half men in uniform, to hundreds of acres of munitions plants building.

But every current production chart today gives the lie to optimism over the progress of national defense.

There are leaders no man can call defeatists, who say that unless America throws herself into this picture as only America can, this country faces a defense Dunkerque.

They say that if this Nation is lagging now, the arms deficit next year, when the program is to be expanded to staggering proportions, will be appalling.

They say there is no coordinated plan and no man with the authority to execute it; that envisions the American defense and domestic scene as an entity. In discussing this matter, practically every official in Washington concludes by pointing to reasons outside his own sphere of influence.

They say that, too often, the familiar chant, "In September we will have; in December we will have; in January we will have" is whistling in the dark.

They say that aid to Britain and the lend-lease bill cannot be blamed for present deficiencies. Much so-called "aid to Britain," they say, coming from America today, originates in plants in this country, paid for by England with English money, before the lend-lease bill was drawn.

They have considerable sympathy for the veteran sergeant who told a Post reporter: "The whole thing smells of France. Every politician after his bit; every brass hat looking for more red tape; every labor leader getting his cut; everybody making something, after easy money; the newspapers saying everything is lovely; and all the soldier knows is that he is in for the duration; that he hasn't got the stuff and that, in the end, he will hold the bag. When in hell are they going to get going and give us some guns? You can't lick Hitler with Boy Scouts."

There is enough truth in this colorful and exaggerated outburst to make any patriotic citizen pause.

With all due credit to the thousands of able, experienced men in the service and the allied branches of defense, who are working day and night for a properly prepared America, the Post has been exploring the detours on the defense road.

There are several very rocky detours.

The Post hopes that they can be blasted out so our soldiers may have guns and planes and tanks in an unending stream. Miracles will be required in some cases. But America is capable of miracles.

One thing is certain: When history appraises our effort to protect this hemisphere, the desolate, blood-chilling phrase "too little and too late" must not appear.

Soldiers must have guns.

[From the Washington Post of August 21, 1941]

GUNS FOR SOLDIERS—WE OUTPRODUCE THE WORLD IN GLITTERING LUXURY GADGETS

"If we get the spirit, I don't see anybody on God's earth that can outproduce the United States of America."

These were the words, yesterday, of William S. Knudsen, Director General of the O. P. M. He referred to the production of weapons for defense.

The last 14 months prove Knudsen partially correct. We have outproduced the world—but not in armaments. Instead, we have turned out more glittering luxury gadgets than this comfort-mad Nation has ever seen.

America needs guns. In answer, it has been given automobiles—beautiful things and 20 percent more than any year since 1929.

America needs planes. In answer, an industrial cornucopia has poured out a deluge of washing machines, vacuum cleaners, air-conditioning equipment, electric refrigerators, and radios.

If these handsome objects are not quite like guns and planes, they at least have used up the same raw materials.

America needs munitions and ships. In answer, it has a spending boom with an appetite for copper, steel, zinc, and brass every whit as rapacious as the defense industry.

To get the guns and planes and munitions, America needed military planners to prepare the buying list; industrial experts to mobilize the world's greatest, most modern, most efficient factory; a central economic body to secure raw materials, machines, labor, management.

Instead, America got military planners who started to prepare in terms of a cavalry skirmish on the Mexican border; industrial experts who were looking out the window on the job of getting supplies and complacently watching industry mobilize itself for civilian production, not guns; a military and economic high command which consistently shot behind a moving target, failing to sketch the job to be done, failing to delegate the authority to do it.

EACH BLAMES THE OTHER

In this picture, the White House, the Army, and the Office of Production Management (along with its predecessor, the National Defense Advisory Commission) have been like a bad outfield.

The ball was a high fly.

Each fielder screamed, "Yours."

The ball fell between them.

Ever since, each has been blaming the other.

The Army declares it was never told what sort of a war to prepare for, whether to defend the United States, to defend the Western Hemisphere, or to lick Hitler.

The O. P. M. declares it never had authority to challenge the puny Army estimates of materials needed, or to step up the dribbling, piecemeal pace of appropriation requests; that it had equally little authority to force the Army to place its contracts with an eye for future needs.

The rest of the administration, voicing private White House sentiment, declares that anyone with eyes in his head could see the huge extent of the job; that there was no mistaking the task of O. P. M.; that O. P. M. could have had all the authority it wanted had it ever asked for it.

WE'LL BE LAGGING NEXT YEAR

The result:

Confidential figures, which cannot be disclosed in detail, show, in general, that not only has production to date been woefully inadequate but that 1 year from now—2 years after the defense program was launched—production of military planes, artillery, and tanks will be less than one-half of the amount required for adequate defense and real aid to Britain.

Today, 14 months after the program began, the great reservoir of military production facilities—the durable goods industries, the pride of American civilization—has scarcely been tapped. Its wheels are turning busily, busier than at any time since 1929, but not sufficiently on guns, planes, or tanks.

As of the 1st of June, this year, the size of the defense program, as measured in appropriations, was almost $50,000,000,000.

Yet of this amount, only twenty-eight billions, or less than 58 percent, had been placed under contract by that date. The supplies for which the remaining twenty-two billions are to be spent had not even been ordered.

On top of this, another $30,000,000,000 will soon be appropriated for defense purposes.

Of airplane appropriations of $11,728,000,000, contracts have been issued for only $6,829,000,000.

Of appropriations for ordnance and combat vehicles, totaling $8,225,000,000, not quite five billions have been contracted for.

Of $5,880,000,000 appropriations for new industrial facilities, which themselves take 1 or 2 years to build before they can produce the items for a shooting war, contracts have been issued for less than half the amount.

CRUCIAL SHORTAGES ALREADY

The figures above refer only to contracts—contracts for deliveries expected some time in the future. Actual deliveries are military secrets and may not be printed.

This is just as well. They do not make happy reading.

With military production a full year away from the date of peak rate of output, there are already crucial shortages in raw materials. There is barely enough nickel and aluminum for military needs, and none at all for the rest of American industry. There is a deficiency in magnesium which utterly precludes the production of certain armament items in the amount desired. The greatest difficulty is being experienced in getting steel plate for ships—naval and merchant marine—and for railroad freight cars, which are necessary if another inevitable shortage, that of transportation, is to be alleviated, much less averted.

And if—as is by no means improbable—commerce ends with the Orient and East Indies, the situation in tin, rubber, manganese, chromite, tungsten, manila fiber, and mica, to name only a few of the items of which inadequate stock piles have been accumulated, will be equally serious.

What is the answer?

The answer is that there are a thousand answers. It simply depends on with whom you talk. There are a thousand suave, passionately earnest good answers. But, paradoxically, most of them are bad.

The truth seems to be that our ball club needs a Jimmy Dykes—a tough, battling, two-fisted guy from across the tracks who will be thrown out of the game now and then for protesting too strenuously, but who, in the game of getting guns for soldiers, will win—come hell or high water.

[From the Washington Post of August 22, 1941]

GUNS FOR SOLDIERS—THEY TRIED TO PUT MUSCLE ON UNITED STATES BUT NOT LOSE FAT

With superb disregard of the facts of economics, the President, the National Defense Advisory Commission, and its successor, the Office of Production Management, attempted to pile a thirty of forty billion dollar annual

defense load on top of a phenomenal, prosperity peacetime production load of about $100,000,000,000.

In effect, the defense program administrators said, not "business as usual," but "better business than ever before, plus 40 percent additional defense business."

This Nation has not done it.

No nation has ever done it.

Actually, the second half of the program—the defense half—has failed to jell. We are not spending for defense at the rate of three or four billions a month, as we must to achieve real armament production to match the Axis. Instead, we are spending less than $1,000,000,000. And even this rate was not achieved until June and July, more than a year after we started.

DEPRESSION APPEARS AMID THE BOOM

Second, although there has been, indeed, much better civilian business than ever before, a considerable segment of it is about to come to a sickening halt—a depression in the midst of a boom—with thousands of factories made idle, millions of men out of work.

This impending depression is the result of a slight oversight. The N. D. A. C.-O. P. M. neglected to provide sufficient raw materials for both a $100,000,000,000 civilian production and a defense program of even small proportions—at present only $9,000,000,000.

The fact that 5,000 or 6,000 shut-down factories and one or two million jobless men will not be immediately put to work to step up a lagging defense output is the result of another slight oversight. The N. D. A. C.-O. P. M. neglected to plan for the conversion of those factories and men to armament work.

The failure to convert—the failure to even plan for conversion—is basic.

It was admitted as late as Wednesday by William S. Knudsen, O. P. M. Director General, who told a press conference that the impending curtailment of auto production was dictated by a shortage in raw materials and not by necessity to convert the factories and tools to defense purposes.

WHICH EXPLAINS SOME OTHER FAILURES

It underlines and explains—but in no way excuses—the now obvious bogging down of defense production.

It makes understandable a whole series of failures to be discussed at more length in subsequent articles in this series—failure to build stock piles, failure to expand raw-material production, failure to force three-shift operations, failure to subcontract, failure to spread orders, failure to use the full production potentialities of the Nation, failure to control strikes, failure to achieve in fact "all out" defense production.

The tone was set at the White House, which for month after month, through a slight oversight, failed to face reality and let the Nation know that the defense program was going to hurt. It should be remembered that the President of the United States is Commander in Chief of production, as well as Commander in Chief of the Army and Navy.

The tone was not challenged by N. D. A. C.-O. P. M. Instead it was embraced with fervor It was a convenient path of least resistance; a happy excuse for avoiding an unpleasant chore, namely telling American industry it would have to quit its enormously profitable production of autos, zippers, gadgets, and thingumbobs and go to work for Uncle Sam.

Instead of calling on these existing great factories to convert to military production, the defense agencies busily helped industry build new plants and acquire new machine tools.

These new plants and new tools were relied on almost exclusively to produce the great armament stores that are needed, while most of the already existing ones happily went on making gadgets.

ONLY HEAVY INDUSTRY CAN DO THE JOB

There were two deficiencies in this reliance on new and projected plants, both of them all too visible now in terms of actual results. First, it takes time to build a new plant, and still more time to build new machine tools.

Second, to turn out thirty or forty billions of dollars' worth of military material, a heavy industry must be created even larger than America's present civilian heavy industry.

To duplicate—even to exceed—what America has been building since the Civil War is a sizable chore—too sizable to be done in a year or two or even three. But the production happens to be needed in a year or two, or at most three.

This is not to say that no new plants should have been built. Obviously, an enormous number of new factories and a still larger number of new machine tools were necessary. An airplane cannot be assembled except in a plant with vast floor space. A candy factory cannot be made over into a powder plant.

But to start the great bulk of defense production from scratch, in new plants, with new tools, was to do things the long way when time was desperately short, the insufficient way when volume was to count.

Scores of the plants have been built and perhaps three quarters of a billion dollars' worth of new machine tools have been constructed. If they, and the others still building, were adequate for America's defense needs, there would be no purpose in complaining. America could kiss off the lost 12 months, and we could thank our lucky stars that England and Russia are giving us the grace period, and forget it.

But these plants, as delivery expectancy schedules show—are not adequate, not if we are to give Germany's foes what they need this year, next year, or even the year after that, much less if we ourselves are to fight.

What is adequate, obviously, is nothing less than the great existing bulk of America's heavy goods industries. That great bulk in the main is still at work on civilian items. Even worse, the very plans for its conversion to armament production are only now beginning, 14 months late.

Why?

The military services and the O. P. M. had two answers.

The first was that the conversion wasn't necessary; that the new facilities planned, plus the expansion of other factories, were adequate to meet our defense needs.

The second answer was that conversion wasn't possible. The great mass of the durable-goods industries, it was argued, did not have the managerial skill, the trained labor, the adaptable plants or machine tools to undertake the incredibly difficult and demanding defense work.

This second answer, because it has been so widely argued, because it has become the subject of so much controversy, demands separate discussion and will be the subject of a future article.

Meantime, at the risk of laboring a point made obvious by the visible lack of production to date, the first answer—that new production facilities will be adequate—is worth further examination.

Is expected production of about half of our defense requirements by 1 year from now, adequate?

More important, are those defense requirements themselves adequate?

Are not the sights still set too low?

Consider for a moment that in 6 weeks of fighting the Russians admit losing 5,000 tanks, 4,000 planes, and 7,000 pieces of field artillery. Actual losses, it can be assumed, are much higher.

Set this against a hoped-for British invasion of Germany in 1943.

Assume Russia is still holding an army at the Urals, that England has rearmed manfully.

The invasion campaign would probably be 30 weeks long, a full summer. Multiplying the Russian losses to fit this period, the conclusion is reached that the anti-Axis invaders must expect to lose 25,000 tanks, 20,000 planes, 35,000 pieces of artillery.

Although the figures are secret, there is strong ground for belief that our armament deliveries by 1943 would not permit such a struggle—particularly in face of a probable conflict at the same time or before with Japan.

Consider the problem of adequacy from another angle. Machine tools are the key to armament production. The machine-tool building industry is running at high speed. In the absence of concerted effort to bring other potential machine-tool makers into the picture—captive machine shops in every durable goods industry, back-alley shops, small metal-working plants—O. P. M. must believe that the machine-tool builders alone can do the job.

Or was this also a slight oversight?

Because:

As of midsummer, the machine-tool industry had between five hundred and six hundred million dollars of unfilled orders, a backlog that will take from 6 to 8 months to saw through.

To be placed, in addition, are orders for about $300,000,000 more tools for the bomber program, and perhaps $400,000,000 for other tools, adding another 9 or 10 months to the backlog.

Not even thought about yet are still further machine-tool orders deriving from pending military appropriations of $10,000,000,000.

Still another appropriation of $10,000,000,000, more or less—the new lease-lend bill—is under consideration. A great volume of the armaments to be bought with these funds must be made with new machine tools.

Adolf Hitler has stated repeatedly that America cannot produce enough, nor in time, to have any effect on the war's outcome.

He was not talking about two-tone sedans with fluid drive and white-wall tires.

He was talking about guns—on planes, on tanks, on battleships, and in the hands of soldiers.

It's Still Far Too Little

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of August 23, 1941:

[From the Washington Daily News of August 23, 1941]

IT'S STILL FAR TOO LITTLE

President Roosevelt has now challenged some of the dismal figures on defense production that Senator BYRD, of Virginia, recited the other day.

We are glad to hear from such an authority that the situation is not quite so bad as Mr. BYRD had been given to believe. Still the

President's statistics won't make many Americans feels like throwing out their chests.

He concedes that the production of military planes only held steady in May, June, July, due to changing designs Including training planes, the monthly figure was below 1,500. And this, of course, was not only for the Army, Navy and Marine Corps; not only for our mainland defenses plus Panama, plus Puerto Rico, plus Alaska, plus the Philippines, plus Guam, plus Hawaii, plus Iceland, plus Greenland, plus the leaseholds on British possessions in the Atlantic and Caribbean; but also for England, for the British forces in Africa, and the Middle East, for Singapore and Java and Sumatra and Australia, for Russia and China. At 1,500 a month—including trainers—the arsenal of democracy has hardly made a beginning toward meeting the enormous demands upon it.

The same thing is true in other categories — antiaircraft guns, antitank guns, mortars, tanks. The President's figures are bigger than Mr. BYRD's and his forecasts for increased output in the next few months are encouraging. If we were arming only ourselves, the prospect might be considered at least hopeful. But that is not the case. We are undertaking to deal out weapons for every continent on the globe. And the raw fact is that we have not got going fast enough. That is not the fault of any one man; but in the distribution of the blame Mr Roosevelt can hardly escape a share, especially in the light of his persistent refusal to name an over-all boss of defense production with the vision and authority to get things done much faster and bigger than they are being done.

Regardless of the inaccuracy which the President attributes to some of Senator BYRD's statistics, we still think that the Senator—who has been a faithful supporter of aid to England and of other foreign policies of the President—was dead right when he said:

"In my judgment, it would be an act of utter folly to become a voluntary shooting participant in the European conflict in our present state of unpreparedness."

We suspect that the President agrees with that, in spite of his recent avoidance of the subject.

"Before we fight, face the facts."

Pulp Timber in Alaska

EXTENSION OF REMARKS
OF
HON. ANTHONY J. DIMOND
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

EDITORIAL FROM THE KETCHIKAN (ALASKA) DAILY CHRONICLE

Mr. DIMOND. Mr. Speaker, because the subject is of such importance, I offer for incorporation in the CONGRESSIONAL RECORD an informative and well-written editorial taken from the Ketchikan Daily Chronicle, of Ketchikan, Alaska, able Roy C. Anderson, editor, pointing out the availability of newsprint now in much demand

Careful investigation by Forest Service officials reveals that Alaska can furnish at least 1,000,000 tons of newsprint, on a sustained-yield basis, in perpetuity. It would be to the advantage of the Nation, as well as to the advantage of the Territory of Alaska, if this source of renewable wealth were brought into use. At present prices the output of the Alaska forests would yield an annual $50,000,000 to be continued without any limit in time.

The editorial follows:

[From the Ketchikan (Alaska) Daily Chronicle of August 15, 1941]

NEWSPRINT MILLS

Recently we brought up the matter of a can factory for Ketchikan Its need is demonstrated forcibly by the present acute shortage in both cans and shipping space for them out of Seattle. There is no good reason, we believe, why there shouldn't be a can factory here for the good of Alaska, the good of the can companies themselves, the good of the salmon industry.

Those of you with not so long memories still will remember that a can factory was definitely announced for Ketchikan little more than a decade ago

And if you remember that you will remember also that a newsprint mill was definitely promised for Ketchikan, too, and another for Juneau. In fact, the newsprint mills were even farther along than the can factory. Los Angeles and San Francisco interests spent thousands and thousands of dollars on surveys They had everything ready to go, along with assurance of a mill in operation by about 1932, when old man depression knocked down the newsprint price and frightened capital away.

Then for a while nobody wanted newsprint. It tumbled from about $75 a ton to $40 a ton. Mills operated only at partial capacity. Nobody wanted a newsprint mill, and nobody would talk of one for Alaska.

Now the price has crept back up to $50 a ton. But even at that price those approached with respect to building a newsprint mill in Alaska have pointed to (1) plenty of newsprint capacity in existing mills, (2) high taxes, (3) lack of capital

There are still high taxes, and they're going higher. But the bogey of overcapacity is now proved a myth. There is need for more newsprint mills, and their very need would mean there would be no lack of capital to establish them

We base our belief of the need for more mills partly on what we read; more emphatically on our own experience.

A few weeks ago the United States mill from which we have been buying newsprint informed us that it could no longer guarantee delivery of even the comparatively small need we have for newsprint. This mill also, in view of its need for all its products to supply previous contracts, emphasized its desire to get rid of our business by boosting the price f. o. b. Seattle.

Simultaneously, we were informed from Seattle that other United States mills had already begun contracting with some Canadian mills that had a little tonnage to spare. The United States mills had to buy up the Canadian surplus in order to supply contracts entered into by the United States mills—in other words, capacity is not great enough to meet the demand.

Of course, now it may be a little late. The horse is stolen. Defense needs mean that the matter of getting machinery for new newsprint mills would be a stupendous job. In normal times it would take 1½ or 2 years. Now it might take 10. Building costs are up. Taxes are up.

Nevertheless, if the need goes up apace it may be that someone will remember again that Alaska can supply a quarter of the United States newsprint need in perpetuity.

And, of course, Alaska would benefit tremendously. As the Juneau Empire pointed out recently, "Paper mills operating to capacity in the Ketchikan and Admiralty Island sections would find some 3,000 men at work. Loggers, tugboat men, pulp and paper makers—they would be permanent, year-round Alaska residents, drawing weekly pay checks that would be spent in Alaska."

Address of Winston Churchill, Prime Minister of the British Empire

EXTENSION OF REMARKS
OF
HON. EDWARD T. TAYLOR
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

RADIO ADDRESS FROM ENGLAND

Mr. TAYLOR. Mr Speaker, under leave granted me by the House, I insert in the RECORD herewith the address of Winston Churchill. Prime Minister of the British Empire, delivered yesterday to the world over the radio. It graphically describes his impressions of the historic conference which he recently held with President Roosevelt in the North Atlantic. That was one of the most important meetings ever held between the heads of two great nations in the history of the world, and I feel that it should be preserved in the CONGRESSIONAL RECORD, along with the statement of President Roosevelt, as a permanent historical document, as follows:

I thought you would like me to tell you something about the voyage which I made across the ocean to meet our great friend, the President of the United States.

Exactly where we met is a secret, but I don't think I shall be indiscreet if I go so far as to say that it was somewhere in the Atlantic. In a spacious, landlocked bay which reminded me of the west coast of Scotland, powerful American warships, protected by strong flotillas and far-ranging aircraft, awaited our arrival and, as it were, stretched out a hand to help us in.

Our party arrived in the newest, or almost the newest, British battleship, the *Prince of Wales*, with a modest escort of British and Canadian destroyers. And there for 3 days I spent my time in company, and I think I may say in comradeship, with Mr. Roosevelt, while all the time the Chiefs of the Staff and naval and military commanders, both of the British Empire and of the United States, sat together in continual council.

President Roosevelt is the thrice-chosen head of the most powerful state and community in the world. I am the servant of King and Parliament, at present charged with the principal direction of our affairs in these fateful times. And it is my duty also to make sure, as I have made sure, that anything I say or do in the exercise of my office is approved and sustained by the whole British Commonwealth of Nations. Therefore, this meeting was bound to be important because of the enormous forces, at present only partially mobilized but steadily mobilizing, which are at the dispcsal of these two major groupings of the human family, the British Empire and the United States, who, fortunately for the progress of mankind, happened to speak the same language and very largely think the same thoughts, or anyhow, think a lot of the same thoughts.

MEETING WAS SYMBOLIC

The meeting was, therefore, symbolic. That is its prime importance. It symbolizes in a form and manner which everyone can understand in every land and in every clime the deep underlying unities which stir and, at decisive moments, rule the English-speaking peoples throughout the world.

Would it be presumptuous for me to say that it symbolizes something even more majestic, namely, the marshaling of the good forces of the world against the evil forces which are now so formidable and triumphant and which have cast their cruel spell over the whole of Europe and a large part of Asia.

This was a meeting which marks forever in the pages of history the taking up by the English-speaking nations, amid all this peril, tumult, and confusion, of the guidance of the fortunes of the broad toiling masses in all the continents, and our loyal effort, without any clog of selfish interest, to lead them forward out of the miseries into which they have enplunged, back to the broad highroad of freedom and justice. This is the highest honor and the most glorious opportunity which could ever have come to any branch of the human race.

When one beholds how many currents of extraordinary and terrible events have flowed together to make this harmony, even the most skeptical person must have the feeling that we all have the chance to play our part and do our duty in some great design, the end of which no mortal can foresee. Awful and horrible things I have seen in these days.

BARBARISM PLUS SCIENCE

The whole of Europe has been wrecked and trampled down by the mechanical weapons and barbaric fury of the Nazis. The most deadly instruments of war science have been joined to the extreme refinements of treachery and the most brutal exhibitions of ruthlessness and thus have formed a combine of aggression, the like of which has never been known, before which the rights, the traditions, the characteristics, and the structure of many ancient, honored states and peoples have been laid prostrate and are now ground down under the heel and terror of a monster.

The Austrians, the Czechs, the Poles, the Norwegians, the Danes, the Belgians, the Dutch, the Greeks, the Croats, and the Serbs, above all, the great French Nation, have been stunned and pinioned. Italy, Hungary, Rumania, Bulgaria have bought a shameful respite by becoming the jackals of the tiger. But their situation is very little different and will presently be indistinguishable from that of his victims. Sweden, Spain and Turkey stand appalled, wondering which will be struck down next. Here, then, is the vast pit into which all the most famous states and races of Europe have been flung and from which, unaided, they can never climb.

But all this did not satiate Adolf Hitler. He made a treaty of nonaggression with Soviet Russia, just as he made one with Turkey, in order to keep them quiet until he was ready to attack them.

And then, 9 weeks ago today, without a vestige of provocation, he hurled millions of soldiers with all their apparatus upon the neighbor he had called his friend, with the avowed object of destroying Russia and tearing her in pieces.

This frightful business is now unfolding day by day before our eyes. Here is a devil who, in a mere spasm of his pride and lust for domination, can condemn two or three millions, perhaps it may be many more, of human beings to speedy and violent death. Let Russia be blotted out. Let Russia be destroyed. Order the armies to advance. Such were his decrees. Accordingly, from the Arctic Ocean to the Black Sea, six or seven millions of soldiers are locked in mortal struggle.

RUSSIA NOT SO EASY

Ah, but this time it was not so easy. This time it was not all one way. The Russian Armies and all the peoples of the Russian Republic have rallied to the defense of their hearths and homes. For the first time Nazi blood has flowed in a fearful flood. Certainly a million and a half, perhaps two millions of Nazi cannon-fodder, have bit the dust of the endless plains of Russia. The tremendous battle rages along nearly 2,000 miles of front. The Russians fight with magnificient devotion. Not only that, our generals who have visited the Russian front line report with admiration the efficiency of their military organization and the excellence of their equipment.

The aggressor is surprised, startled, staggered. For the first time in his experience mass murder has become unprofitable. He retaliates by the most frightful cruelties. As his armies advance, whole districts are being exterminated. Scores of thousands, literally scores of thousands of executions in cold blood are being perpetrated by the German police troops upon the Russian patriots who defend their native soil. Since the Mongol invasions of Europe in the sixteenth century there has never been methodical, merciless butchery on such a scale or approaching such a scale. And, this is but the beginning. Famine and pestilence have yet to follow in the bloody ruts of Hitler's tanks.

We are in the presence of a crime without a name.

But Europe is not the only continent to be tormented and devastated by aggression. For 5 long years the Japanese military factions, seeking to emulate the style of Hitler and Mussolini, taking all their posturing as if it were a new European revelation have been invading and harrying the 500,000,000 inhabitants of China. Japanese armies have been wandering about that vast land in futile excursions, carrying with them carnage, ruin, and corruption, and calling it the Chinese incident. Now they stretch a grasping hand into the southern seas of China. They snatch Indochina from the wretched Vichy French. They menace by their movements Siam, menace Singapore, the British link with Australasia, and menace the Philippine Islands under the protection of the United States.

JAPAN MUST BE HALTED

It is certain that this has got to stop. Every effort will be made to secure a peaceful settlement. The United States are laboring with infinite patience to arrive at a fair and amicable settlement which will give Japan the utmost reassurance for her legitimate interests. We earnestly hope these negotiations will succeed. But this I must say: That if these hopes should fail, we shall, of course, range ourselves unhesitatingly at the side of the United States.

And thus we come back to the quiet bay, somewhere in the Atlantic, where misty sunshine plays on great ships which carry the White Ensign or the Stars and Stripes.

We had the idea when we met there, the President and I, that without attempting to draw final and formal peace aims or war aims, it was necessary to give all peoples, and especially the oppressed and conquered peoples, a simple, rough-and-ready wartime statement of the goal toward which the British Commonwealth and the United States mean to make their way and thus make a way for others to march with them on a road which will certainly be painful and may be long.

There are, however, two distinct and marked differences in this joint declaration from the attitude adopted by the Allies during the latter part of the last war, and no one should overlook them.

The United States and Great Britain do not now assume that there will never be any more war again. On the contrary, we intend to take ample precaution to prevent its renewal in any period we can foresee by effectively disarming the guilty nations while remaining suitably protected ourselves.

The second difference is this: That instead of trying to ruin German trade by all kinds of additional trade barriers and bindrances, as was the mood of 1917, we have definitely adopted the view that it is not in the interests of the world and of our two countries that any large nation should be unprosperous or shut out from the means of making a decent living for itself and its people by its industry and enterprise.

FAR-REACHING CHANGES

These are far-reaching changes of principle upon which all countries should ponder.

Above all, it was necessary to give hope and the assurance of final victory to those many scores of millions of men and women who are battling for life and freedom or who are already bent down under the Nazi yoke.

Hitler and his confederates have for some time past been adjuring and beseeching the populations whom they have wronged and injured to bow to their fate, to resign themselves to their servitude, and, for the sake of some mitigation and indulgences, to collaborate—that is the word—in what is called the new order in Europe.

What is this new order which they seek to fasten first upon Europe and, if possible—for their ambitions are boundless—upon all the continents of the globe? It is the rule of the Herrenvolk—the master race—who are to put an end to democracy, to parliaments, to the fundamental freedoms and decencies of ordinary men and women, to the historic rights of nations, and give them in exchange the iron rule of Prussia, the universal goose-step and the strict, efficient discipline, enforced upon the working classes by the political police, with the German concentration camps and firing parties, now so busy in a dozen lands, always handy in the background. There is the new order.

Napoleon in his glory and genius spread his empire far and wide. There was a time when only the snows of Russia and the white cliffs of Dover, with their guardian fleets, stood between him and the dominion of the world. Napoleon's armies had a theme. They carried with them the surges of the French Revolution—liberty, equality, and fraternity. That was the cry. There was a sweeping away of out-worn, medieval systems and aristocratic privilege. There was the land for the people, a new code of law. Nevertheless, Napoleon's empire vanished like a dream.

But Hitler—Hitler has no theme, naught but mania, appetite, and exploitation. He has, however, weapons and machinery for grinding down and for holding down conquered countries which are the product, the sadly perverted product, of modern science.

HOPE FOR THE CONQUERED

The ordeals, therefore, of the conquered peoples will be hard. We must give them hope. We must give them the conviction that their sufferings and their resistances will not be in vain. The tunnel may be dark and long, but at the end there is light. That is the symbolism and that is the message of the Atlantic meeting.

Do not despair, brave Norwegians; your land shall be cleansed not only from the invader but from the filthy Quislings who are his tools.

Be strong in your souls, Czechs; your independence shall be restored.

Poles, the heroism of your people, standing up to cruel oppressors, the courage of your soldiers, sailors, and airmen shall not be forgotten. Your country shall live again and resume its rightful part in the new organization of Europe.

Lift up your heads, gallant Frenchmen. Not all the infamies of Darlan and of Laval shall stand between you and the restoration of your birthright.

Stout-hearted Dutch, Belgians, Luxemburgers, tormented, mishandled, shamefully cast away peoples of Yugoslavia, glorious Greece, now subjected to the crowning insult of the rule of the Italian jackanapes, yield not an inch. Keep your souls clean from all contact with the Nazis. Make them feel, even in their fleeting hour of brutish triumph, that they are the moral outcasts of mankind. Help is coming. Mighty forces are arming in your behalf. Have faith, have hope, deliverance is sure.

There is the signal which we have flashed across the waters and if it reaches the hearts of those to whom it is sent they will endure with fortitude and tenacity their present misfortune in the sure faith that they, too, are still serving the common cause and that our efforts will not be in vain.

You will, perhaps, have noticed that the President of the United States and the British representative, in what is aptly called the Atlantic charter, have jointly pledged their countries to the final destruction of the Nazi tyranny. That is a solemn and grave undertaking. It must be made good. It will be made good. And, of course, many practical arrangements to fulfill that purpose have been and are being organized and set in motion.

"HOW NEAR IS UNITED STATES TO WAR?"

The question has been asked: "How near is the United States to war?" There is certainly one man who knows the answer to that question. If Hitler has not yet declared war upon the United States, it is surely not out of his love for American institutions. It is certainly not because he could not find a pretext. He has murdered half a dozen countries for far less. Fear—fear of immediately redoubling the tremendous energies now being employed against him is, no doubt, the restraining influence. But the real reason is, I am sure, to be found in the method to which he has so faithfully adhered and by which he has gained so much.

What is that method? It is a very simple method. One by one—that is his plan. That is his guiding rule. That is the trick by which he has enslaved so large a portion of the world.

Three and a half years ago I appealed to my fellow countrymen to take the lead in weaving together a strong defensive union within the principles of the League of Nations, a union of all the countries who felt themselves in ever-growing danger. But none would listen. All stood idle while Germany rearmed.

ONE BY ONE

Czechoslovakia was subjugated. A French Government deserted their faithful ally and broke a plighted word in that ally's hour of need. Russia was cajoled and deceived into a kind of neutrality or partnership while the French Army was being annihilated. The Low Countries and the Scandinavian countries, acting with France and Great Britain in good time even after the war had begun, might have altered its course and would have had, at any rate, a fighting chance. The Balkan states had only to stand together to save themselves from the ruin by which they are now engulfed. But, one by one, they were undermined and overwhelmed. Never was the career of crime made more smooth.

Now Hitler is striking at Russia with all his might, well knowing the difficulties of geography which stand between Russia and the aid which the western democracies are trying to bring. We shall strive our utmost to overcome all difficulties and to bring this aid. We have arranged for a conference in Moscow between the United States, British, and Russian authorities to settle the whole plan. No barrier must stand in the way. But why is Hitler striking at Russia and inflicting this suffering on himself, or rather making his soldiers suffer this frightful slaughter?

It is with the declared object of turning his whole force upon the British Islands and, if he can succeed in beating the life and strength out of us, which is not so easy, then is the moment when he will settle his account—and it is already a long one—with the people of the United States and generally with the Western Hemisphere.

One by one—there is the process. There is the simple dismal plan which has served Hitler so well. It needs but one final successful application to make him the master of the world.

I am devoutly thankful that some eyes at least are fully opened to it while time remains. I rejoice to find that the President saw in their true light and proportion the extreme dangers by which the American people, as well as the British people, are now beset.

IMPORTANCE OF UNITED STATES FLEET

It was, indeed, by the mercy of God that he began 8 years ago that revival of the strength of the American Navy, without which the New World today would have to take its orders from the European dictators, but with which the United States still retains the power to marshal her gigantic strength and, in saving herself, render an incomparable service to mankind.

We had a church parade on the Sunday in our Atlantic bay. The President came onto the quarterdeck of the *Prince of Wales*, where there were mingled together many hundreds of American and British sailors and marines.

The sun shone bright and warm while we all sang the old hymns which are our common inheritance and which we learned as children in our homes. We sang the hymn founded on the psalm which John Hampden's soldiers sang when they bore his body to the grave and in which the brief precarious span of human life is contrasted with the immutability of Him to whom a thousand ages are but as yesterday and as a watch that is passed in the night.

We sang the sailors' hymn For Those in Peril, and there are very many in peril on the sea. We sang Onward, Christian Soldiers, and, indeed, I felt that this was no vain presumption but that we had the right to feel that we were serving a cause for the sake of which a trumpet has sounded from on high.

When I looked upon that densely packed congregation of the fighting men of the same language, of the same faith, of the same fundamental laws, of the same ideals, and to a large extent of the same interests, and certainly in different degrees facing the same dangers, it swept across me that here was the only hope but also the sure hope of saving the world from merciless degradation.

And so we came back across the ocean waves uplifted in spirit, fortified in resolve. Some American destroyers, which were carrying mails to the United States marines in Iceland, happened to be going the same way, too, so we made a goodly company at sea together.

And when we were right out in midpassage one afternoon a noble sight broke on the view. We overtook one of the convoys which carry the munitions and supplies of the New World to sustain the champions of freedom in the Old. The whole horizon, the whole broad horizon, seemed filled with ships. Seventy or eighty ships of all kinds, sizes, arrayed in 14 lines, each of which could have been drawn with a ruler hardly a wisp of smoke, not a straggler, but all bristling with cannon and other precautions on which I will not dwell, and all surrounded by their British escorting vessels, while overhead the far-ranging Catalina airboats soared, vigilant, protecting eagles in the sky.

And then I felt that, hard and terrible and long-drawn-out as this struggle may be, we shall not be denied the strength to do our duty to the end.

Maj. Gen. Adna R. Chaffee—A Great Soldier of the Republic

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. LEWIS. Mr. Speaker, my friend, Maj. Gen. Adna R. Chaffee, United States Army, until recently Chief of the Armored Force with headquarters at Camp Knox, Ky., died last Friday morning, August 22, at Phillips House of Massachusetts General Hospital, in Boston, after a physical break-down.

He was only 56 years old. After services last Saturday at Fort Meyer Chapel, his body was interred in Arlington National Cemetery beside the remains of his distinguished father.

His father, another great soldier of the Republic—also named Adna R. Chaffee—as a boy, when President Lincoln called for volunteers, walked for 2 or 3 days to reach a recruiting station in order to enlist in answer to his country's call. Step by step, by outstanding merit, he rose to the rank of lieutenant general and Chief of Staff.

The son was born and spent his entire life in the Army. He served with distinction wherever our flag flew—from the Philippines to France and Germany, as well as in the United States. Most of us in the Congress came to know him best when he was Chief of the Budget and Legislative Division of the General Staff from 1934 to 1938. In this position he won the admiration and respect of all Members of the House who came in contact with him, and the affectionate regard of those who knew him well.

Long before Hitler came to power in the Reich and organized his panzer divisions, General Chaffee was urging our Army to develop heavily armored automotive divisions with overwhelming fire power. In an address at the Army War College in 1930, Chaffee predicted that "in the next war" these supertanks would be a deciding factor. Most appropriately he was assigned to organize and develop the first of our armored divisions. In this, as in all previous assignments, he was eminently successful—but in its performance he sacrificed his health and his life.

He deserved well of the Republic. Recently the President nominated him for promotion to lieutenant general—the rank which his father ultimately attained—but he died before the Senate had opportunity to confirm the nomination.

He was a great soldier and a really great man.

Among numerous tributes to the life and services of General Chaffee are the following:

[From the New York Times of August 23, 1941]

GENERAL CHAFFEE DIES; LED TANK FORCES—THE CREATOR AND COMMANDER OF ARMY'S ARMORED DIVISIONS—HONORED ON DEATHBED—IN 1930 PREDICTED "BLITZ"—CAVALRY OFFICER MANY YEARS WITH DISTINGUISHED WORLD WAR RECORD GOT LAST POST IN 1940

BOSTON, August 22.—Maj. Gen. Adna R. Chaffee, creator of the Army's new Armored Force and its commander until his retirement was necessitated last month because of illness, died this morning at Phillips House of Massachusetts General Hospital after suffering a physical break-down. His age was 56.

At the bedside in Phillips House were General Chaffee's wife, the former Ethel Warren Huff, of Leavenworth, Kans., whom he married in 1908; his son, Adna R. 3d; and two sisters, Mrs. Alcott Farrar Elwell, of Boston, and Mrs. George Hamilton, of California.

A funeral service will be held at Fort Myer Chapel, near Washington, tomorrow afternoon, with burial in Arlington National Cemetery. The body, accompanied by Mrs. Chaffee, left here tonight on the Federal Express.

NOMINATED FOR HIGHER RANK

WASHINGTON, August 22.—Major General Chaffee was nominated a few days ago by President Roosevelt for promotion to lieutenant general, but the nomination had not gone through the routine of senatorial confirmation. Thus General Chaffee missed closing his career with the rank held by his father, the late Adna R. Chaffee, a former Chief of Staff of the Army.

On August 2 the former commander of the Armored Force received, while at the Massachusetts General Hospital, an oak-leaf cluster for his Distinguished Service Medal. Three days later he was too ill to be informed that the Senate had confirmed his nomination to the permanent rank of major general. He had held temporary rank since September 1939.

General Chaffee became the Army's first commander of tank forces after long service in the Cavalry and broad staff experience.

Only a few hours after his death this morning the War Department announced creation of a fifth division of the Armored Force, now commanded by Maj. Gen. Jacob L. Devers.

During service in the World War, General Chaffee served on the staffs, in turn, of the fourth, seventh, and third Army corps. He was sent to Fort Knox in 1938 to command the Seventh Cavalry Brigade. In July 1940, when the Army established its first independent tank command, he was assigned to command the First Armored Corps and designated as chief of the Armored Force, with headquarters at Fort Knox.

Establishment of this command resulted in large measure from planning in which General Chaffee had a prominent part.

Despite critical illness which gave him great discomfort during the last year of his life, General Chaffee personally trained his rapidly growing organization, except for sick leave last January, until ill health finally forced his retirement.

FATHER AN ARMY OFFICER

Tall, wiry, and tanned, General Chaffee was the perfect picture of an Army officer. He came naturally by his military bearing, for he was the son of a lieutenant general, who spent his entire career in the armed service of this country. His mother was Anna Frances Rockwell Chaffee. He was born at Junction City, Kans., September 23, 1884.

When a boy he went to China to be with his father, who then was in command of United States troops during the Boxer Rebellion. After the trouble was over young Chaffee returned home and prepared for West Point.

He was graduated from the United States Military Academy in 1906 and immediately was assigned to the Fifteenth Cavalry and sent to Santa Clara, Cuba. After his tour of duty there he entered the Mounted Service School at Fort Riley, Kans., from which he was graduated in 1908. He was selected for further schooling and finished the advanced course there the following year.

General Chaffee then rejoined the Fifteenth Cavalry at Fort Myer, where his first task was to organize the Army War College detachment, which he commanded. Recognized as one of the outstanding horsemen in the Army, he was one of the officers chosen in 1911 to be a member of the United States Army team, which participated in the international horse show in London that year.

BECAME CAVALRY INSTRUCTOR

From England he went to France, where he studied at the Ecole d'Application de Cavalrie at Samur. He was graduated from that leading French cavalry school in 1912. He then returned to the United States to become an instructor at the Mounted Service School.

There followed a tour of duty in the Philippines with the Seventh Cavalry, after which he returned to the United States Military Academy as an instructor of cavalry.

Shortly after the declaration of war with Germany he was made a major of infantry of the National Army and assigned as adjutant of the Eighty-first Division, stationed at Camp Jackson, N. C. He later was acting chief of staff of the division.

General Chaffee, then a major, was sent to France, where he was immediately chosen to attend the General Staff College at Langres. After his graduation he was retained at the college as an instructor.

During the San Mihiel offensive, however, he was relieved of his teaching duties with the college to become G–3 (operations officer) of the Fourth Army. Later he was assigned to the Eighty-first Division in the St. Die sector.

Early in October 1918 Major Chaffee was promoted to lieutenant colonel of infantry and made assistant chief of staff of the Eighth Army Corps, stationed at Remiremont, France.

That same month he was again promoted, becoming a colonel of cavalry. In this position he was assigned to the Third Army Corps. He occupied this position during the Meuse-Argonne offensive and during the occupation of the Rhineland after the war.

Upon his arrival in Germany, Colonel Chaffee received command of the Ninth Infantry. For his services in France the Distinguished Service Medal was awarded to him.

After the World War, Colonel Chaffee served several tours of duty on the General Staff.

HIS IDEAS FINALLY ACCEPTED

In 1930 he predicted that tank-powered armies could do virtually what the Nazis accomplished 10 years later in their blitzkrieg of the Low Countries and France. Some officers considered his prediction too visionary and impractical. It wasn't long, however, before the War Department began putting the ideas of Chaffee and other mechanization-minded officers into something more tangible than paper plans.

Col. Daniel Van Voorhis (later advanced to a lieutenant general), also a strong advocate of modernizing the Army, was assigned in 1931 to organize the first mechanized cavalry force at Fort Knox, Ky. Colonel Chaffee served under Van Voorhis as executive officer of the mechanized cavalry organization until he was ordered back to Washington for duty with the General Staff's Budget and Legislative Planning Bureau. He was Chief of the Bureau from 1934 to 1938.

The latter assignment gave him a better opportunity to seek increased appropriations to carry on experiments in mechanization. He also helped fight for increased funds for the Air Corps.

In 1938 Chaffee was returned to Fort Knox to command the First Cavalry of the Seventh Cavalry Brigade, mechanized, the only such organization in the Army at that time. He succeeded Van Voorhis as brigade commander when the latter was made commander of the Fifth Corps Area. Colonel Chaffee then was promoted to brigadier general.

[From the New York Times of August 23, 1941]

GENERAL CHAFFEE

Maj. Gen. Adna R. Chaffee was the worthy son and namesake of a brilliant soldier. Like his father a cavalryman, he served with distinction in the first World War. Not long after its close he began, with the help of certain other selected officers, experiments in the use of armored force. This was years before the immense effectiveness of such a force with its coordinate units was so memorably and cruelly illustrated in the Nazi assault on Poland.

First commander of the mechanized cavalry brigade and then of the newly created armored corps, his genius for mechanics and tireless energy have helped to realize for the United States this swift and far-striking force. He may fairly be said to have given his health and his life to this, his last and greatest service to his country. His promotion to major general and the award to him of the Oak-Leaf Cluster citation came to him when he was near his end, but it is pleasant to remember that his devotion to duty was recognized while there was yet time.

It is only a few days less than 2 years that we saw him in this town and at the fair, the ideal cavalry officer, tall, incredibly lean.

[From the Washington Evening Star of August 23, 1941]

GENERAL CHAFFEE

The whole life of Maj. Gen. Adna R. Chaffee was devoted to the Army. A son of a distinguished soldier, he was born in the service and glorified in the circumstance throughout his career. Part of his boyhood was spent in China, where his father was in command of American troops operating against the Boxer rebels. He returned home convinced of his vocation, made an excellent record at West Point, gained his first commission in 1908. By nature fearless and confident, he was a brave and skillful horseman from the start. Riding as a member of the American Army team at the International Horse Show in London in 1911 and studying at the Saumer School in France in 1912, he qualified for promotion in the Cavalry. When the United States entered the first World War he was a captain and a West Point instructor. Keen energy and wise discernment in the discharge of grave responsibilities in the Meuse-Argonne campaign gained him the Distinguished Service Medal, to which only 3 weeks ago was added the Oak-Leaf Cluster.

General Chaffee, however, was something more than a successful officer. His most notable characteristic was an active, yet disciplined, imagination. Few, if any, of his contemporaries appreciated in 1918 that a new era of military science was dawning; but he visioned an army which should be strong in attack, yet also sturdy in resistance to a degree hitherto unknown. Long before the panzer divisions of the Germany Army had been organized he was urging the development of mobile fortresses. Speaking at the Army War College in 1930, he predicted that the decisive factor in the next war would be heavily armored automotive divisions of overwhelming firepower. He was

named executive officer of the pioneer mechanized cavalry unit at Fort Knox in 1931. The beginning of the present conflict in Europe found him prepared for the command of the first American armored division deserving of the name. He labored tirelessly to anticipate the inevitable crisis which he had foreseen.

In personal appearance General Chaffee, like Vachel Lindsay's General Booth, "looked the chief." His profile was eagle-sharp. When thoroughly aroused, he could flash lightning from his eyes. But he was a lovable man despite the stern aspect of his countenance.

His country regrets that General Chaffee should have died so young. It is no exaggeration to say that he was a martyr to his work. The new defense organization which he helped to create is his monument. He departs with the thanks of a nation made safer by his sacrifices.

Britishers Make Whoopee With Lease-Lend Dollars

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

ARTICLE FROM WASHINGTON TIMES-HERALD

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include an article by Mr. Walter Trohan, which appeared recently in the Washington Times-Herald. The article well illustrates the attitude of many of the British Government representatives now crowding Washington to tell us how to spend our money. It indicates that we are still "Uncle Saps" to those we are aiding. No further comment is necessary. The article follows:

[From the Washington Times-Herald of August 22, 1941]

BRITONS HERE MAKE WHOOPEE AS UNITED STATES PAYS—THIRTY THOUSAND DOLLARS IN WINE, FOOD REPORTED CHARGED TO LEASE-LEND BILL

(By Walter Trohan)

Britishers of military age in the National Capital are doing their bit for England by spending American dollars on everything from guns to whoopee.

The theme song of the British Purchasing Mission is a parody of There'll Always Be an England. It runs:

"There'll always be a dollar
As long as we are here."

MEALS, WINES CHARGED

The song was the hit of the evening at a recent mission party in a fashionable Washington restaurant, which has been taken over by the Britishers.

The checks are being paid by the American people. It is reported in reliable congressional circles that the mission has already charged over $30,000 worth of meals and rare wines in this restaurant alone to the lend-lease bill.

Individual items of the lend-lease program can only be made public by the President. He is empowered to withhold anything he regards as a military secret or which may be inimicable to British-American interests.

It is understood that the commission has contracted other bills for whisky, wines, and food at hotels and restaurants which are to be charged to the $7,000,000,000 lend-lease bill and to the anticipated new lend-lease appropriation which Mr. Roosevelt is to ask of Congress, which is expected to run between $6,000,000,000 and $10,000,000,000.

PERSONAL PHONE CALLS, TOO

In addition to charging whoopee against American dollars, the British are charging personal phone calls to American taxpayers.

One recent British arrival spent 45 minutes chatting with an acquaintance in Canada and charged the bill, tax and all, to lend-lease.

"Charge it to lend-lease" is the byword at the British headquarters. Members of the various missions number about 3,000 Britishers, or more than a full-strength regiment.

The Britishers found the heat of Washington intolerable in their suites in the Willard Hotel and clamored for air conditioning at a time when their fellow countrymen were dismissing German bombs with callous contempt.

Almost 100 portable air-conditioning units were purchased by the commission and charged to lend-lease.

At the British Purchasing Mission this story was denied along with other stories of use of lend-lease funds over and above actual war needs.

Only one stop order has been issued recently against the carte blanche use of American funds by the British. This involved the attempt of officers of a British vessel being repaired in an American port to secure new uniforms at American expense.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. LAMBERTSON. Mr. Speaker, the most important part of the Atlantic conference is the thing not given out.

If it is a long war, then it is ours. Possibly Franklin, Jr., has a real commission.

Raymond Clapper says from London that the one-vote escape of the President from defeat has stunned England.

Leon Henderson and our Harry Colmery discovered in conversation that they were once members of the same faculty.

After the ocean conference Mrs. Churchill was overjoyed to get her Winston back—he narrowly missed being placed in our Cabinet.

Since planning on five billion and up at sea for Soviet aid, the President returns to find a Russian strike in progress here.

The Army will now half do what Congress wanted done with selectees. Our defense is not imperiled now. Poor Congress never gets any credit.

"President quotes Lincoln and draws a parallel" is the Chief's own suggestion for a headline. A week ago the one-vote margin compelled a comparison to Washington and the unfaithful Continental Congress.

The one who writes this column is bitterly opposed to sending our men into foreign wars. You might have guessed it. While our leaders are dragging us to the verge, we think no other subject is important.

Our hats are off again to the unswerved American public who have not fallen for the warmakers. Dr. Gallup said last Sunday, "Where the American public does draw the line today—as in preceding months—is at sending another A. E. F. abroad."

To my big brothers who stayed in the Capital: It is great to be home among protestors and compliers, interventionists, and those for isolation in war, Townsends, and those who disdain public help. We never did like to row on a placid lake.

The Plow Did Well That Broke the Plains

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. MUNDT. Mr. Speaker, a number of years ago the Government did a great disservice to the Great Plains States, stretching from Canada to the Gulf, by using taxpayers' money to develop a highly fictitious and fantastical moving picture titled "The Plow That Broke the Plains." The great wave of protests which swept in upon Washington from all of the 9 or 10 States which had been slandered by their Central Government in this dishonest and deceptive film finally caused the Department of Agriculture to withdraw the picture from circulation.

The attached editorial from a small South Dakota newspaper, Mr. Speaker, gives the world more truth and accuracy about the Great Plains area of America than was to be found in the thousands of expensive feet of inaccurate film which comprised the late but not lamented governmental monstrosity known as The Plow That Broke the Plains. The editorial follows:

THE PLOW THAT BROKE THE PLAINS

South Dakota should have a dozen motion-picture cameras in action this week. They should be scattered throughout the length and breadth of the State, obtaining pictures in technicolor, of the thousands of acres of bounteous crops that are being harvested in every section.

These pictures should be made into one large reel and should be entitled "The Plow That Broke the Plains." The picture should be shown in every community where the original picture of that name was shown.

The picture should be complete with sound and in the place of having a gruesome voice moaning, "High winds and little rain," a harvest queen should explain that this is South Dakota—this is the Dust Bowl of today.

She should tell how this is the result of man's faith in a "God given" land, coupled with normal rains and bounteous sunshine.

Some of the picture should be taken from the tops of our high buttes, showing a vast landscape of deep green ranges, checkerboarded with ripe and ripening crops. It should show close-up shots of wheat standing waist high with heavy golden heads waving like a vast ocean in the breeze.

It should show acres of grain in shocks. Hundreds of stacks of headed crops that are dotting the prairies. It should show combines wallowing over the fields, reaping the harvest in one operation.

It should show herds of white-faced cattle wading deep in native grass. It should show calves resting lazily on the slopes, jumping out of tall grass to join their mothers as the camera man rides up. It should show grass-fat steers that look almost as though they had come out of feed lots.

This is the picture the Nation should see of the Dust Bowl of today. This is the full picture of man's faith in a land that has no equal—when the plow, the rain, and the sun work together.—McLaughlin Messenger.

Will History Repeat Itself?

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. GUYER of Kansas. Mr. Speaker, Edward J. Flynn, chairman of the Democratic National Committee, is already calling for the election of a Democratic House of Representatives in 1942. He makes his appeal in the name of national defense and unity, so that we will still have a Congress that will swallow whole anything the New Deal brain trusters offer.

This is precisely what President Wilson demanded in 1918, and the response of the country was a Republican House, which remained that way for a dozen years. Mr. Flynn complains that Republicans do not accept every point and part of the New Deal foreign policy. He wants Republican Congressmen to shut their eyes and accept every sort of legislation extending the powers of the President and still more centralizing and concentrating powers and prerogatives to arbitrary and irresponsible bureaus and commissions.

When a Republican Congressman dares to oppose some such dictatorial legislation he becomes an obstructionist, and Flynn wants him defeated and replaced by some rubber-stamp Democrat—or he might compromise on a Roosevelt Republican—who has been trained to dance to the music that emanates from the brain-trust orchestra in the White House. Flynn speaks of adjourning politics and creating unity, but he insists that the Republicans do all the disbanding and adjourning. He wants just one nice big family of rubber stamps in the name of unity and national defense so that when the President crooks his finger the boys understand and obey. In other words, a one-party country like they have in Nazi Germany, where everyone heils the administration or else. That is what the arbitrary and impatient schoolmaster, Woodrow Wilson, demanded in the congressional elections of 1918, and that was the beginning of his tragic exit from public life. It was undemocratic and un-American and contrary to the fundamental elements of representative government.

There are other instances in which the Wilson and Roosevelt administrations follow parallel lines. Both were elected upon most solemn pledges to keep the country out of war and to maintain peace. In 1916, in the Presidential campaign it was charged that the Democratic Party, if supported at the election, would plunge the country into war to cover up its miserable failures—its soup kitchens, its bread lines, and its depression. To answer that charge the Democratic publicity manager, George Creel, the Charley Michaelson of his day, came forward with the most effective political advertisement since Caesar wrote the political pamphlet about his war in Gaul.

Creel proposed this slogan: "Wilson kept you out of war." On the eve of the election of 1916 this smooth political prestidigitator issued this most unparalleled example of stereotyped mendacity that ever graced the advertising columns of the American press:

> You are working, not fighting. You are living, not cannon fodder.
> Wilson kept you out of war.

Upon the strength of that advertisement, which blanketed the press of the State, Wilson carried Kansas. That saved the Democratic Party from defeat in 1916. A little more than 100 days after that election, and 32 days after his inauguration for a second term, Woodrow Wilson went before a joint session of the House and Senate and asked for a declaration of war against the Imperial German Government.

The question that intrudes is, Will history repeat? If we got into war with a President who honestly boasted that he was too proud to fight, one who in the early stages of the last war asked the people to even think neutral, who asked the public when war pictures were shown on the screen to refrain from applause, lest some belligerent think we were not neutral, we naturally wonder where we are going with a President who retains in his Cabinet three members who openly advocate our participation in this second World War.

We wonder if with Woodrow Wilson, obsessed with a consuming passion for peace, we were catapulted into the greatest war in history, up to that time, where we are going to land when led by a blustering, bellicose, and brutally frank Franklin D. Roosevelt, assailing nations with which we maintain relations of profound peace with threats of "quarantine" and "steps short of war."

If with William Jennings Bryan, one of the most eloquent and vociferous advocates of peace, as Secretary of State during the last World War, we plunged into a blood bath on another continent to make the world safe for democracy, wither are we rushing with a Secretary of State who irritates a jittery world with querulous warnings and a sensitive potential rival in the Orient with peevish admonitions and caustic insinuations.

There is this difference: In the case of Woodrow Wilson, his pledges of peace were personally based on his well-known ideas about war and peace, buttressed with what a cagy publicity agent spread over the newspapers of the country. But in the case of Franklin D. Roosevelt, he is bound by the most solemn and reiterated promises to the fathers and mothers that their sons would not be sent to fight in foreign wars nor to die on foreign soil. Not once, but "again, and again, and again." He also is bound by the declaration of his party's platform and its pledge to keep out of foreign wars. The whole matter is up to him, and whether he will keep his word sacred and make it good. The question of war or peace is in the hands of the President. If he keeps the country out of war, he will deserve the good will of the people. If he leads us into war, then the blood of many thousands will be on his head, and he will deserve the anathema of a people which elected him upon the sacred promise that he would keep them out of foreign wars. The momentous question is up to him.

Every vote I have cast relative to our foreign relations has been cast solely on the question of peace and war. I voted against those matters that I deemed opened the gates for the United States to enter the war. I voted for fifty-two billions for national defense and for aid to Britain, which I believed would be effective for our own defense. I have done all this solely on the ground and in the belief that if I could do anything that would keep this country out of war it would be the greatest service I ever have had the opportunity to perform for my country. I have done this, because I know that when the shooting once begins we will all say with Decatur, "My country, may she always be right, but right or wrong, my country."

The tragedy of such a war is too horrible to contemplate with all its death and debts. Let that American tremble who by ambition or for selfish purpose promotes or permits it.

Protest Against 49-Cent Wheat Penalty

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. MICHENER. Mr. Speaker, on July 29, 1941, I addressed the House in protest against the unjust 49-cent wheat penalty imposed on the 1941 crop. At that time I presented to the House, and had printed in the daily CONGRESSIONAL RECORD, the

petition of more than 1,000 Lenawee County, Mich., farmers objecting to this 49-cent penalty.

I am today in receipt of an additional petition, signed by more than 1,000 dirt farmers of Lenawee County, protesting against this penalty. I am presenting this petition to the Congress, as requested by my constituents.

I regret, however, that because of the attitude of the Department of Agriculture, I must tell these farmers that in my judgment all of these petitions and protests will avail them nothing so far as any modification of the 49-cent wheat penalty regulations for 1941 are concerned. I make this assertion for the following reasons:

First. After much persuasion, the New Deal dominated House Committee on Agriculture favorably reported a bill that would permit the farmer to use on the farm where grown, for the purpose of feeding his own livestock and poultry and for seed wheat, any or all of the quota surplus wheat without paying the 49-cent wheat penalty.

Second. The House of Representatives passed this bill and it went to the Senate.

Third. The Senate struck out this provision which gave some little relief to the excess-wheat grower.

Fourth. The conference committee between the House and Senate agreed to a compromise wheat provision reading as follows:

Notwithstanding any of the foregoing provisions, the penalty upon wheat during the marketing year beginning July 1, 1941, shall not apply to that portion of the farm-marketing excess for any farm which the producer establishes in accordance with the regulations of the Secretary was or will be used as feed on the farm where grown for livestock or poultry or was or will be consumed by the farmer's family or household. The amount of any penalty paid on that portion of the farm-marketing excess of wheat which was or will be used as feed on the farm where grown for livestock or poultry or which was or will be consumed by the farmer's family or household shall be returned or allowed the producer.

Fifth. The bill so agreed upon by a majority of the Congress went to the President for his approval or disapproval. A few minutes ago, the Clerk read to the House the President's message vetoing the bill. That part of the message wherein the President gave his reasons for his veto is as follows:

It is my conviction that approval of the measure would seriously and adversely affect the agricultural-adjustment program and the attendant policies which have been so beneficial to our farmers during the past few years.

One provision of this act would permit the farmers to dispose of as feed, without penalty, an indefinite amount of wheat produced in excess of their farm-acreage allotments for 1941. This provision would place a premium on noncompliance with the wheat program, constitute a breach of faith with the large majority of farmers who complied with the program, and so relax the control features of the farm program as to adversely affect future participation therein.

In short, the bill, as the Congress finally approved it, would have made it possible for the farmer to use his own wheat as feed on the farm where grown for livestock or poultry, or for family consumption. That was the only crumb of relief which even the Congress granted to these farmers who have been so unjustly penalized by a law and regulations made between planting time and harvesting time.

The President's veto kills the bill unless two-thirds of the New Deal dominated House and two-thirds of the New Deal dominated Senate vote to override the veto. Candor compels me to tell my constituents that, in my judgment, this will not happen. I hope I am wrong.

To summarize, the 49-cent wheat penalty must be paid on all wheat beyond the allotment allocated; that is, no wheat grown on excess acreage can be fed or used on the farmer's own farm, or used for seed wheat on his own farm, or otherwise disposed of, without paying the 49-cent penalty.

A Moral Sense With Us

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

ARTICLE FROM THE TABLET

Mr. GUYER of Kansas. Mr. Speaker, by unanimous consent of the House, I present the following for printing in the CONGRESSIONAL RECORD:

[From the Tablet, Catholic weekly, Brooklyn]

A MORAL SENSE WITH US

Religious publications in their attitude toward involving the United States in war never overlook the morality of the question. There is almost a unanimity of viewpoint on the topic. These publications assert there must be a justification for entrance into war. Once there is a sufficient reason for conflict there must first be exhausted every attempt at arbitration. War is always a last resort.

The fact that a person says someone else is going to attack us at some distant time if he defeats someone is not a sufficient reason for conflict. Neither does the economic argument, which is usually based on power politics or economic determinism, justify spilling the blood of innocent people.

As far as can be seen in the present situation affecting the United States' entrance into war, there is no moral reason or justification. Moreover, there is every moral reason for our country remaining out of the suicidal conflict. Assuredly our leaders have promised us over and over again we would not enter any foreign conflict. They would not send our Army, Navy, or marines to engage in a distant strife, and this pledge is morally binding. All the moves which are said to have led us close to our entrance were enacted to keep us out of war—here we have another moral obligation.

Secretary Knox, who demands we enter war now, less than a year ago asserted he was against sending American youths to graves in distant places. He has gone back on his word. Of course, he has not the right, constitutionally or otherwise, to send Americans down the hell holes of catastrophe. It is unfortunate that the majority of the American people—those who want peace and see no reason to go to war—do not seem to be represented in the President's Cabinet.

Perhaps the worst offender of all in relation to the moral side of war is Wendell Willkie, for whom millions voted, thinking he was antiwar, but who turned his back on them to engage in warmongering. It was bad enough for Mr. Willkie to deceive the American people, but it is even worse for him to attempt to fool the foreign nations as he did in his July 4 broadcast abroad. Then Mr. Willkie said:

"And, despite the occasional hesitation and doubts, the American people will reach out, will give their utmost to see that this precious thing we call liberty shall not disappear from the world, either in Europe or in Asia or in America."

That is untrue. Russia and other nations have been in slavery for centuries and Americans never objected to their role. And today, contrary to Mr. Willkie Americans will not and could not give their utmost to safeguard liberty all over the world—including places where liberty is not wanted. The vast majority of Americans are overwhelmingly against being used as cannon fodder to establish liberty in Russia, Germany, Africa, and dozens of other countries.

One report on Monday called for a repudiation of the United States Constitution, together with a repudiation of the wishes of the people. This article quoted a radio speaker as asserting the President of the United States should alone decide when, where, and how our country should go to war. Notwithstanding that the Constitution specifically asserts that Congress, as the representative of the people, alone can declare war, this speaker would violate the Constitution and thereby destroy popular government. It follows that if the reigning President can contravene one part of the Constitution, he can contravene any part, including the guaranty of religious liberty. The suggestion is so absurd that it hardly needs rebuttal. Destroying the Constitution, prohibiting the people or their representatives from voting on an issue that affects them and their children, so smacks of nazi-ism that one can only feel sorry for the person making such a proposal.

This is the United States of America, not totalitarian Germany or Russia. Here we have "government of the people, by the people, and for the people"—not by one individual. Our Government rules with the consent of the governed. "But the people do not fully understand; they have not all the knowledge," say newcomers to our shores and chauvinists. That's it. The people cannot decide. They are only supposed to fight and die.

Moralists have long decided expediency or popularity is not the rule for good conduct. Again, that sounds just like Hitler. Here, too, we have another moral argument, for it is said the Nazis are worse enemies of the United States than the "reds." Perhaps arguments can be used on both sides, but what difference does it make? Would you prefer cancer or creeping paralysis? You would answer "Neither." And Americans who love their country are not making any choice between Nazi and the Soviet. They hate both. They want nothing to do with either. They hold no brief for any totalitarians. And they would consider it immoral and indecent, treacherous and hypocritical to send American boys, American wealth, or American goods to either Hitler or Stalin—both enemies of God and man—not more, not less, but both exemplars of international thuggery.

Morality demands the United States to keep out of this war. Patriotism which casts aside the fearmongers insists we stay out of war. The people to the tune of three and four to one, are opposed to entering the war. Oh, yes; they have experience, they have the facts—they got both in 1917 and 1918 and so did their parents. The minority, the warmongers, who themselves will not fight, have

taken one defeat after another. They planned to lead the country into war long ago. Unable to get the people to go to war, they now want to invite it. Let us keep defeating them. Every day we stay out saves hundreds of more American lives and keeps back the tears of American mothers. Hold fast to the Constitution. Permit Congress to, in fact, demand that the people decide. Away with mass suicide. Let us think of peace for the masses. Make morality and principle the rule and do not follow the line of broken pledges which has made Europe and Asia places to keep away from.

Justice for Investors

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. PADDOCK. Mr. Speaker, the Government of the United States, with its almost complete control over the property of its citizens, owes them a high degree of fairness and honesty in exercising these great powers. In recent cases now before the courts our Treasury Department has attempted to tax as "profitable" transactions where actual losses were plainly evident, and conceded by the Department. Because of these attempts to collect taxes without any justification except a technical and arbitrary interpretation of the law, I have introduced H. R. 5617.

In brief, my bill prevents the attempt to collect profits taxes on transactions involving actual losses, following reorganizations by bondholders. It directly protects hundreds of thousands of individuals and corporations, former purchasers of bonds, who took over in reorganization the property their securities covered. It clarifies the present law which our Treasury Department interprets to authorize profit taxes on differences between reorganization values and later resales, even though this resale value was actually less than the original cost to the taxpayers.

For a concrete case illustrating the injustice which H. R. 5617 will correct, I cite the Federal Land Bank of Milwaukee, which issued bonds for which it secured about $15,000,000, mostly from small investors. It loaned this money on farm mortgages. In 1926 it was declared insolvent, and in 1932 the Farm Loan Board approved the transfer of its assets to a new corporation organized by the bondholders. This transfer was by means of a public sale at which the bondholders were the only bidders, and the nominal upset bid price was $2,351,000. No money passed. The bondholders might just as well have bid $15,000,000. It would have cost them no more, and would have eliminated the controversy.

Eventually the reorganized company liquidated the mortgages for about $10,000,000, so there was an actual loss of over $4,000,000. If the transfer of the assets of the land bank to the new company be treated as a reorganization, this loss will be given effect. Otherwise, a tax will be due on an alleged profit of $7,649,000. The bondholders were in control before and after the transfer.

In 1932 the Treasury ruled that there was a "reorganization," and the bondholder could deduct no loss. Now that the statute of limitations has run against the bondholders, the Treasury has reversed its position, and claims its former ruling was wrong, that a deductible loss was realized in 1932, and a new base for the computation of profit and loss and the calculation of depreciation was then established.

The decision depends on the definition of reorganization. If there is a reorganization, the new company assumes the old company's base, and the transaction is not considered completed as to bondholders and stockholders. They retain the original cost as a basis of computing profit or loss when they dispose of the substituted securities they receive in the reorganization.

The Board of Tax Appeals has denied the Treasury's present contention. So have the Circuit Courts of Appeals for the Second, Fifth, and Tenth Circuits. However, it has been sustained by the Circuit Courts of Appeals for the Ninth and Eighth Circuits, and the decision of the ninth circuit in the case of Marlborough House is now pending in the Supreme Court.

I submit, Mr. Speaker, that we ought not to subject taxpayers to the hazard of what the Supreme Court may decide, but should put the question at rest now by adopting this amendment to settle the matter beyond doubt.

I do not know how many people, poor and rich, will be protected against unjust taxation by this bill. To calculate the number would involve a tabulation of the countless reorganizations which followed the crash of 1929. If we include the policyholders of the insurance companies, which invested many millions in these bonds, almost every American family will benefit somewhat by its provision.

Best of all, by enacting this bill, we will prevent the force of our Government from being used, under color of law, to attempt unjust transactions at the expense of its own citizens.

Why Squawk? You Had It Coming

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. HOFFMAN. Mr. Speaker, for many months, yes, since the sit-down strikes of '37, some Detroit newspapers have coddled certain union leaders, condoned their lawlessness, praised them immoderately when they acted as the ordinary, decent, law-abiding citizen usually acted.

Over the same period of time, the same newspapers patted on the back public officials who disregarded their oath of office, praised them for settling strikes when the settlements overlooked coercion, intimidation, beatings, and an utter disregard of the law.

The same newspapers condemned as labor baiters many of those who insisted upon what these same newspapers now stress—the unqualified right of an American citizen to earn a livelihood regardless of his membership in a union.

The inevitable has happened. Certain union leaders have pulled a strike, which even the Detroit public and the newspapers of Detroit cannot stomach. The Detroit Free Press of August 21, in a front-page editorial, labels as "a disgraceful strike" the action of the unions in tying up the transportation system of Detroit. It comments:

> The citizens of Detroit are justified in feeling outraged over a streetcar strike that has paralyzed this community's transportation system.

But the citizens of Detroit did not feel outraged when John Doe, in 1917, going to work in Flint, or at any time since, on his way to his job in Detroit or nearby communities, was cracked on the head and sent to a hospital.

The citizens of Detroit paid no attention when farmers, seeking to deliver their products to the Detroit market, were compelled to pay tribute to a union or take a beating.

The citizens of Detroit and the Detroit newspapers and the officials of the State of Michigan did not seem to care very much when thousands of workers in Flint and, later, other thousands in Detroit were kept from their jobs by armed picket lines, by goon squads which came in, armed to the teeth, from other cities and took possession first of Flint and later of the streets surrounding the Chrysler plants.

There was money behind those strikes. Not that the newspapers got any of it, but it bought publicity. There was influence behind those strikes. Yes; and in some of the newspaper offices men belonging to the union were a potential threat to anything the newspapers might say condemning the unjust and unlawful acts of the strikers.

The citizens of Detroit did not seem greatly concerned, nor did the newspapers of Detroit feel called upon to comment courageously and plainly on the fact that the United States Navy was unable, for 42 days in one instance, for twenty-odd days in another, to get its own patterns and plans out of the Bohn Aluminum & Brass Corporation plant.

Newspapers throughout the country and public officials throughout the Nation have failed time and time again to do their part when the unions assailed the management of industrial plants, compelled employees to pay tribute in order that they might earn a livelihood.

But just because the present strike in Detroit inconveniences thousands of people and is unpopular, the newspapers are on the warpath. Let us thank the good Lord that at last the long-suffering pub-

lic has found a spokesman. Says the Detroit Free Press:

The bald effrontery of two rival unions, fighting over memberships, making an entire municipality a victim of their controversy is without parallel in union history.

Well, well. Because the controversy is between the two unions it may be without parallel, but the assault of the C. I. O. on the city of Flint made the citizens of that city its victims and strike after strike throughout the Nation has had a like effect, and many of the strikes have been because of jurisdictional disputes, as the Detroit Free Press should know.

Not long ago, several thousand men were thrown out of work, the Government was denied production of essential defense machinery, for some seventy-odd days at the Allis-Chalmers plant in Milwaukee, because two A. F. of L. men were working there. During a portion of that same period, at Dayton, Ohio, the A. F. of L. tied up another Government project just because four C. I. O. men were working on electrical equipment.

At the present time, warships ready for launching remain on the ways at Kearny, N. J., because a union wants the men who launch them to belong to that certain union.

The Detroit Free Press is greatly exercised and says that the union attitude, its utter disregard for the rights of the people, is exemplified by the shouted words of James P. McGinnity, A. F. of L. business agent, who shouted:

Let's show them what a real strike is. We'll tie up the whole town. No cars will move.

Why get exercised over that? Way back in '37, John L. Lewis and Richard T. Frankensteen, or was it Reuther, were yelling that, if Henry Ford made cars, he would join the union. The Detroit newspapers didn't sob over that. The principle was the same.

But the chickens are coming home to roost and Detroit is getting just what it asked for, as will every other city and State which condones lawlessness. The editorial now praises Mayor Jeffries because he told Frank X. Martel, president of the Detroit and Wayne A. F. of L.:

We have city and State laws which you have ignored. You are not bigger than the Government yet though your conduct seems to indicate that you think so.

Phooey! Do you not remember that, back in 1937, when the C. I. O. had General Motors down in the mud, rubbing its face in the dirt; when it was defying ordinances, State and Federal laws, the Honorable Frank Murphy, then Governor of Michigan, day after day violated his oath of office; refused to punish violence and lawlessness; called in the State troops to prevent the local authorities and decent citizens from throwing the strikers out of the General Motors plants? Do you not remember that he condoned the commission of felonies day after day, from the 1st of January way down to June?

Sure, we had city and State laws then, but the Governor, charged with their enforcement, took no notice of them. The Detroit Free Press and other papers praised Governor Murphy for the settlement of that strike, and the settlement was a reward to the C. I. O. for its violence.

Still later, in the recent Ford strike, when possession of the streets and highways was taken over by the C. I. O.; when the State police stood idly by while innocent citizens were beaten by Communists and members of Briggs local—and I have the pictures and the sworn testimony to that effect—was Governor Van Wagoner censured? Oh, no! He was praised for the speedy settlement, which compelled every Ford worker to join the C. I. O.

The unions have some forty-odd million dollars income, on which they pay no tax. They have defied city ordinances and State laws. They have broken Federal laws. But so far they have gone unwhipped of justice. Perhaps this Detroit strike is an angel in disguise. Perhaps it will awaken the citizens of Detroit and of the State to the fact that here in America we should have freedom from fear, which Roosevelt says must be carried to the four corners of the earth.

It may be that, while we are sending millions of dollars' worth of material and getting ready to send men to help Comrade "Bloody Joe" Stalin maintain himself so that hereafter he can follow his course of executing ministers and priests, destroying churches, and preventing the teaching of religion, this little strike in Detroit will have its influence in restoring to the American worker freedom from union boss domination.

I noticed, too, on the editorial page of the Grand Rapids Press of August 20, under the head of The Shipyard Strike Issue, that the editorial writer, commenting on the shipbuilding strike at Kearny, N. J., now states, referring to labor legislation that—

Nothing is said to the effect that labor organizations shall be given the right to deny freedom of action to a worker.

That is old doctrine. In Congress and throughout the Nation, it has been proclaimed time and time again by those who have sought the amendment of the Wagner Act and fair play on the part of the unions.

The truth is that the unions have been coddled by newspapers and by politicians, by public officials; actively aided by this administration, until they have reached a position where they now deny the proposition enunciated by Mayor Jeffries when he said to a union official:

You are not bigger than the Government yet, though your conduct seems to indicate that you think so.

As a matter of cold, hard fact, the unions and their bosses have, ever since 1937, in all too many instances, been bigger than the Government and their conduct has indicated that they realized that fact.

Let us hope that when Congress gets back on September 15, it will have the inclination and the courage to amend the Wagner Act; put the N. L. R. B. and the National Defense Mediation Board over the woodshed barrel; insist that the American workman be given protection from union racketeers and bosses and that the national-defense program be no longer impeded either by selfishness or political ambition.

The People Would Like To Know in the President's Own Words What He Thinks. They Do Not Want To Guess

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 21, 1941

EDITORIAL FROM THE ADRIAN (MICH.) TELEGRAM

Mr. MICHENER. Mr. Speaker, when a newspaper which has editorially consistently supported the President's foreign policy pauses to question the President, then that is news.

The Adrian (Mich.) Telegram, one of the leading small-town dailies in the country, has definitely supported the President's foreign program from the beginning of the present World War. Therefore, a critical editorial in this paper hardly stands in the same position as critical editorials appearing in the press hostile to the President's foreign program.

Pursuant to permission given me to extend my remarks in the RECORD, I include the following editorial:

[From the Adrian (Mich.) Telegram]

SPEAK OUT, MR. PRESIDENT

President Roosevelt called on the Nation to do some serious thinking about America's war effort at his press conference and he made it plain that he believes the people are not yet awake to the enormous task they face. But by speaking indirectly and quoting words that Abraham Lincoln spoke back in 1862, Mr. Roosevelt did not help clarify confusion of thought when clarity is so imperatively needed. The people would like to know in the President's own words what he thinks. They do not want to guess.

But by reading to the reporters passages from Carl Sandburg's account of an interview Lincoln had with a delegation of Chicago women who were seeking encouragement for preservation of the Union, Mr. Roosevelt left it to the Nation to judge what he really thinks the situation in the United States is now.

Probably the most significant passage Mr. Roosevelt read was that in which Mr. Lincoln said: "The fact is the people have not yet made up their minds that we are at war with the South. They have not buckled down to the determination to fight this war through; for they have got the idea into their heads that we are going to get out of this fix somehow by strategy. * * * They have no idea that the war is to be carried on and put through by hard, tough fighting, that it will hurt somebody; and no headway is going to be made while this delusion lasts."

When he had finished reading, Mr. Roosevelt authorized the reporters to quote him directly as saying "President quotes Lincoln and draws parallel." Lincoln's words were plain enough, but President Roosevelt did not make his meaning entirely clear by saying he drew a parallel. The time has come for straight from the shoulder talk and the people would like to hear it from their President.

They would like to know just how serious is the situation of the country. There are

varying shades of opinion on that point. The close margin by which the Army service extension bill passed the House of Representatives shows how divided opinion is. The President, better than anyone else, knows the actual situation. He, better than anyone else, is able to unite the Nation's thinking. Speak plainly, Mr. President.

A Great American and a Great Soldier

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

Mr. SNYDER. Mr. Speaker, on Friday morning last, Maj. Gen. Adna R. Chaffee, United States Army, was called into the Great Beyond.

Thus, there was lost to the Nation a truly great military genius and a truly great man, and thus have many of us been deprived of a valued friendship and a wise counselor.

Nothing that I might say could add to the luster of this great soldier who has gone from us. His record is replete with signal accomplishments, climaxed by his foresight and leadership in the development of motor propelled and drawn striking forces. He logically became the first commander of our armored force, the billet which he held when his fatal illness made necessary his relief.

For 4 years General Chaffee was the counselor of my subcommittee during the consideration of military budgets. He was handpicked for such duty by that former great Chief of Staff, Gen. Malin Craig, who knew his man and his unusual attainments.

The close association occasioned by this detail grew into warm personal friendships between General Chaffee and my colleagues and myself, and all of us deeply mourn his death.

Mr. Speaker, the Washington Evening Star of last Saturday contained a very excellent editorial upon General Chaffee, which I should like to include as a part of these remarks. I shall read the concluding paragraph:

His country regrets that General Chaffee should have died so young. It is no exaggeration to say that he was a martyr to his work. The new defense organization which he helped to create is his monument. He departs with the thanks of a Nation made safer by his sacrifices.

To those expressions I know the entire membership of this body will say, "Amen."

The following editorial appeared in the Washington Evening Star of Saturday, August 23, 1941:

GENERAL CHAFFEE

The whole life of Maj. Gen. Adna R. Chaffee was devoted to the Army. A son of a distinguished soldier, he was born in the service and gloried in the circumstance throughout his career. Part of his boyhood was spent in China, where his father was in command of American troops operating against the Boxer rebels. He returned home convinced of his vocation, made an excellent record at West Point, gained his first commission in 1908. By nature fearless and confident, he was a brave and skillful horseman from the start. Riding as a member of the American Army team at the International Horse Show in London in 1911 and studying at the Saumer School in France in 1912, he qualified for promotion in the Cavalry. When the United States entered the first World War he was a captain and a West Point instructor. "Keen energy and wise discernment" in the discharge of "grave responsibilities" in the Meuse-Argonne campaign gained him the Distinguished Service Medal, to which only 3 weeks ago was added the Oak-Leaf Cluster.

General Chaffee, however, was something more than a successful officer. His most notable characteristic was an active yet disciplined imagination. Few, if any, of his contemporaries appreciated in 1918 that a new era of military science was dawning; but he visioned an army which should be strong in attack yet also sturdy in resistance to a degree hitherto unknown. Long before the panzer divisions of the German Army had been organized he was urging the development of mobile fortresses. Speaking at the Army War College in 1930, he predicted that the decisive factor in the next war would be heavily armored automotive divisions of overwhelming firepower. He was named executive officer of the pioneer mechanized cavalry unit at Fort Knox in 1931. The beginning of the present conflict in Europe found him prepared for the command of the first American armored division deserving of the name. He labored tirelessly to anticipate the inevitable crisis which he had foreseen.

In personal appearance General Chaffee, like Vachel Lindsay's General Booth, "looked the chief." His profile was eagle-sharp. When thoroughly aroused, he could flash lightning from his eyes. But he was a lovable man despite the stern aspect of his countenance.

His country regrets that General Chaffee should have died so young. It is no exaggeration to say that he was a martyr to his work. The new defense organization which he helped to create is his monument. He departs with the thanks of a nation made safer by his sacrifices.

Steps Taken Toward Participation by United States in European War

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 25, 1941

RADIO ADDRESS BY HON. KNUTE HILL, OF WASHINGTON

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks and include therein an address delivered over WWDC Sunday evening, August 24, 1941, may I say that President Roosevelt, in his letter last week to the Young Democrats of the United States, evidently has forgotten the following paragraphs in the 1940 Democratic platform and the paragraphs from his own speeches just prior to election on November 3, 1940:

And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again and again and again: Your boys are not going to be sent into any foreign wars.

They are going into training to form a force so strong that by its very existence it will keep the threat of war far away from our shores.

Yes; the purpose of our defense is defense. (Boston, October 30, 1940.)

I am fighting to keep this Nation prosperous and at peace. I am fighting to keep our people out of foreign wars and to keep foreign conceptions of government out of our own United States. (Brooklyn, November 1, 1940.)

WE MUST STRENGTHEN DEMOCRACY AGAINST AGGRESSION

The American people are determined that war, raging in Europe, Asia, and Africa, shall not come to America.

We will not participate in foreign wars and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack. We favor and shall rigorously enforce and defend the Monroe Doctrine.

The direction and aim of our foreign policy has been, and will continue to be, the security and defense of our own land and the maintenance of its peace.

The President has also forgotten the results of his efforts to purge certain Senators in 1936. In 1942 and 1944 let the American voters decide who are following the Democratic platform and the pledges of its leader at that time.

The radio address follows:

Dear radio friends, it is a privilege, indeed, to speak to you tonight over WWDC, and I am deeply grateful to the Veterans of Foreign Wars to have them sponsor my talk. Especially am I indebted to Mr. Elon R. Burton, who so kindly has arranged for me to express my sentiments and convictions to the people who listen in on WWDC.

It is my purpose tonight to briefly discuss the different steps taken which have tended to involve us in the present European war. First of all, the present so-called neutrality law was enacted because of the default of European nations in the payment of their indebtedness to the United States incurred during the first World War. There was such a strong sentiment against loans to the defaulting nations that the Johnson Act was passed prohibiting any loans to such nations. This, of course, included England. The Neutrality Act was passed by a substantial majority because we were definitely and distinctly promised that the cash-and-carry provision would be adhered to. No nation was to receive any goods of any kind unless it paid cash and came to our ports for them. This law has not been repealed and is in force today, notwithstanding the lend-lease legislation giving "all aid short of war" to England. The administration is today violating that law enacted by the Congress and signed by the President. By convoying these tanks and airplanes and other materials and using our fleet to protect them it is not only violating present law but seeking an excuse to get us involved in the war across the Atlantic. In Thursday's Evening Star, August 21, Elliot Roosevelt is reported to have said in London: "War entry may not be determined by the United States. One of our ships might be fired on." Where and how? In foreign waters supplying England with equipment in violation of our neutrality law. It is true that this act would not be determined by the United States Congress, which alone has the power to declare war, but it would be due to

the provocation on the part of the administration beyond any authority contained in the Constitution or granted by the Congress. I repeat it: The lend-lease legislation, broad as it is, gives no authority to convoy goods to England or any belligerent nation.

Much is said today about freedom of the seas and of our right to have our ships sail the seven seas. To my mind, it is not a question of right. We still have, and always will have, a right to use the high seas for commerce and travel purposes. But today it is a question of the wisdom of insistence on that right. Is it the wisest policy to defend that right by expending billions of dollars of the taxpayers' money for dreadnaughts and superdreadnaughts, to risk the lives of our sailors and marines in danger zones, or is it the better plan to forego the profits of our foreign trade for a time until the storm clouds of war have passed and the waves of danger have subsided? Is it not the part of wisdom to restrict our activities for the present to peaceful waters surrounding the Western Hemisphere? Especially so since we had nothing to do with the disturbance of the waters abroad.

Another most serious step leading to the present crisis was the peacetime conscription bill. Never before in our history has this occurred. It is not unfair to term it undemocratic and un-American. To be democratic it should apply to all alike. It does not when it permits the President's sons and other favored sons to become commissioned officers with good salaries To be American it should provide for remuneration for a private soldier in the same proportion as laborers in civilian pursuits. It is true that patriotism is without price. But patriotism demands service and sacrifice on the part of all—including industry and the so-called $1-a-year men, men who not only continue to receive their annual salaries from their former employers but who secure for these employers preferred Federal contracts resulting in huge profits. May I quote an old saying: "Patriotism—what crimes have been committed in thy name"

This injustice just referred to is one of the main causes for the low ebb of morale among our conscripts. Other causes are lack of equipment for proper training, the attitude of noncommissioned and regular officers—and above all, a total lack of a frank statement of the purposes for which they were drafted and are being trained. In 1917 morale was high. The boys thought that they were going across to "make the world safe for democracy." They were sadly disillusioned, it is true, and their sons today, thank God, are not anxious or willing to go across in a futile effort to guarantee the four freedoms throughout the world. They say so and they mean it. They are willing to risk their all to guarantee those four freedoms in the Western Hemisphere. One selectee was in my office the other day. I know him personally to be a fine young American—a consistent attendant at one of the city churches. He said there was a real riot at camp following the vote on the extention act. He said there had been several suicides as a result of that vote. He said most of them would have been willing to volunteer and serve 6 months longer. But that on a poll taken in his company of 130, 129 voted against service beyond the original year, and only 1 voted to continue—and he was a nephew of the commanding officer and due for a promotion. He said they were both bitter and very outspoken in their denunciation of those who voted to break faith with them on this vital issue. To check this ever-increasing discontent among the soldier boys one commentator in the Evening Star of date above referred to suggests that it is "time to use power." Power across the Pacific to fight Japan and power across the Atlantic to fight Germany. To combat these nations on their own ground will not only require the transfer of our equipment and soldiers and sailors to the continents of Asia and Europe but we will have to use the same methods and the same technique that those two militarized and mechanized nations are using. We must enforce the same dictatorial discipline, require the same blind obedience, and imitate the same goose-stepping which we as Americans have so long despised. If it were in actual defense of home and country and our splendid institutions, no force would be necessary. Americans have ever been known and are known today as brave and courageous defenders of their country, when they feel that this country is threatened by any aggressor. But they are not willing to go—and by the grace of God, they are not going to Asia, Africa, or Europe to fight other nation's wars for them. The intelligence, the will, the intense patriotism of these men and the people themselves throughout the United States will not consent to such a travesty on the integrity and purposes for which our democracy was founded.

The most recent step taken toward our participation in the European war was the secret meeting of President Roosevelt and Prime Minister Churchill on the high seas last week. There were several outstanding features of that meeting which it would be well for Americans to ponder. The mystery surrounding its very inception and throughout to its conclusion should give every true American cause for anxiety and to pause to reflect on what it means. Why all this secrecy in a democracy where the people elect one of their own as their leader? Is he not responsible to them? Is it not his duty to let them know where he, their servant, is at all times, and just what he is doing? Especially in such momentous times and in so serious a matter and in a discussion of such a tremendous issue. He had no credentials at that meeting to make any commitments. Churchill had. Note also that the meeting was aboard a British ship, and thus our Executive was on foreign soil when he made these unauthorized commitments. It was also rather strange that no American reporters or camera men were permitted to be present. It was all a British drama and democratic America was left out of the picture. No wonder the British chuckle; but to me the great wonder is that many American newspapers still continue to lick the boots of British royalty and fill their pages with British propaganda. Do they not realize that Britain's aim and game is the same today as it was in 1917 and 1918 and as it always has been? Why did she do her utmost in the War between the States to disrupt our Union? Because she envied and feared this growing Nation. Why does she now use every means to involve us in her wars? To save democracy? No; she had better practice that in India and Ireland. She wants to involve us so as to prevent us at the close of this world cataclysm from being the most powerful, the most wealthy, and the most influential nation in the world because of our neutrality and our insistence on living our own lives and pursuing the pathways of peace until and unless some aggressors might be foolish enough to make a futile attack on our impregnable ramparts and fortifications. She cannot brook a rival, let alone a superior. It should and must be our policy—and this is the solemn verdict of our American people, and the only course which will bring complete unity in our ranks—that we build up the greatest defense possible, that it be distinctly and definitely and solely for the Western Hemisphere, and that as a powerful neutral unscathed by the horrors and ravages of war we can assist in the final outcome in shaping a just and lasting peace. We can and will be called on to be the arbiter in this matter if we show the whole world that our purposes are unselfish, our aims are to be helpful to those who are ready to cooperate for the good of all nations, and that although we absolutely refuse to join them in their wars we are willing and anxious to join them in their peace parleys, which alone can guarantee the four freedoms throughout the world.

These have been the policies and practices of our greatest statesmen since the foundation of our Republic until the last two decades. Let me quote from Washington's Farewell Address: "Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side and serve to veil and even second the arts of influence on the other." The first President and Father of his Country did not believe in entangling alliances with any foreign countries. Then let me quote to you from that other great first American, Thomas Jefferson: "I have ever deemed it fundamental for the United States never to take part in the quarrels of Europe. Their political interests are entirely distinct from ours. Their mutual jealousies, their balance of power, their complicated alliances, their forms, and principles of government are all foreign to us. They are nations of eternal war. All their energies are expended in the destruction of the labor, property, and lives of their people.

"On our part, never had a people so favorable a chance of trying the opposite system, of peace and fraternity with mankind, and the direction of all our means and faculties to the purposes of improvement instead of destruction.

"I hope for a cordial fraternization among all the American nations and their coalescing in an American system of policy totally independent of and unconnected with that of Europe.

"The day is not distant when we may formally require a meridian of partition through the ocean which separates the two hemispheres, on the hither side of which no European gun shall ever be heard, nor an American on the other; and when, during the rage of the eternal wars of Europe, the lion and the lamb within our regions shall lie down together in peace.

"I hope no American patriot will ever lose sight of the essential policy of interdicting in the seas and territories of both Americas, the ferocious and sanguinary contests of Europe. I should rejoice to see the fleets of Brazil and the United States riding together as brethren of the same family and having the same interests." Is not the wisdom and foresight and splendid patriotism of these two great Americans as true in these eventful days as it was in those trying days of our early history? Are their ideals and ideas not as worth while to us now as they were to the people of that day and generation? Who will you, my good friends, follow today—the ones who knew full well the dangers that lurked in alliances with European aristocracies or the ones today who hold secret conferences on foreign vessels with the same type of royalists as of 1776 and 1812? Be not deceived by propaganda. Be not imbued with the fear which President Roosevelt himself in his first inaugural warned us against when he said: "The only thing we have to fear is fear itself." Now we are taught to fear Hitler but to embrace Stalin. We are taught to fear our own lack of proper defense so as to build up the defenses of Europe. We are urged to fear our own ability, our own integrity, our own will to defeat any and all aggressors who may be foolhardy enough to attack the Western Hemisphere. I will repeat what I have before so often said, President Roosevelt still has the golden opportunity not only to have his name go down in history as the greatest American President but also to make this glorious country of ours safe for democracy and the leader of all nations along the pathways of peace and progress. I regret that he saw fit the other day in his letter to the Young Democrats of America, to read us who disagree with him in this matter out of his

party. Be it so, if he wishes. But so surely as democracy can live and function, so surely if he persists in his present foreign policies will the people of these United States read him and his ill-advised counselors out of office and into political oblivion. He should not forget Wilson and the election of 1918. He should not forget that in America the people are still the sovereigns and that unless we heed their wishes and their pleas they will repudiate us when their turn comes to speak and act. President Roosevelt, as an admirer and friend, I sincerely urge you to listen to the voice of the people and to turn away from the intrigues of war propagandists and royalists. Even your astuteness cannot escape the just wrath of an aroused and disillusioned people. Thomas Jefferson and Abraham Lincoln had an abiding faith in the common people. They trusted these common people and shaped their policies and actions in accordance with their wishes for the common good. The names of these two great Americans shine with an undimmed, increasing luster on the scroll of history. Franklin D. Roosevelt, go thou and do likewise, and your name will be greatest among the three.

The Administration's Foreign Policy

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, August 28, 1941

ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address on the subject of the administration's foreign policy, delivered on August 25, 1941, by the senior Senator from Illinois [Mr. LUCAS] before the American Legion Convention at Springfield, Ill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Commander, fellow Legionnaires, and friends, it is a genuine pleasure for me to return to Springfield as one of the speakers at this the twenty-third annual convention of the Department of Illinois of the American Legion. It was in this city that I had the high honor as your department commander to preside over the deliberations of the delegates selected to attend the convention in 1926.

You who were present will never forget the spirit of national unity which prevailed as we, with pride in our hearts, watched Capt. John Inman, commander in chief of the Grand Army of the Republic, and Gen. Hugh Vance, commander of the Confederate Veterans, march down the aisle, arm in arm, and later shared equal honor as convention speakers.

You will also remember that epoch-making and soul-stirring event in Oak Ridge Cemetery, when these two national heroes, one of the blue and one of the gray, jointly laid a wreath of flowers on hallowed ground in the tomb of our own Abraham Lincoln.

What record is kept of the floral pieces strewn over that inn of immortality I am not advised. Yet I know that in the years gone by people in every walk of life have made a pilgrimage to Lincoln's last resting place, paying homage and tribute to his memory with the fragrance of flowers.

Mr. Commander, no wreath was ever laid in that tomb which so symbolized the beauty, the strength, the character, and the unity of a free people as did the one tendered by the patriotic hands of Captain Inman and General Vance.

That my comrades, was the type of unity that Abraham Lincoln prayed would come to a nation that was divided over the question of human rights. To achieve that unity for the benefit of future generations, Abraham Lincoln, along with thousands upon thousands of American boys, gave up their lives in mortal combat.

Today, my comrades, America again faces a crisis. It is not merely national in its scope, but encompasses the entire universe. The Lincoln doctrine that no nation can live half slave and half free can today be applied to the world. When we see the dictators of tyranny and oppression enslave innocent peoples of one nation after another in Europe, and knowing what the totalitarian ideology seeks to do—well, can we seriously ask, "Can this world continue half slave and half free?"

My comrades, if Abraham Lincoln were alive, he would challenge, tooth and nail, the European and Asiatic enemies of democracy. He had experience with a military despot during the Civil War. He saw Napoleon the Third, Emperor of France, send, through Maximilian, the puppet Emperor of Spain, ships and soldiers to Mexico ready to strike at this Nation at the psychological moment.

But Abraham Lincoln was equal to the occasion. He massed a huge army on the Mexican border. He demonstrated a show of real military force, and thanks to that strategy, the greedy foreigners returned to Europe without firing a shot, and America won that battle without losing a man.

If Lincoln were alive today, he would be striving for national unity. He would be telling the people of this Nation how Stephen A. Douglas, the little giant, but the long political enemy of Lincoln, took up the cudgel for him and his administration, speaking everywhere on the preservation of the Union. It is said by Beveridge in his life of Lincoln that the persuasive powers of Douglas probably raised 50,000 soldiers from Illinois and 200,000 from all the Northern States. Douglas the patriot submerged all political phobias for the sake of a united nation. A near parallel to the Lincoln-Douglas teamwork in a crisis can be found in Wendell Willkie's strong approval, by words and deeds, of the administration's foreign policy.

At this juncture of my address I turn to our own American Legion of Illinois for further support upon the question of unity. One of the finest editorials I have read can be found in the first issue of the Illini Legionnaire. In discussing the foreign policy this editorial said, among other things:

"In order that the play may work successfully, those charged with the responsibility for carrying it out must have the united support of all our citizens. Failure to support them in their endeavors cannot alter the plan, but may hamper them in their efforts by giving aid and comfort to our enemies.

"It is our duty to lead the fight against the enemies of democracy through the promotion of national unity. We cannot hope to supply that leadership unless we are united within our own ranks. Let us put patriotism and the welfare and security of our country above every other consideration in determining the course which we are to follow."

My comrades, those are the words of one of the most forcible and patriotic veterans to ever occupy the high and exalted position of Department Commander of Illinois, and I refer to the Honorable William Waugh. It may be well in passing to say that this editorial was approved by the publication board.

Mr. Commander, why do I discuss unity of thought, unity of purpose, and unity of action in this great emergency? Well, I happen to be the senior United States Senator from this great State, and I firmly believe that nazi-ism, with its cruel intolerance, its perverted notion of racial superiority, its so-called rendezvous with destiny, all backed by the most powerful military machine the world has ever known, is the greatest menace to democracies and their ideals since the cruel reign of Napoleon Bonaparte. I am convinced that Hitler and his fanatical followers hope some day to dominate the world.

My friends, there are a number of honest people in this country who feel that America is in no danger as a result of the war in Europe. But I merely call your attention to the fact that during the last 12 months the United States Senate has appropriated and authorized some $20,000,000,000 for defense purposes. It is significant that not a single Senator voted against these appropriations. As lawmakers entrusted with the security of this Nation, whom do we fear as we feverishly plan our national defense? Is it Mexico? Is it Sweden? Is it England? Is it Russia? No, my comrades; there is only one menace; there is only one possibility of attack, and that can be found in the ruthless philosophy of Hitler, the madman. These 96 Senators voted these billions of dollars to keep the totalitarian poison from the shores of the Western Hemisphere.

I undertake to say that the American slogan should be, "Beat Hitler." That is why I have supported one defense measure after another in this United States Senate. That is why Roosevelt and Churchill met at sea. That is why at this moment we are willing to aid communistic Russia.

My friends, no one has been more bitter in the denunciation of the communistic theory of government than I. What I have said in the past I do not retract. But today we are confronted with a condition and not a theory.

I hear it said that a free democracy like ours cannot in this crisis form any alliance with an autocracy, and especially Russia. I hear it argued that the United States ought not keep Russia in the field just to slow down the Hitler war machine. To persons who say that, I would like to ask this: Whom did George Washington make his military ally when this young democracy of ours was fighting for its freedom? And Thomas Jefferson, with his fingers still black with the ink of the Declaration of Independence, whose help did Jefferson welcome in our great Revolutionary crisis? Why, it was the help of the greatest autocracy, the most tyrannical despots of that day—the Bourbon kings of France.

Did Washington and Jefferson let their dream of democracy die rather than accept the aid of a most antidemocratic foreign power? They were no such fools. They knew that the ideals of liberty were so strong in our people that no alliance with a foreign ideology could endanger us.

Who was it in the 1860's that welcomed the fleet of the Russian Czar in the New York Harbor as a threat to foreign nations which then wished to see the United States fall? Why, my comrades, it was the immortal Abraham Lincoln, who certainly had no sympathy whatsoever with czarism. He knew that the Czar had utterly foreign ideas as to what the words "liberty" and "freedom" meant; but so long as that Czar's fleet could be helpful to the great Republic of the United States, Lincoln would use that help and be grateful.

Suppose a Communist was your next-door neighbor and you had been responsible for his arrest on a half-dozen occasions because of overt acts against the Government. And then suppose your house got on fire and the Communist came over and grabbed the hose to help put it out. Would you attempt to chop the arm off the Communist under those

circumstances? I undertake to say that you would permit him to help you save your home.

My comrades, this is no time for political partisanship or for academic hairsplitting. Hitler's time clock is grinding on, and the hour for us is later than many of us think. Only one thing now can stop that clock before that zero hour sounds in our own ears, and that one thing is a unified spirit—unity in thought; unity in producing the guns, the tanks, the planes with which England and Russia can stop Hitler. Because when and if they fall, war is inevitable for America.

With aid to these countries, I think Hitler can be stopped. We can succeed so long as we hold in check the petty carpers and obstructionists who for picayune and personal reasons would interrupt the national effort. The time for personal ambitions is past.

Let me say to you at this point, my comrades, that in this emergency, I am duty bound to follow the legislative path which I believe will make secure the American way of life for the oncoming generation of Americans. I cannot, under any circumstances, permit the question of my continuance in public office to influence my vote. It is utterly immaterial to the continuance of free government that I should continue in office, but it is basic and fundamental that I conscientiously attempt as a public officer to hand on to the next generation the same heritage which was handed to me.

Senators come and Senators go and are sometimes soon forgotten, but the principles upon which this Republic rests must continue to remain inviolate notwithstanding the Hitler-Mussolini theory to the contrary. This Republic of free men and women must continue to be the citadel of life, liberty, and happiness throughout the world.

My only hope is that in all of my acts I perform as your Senator that I am right, and my prayer is that God will give me the power to see the right. I say this with the utmost sincerity.

I submit that we must clear the road for Uncle Sam. We all must work so that the President of the United States can keep on saying as he said the other day when he returned from the historical meeting with Churchill, "We are no nearer to war."

My comrades, without attempting to speak in the way of politics, let me say I personally know Franklin D. Roosevelt, and I am willing to testify that in my opinion, he is a man of peace and not of war. I know Col. Frank Knox, I know Colonel Stimson, I know Gen. George Marshall, Chief of Staff of the Army, I know Admiral Stark, head of the Navy, and what is true of the Commander in Chief of the Army and Navy is true of these men. Nobody wants war. The polls showing 80 percent of the people not wanting war can be increased, I think, to 100 percent.

But I submit that these men in Washington, some Democrats and some Republicans in that Cabinet, are working with all the tools we will give them—they are using all the brains God gave them to keep the war from our unbombed and unscorched shores. They are using statecraft, wits, and steel, and all their ingenuity, not only to keep us out of this war, but to keep us out of possible wars to come.

Notwithstanding this, we hear men high in public office condemn every defense move that is made, boldly charging that it is another step to war, or repeating that old hackneyed phrase, "We are on the road to war."

Well, are we? I challenge that statement. Secretary Knox told the Naval Affairs Committee in executive session not 2 weeks ago that not a single American merchant vessel, or an English vessel, has been convoyed across the Atlantic, yet the press and radio have been full of convoy hullabaloo.

We have a Neutrality Act; we have combat zones which American merchant ships are prevented from entering, and not once has that Neutrality Act been violated. During this great emergency we have lost only 1 ship, and that was the *Robin Moor*, which was sunk some 600 miles off the coast of Brazil, where some 30 lives were lost. Contrast that, if you will, to 1915 and 1916, prior to our entry in the war. Do you know that we lost 21 American ships? Do you know that 8 others were fired upon in that time? Do you know that we lost the lives of 155 Americans at sea before a declaration of war was made in April 1917, and that came only after Germany had declared an unrestricted submarine warfare on the high seas of the world.

My friends, I would not vote for a declaration of war today, and I think there are few men in the Senate who would; but what tomorrow will bring forth no man dare foretell. What Hitler and his planes and submarines may do or try to do to American peoples that have the right of freedom of the seas is a question that has yet to be answered.

Mr. Commander, I am happy to have been here.

I have been criticized for not taking a more active part in Legion affairs, but I saw politicians out of Washington come to national conventions when I was the national judge advocate of the Legion, and I helped to defeat those individuals who attempt to use the Legion to further their own selfish and political ends. And I remember distinctly how the national officers felt about Washington politicians. So perhaps as a result of that experience I have leaned backward in keeping myself free from the Legion activity in Illinois and in the Nation during the last 7 years.

But there is one thing, Mr. Commander, that I am proud of, and that is my record in Congress as far as legislation affecting the ex-servicemen, their widows and dependents, is concerned. The only time that I have ever been a "yes man" in the Congress of the United States has been upon veterans' legislation, most of which was inaugurated by the American Legion.

In conclusion, I have hoped that when the history of these tremendous times is written there may shine on the pages for future generations to see the fact that the American Legion rose to the emergency and voted to stand like a rock behind the chosen President of our beloved Republic.

The American Market for the American Farmer

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, August 28, 1941

STATEMENT BY HON. JOHN THOMAS, OF IDAHO, BEFORE COMMITTEE FOR RECIPROCITY INFORMATION

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a statement which I made on August 22 to the Committee for Reciprocity Information relative to the proposed negotiations with Cuba for a supplemental trade agreement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Department of State on July 26, 1941, gave formal notice of its intention to negotiate with Cuba a supplemental trade agreement, in which the United States will consider the granting of concessions on sugar and molasses, tobacco, veal, beef, grapefruit, and certain stone compositions.

I desire to discuss just how further concessions to Cuba will affect the farmers and stockmen of Idaho and of the Nation. The sugar and livestock industries are the basis, either partially or entirely, for the livelihood of many thousands of citizens in Idaho and numerous other States, and I shall concern myself with paragraphs 501, relating to sugar, and 701, relating to beef and veal.

The announcement by the Department marks the third time in 8 years that the administration has undertaken to improve the position of Cuban sugar producers, and the second time in 3 years that it has undertaken to amend in Cuba's favor the original trade agreement between the two countries, which became effective on August 24, 1934.

In the case of sugar the original trade agreement of 1934, coupled with the establishment of a quota system, extended to Cuba a number of definite and highly valuable concessions. Chief among them were:

1. The rate of duty on Cuban raw sugar was reduced from $1.50 to 90 cents a hundred pounds. (Shortly before that concession had been granted, the President ordered a reduction in the duty on Cuban raw sugar from $2 to $1.50 a hundred pounds.)

2. Cuba's position in the American market, which was being undermined by Philippine competition, was protected through the imposition of quotas on all areas supplying sugar to the United States, domestic as well as foreign.

The effect of these arrangements was to give Cuba advantages in the United States which were not shared by any other foreign sugar-producing country. Not only was Cuba's volume of sales in the United States enlarged and protected, but the price she received for her sugar was significantly increased. The only assurance which the agreement gave to the domestic producers of sugar was that, in case quotas were suspended or otherwise became inoperative, the duty to be paid on Cuban raw sugar would automatically be restored to $1.50 a hundred pounds.

In the 4 years from 1934 to 1937, Cuba's sugar quotas increased from 1,866,482 short tons to 2,148,951 short tons, and the value of the produce increased from $55,217,000 in 1934 to $103,808,000 in 1937. In the face of this highly favorable position of the Cuban producer, the Department of State on November 30, 1938, gave notice that it intended to negotiate a supplemental trade agreement with Cuba, and listed sugar as one of the commodities upon which it was prepared to discuss possible concessions. But the day before the State Department deigned to give domestic producers notice of the fact that it intended to negotiate a supplemental agreement, Col. Fulgencio Batista, the president of Cuba, gave a newspaper interview in which he said that an oral agreement had already been reached to reduce the tariff to 75 cents a hundred pounds. The interview, as published in the New York Times on the morning of November 30, 1938, follows:

"HABANA, November 29.—Col. Fulgencio Batista, Cuban chief of staff, said in an interview today that an oral agreement had been reached for reduction of the tariff on Cuban sugar entering the United States. In return, he said, Cuba would throw open her market for Louisiana rice and other North American products, manufactured and agricultural, and grant certain exemptions under her nationalistic labor laws.

"Formal negotiations for modifications of the present reciprocal trade treaty between the United States and Cuba will be started in a few days, he said. Reduction of the United States tariff on Cuban sugar will not affect the United States import quotas but will benefit Cuban growers by giving them a better price.

"Colonel Batista said the present tariff on Cuban sugar of 90 cents a hundredweight would be reduced to 75 cents, the maximum reduction President Roosevelt is permitted to make under his reciprocal trade powers.

"'And we expect a further reduction when the United States Congress meets again,' said Colonel Batista."

The State Department denied that it had given any such assurances to Cuba, but 10 skeptical United States Senators joined in support of a resolution instructing the Senate Finance Committee to determine whether any prior commitments had been made by the State Department in violation of the provisions of the Reciprocal Trade Agreement Act of June 12, 1934. That act, which authorizes trade agreements without Senate ratification, requires that "before any foreign trade agreement is concluded with any foreign government * * * reasonable public notice of the intention to negotiate any agreement * * * shall be given, in order that any interested person may have an opportunity to present his views to the President or to such agency as the President may designate."

When the negotiation of the supplemental agreement was completed late in 1939, it did not contain a reduction in the rate of duty, but it did nevertheless take away from domestic producers virtually the only protection contained in the original agreement—that is, the provision which automatically restored the duty to $1.50 whenever quotas were suspended or otherwise became inoperative. The supplemental agreement provided instead that at any time quotas were suspended the rate of tariff would remain at 90 cents if the powers of the Secretary of Agriculture under the Sugar Act of 1937 had not expired. Thus, if quotas were to be suspended today, domestic producers would be subjected to the full weight of Cuban competition with only a 90-cent rate of duty, which does not even remotely represent the differences in the cost of production of sugar in the United States and Cuba.

More recently the United States, through the Export-Import Bank, loaned Cuba $11,200,000 to finance the production of 400,000 tons of sugar, which would not have been produced without the financial encouragement of this country. This subsidy to stimulate production, incidentally, came shortly after the Department of Agriculture insisted that the production of beet sugar this year be reduced by 17 percent.

What further concessions the United States is prepared to offer to Cuban sugar producers is something known only to the Department of State—and possibly to Cuba. Domestic producers can do no better than to make guesses founded on their own fears and the Department's past performances. In any event, the total effects upon the domestic industry of any additional concessions to Cuba cannot be measured until it is determined whether the quota system is to be continued after December 31, 1941. And that remains in doubt.

First among the possibilities involved in the negotiation of a supplemental agreement is that the United States will agree to reduce the duty on Cuban raw sugar to $0.75 a hundred pounds, which is $0.15 below the prevailing rate, and the very lowest to which the tariff can be cut under the provisions of the Foreign Trade Agreements Act. If there was no reason for making that reduction in 1934 or in 1939, there is even less reason for making it now. At the present level of prices Cuba is getting more for her sugar than she has at any time since the control programs have been in effect, and her quota is 2,374,852 short tons, raw value—the highest on record. Cuba needs no reduction in duty, and the only effect of a reduction would be to protect her against any possible price reactions.

If the tariff be reduced and quotas discontinued on December 31, the results are certain to be devastating to the domestic industry, and we should keep in mind at all times that dependent upon the domestic sugar industry are some 70,000 sugar-beet growers of the West, 18,000 sugarcane growers in Louisiana and Florida, 190,000 field workers, 10,000 factory employees, and their families. The extinction of the domestic sugar industry means the destruction of the livelihoods of these tens of thousands of Americans.

The proposal to negotiate a supplemental agreement with Cuba without regard to the continuance or discontinuance of the general sugar program is fundamentally unsound and unfair to the domestic industry. The original Cuban agreement of 1934, which reduced the duty on Cuban sugar from $1.50 to $0.90, was negotiated after quotas and a tax-and-payment system had been enacted by Congress, and, as mentioned above, that agreement provided that the rate of duty would be automatically restored to $1.50 if quotas became ineffective. If adequate protection is to be given domestic producers, that provision should once more be made a part of the agreement, and no further concessions granted to foreign producers, whether they be in Cuba or some other tropical area, at the direct expense of the Federal Treasury.

Cuba today is getting $0.75 a hundred pounds more for her sugar in the United States market than she can get anywhere else in the world, which amounts to a bounty of more than $30,000,000 a year which American consumers pay to Cuban sugar producers. A reduction of $0.15 in the duty would add another $6,000,000 to this subsidy, and this is at a time when Congress is faced with the prospect of imposing ever higher taxes on its own citizens. There can be no doubt that the tax revenue is needed, and if it be lost by extravagant gestures to foreign sugar producers it inevitably means that the burdens to be assumed by American taxpayers must be so much greater.

There is another consideration which should not be overlooked. For the purpose of the national defense we should be doing everything possible to encourage, rather than to discourage, the domestic sugar industry. We should profit by our experience in the last war. Because we were so largely dependent upon foreign production during the first World War, we were forced to ration sugar, and we saw the price skyrocket to an excessively high level. The national interest today demands that such a vital industry be protected, and I think that we will be doing a real disservice to the well-being of the Nation if we take steps which undermine the stability of the domestic sugar producer.

Paragraph 701 refers to beef and veal, fresh, chilled, or frozen.

It has been argued by some that the amount involved in these negotiations is very small, and that the concession, if granted, would not materially affect the economic welfare of beef producers in this country. The real point, however, is that the concessions we have been making to foreign countries add up to what very nearly represents the difference between profit and loss for the American producer.

Imports of beef from Cuba during the last year have increased more than 2,000 percent, from 507,000 pounds in 1939 to 11,000,000 pounds in 1940. Since the first of 1941, from 500 to 1,000 carcasses, running about 300 pounds each, and cut into quarters, have been imported per week. The imported beef is usually of low grade and sells at a discount of 5 cents per pound. The normal tariff duty on beef is 6 cents per pound; but since Cuba has already been granted a 20-percent preferential treatment, she is able to bring beef to our shores with only a 4.8-cents-per-pound duty. It is not difficult to see that already Cuban importation has had a depressing effect upon the prices which the American producer is able to command, and that any further reduction in the tariff duty would be of additional disadvantage to the domestic stockman.

The American producer has for the past decade suffered great hardships, and for the first time in many years has an opportunity to overcome them by securing his appropriate share of the American market, the best market in the world. He is entitled to that opportunity, and it is the duty of the Government to help him to regain his economic feet and to permit him to participate in the years of plenty after the years of despair.

Domestic stockmen are faced with the largest cattle population in history. Figures show that the population has increased from 68,801,000 in 1940 to 71,666,000 in 1941. By January 1, 1942, it is conservatively estimated that the total cattle population may reach 74,000,000 head. The Department of Agriculture publication Livestock, Meats, and Wool Market Reviews and Statistics, dated August 13, gives some interesting figures on the number of cattle on feed on August 1 of this year:

"There were 17 percent more cattle on feed for market in the 11 Corn Belt States on August 1 this year than a year earlier, according to the August cattle feeding report of the United States Department of Agriculture. This was the largest relative increase in the number on feed August 1 compared with the number a year earlier shown by these reports going back to 1928. The actual number of cattle on feed August 1 this year was undoubtedly the largest since the beginning of the drought period in 1934 and probably was among the largest for this date for all years.

"Increased numbers on feed are shown for all States, ranging from 6 and 5 percent in Ohio and Kansas, respectively, to 25 percent in Iowa and Nebraska and 35 percent in South Dakota. The increase in the eastern Corn Belt is 11 percent and in the western Corn Belt 21 percent. This estimated increase in cattle feeding of 17 percent on August 1, compares with the estimates of 16 percent increase on April 1 and of 11 percent increase on January 1.

"Reports received by the Agricultural Marketing Service from a large number of Corn Belt feeders indicate that most of the increase in the number on feed on August 1 this year is in relatively long-fed cattle—cattle that have been on feed over 7 months, or since before January 1. These reports show that about 40 percent of the cattle on feed August 1 this year had been on feed over 7 months compared with about 31 percent reported in August last year; that about 33 percent had been on feed from 4 to 7 months this year as against 29 percent last year; and that the number of short-fed cattle—on feed less than 4 months—was only 26 percent this year compared with 40 percent last year.

"These reports check fairly well with reports received from cattle feeders earlier in the year. In January these reports showed that feeder calves made up a larger proportion of the cattle on feed than a year earlier and most feeder calves are fed beyond August 1. In April these reports showed that a larger proportion of the cattle on feed April 1 would be marketed after July 1 than was shown by reports in April a year earlier.

"Shipments of stocker and feeder cattle—from stockyards and direct—into the Corn Belt, which were of record size for the period during the first quarter of this year, tended to drop off somewhat in the second quarter. However, shipments into the Corn Belt States through stockyard markets during the second quarter were the largest since 1930, and the

total of all shipments during the first half of 1941 were probably the largest for all years."

It is evident there is no danger of shortage that necessitates making concessions to foreign nations. The livestock producers of the United States have produced cattle in unprecedented numbers, and there is no reason why they should not be allowed to dispose of their produce in their own country without undue competition from foreign nations.

The price situation itself is still uncertain. The prices received for beef cattle since January 1 generally have been below the cost of production. Prices on heavy, well-finished steers have followed the normal downward trend since the first of the year, whereas prices of the lightest weights and lower grades of slaughter cattle have held about steady. Well-finished steers are now low in relation to other grades and classes of slaughter and feeder cattle. Marketings of slaughter cattle have been of record proportions during recent months, apparently reflecting a heavy movement of grain-fed steers and heifers, and it is hoped that this may reduce somewhat the expected large increase in supply during the late summer and early fall. Marketing of grain-fed cattle, however, will increase seasonally during the next few months, and total slaughter supplies of cattle are expected to continue larger than a year earlier. It is hoped that the general level for cattle prices will continue at least as high as a year earlier during the remainder of 1941, and it seems likely that the price on well-finished cattle will advance considerably over the last half of 1940.

It should be borne in mind that the position of the American stockman has been a hazardous one. During the drought year, 1934, nearly 10,000,000 head of cattle had to be sacrificed to the elements. Cattle worth from fifty to one hundred dollars or more were sold at an average price of fifteen or twenty dollars per head. It would take many, many years of favorable prices to enable the domestic stockman to regain the losses sustained during those awful years, and it has been only in recent months that prices for beef cattle have been adequate. It is, in my opinion, absolutely unfair to snatch this opportunity from the American stockman just as he is beginning to reestablish himself financially.

The danger of the present must not make us overlook the future, and I am convinced that wise planning for the post-war period forbids further decrease in the tariffs. When the war is ended, when the nations of the world must return to a peacetime economy, it will be all the more important that we have adequate protection for the American producer. Surely, appropriate concern for the future demands opposition to all moves which tend to destroy tariff protection!

Some will insist that we must make further concessions to Cuba because of our good-neighbor policy. I, however, do not believe that the good-neighbor program is involved in these discussions. Our relations with Cuba have been satisfactory. Our Government has made many concessions to her. We have been extremely careful to protect her interests and her economy. Cuba is in better shape now than she has been in for some time, and there is no reason why the farmers and stockmen of the United States, who have suffered for so many years, should be asked to make further concessions in the name of the good-neighbor policy.

Since the American farmer realizes the great desirability of cementing a friendship between all the nations of the Western Hemisphere, he is willing to make sacrifices for an honest good-neighbor policy. But when such a policy means ruin to him instead of a 50–50 proposition whereby there are benefits to be received in return for the concessions which he makes, then he has the right to wonder whether he is being sold down the river. As the good-neighbor policy has unfolded itself, the American farmer has found that he is making all the sacrifices while somebody else is securing all the benefits. Any fair-minded person can readily see that the policy has become discriminatory, inequitable, and manifestly unfair as far as American agriculture is concerned.

For the reasons embodied herein, I am firmly opposed to granting further concessions to Cuba, and I am quite confident that objective consideration of the facts will bring the Committee for Reciprocity Information to the same conclusion. Those of us who are concerned with the welfare of the American farmer and of the Nation as a whole see the danger and the injustice which lie in further destruction of the American farmer's tariff protection.

Supplemental Trade Agreement With Cuba

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, August 28, 1941

BRIEF FILED BY HON. HUGH BUTLER, OF NEBRASKA

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief filed by me on August 25, 1941, with the Committee for Reciprocity Information in connection with the negotiation of a proposed supplemental trade agreement with Cuba.

I have obtained from the Government Printing Office an estimate of the cost of printing this brief in the RECORD, which is $157.50.

There being no objection, the brief was ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL TRADE AGREEMENT WITH CUBA

In connection with negotiation of the proposed supplemental trade agreement with Cuba, it may be of assistance to recall the language of the act authorizing such negotiations.

The Trade Agreements Act, amending the Tariff Act of 1930, reads in part as follows:

"SEC. 350. (a) For the purpose of expanding foreign markets for the products of the United States (as a means of assisting in the present emergency in restoring the American standard of living, in overcoming domestic unemployment and the present economic depression, in increasing the purchasing power of the American public, and in establishing and maintaining a better relationship among various branches of American agriculture, industry, mining, and commerce) by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States."

It will be noted that the purpose of the trade-agreements program, as set forth in the language of the act, is to expand our export markets. The act says nothing about the necessity of helping Latin American nations dispose of their surpluses by dumping them in the American market. It does not suggest that this policy is to be undertaken for the purpose of controlling the foreign policies of other nations. There is not even an implication in the language cited or elsewhere in the act that the purpose is to bail out American banks and other corporations that have invested their capital abroad. The good-neighbor policy is not even mentioned. All it talks about is exports. With this clearly in mind, it may be well to consider just what are our prospects for expanding exports to Cuba through reciprocal trade agreements or otherwise.

In this connection two important factors distinguish the present situation from that which existed at the time the Reciprocal Trade Agreements Act of 1934—the shipping shortage and the domestic rearmament program.

As regards shipping, at the present time there is what amounts to a world-wide shortage of bottoms for ocean commerce. There is no need to cite figures to prove that fact to this committee; undoubtedly the members are as familiar with the facts of the case as I am. The United States is suffering at the present time from a shortage of essential materials, simply because the shipping is not available to bring them in. Rubber processors have been notified that they must begin to cut down their use of rubber below customary levels. The tin shortage is so acute that only recently the Office of Price Administration and Civilian Supply found it necessary to establish a price ceiling for that commodity. Somewhat the same thing could be said of burlap. It is even rumored that no copper will be available to civilian use during coming months, simply because the shipping is not available to bring in enough of the metal to meet our expanded needs. Every important industrial export commodity is finding all the markets it can supply in view of the lack of shipping. How, then, can our exports to Cuba be expanded by a trade agreement?

The second major factor to consider is the heavy drain in our domestic supplies of raw materials and manufactured goods, incident to the national-defense program. Shortages of goods are appearing in all lines. Consumers in the southeast are being rationed on electricity and those along the eastern seaboard on gasoline, and manufacturers in all lines are being rationed on practically all the major metals and on such materials as rubber, silk and rayon, and numerous chemical products. Have we got anything to spare for Cuba?

Just to emphasize this point, let us take a look at some of the major items which have entered into our export trade with Cuba in the past, on the assumption that these are the products of which we might naturally expect to increase sales. Nineteen hundred and thirty-nine may be taken as the most recent normal year and is fairly typical of other years. In that year we shipped to Cuba 1,140,859 barrels of crude petroleum, 530,218 barrels of gasoline and other petroleum motor fuel, 55,398 barrels of lubricating oils, and 322,362 barrels of residual fuel oil, with a total value of over $3,500,000. At a time when consumers on the eastern coast are being asked to curtail their use of gasoline and other petroleum products because of the shortage of shipping space, are we to divert needed tankers to the Cuba trade? In the present crisis, is there any sense in trying to expand sales of petroleum products to Cuba? Can we even afford to try to maintain the present volume of sales?

Another group of exports is made up of the following items: Iron and steel sheets, galvanized, 11,094,690 pounds; tin plate and taggers' tin, 23,406,921 pounds; tubular products and fittings, 21,963,192 pounds; bars and rods, 31,281,545 pounds; and wire and manufactures, 22,332,412 pounds; with a total

value of well over $4,000,000. Is it proposed to open up greater export markets for these products on the heels of the news that steel has been placed under mandatory priority control and that there will be an estimated 11,000,000-ton shortage of civilian and national-defense needs this year? The shortage situation with regard to most of the other metals is, of course, much worse than in steel.

In 1939 we also exported the following commodities to the values stated (in most cases quantity figures are not available for these items): Sugar-mill machinery, $324,713; other industrial machinery, $1,671,067; electric refrigerators, $701,818; radio apparatus, $585,371; motor trucks, busses, and chassis, new, $737,066; passenger cars and chassis, new, $1,410,328; and automobile parts for replacement, $649,818; a total of over $6,000,000. Is there a single item listed here of which we have a surplus for export? Discussions are already proceeding on the question of how much more than 26 percent the production of passenger cars must be cut this year. A reduction of at least 40 percent seems certain, and higher figures are suggested on all sides. Refrigerators are another industry that is slated for a drastic reduction, and by present indications the production of private radios will be practically wiped out. There is a shortage of practically all kinds of machinery and further shortage of the materials of which they are made.

As a final example of the goods we cannot sell, may I mention rubber-tire casings, auto, of which we exported 94,089 in 1939, with a value of $1,002,237. Tire manufacturers have already been told that they must expect to have their supplies of rubber cut because of the extreme difficulties of securing sufficient supplies of crude rubber from the Far East. In view of the expanded consumer demand and the pressure of military requirements on our rubber supplies, it is a certainty that there will not be enough rubber and rubber goods to go around. Are we then to sell the Cubans tires made from rubber we have not got, brought long distances in ships we cannot spare, for them to use on the automobiles we cannot supply them and which they can get nowhere else?

I have not dealt with every industrial commodity that we customarily export to Cuba, but only with a few of the more important ones. Many of the minor items which I have not mentioned, but which, taken together, amount to a considerable total, fall into the same categories as those listed above. Furthermore I have mentioned only some of the products in which a shortage is known to exist. I have not touched on a long range of commodities in which a shortage is possible or probable. Bituminous coal, for example, of which we shipped 260,885 tons to Cuba in 1939, at a value of $1,293,740, may not be as abundant as we could wish this winter because of the strike last spring and the rising demand for it for defense purposes, and it is unlikely that there will be any supply for expansion of sales to Cuba, even assuming our railroads can carry the increased quantities, which, again, is doubtful. Jute bags, of which we shipped the value of $551,787, and southern pine, of which we sold $1,065,770 to Cuba in 1939, are commodities for which the Office of Price Administration and Civilian Supply has found it necessary to set price ceilings, which implies at least a possible shortage. Altogether, there are practically no major industrial commodities, with a few minor exceptions, such as glass containers, paper and paperboards, and cotton cloth, of which we are not already pressed to maintain adequate supplies for our own industrial and consumer needs, to say nothing of expanding our exports. In short, whether this agreement is negotiated or not, the Cubans are likely shortly to find themselves in the same position as the Americans—their pockets full of money, but nothing to spend it on. I submit that to negotiate a trade agreement with the purpose of expanding exports under such conditions is the most foolish procedure imaginable; and yet let me emphasize again the purpose of the trade-agreements program, as set forth in the preamble of the act, is to expand exports, and no other purpose is mentioned.

It may be observed that I have thus far made no mention of exports of agricultural products. This has been for two reasons: First, because agricultural exports to Cuba are so small compared with agricultural imports from Cuba that no friend of American agriculture could possibly justify a trade agreement with Cuba on the ground that agricultural exports will be aided; and, second, because American farmers have learned from sad experience that the promised benefits to be gained from wider export markets have not always materialized.

A striking case to prove this latter point is provided by the story of our exports of wheat flour. A table is here given to show, in barrels, our exports of wheat flour to Cuba:

	Wheat flour, total	Wheat flour, wholly of United States wheat	Other wheat flour	Percent, United States wheat
1932	779,058	----------	----------	----------
1933	745,661	----------	----------	----------
1934	884,893	----------	----------	----------
1935	1,009,374	220,060	789,314	21.8
1936	1,023,417	162,932	860,485	15.9
1937	1,052,967	310,160	742,807	29.5
1938	989,191	543,592	445,599	55.0
1939	1,045,078	519,851	525,227	49.7
1940	1,015,059	482,324	532,735	47.5
1941 (3 months)	293,444	221,764	71,680	75.6

It will be noted that in only one full year was as much as half of the American flour shipped to Cuba, ground wholly from American wheat. It may be pointed out, by way of emphasis, that the flour listed as "not wholly of United States wheat" is, in fact, wholly of foreign wheat, as is shown by the following table giving imports of wheat for milling in bond and export to Cuba, with the flour equivalent of such wheat:

	Imports of wheat [1]	Flour equivalent
	Bushels	*Barrels*
1939	2,597,500	552,660
1940	2,456,827	522,729
1941 (3 months)	382,622	81,409

[1] For milling in bond and export to Cuba

It will be seen that the amounts of wheat imported for milling into flour for shipment to Cuba would produce almost exactly the amounts of flour to correlate with the figures for wheat flour, not wholly of United States wheat shipped to Cuba, given in the preceding table.

In addition, it should be remembered that our exports to Cuba of flour from American wheat were made possible only through a subsidy under the export diversion program of the Surplus Marketing Administration. From September 7, 1938 (the date of the beginning of the program) to August 4, 1941, diversion payments were made on 1,781,163 barrels of flour for export to Cuba, or the equivalent of 8,193,348 bushels of wheat. It will be observed that these figures agree roughly with the figures on exports of flour from American wheat given above, when allowance is made for the overlapping of the time periods, indicating that all or substantially all of the flour from American wheat exported received subsidy. It should further be noted that prior to 1938, the date of the beginning of the subsidy program, flour from American wheat had only a small share of the Cuban market. Total diversion payments during the same period have been $1,870,347, or at an average rate of about $1.05 per barrel, equivalent to 22.83 cents per bushel. Evidently we cannot depend on a preferential agreement with Cuba to sell our wheat flour, but must pay an extra bribe. No criticism of the Surplus Marketing Administration's program is implied here, on the contrary, it is evident on the basis of the record that it was the important factor which enabled us to expand our sales of flour from American wheat, which logically leads to the conclusion that we could sell more flour if we junked the trade-agreements program but increased the subsidy payments per barrel of flour.

The other agricultural product to which free traders are fond of pointing as a commodity which should be benefited by the trade-agreements program is lard, and it is, of course, true that Cuba annually purchases small quantities But recent events have fully borne out the contentions of those who have advocated preserving the American market for the American farmer to the full extent of his ability to supply it, by excluding competitive imports of foreign oils and fats. Lard prices are at present at the best level in 4 years, but not because of exports to Cuba. Lard production last year was the heaviest in a number of years, stocks are at or near record levels, exports are at the lowest figure since 1936–37, the last drought year, but prices are good. The only possible explanation is that the exclusion, because of the shipping shortage, of low-priced competitive imported oils has created an additional domestic demand for lard which has pulled prices up to their present satisfactory level. It is evident that the domestic market can absorb all the lard produced at satisfactory prices provided these foreign tropical oils are kept out.

A few other agricultural products are exported to Cuba to some extent, but on the whole their importance is practically infinitesimal compared with the sugar, molasses, tobacco, cattle, and other competitive agricultural imports—and every important import from Cuba is both agricultural and competitive. In the case of every one of our agricultural exports to Cuba, the crop in question is grown on the same land as would be used to grow sugar, and by farmers who ask only the right to be permitted to shift to sugar. Ask Louisiana which is more important to its economy, sugar or rice. Speaking for Nebraska alone, I can say without qualification that Nebraska farmers would gladly give up their minor markets for such products as beans and potatoes if in turn the restrictions on their sugar acreage were abandoned. Agriculture knows that it can expect no benefit from trade agreements negotiated with tropical countries producing the same products as are grown in the United States, and will not sell out its birthright—the American market—in exchange for a relatively slight expansion in the markets for a couple of its minor crops.

One other argument for trade agreements with Latin American countries which has featured prominently in discussions recently relates to the necessity of providing markets for the surpluses of nations which can no longer sell to Europe. There is no warrant for a trade agreement negotiated for such a reason, as I have pointed out. Congress never authorized the Committee for Reciprocity Information, the State Department, or any other administrative agency to give away American markets in order to help foreigners with their problems. But even assuming such a policy should be adopted, there is no need for an agreement with Cuba under present circumstances.

In the first place, it may be pointed out that Latin America is not the only part of the

world troubled with surpluses arising from lost foreign markets. The American farmer has been hit in precisely the same way and to at least as great an extent as has the Cuban colono. The table below summarizes just what the war has done to those important branches of American agriculture which are dependent on foreign markets for outlets for a portion of their production.

United States exports

	Monthly average, fiscal years—		
	1938–39	1939–40	1940–41 [1]
Lard, 1,000 lbs.	19,956	21,400	15,182
Bacon and sides, do	1,105	1,884	407
Hams and shoulders, do	4,894	3,071	702
Cotton, upland, 500-lb. bales, thousands	297	531	105
Leaf tobacco:			
Bright flue-cured, 1,000 lbs.	30,208	21,026	11,115
Dark-fired, Kentucky and Tennessee, 1,000 lbs.	3,970	2,925	1,025
Wheat, grain, 1,000 bu.	7,049	1,970	973
Apples, fresh, do	1,006	268	76
Pears, fresh, 1,000 lbs.	14,248	7,755	2,135
Oranges, 1,000 boxes	632	321	349
Raisins, 1,000 lbs.	12,770	10,564	7,120
Prunes, dried, do	17,836	9,920	3,232

[1] 11 months.

The above list includes practically every important American agricultural product which is dependent on foreign markets to any important extent, as reported regularly by the Office of Foreign Agricultural Relations in the latest monthly supplement to Foreign Crops and Markets. It will be seen at once that for every commodity exports have declined from the levels of the last pre-war year—1938–39—levels which in most cases were far from satisfactory. In many cases exports have declined drastically or been practically wiped out. There is no prospect that exports of these products will materially improve unless the wars come to an end. Cuba and other Latin American countries cannot offer us any significant expansion of markets for any of these products, with a few minor exceptions. Evidently the American farmer has surplus problems of his own without worrying about those of Latin America. No doubt we shall be told that Cuba is more dependent on agriculture than is the United States. This is true, of course, but is of little significance. The average middle-western wheat farmer (who might like to grow some sugar) is just as dependent on wheat as the Cuban sugar grower is on sugar. It is no comfort to the Nebraska wheat producer to learn that some other fellow has gotten a job in a gunpowder factory, and it is still just as difficult for him to see why the Cuban surplus problem should be solved by transferring it to the United States.

Before we allow ourselves to become too sentimental about the sad plight of the great American sugar corporations operating in Cuba it might be as well to evaulate Cuba's present position with respect to foreign markets and attempt to determine the sales prospects for her sugar in the near future. One thing is certain: If Cuba is suffering from a lack of foreign outlets, it is not the fault of the United States. Under the most recent quota allocation of the Sugar Division of the Agricultural Adjustment Administration, Cuba is permitted to ship the tremendous total of 2,374,852 short tons, raw-sugar basis, to this country—far more than in any year since the sugar-control program was first instituted and about 625,000 tons more than her quota of last year.

At an average price of $2 a hundred (which is below the prices prevailing for the past few months), this increase in quota alone will net Cuba about $25,000,000 more than her sales to this market last year. But such a computation fails to take into account the increase in Cuban receipts arising from the substantial advance in prices over those of last year. It is impossible, of course, to predict what prices Cuba will receive for her sugar during the remainder of this year. It will surely be ultra-conservative to say that prices at Habana for quota sugar this year should average at least 25 cents per hundred higher than last year. On the basis of such an assumption, Cuba will receive an additional increase of better than $10,000,000 in receipts on account of price advance, making at least $35,000,000 more from sales of sugar to the United States market alone. Since Cuba's normal sales of sugar to us during the past 2 or 3 years have averaged only about $70,000,000 per year, it is clear that she may expect an increase in total receipts from this source of about 50 percent at the minimum. Thus it may be said that if it was necessary to "do something for Cuba," it has already been done. Why is it necessary to make still further concessions? Why not "do something for America" for a change?

The other major factor in Cuba's foreign-trade position is her sales of sugar on the world market. In recent years this source of income has been relatively minor. Exports of sugar to countries other than the United States, according to the Cuban Stabilization Institute, were 811,000 short tons, English in 1937; 920,000 in 1938; 855,000 in 1939; while in 1940, of course, they dropped to 571,000. It is apparent that the first full year of war resulted in a loss to Cuba of foreign markets outside the United States of less than 300,000 tons. This loss has already been more than made up by the increased quota granted in the United States market, and sales in the American market take place at a higher price than those in world markets.

Secondly, it may be mentioned that Cuban prospects for expanded sales to markets other than the United States are far from unfavorable. It is, of course, extremely difficult to get accurate information on international movements of sugar. The United Kingdom, the chief buyer of world sugar, naturally does not publish statistics on its operations. But there are many indications that Britain, having substantially depleted the stocks accumulated before the war and during its early months, is buying again. In view of the shipping shortage, it is unlikely that Britain will be able to draw to any great extent on her normal suppliers in the Far East and Africa. The Caribbean, as the nearest source of supply, seems slated to become again, as in the last war, the sugar supplier for Britain's fighting forces. And if Canada's requirements and those of other Latin American countries, such as Mexico, absorb all the surplus from the British Caribbean colonies and other minor suppliers in that area, it is not only possible, but probable, that Britain will be depending on Cuba for something like 1,000,000 tons of sugar a year.

During last year and the first 6 months of this year British purchases of Cuban sugar were not particularly heavy. This may be attributed to the large British stocks built up before 1940, to British purchases from distant sources before the shipping shortage became so acute, and, early this year, to the sale of practically the entire Dominican surplus to Britain. In recent weeks, however, the British have again entered the market. Willett & Gray's Weekly Statistical Sugar Trade Journal of August 14 announces total Cuban exports to markets outside the United States, up to August 9, of 196,000 Spanish long tons, an increase of 82,000 over export figures for the first 6 months of the year, or better than 15,000 tons a week. Lamborn reports, according to the Journal of Commerce, Cuban exports to world markets during the week ended August 17 of nearly 40,000 tons. And the following day the same paper reported British purchases for September-October delivery of between sixty and seventy-five thousand tons of Cuban at $1.75 f. o. b. Cuba, with further interest manifested at that price.

But if Cuba should sell anywhere near 1,000,000 tons to world markets this year, it would take up all her carry-over and make it doubtful that she could even fill her United States quota; while if her sales to Britain and other countries are no more than half a million tons, she will still be selling as much as or more than normal, and at a better price. Before the Committee for Reciprocity Information takes steps to "do something for Cuba" it might be well to undertake an investigation to see whether Cuba is not doing something for herself and is not in fact "making a killing" out of this war.

I have not burdened members of the Committee for Reciprocity Information with extensive tables of statistics and do not propose to do so now. The committee is, of course, familiar with the course of sugar prices during the last war, when the average price of raw sugar, c. i. f. New York, advanced from 2.28 during the last month before the war to 20.58 in May 1920, after rationing and other restrictions on consumption had been abandoned. This particular incident has been the subject of much controversy and the cause of much bitterness. Probably the weight of evidence indicates that since Cuba was the dominant supplier of our sugar requirements, Cuba must accept the major share of the blame for the high prices. But be that as it may, one thing is certain: If there had been more sugar available, no such speculative price advance would have been possible. Certainly the prices of 1920 had no relation to cost, but were purely a reflection of temporary shortage. The best way to avoid a recurrence of such an incident, therefore, is to increase supplies of sugar, laying up reserve stocks, if necessary, against such temporary shortages, and to encourage production in dependable sources, which means in the United States. But this cannot be done by cutting the duty on Cuban sugar.

The present duty is no bar to importation of all the sugar that Cuba has to spare. The only limitations of any importance on imports of Cuban sugar are the quota, which can be raised if necessary, and the shipping shortage, which may operate to make even Cuban supplies uncertain. A reduction of the duty, on the other hand, will be taken as clear evidence by the domestic industry that their Government is not interested in the welfare of their industry, that they cannot expect to have their interests consulted, that even if they do their part in meeting the prospective shortage of sugar by expanding production their increased investment will not be protected, and that they may expect to write off as total loss, after the end of the present emergency, any investment in expansion of production equipment. Under such conditions, what sane man will expand the productive capacity of his factory or his sugar mill or go to the expense of preparing new land or buying new equipment for increased sugar cultivation? Since domestic sugar production is our only dependable source of sugar, encouragement of the domestic industry to expand, rather than discouragement, would seem to be called for. Just in the last few months we have had further evidence that foreign sources of supply depending on marine transportation are not reliable. Let us do everything in our power to avoid a recurrence of the shortage prices of 1920.

I have not gone into the question of specific commodities or specific rates of duty to any great extent. I have no doubt that representatives of the various industries involved will present their own cases ably. Personally, I am opposed to reductions on all the major items listed, and I should like to

mention some of them briefly. I have discussed sugar at some length

Molasses is another item which should have a higher duty, not a lower one.

The present duty is nominal. Cuba's exports of molasses to this market have expanded phenomenally during the past 2 years in response to the defense demand for industrial alcohol. The volume of demand has been so great that recently Secretary Wickard offered 20,000,000 bushels of corn for use in the manufacture of alcohol. In the statement making this announcement, it is pointed out that "using corn in the manufacture of industrial alcohol will further the national-defense effort by making available more alcohol and by freeing tanker space needed for the shipment of strategic materials, and will also aid the agricultural situation by removing surplus corn and making increased corn storage space available for the 1941 crop. Feed grain supplies are more than sufficient to meet the requirements for the increases in livestock, dairy, and poultry production sought under the food-for-defense program." If the present duty on molasses is no bar to greatly increased imports, if part of the corn surplus can be used for the same purpose while still leaving plenty of feed for our livestock industry, and if present imports of molasses are hindering the defense program because of their demands on the limited supply of tanker space, why, then, should the duty be reduced?

Another item listed is beef and veal—fresh, chilled, or frozen. I would not be true to Nebraska or American agriculture if I did not raise my voice in protest against any reduction in the duty on beef. During the past 2 years beef has been coming in from Cuba in quantity, and, in fact, during the first 5 months of this year over 13,000,000 pounds entered at the present rate of duty. Prior to 1940 Cuba was on an import basis, but as soon as their livestock industry developed even a slight surplus they apparently had no trouble in shipping it in here over the present rate of duty. In view of this fact, how can the present rate of duty be burdensome? As a matter of fact, recent developments in Cuba would seem to cast doubt on the existence of a Cuban surplus of beef. A news bulletin from Habana of barely 2 weeks ago reads as follows:

"CUBA BANS MEAT EXPORTS IN SHORTAGE

"HABANA.—A threatened meat shortage in Habana brought a presidential ban today on exports of livestock or dressed meat from Cuba. Cuban cattlemen have been reluctant to sell beef at the Government-fixed price of 3.20 cents a pound, saying they had a better market abroad. The result was a meat shortage, which began here last week."

I understand that since that time the ban on exports of Cuban beef has been taken off, but it is evident that exports of beef to this market can only be made at the expense of the Cuban consumer. While we are speaking of "doing something for Cuba," we might think of that. If American consumers need cheaper beef (which is doubtful), surely Cuban consumers need it worse and are less able to pay higher prices for it. At least, it appears that Cuba is not entirely sure whether she wants to sell us her beef, and it would be only the part of prudence for us to insist that she make up her mind before we give her the market to which American cattlemen are entitled.

I cannot close without pointing out the position of American agriculture in the present emergency and the effects of the trade-agreements program upon the agricultural situation. For many years it has been recognized by the Congress and the people that a pronounced disparity exists between the rewards received by agriculture and those paid to labor and industry. This recognition has been embodied in many separate acts of legislation, even including the act under which the trade-agreements program operates, as evidenced by the language of the first paragraph "as a means of assisting * * * in establishing and maintaining a better relationship among various branches of American agriculture, industry, mining, and commerce." That the various remedial measures undertaken to assist agriculture and overcome this disparity have not been markedly successful is shown by the figures for national income for last year, when the 22.9 percent of the population on farms received only 7.2 percent of the national income, according to the Bureau of Agricultural Economics.

At the present time we are engaged in a great national effort to repair our defenses and assist our friends abroad. This policy is calling for and will call for greater and greater sacrifices, higher and higher taxes. Agriculture will bear its fair share of these burdens without complaint. On the other hand, the economic boom resulting from our defense expenditures has enabled some groups—those receiving defense jobs or contracts and those located in defense-boom areas—to compensate for their added burdens with additional income. Not so with agriculture. Expenditures on defense mean an industrial boom, not an agricultural boom. The defense program, therefore, is likely to increase the disparity between agriculture and industry, rather than to lessen it. Even this agriculture can bear without protest, on the assumption and the hope that it will be but temporary.

But now a drive seems to be under way to cut import duties on all Latin American products on the plea of hemispheric solidarity, and since practically all the other nations of this hemisphere are predominantly agricultural, this simply means destroying agriculture's protection for the supposed benefit of industry and placing agriculture permanently on an inferior basis, with no hope of relief. If we have been unable to control our own surpluses and maintain decent prices for just our own products, how can we possibly raise world prices to the levels necessary to give American farmers a standard of living commensurate with that enjoyed by other groups of the economy? Agriculture cannot sit idly by while the basis of its economic position is swept away through administrative decisions rushed through under the excuse of an emergency. Farmers cannot be persuaded to support a national-defense program if it carries with it not only the added burdens naturally associated with such a program and shared by all groups, not only the temporary disparities against agriculture and in favor of industry resulting from the placement of defense contracts, but a program of bartering away our only remaining market—the American market—with the calculated intent of placing agriculture permanently in a colonial status. Agriculture cannot support the defense program wholeheartedly if that is the certain outcome, and without the wholehearted support of agriculture this program will not succeed.

One other factor I should like to call to this committee's attention in connection with agriculture's role in the defense emergency. American agriculture can produce bountifully all the foods and raw materials adapted to a temperate-zone climate and likely to be required by the Nation during this critical period. There is plenty of idle land, improved and ready for the plow, plenty of feed for livestock, enough equipment, and the farmers' own labor to be drawn upon. All these resources will be willingly devoted to production of the Nation's needs, provided that a reasonable time is given for readjustment to changed demand and a fair price is assured. But farmers cannot make the maximum contribution to defense needs if there is constantly hanging over them the destruction of their markets and the repeated evidence that their Government is not interested in their long-time welfare.

In conclusion I can summarize my position as follows:

1. No authority is given in the Trade Agreements Act for negotiation of trade treaties for any purpose other than the expansion of exports. There is no prospect whatever that exports to Cuba be expanded by this agreement, and we do not desire, nor can we fill, broader export markets for the products we customarily ship to Cuba at the present time.

2. Cuban agriculture does not need any more help in her problems than has already been given by the United States. American agriculture is far more troubled with surpluses than is Cuba.

3. American agriculture is the only dependable source of raw materials and goods for American needs. The shipping shortage will become more, not less, acute and it is therefore essential that American agriculture be encouraged to produce more, not less.

4. This treaty appears to be a part of a calculated program to destroy agriculture's protection against the dumping of the surpluses of foreign nations and to place agriculture in a permanently inferior status to that of industry.

Address by Senator Capper to the People of Norway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, August 28, 1941

ADDRESS BROADCAST FROM STATION WRUL, BOSTON

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the RECORD the text of a talk to Norway by the senior Senator from Kansas [Mr. CAPPER], on August 10, 1941, which was sent by short-wave broadcast from station WRUL, Boston, on a regular program of the Norwegian Broadcasting Service. I believe this talk expresses the sentiments of most of the people of our Nation toward the courageous citizens of Norway.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My listeners in Norway, may I, first of all, tell you how glad I am to have this opportunity to speak directly to you, the brave people of Norway, who are setting before the whole world an example of steadfast and whole-hearted national unity.

As Senator from the State of Kansas—a State which I have represented in Washington for the past 22 years—I should like, first of all, to express my respect and admiration for the men and women who came from Norway to settle in Kansas. You have heard such phrases before, as I understand that other American speakers on these short-wave programs have also begun by praising the Norwegian elements in our population, but even so, I insist that this is worth repeating. We have a considerable number of Norwegians of the first, second, and third generations in my State, and I want to go on record

as saying emphatically that they are among the very best of our citizens. Progressive, industrious, and law abiding, these Norwegian-Americans have made a contribution to good citizenship which all of us admire. Indeed, they have set up a standard of citizenship which many of us might well strive to equal.

Knowing these relatives and compatriots of yours in my own home State as I do, I am not surprised by the developments in Norway during these dark 15 months since the mechanized hordes of nazi-ism broke into your peaceful and civilized land. I am not surprised that you chose to fight for your homes and your dearly won economic progress and spiritual freedom. For that is what your descendants in Kansas would have done; and that is what every true American would do today—fight to defend his home and his democratic way of life against any aggressor.

There is, however, one thing that has astonished me as I have read the news from your country during these past months; and this is the nation-wide extent, the inexhaustible variety, and the bold nature of your continued and your ever-increasing resistance to the Nazi invaders. Perhaps we Americans are too prone to think that once a military victory has been won, then everything is over for the nation thus defeated. If so, the example of Norway is a most valuable lesson to us. For although you, a nonmilitary and almost entirely unprepared nation, were beaten on the field of battle by a juggernaut a thousand times as strong, you were beaten only after 2 months of brave resistance which cost the enemy dearly. But more than this—and here is the most amazing part of it to me—you, the unarmed farmers and fishermen, children and old folks, the workmen and teachers, the clergymen and doctors—you Norwegians have since defeated with spiritual weapons that German army of occupation which I understand is half a million strong.

You can be sure of this, that when you perform those deeds of resistance, those exploits on behalf of freedom of body and soul, that when you defiantly cling to the civilization which is rightfully yours, we in America hear about it and we thrill with admiration. Sometimes we learn of your actions only many days or weeks later. Thus when your bishops threw the whole weight of the Church of Norway against Nazi barbarism last winter, it required some time before we learned the significance of their deed. But now, you may be sure, in religious and lay circles alike in the United States everyone realizes that in Norway's pastors and bishops there is the same stuff out of which martyrs were made in earlier times.

More recently something happened in Norway which became known throughout practically the whole United States a few days later, something which thrilled every true American heart. On the Fourth of July—America's sacred Independence Day—a number of Norwegian patriots in Oslo gathered around the statute of Abraham Lincoln and on it reverently laid wreaths in honor of the Great Emancipator. Then came the Nazi storm troopers—those symbols of the evil, the destruction, and the misery which Hitler has brought upon the world—and attempted to remove the flowers. But that unarmed crowd of free Norwegians rushed to the defense of Lincoln and battled the storm troopers with such vigor and success that these detestable creatures of nazidom took to their heels.

This deed echoed from one coast to the other in America, and the effect it had on us can be understood from this phrase, which I quote from an editorial in the Birmingham (Ala.) Age-Herald of July 16: "This incident places some kind of a moral responsibility upon the American people. They cannot, in all honor, fail the hopes of all the Nazi-subjugated nations. They cannot let these people down."

Let me say right here and now that we shall not let these people down. We Americans are not going to abandon the brave people of Norway, of Denmark, of Holland, and the other occupied countries. There may be differences of opinion here in the United States; there may be doubt as to ways and means; but of one thing we are all certain: The people of the small, peace-loving democracies deserve our help, and they shall have it at the earliest possible opportunity.

I myself have from the start been an advocate of sending food to those populations in Europe which are threatened with undernourishment and starvation. I realize, of course, the difficulties involved, and I certainly do not want to see any aid go to your enemies; but sooner or later it will be possible to get food to the right people and places in Europe, and then America will do her part in feeding all who are hungry.

In this connection I want to tell you people of Norway how heartily I agree with what our Secretary of Agriculture, Mr. Claude Wickard, said to you exactly 1 week ago over this same radio station: "We are mobilizing food as well as guns," declared the Secretary on that occasion. "On the farms of America we are increasing production of essential foods without stint. Food is strength, and our objective is food for all defenders of freedom."

The news from Norway these past several days has not been pleasant. It appears that everywhere the Nazis, whether because fearful of external attack or nervous over internal resistance, have been taking measures of repression and reprisal. Martial law has been threatened for the whole of your country, and we read with pain and with anger the news in our daily papers telling about the forced evacuation of whole populations from their villages, the driving of farmers from lands their families have tilled for generations, and the seizing of homes that you yourselves have built and lived in happily until just over 1 year ago.

For the moment the hordes of Hitler seem to have the upper hand in Norway and in Europe; and as long as this is true, life cannot be genuine, civilized life, either for you or for the rest of Europe. But I, for one, am convinced that through your own brave and steadfast resistance on the home front and through the help which the outside world, and especially America, is more and more bringing to you—I am convinced that Norway once more will be free and independent, and will again pursue her role as one of the leading civilized nations in this world.

I can think of no more appropriate ending for these words of mine than to quote again two phrases which you in Norway heard last week from the United States Secretary of Agriculture. I repeat them because they express, not only my sentiments but those of the whole American people:

"We are with you in spirit as you carry on in the great tradition of a free people. Your battle is an inspiration to us and to free people all over the world. Long live Norway."

Inland Waterways Improved by France for Military Preparedness

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. MANSFIELD. Mr. Speaker, at my request the Chief of Engineers has furnished me with information on the waterway improvements by France for military preparedness.

The inland waterways of France extend over a total length of 8,000 miles, of which 3,000 miles are canals. The canals link the rivers together to provide a waterway system that serves the greater part of the country. Ten thousand ships, of which 1,500 are motor barges, move between forty-five and fifty million metric tons of freight annually over these waterways.

As in other European countries where the needs of transportation for military purposes are matters of prime importance, careful consideration has been given to the strategic values as well as to the peacetime economy of waterborne commerce. Employed as tactical obstacles to the enemy as well as for the movement of supplies and troops to the front, the use of the inland waterways of France has been conspicuous in her wars. The Minister of National Defense and War must be consulted in connection with all proposed improvements of waterways. After the close of the Franco-Prussian War, national leaders became more than ever convinced of the indispensability of inland waterways to the welfare of the French Nation and the principles set forth in 1878 by De Freycinct, one of France's most distinguished statesmen, have been followed to this day.

The French canal system is based on the Seine, Loire, Garonne, and Rhone Rivers with connections to the upper reaches of the Rhine, Sambre, Meuse, and smaller streams. Connections for foreign commerce have also been made. For example, the Seine and its tributaries are connected with Germany and Holland by way of the Rhine and with Switzerland by way of the Saone.

Of the larger rivers, the most important commercially is the Seine, which rises in the plateau of Langres in east-central France and flows northwesterly across the country to enter the English Channel at Havre. The Loire has its source in east central France also, and flows westerly across the country to enter the Bay of Biscay. The Garonne flows in a circuitous route from the Pyrenees Mountains on the Spanish border to the Bay of Biscay. The Rhone rises in east central France and flows due south to the Gulf of Lion in the Mediterranean Sea. On the larger rivers, navigation by sea-going vessels is possible; for example, on the Seine extending up to Rouen, on the Loire to Nantes, and on the Garonne to Bordeaux. Above these limits these rivers are navigable by smaller vessels and barges for long distances and the network of rivers and canals is such that large traffic may easily be shifted from one to another of the major river basins and to and from many of the smaller streams.

The military and economic advantage of having the Rhone waterway into the Mediterranean connected with the three major rivers flowing into the Atlantic on the west coast of France is obvious. The route around the coasts of Portugal and Spain is several times longer and of course less safe from a military standpoint as well as for small boats and

barges. Some time after the fall of France last summer the Germans moved light draft naval craft from the channel ports to the Mediterranean by way of this short protected route. Of course these connected waterways are not large enough for battleships, a deficiency that in December 1938 the French Government was planning to improve by constructing a $500,000,000 canal to extend from the Atlantic port of Bordeaux to the Mediterranean port of La Nouvelle via the Garonne and Aude Rivers. Plans for such a canal that would accommodate the largest battleships were given impetus by Italy's growing territorial aspirations but the project was conceived too late. As much as we dislike to think of France making war against Great Britain, there appears to be a possibility of this happening. If this does happen, France will regret not having constructed a canal through which the French Fleet could be moved back and forth from the Mediterranean to the Atlantic, thus bypassing the British Navy and Gibraltar in much the same way that the German Navy uses the Kiel Canal between the Baltic and North Seas.

Paris, the nerve center of France, is the focal point of a large portion of the domestic and foreign commerce of the country. In addition to being connected by waterways with domestic interior points such as Nancy on the Moselle, Strasbourg on the Rhine, Besançon on a tributary of the Saône, and Nevers on the Loire, the capital city is connectd by navigable channels with the industrial areas of Belgium, Germany, and Switzerland and with the foreign trade of the Mediterranean and Atlantic ports. Due to France's well planned inland waterway system Paris, based on the criterion of total tonnage handled in normal times, ranks as the most important port of the country. Rouen, Marseille, and Strasbourg follow in the order named.

In the old countries waterway developments are much more extensive than in this country. Developments of this character throughout the civilized world generally are dependent upon popular demand for such transportation and the ability of the public affected to bear the cost of improvements. Both of these factors are affected by density of population. Density produces demand and density produces the labor to effect improvements, or, what is the same thing, taxes from great numbers with which to pay for improvements. In Europe densities of population are from 4 to 16 times those in the United States. As time goes on, increased populations in this country will surely demand more and more waterway transportation facilities. Possibly the distance and heights of divides between natural waterways will delay improvements between river basins, but, sooner or later, we will improve our rivers upstream and connect their basins, just as the Russians, the Germans, and the French have done. We cannot predict the exact time, but it requires little imagination to visualize greatly increased improvement of the Red, the Arkansas, the Missouri, and other such streams in the United States, and many, if not all, of our contiguous river basins will some day be connected with each other, just as is the case in Europe. Let us have the vision and foresight to do the things now that need to be done now and to be sure that we do not fall behind in the planning and prosecution of waterway improvements.

Talk of Morale

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

EDITORIAL FROM THE BOSTON POST

Mr. McCORMACK. Mr. Speaker, under leave granted to me to extend my remarks, I include herein a powerful, constructive, timely, and correct editorial on the question of the morale of our civilian soldiers, which editorial appeared in the Boston Post on August 26, 1941:

[From the Boston Post of August 26, 1941]

TALK OF "MORALE"

This business of morale has become the biggest topic of conversation in our Army. There is no question of it in the Navy. There is no question of it in the Marine Corps. So what is the matter with the Army?

A veteran Post reporter said the other day, after visiting the Yankee Division, that the trouble with morale in the Army is that there is too much talk of morale.

He pointed out that the young men making up the Army have never been so fit in their lives. They are hardening up and each one of them is brimming with health and energy. Soft, fat boys are now turning out lean and muscular. Lean youngsters are putting on flesh.

And in common with finely trained prize fighters and football players, they are alert and quick and on the edge of action at all times. Their nerves are functioning like high-tension wires. Their eyes flash with energy. Thus much of their grousing and complaining is the normal reaction of healthy minds to prime physical condition.

Trainers of competitive athletes tell us that this near irascibility of temper is caused by a man's fitness. When a championship football team takes the field, its members are in this condition. When a great boxer steps into the ring for the contest, his temper is generally on edge.

At the begining of this rearming process, the Army decided that it would run its own recreation projects. In the last war there was too much criticism by outsiders.

But any attempt to keep the uplifters and the social-service people out of the Army is useless. They want to fuss over the boys and they will have their way because they can pull some powerful political strings, and these strings are the reins of power in this country.

All of a sudden everyone started to talk about morale, as if that was the chief function of the Army, rather than fighting. Morale became the moot question, the subject of conversation, idle and otherwise, and all sorts of people were running around bolstering up morale. Or so they thought.

Amusement buildings, clubs, and recreation areas are planned for the whole ccuntry. Patriotic people are doing their utmost to help their construction and outfitting.

The net result has been that the average soldier has become morale-conscious and he is beginning to worry more about his morale than the psychologists and the experts, who are doing their utmost to please him.

Yet all this time the Navy and Marine Corps are going quietly about their business, and, in such matters as Atlantic patrol and occupation of Iceland, are engaged in fairly dangerous work. Nobody worries about the morale of these two services. They are getting along quite nicely. At least, they have had no delegations in the congressional galleries to see how defense legislation is going on.

There are a lot of things wrong with the Army, and there will be until someone shows us how we can defend a nation without one. There are a lot of college striplings serving as officers in this Army who should be back in the fraternity houses.

There are a lot of old-time colonels and higher officers who never amounted to a row of beans in civilian life and now cannot get the respect of their men. But these are matters which can be ironed out. The best thing to forget is morale. It is an overworked word.

President's Veto of Bill Relating to Wheat-Marketing Quotas To Provide for Withholding From Normal Channels of Trade and Commerce Government-Owned Cotton and Wheat, and for Other Purposes

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. COCHRAN. Mr. Speaker, it is evident from the number of telephone, telegraph, and mail requests for information that Members of the House are very much interested in securing information regarding the situation that confronts the bill vetoed by the President relating to wheat-marketing quotas under the Agricultural Adjustment Act of 1938, as amended, to provide for withholding from the normal channels of trade and commerce Government-owned cotton and wheat of the 1940 and previous crops, and to provide 85 percent of parity with respect to peanuts of the 1941 crop, and for other purposes.

When this veto message was received Monday and read at the desk, by unanimous consent, action thereon was deferred until the present unanimous-consent agreement relative to business expires, which is September 15.

In other words, the veto message, having been read, will remain on the Speaker's desk until at least September 15, when it will be in order either for the chairman of the committee to ask unanimous consent to refer the message to the Committee on Agriculture, where the bill originated, or to demand the regular order, which would, as provided by the Constitution, require a yea-and-nay vote on the question as to whether or not the

bill should become a law, the veto of the President notwithstanding.

What action will be taken on September 15, of course, no one can say definitely, but one thing is certain, and that is Members can rest assured until September 15, at least, the veto message will remain on the Speaker's desk.

I make this statement in answer to the many inquiries that have been received for information.

Effect of National Emergency Upon Utility Rate Regulation

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

ADDRESS BY HON. BASIL MANLY

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by Commissioner Basil Manly, of the Federal Power Commission, before the National Association of Railroad and Utilities Commissioners, August 26, 1941, at St. Paul, Minn.:

We have been asked to discuss the effect of the national emergency upon utility-rate regulation with particular reference to two problems: First, amortization of plant expansions resulting from the national emergency; and, second, the relation of emergency increases in revenues due to emergency demands to rate adjustments. These are both important subjects, but it is important to emphasize that they are by no means the only problems in connection with utility regulation which will be created or intensified by the emergency.

It is obvious that there will be many other problems such, for example, as the increases in fuel costs, wages, and taxes, which may reasonably be anticipated; the shift in volume of consumption as between the different classes of customers, due either to official curtailment to meet defense needs or to the play of extraordinary economic forces; the possible pooling of utility operations to secure higher efficiency; and a host of other similar problems growing directly or indirectly out of the emergency.

It is clear that some of these factors may tend to counterbalance each other and to offset the effects which may arise in connection with the two particular topics now under discussion. The growth of revenues resulting from extraordinary defense demands and increased purchasing power of consumers may well be accompanied by such increases in the cost of labor, money, and materials as to leave net income substantially unchanged. The shift of consumption as between the different classes of customers may either increase or decrease net revenues.

It is clear, therefore, that anything that may be said regarding the two topics now under discussion must be understood to be contingent upon the effect which cannot now be anticipated of other factors.

One thing, however, is certain. There should be no suspension of effective regulation of utilities during the emergency. In the public interest there can be no moratorium on the responsibilities of either the utilities or the agencies created to regulate their activities. The rapid changes in economic and financial conditions resulting from the emergency will unquestionably call for greater vigilance and more effective regulation than during what we are pleased to call normal periods, but, by the same token regulatory bodies will be successful in meeting emergency conditions only by speeding up the processes by which they determine the adjustments that should be made in the public interest. The leisurely procedure of reproduction-cost valuation will be even less effective during the emergency than it has been in the past. There will be greater need for accurate up-to-date information upon which sound and prompt decisions can be made.

AMORTIZATION OF EMERGENCY FACILITIES

In the light of this preliminary discussion it would seem to be clear that investments in facilities which have a useful life limited to the emergency period should be amortized during that period. But it is equally clear that most of the extensions of plant facilities during the emergency period will not fall in this category. With rare exceptions new generating plants, substations, and transmission lines will have a useful life extending for many years beyond the emergency period. We may anticipate that such facilities will be used to capacity or even beyond that point during the emergency and that when the emergency ends there may well be a considerable period during which there may be a decrease in the intensity of their use. The public interest it would seem would not justify any attempt to amortize completely during the emergency the investment in such facilities which will have a continuing use after the emergency is ended.

The problem is essentially one of depreciation. We recognize today that all investments in plant facilities must be charged off during their respective service lives. If the useful life of a facility is limited to the emergency, the full cost should, of course, be charged off during that period. If the useful life extends beyond the emergency, an estimate of the full service life must necessarily be made. Where it is anticipated that capacity operation will be followed by a period of slackened operation, there may well be justification for charging a higher rate of depreciation during the time of greatest production and lowering the rate when the slack period comes.

The answer to this problem may perhaps lie in giving some recognition to the so-called production method of computing depreciation expense, which relates the rate of depreciation to the intensity of operations of the facilities. Some of the utilities, for example, are now overloading their generating facilities, and all of them may have occasion to do so over considerable periods during the continuance of the emergency. We all know that such overloads increase depreciation, and consequently it would be sound and reasonable to charge higher rates of depreciation during the emergency and lower the rates during any slack period that may follow the emergency.

The setting aside of larger amounts for depreciation during the period when facilitise are loaded to capacity would also have a very desirable effect upon the financial condition of the utilities. While the majority of them now appear to be charging reasonably adequate depreciation as a result of the activities of the State and Federal regulatory commissions, it is no secret that many of them did not make adequate charges in the past, and as a result now have inadequate depreciation reserves. An increase in such reserves during the period of capacity operations will, of course, increase the financial stability of such companies. It is difficult to imagine a better use of increased profits resulting from capacity operations than to increase inadequate depreciation reserves. It may well be an anchor to windward against whatever financial and industrial storms may hereafter arise.

RELATION OF EMERGENCY REVENUE INCREASES TO RATE ADJUSTMENTS

Turning to the problem of revenue increases resulting from capacity operations of utilities in connection with meeting the extraordinary demands for power during the emergency, it would appear that the principal question here involved is—How long may such increases be expected to continue? Obviously rate reductions would not be justified where a utility may be receiving large revenues during a brief, temporary period with the expectation of suffering a serious decline when the emergency demand is ended. Just as obviously basic rates should not be increased to take care of a merely temporary increase in expenses.

We are now entering a period in which no individual or corporation can reasonably or properly expect to maintain unabated the economic status to which it has become accustomed. Everybody will sooner or later have to make sacrifices for the common good. Adjustments from time to time will necessarily have to be made to meet changing conditions and to assure a continuation of maximum service. But this does not mean, in my opinion, that the Nation should underwrite perpetual prosperity for any industry or economic group. We are all in the same boat and should sink or swim together.

THE NIAGARA FALLS CASE

The attitude of the Federal Power Commission toward the problems here under discussion can best be illustrated by a concrete case arising in connection with the national defense. Late this spring it became clear that a large amount of additional electric energy would be necessary to supply power to electrochemical, electrometallurgical, and other essential defense industries in the Buffalo-Niagara Falls area of New York State. It was also evident that such power could best be secured by the additional diversion of water from Niagara Falls through the existing facilities of the Niagara Falls Power Co., which are now operated under a license of the Federal Power Commission. The Federal Power Commission therefore recommended, with the concurrence of the National Advisory Defense Committee, that the Department of State negotiate an agreement with Canada permitting the additional diversion of 5,000 cubic feet per second during the emergency from the Niagara River. This was effected by an exchange of notes approved by the Senate on June 12, 1941. Immediately thereafter temporary authorization to use this water was granted to the Niagara Falls Power Co. conditioned upon the acceptance by the company of a license containing the necessary provisions to protect the public interest and prevent the enjoyment by the company of excess profits from the emergency diversion. The latter condition was necessary because it was possible for the company to utilize this water with little additional expenses through existing facilities which were not operating to capacity. The sale of the power thus generated under current rates would have produced additional net profits in excess of $1,000,000 a year.

The company signified its acceptance of these conditions and, as a result, it is agreed that, after deducting its out-of-pocket expenses, including New York State fees and taxes incident to the diversion, and providing for the amortization during the emergency period of the relatively small capital expenditures necessary to utilize the diversion, with a 6-percent return on the net amount of such capital expenditures, the balance of the revenues shall be applied to reducing the net investment in the Niagara Falls project. This net investment constitutes the rate base under the terms of the Federal Power Act. This

reduction in the net investment will also be effective if the United States should recapture the project for public use at the end of the license period.

In this case the Commission would appear to have established, with the concurrence of the company, two essential principles: First, that there should be no excess profits in meeting the requirements of national defense; and second, that the investment in facilities useful only during the emergency should be amortized during that period.

It is important, I believe, to emphasize the fact that this agreement was reached with the concurrence of the utility involved in the transaction. The executives of American utilities do not, in my opinion, desire or expect to earn excess profits from their activities in meeting the enormous demands for power arising out of the requirements of national defense. With rare exceptions they have cooperated wholeheartedly with the Government in meeting those demands. And, in those cases where efforts may be made to convert the Nation's power requirements into additional dollars of excess profits, the regulatory processes of the State and Federal commissions should be, and will be, exerted effectively to restrain them.

President Roosevelt Walks to Peace

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

ARTICLE BY WILLIAM ALLEN WHITE

Mr. COCHRAN. Mr. Speaker, coming as it does from one who admits that he has strenuously opposed President Roosevelt in three campaigns and publicly stated in the last election that he felt a third term would be a public calamity, it seems to me that an article written by William Allen White, of Emporia, Kans., is of more than ordinary interest.

Under permission granted me I include that article as part of my remarks:

F. D. WALKS STEADFAST WAY TO PEACE WITH SEA PARLEY THAT RIVALS MAGNA CARTA

(By William Allen White)

EMPORIA, KANS., August 19.—That was a historic conference, probably one of the momentous gatherings of the thousand years since the Magna Carta between the Government of Great Britain and the head of the administration of the United States.

It is curious how events in the last thousand years have gradually pointed to the evolution of freedom in western Europe, in the South American countries, and in the English-speaking world. Consider the Magna Carta, the Cromwellian rebellion, the Declaration of Independence, the fall of the Bastille in Paris, Napoleon's Waterloo, the revolts of South Americans under Simon Bolivar, the Gettysburg speech, the League of Nations, and the conference of the powers on the sea the other day.

A ZIG-ZAG MARCH

Common men are vastly freer than the barons were who challenged King John. It has not been a straight line, this march of freedom. It has zigged and zagged and curved. It has bent up and away from and back to freedom, but always the line of liberty has moved on.

The twentieth century is drawing to an end. The new century is about to open the third thousand years since Golgotha. Man in this epoch has climbed a long upward way. But in every struggle in this era man has been trying to free himself from toil and the fear of war. But he has gained much. He has stored up knowledge with the invention of printing. He has harnessed steam, begun the use of electricity, invented the percussion engine. With each of these expressions of widening knowledge man has broadened his liberty.

BREAKING DOWN BARRIERS

The allies of liberty are fighting this great war, this war of machines to free men from machines by breaking down high barriers which slow down machines and threaten men with idleness and starvation. To break down tariff walls will mark the next step in human evolution.

Today the conference in the Atlantic is in the stage of "what we shall do if we can do it when we are able to do it." It is written in the potential of the future. History is engraved finally only in the past indicative. But this great conference of the English-speaking powers promises freedom to lovers of freedom everywhere. It heralds the guaranty of nations to live as they will, under their own form of government, and giving all—victors and vanquished alike—access to the world's raw materials.

This is a momentous occasion. This is proclamation of a new era in the development of civilization in the twentieth century and in a new millennium of the third thousand years of our epoch. A place in human progress will be marked somewhat by this conference of the powers.

Remember it and tell your children that you lived in this day and how you heard the news.

POLICY HAS DEVELOPED

Gradually the foreign policy of the United States has developed. As the war went from phase to phase it has become evident that the President is leading his country along the road to peace—the road to sure peace that follows international justice. A good neighbor cannot live safely and justly, even armed to the teeth, in a mean neighborhood. A decent nation cannot thrive even behind ships and guns and planes in a world of aggressors. Only as human relations are fair and equitable can decent men prosper happily. Only as international relations are founded upon international justice can democracy survive anywhere in the world. Justice itself is set up only after discussion and compromise—never by arbitrary force, under proclamation or by ukase.

Step by step for 4 years, beginning with his demand that the aggressors be quarantined, back in 1937, President Roosevelt has hewn his pathway to that conference in the Atlantic. In the light of that conference, his policies are clearly revealed.

Look at the pathway: The repeal of the Embargo Act, the shipment of arms to Britain after Dunkirk, the swap of destroyers for island bases to protect our continent and to enforce the Monroe Doctrine, the lease-lend bill, the defense program, the occupation of Newfoundland, the establishment of naval bases in Iceland—all these, taken a step at a time, mark the straight course to permanent peace.

The President's peace aims were announced Thursday from the conference in the Atlantic. Any deviation in the last 2 years of war from the course he has kept would have led us quickly into war, for any other policy than this would have let Great Britain go down in defeat. It would have left us facing the totalitarian tyrants alone.

STEADFAST WAY TO PEACE

President Roosevelt has remained silent with simple courage while he has walked his steadfast way to peace. His enemies, the isolationists, have abused him by clamoring with incessant indecency he was leading America to war. He has let events speak for themselves. Now his deeds, ringing down the corridor of the years, are clarion notes. Now the country knows that the President has been walking the only way to peace which America can follow. Ours is the way to peace through justice, offering liberty as the basis of peace, holding up freedom to all rulers and to all people as the way of life in a modern world.

These lines are written by one who has opposed President Roosevelt in three campaigns and felt his election for a third term would be a public calamity. Yet today we ask all American citizens to look back over the course he has charted in the last 4 years; aren't you proud of your President? Why should partisanship cloud the glory of this day?

The tyrants were afraid to let their people read the eight peace points which President Roosevelt and Prime Minister Churchill offered to the world as the war aims of the democracies. If the tyrants were sure of their ground, they would be sure of their people. The tyrants would be sure that their people would reject these aims or, if not reject them, doubt the sincerity of those who offered the new peace.

But fear is the tyrant's poison. He drinks it to his death. Some way, despite the censorship, despite all the barriers erected around continental Europe, the people there will learn the truth and the truth will make them free. When any man, any nation, any tyrant, fears the truth, he is doomed. The clinching proof that the tyrants are scared is found today in the boasting, taunting, arrogant reply of the Hitlerites to democracy's peace aims. Getting tough is a sign of rough going.

Social-Security Taxes Should Be Reduced Instead of Increased

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. CELLER. Mr. Speaker, after careful perusal of Secretary Morgenthau's recent statement that the Treasury was studying the question of higher social-security taxes and a "dismissal" wage, it is my opinion that the social-security taxes should be reduced instead of increased.

Treasury figures show that at the end of the fiscal year ended June 30, 1941, the reserves in both the old-age-benefits fund and the unemployment-insurance fund are more than ample to take care of any broadening of the benefits under the act.

The Ways and Means Committee in May 1939 voted unanimously to defer for 3 years the scheduled increases in social-security taxes for old-age pensions which would go into effect on January

1, 1940. The postponement of these automatic increases for 3 years placed in the pockets of employers and workers of the United States approximately $825,000,000 more to spend, which otherwise would have been taken from them in taxes. In spite of this postponement of increase in the social-security taxes the reserves have steadily piled up each year until now there is approximately $5,000,000,000 in both funds.

Furthermore the unemployed compensation program of the social security act calls for immediate revision. A 5-year test period of operation which ended June 30, 1941, has proved that the objective of this law is admirable but that its present basis of taxation and benefit payments is unfair to the employers of the Nation, to the workers themselves, and to the general public.

The law should be changed at once in the light of experience obtained over the past 5 years.

The basic 3 percent pay-roll tax on employers is far too high. Even with local reductions allowed by States, employers have been taxed twice as heavily as necessary.

Benefit payments to workers are too low and the period over which they are paid is, in many cases, too short.

As a consequence, we have piled up a surplus in the Treasury which amounted to more than $2,283,000,000 on June 30. This surplus is known as the unemployment trust fund. It represents nearly 60 percent of all the pay-roll tax collected under the unemployment provisions of the social security act and is more than ample to meet any conceivable demands upon it in the future.

Congress need make no apology for setting the tax rate high and the benefit payments low in the first place. When this law was passed, Congress traveled an unblazed trail. The financial safety of the unemployment compensation program was one of the first considerations.

It is better, of course, to be safe than sorry. The test period of five years has shown that the program is financially safe for many years to come. It has proved that the tax rate was set too high in the first place. It has proved that much higher benefits could be paid unemployed workers. Having this proof, Congress should act without delay to correct both of these inequities.

The present pay-roll tax should be cut one-third. If that were done, an unnecessary tax burden on employers amounting to about $300,000,000 a year—nearly $1,000,000 for every working day—would be lifted.

At the same time, benefit payments to unemployed workers under the law could be increased substantially. This could be done by making higher weekly payments or by extending the time over which payments are made, or by both. Treasury figures indicate benefit payments could be increased one-third, making due allowance, of course, for liberalized payments already approved in some States, without any risk whatever of dipping into the huge Treasury trust fund. This could be done at the same time the tax is lowered.

There is no reason on earth for continuing the senseless practice of piling up a mountainous unemployment trust fund beyond what common sense tells us we shall need in the future. And it should be remembered that every dollar we put in this fund increases the public debt by a dollar, because the Treasury must invest the fund in interest-bearing bonds of the United States.

On the other hand, there is every reason why we should stop this practice now.

Employers, as well as employees, are paying the highest peacetime taxes ever levied in the United States. They are willing to pay these taxes to insure national safety through the defense program. They are willingly and patriotically facing the prospect of another mammoth tax increase for national defense. They will pay whatever is necessary to insure the national defense, and pay it, I know, without a whimper.

They should not be made to pay a dollar more than is needed, however.

Yet they are being made to pay twice as much as is needed under the unemployment provisions of the Social Security Act. This pay-roll tax, it should be understood, raises not a thin dime for financing the national-defense program. It has no more to do with financing the defense program than has the man in the moon.

It is a special tax, imposed for one purpose and one purpose only: To finance the unemployment compensation program.

It should be a just tax, yielding only what is needed for that purpose. Instead, it is an unjust tax that yielded, over the past 5 years, more than twice as much as was needed for that purpose.

The injustice should be corrected now.

Here are some figures, gathered by the American Taxpayers' Association of Washington, D. C.—which has made an exhaustive study of the subject—showing how the law has operated over the past 4 years. The 4-year period is selected because the full effects of the law, which went on the books as of February 1, 1936, have been felt over only the 4-year period. In the first year, little was paid in benefits.

Disregarding the first year, when only partial effects were felt, here is the showing:

In fiscal 1938, the pay-roll tax yielded $747,660,497, and workers received $190,975,000 in benefit payments.

In fiscal 1939, the tax was $811,250,508, and benefit payments were $441,795,000.

In fiscal 1940, the tax was $859,863,884, and benefit payments were $482,963,000.

In fiscal 1941, the tax was $892,023,224, and benefit payments were $433,242,841.

Two of those years were years when employment was on the rise. Two of them were years when unemployment was on the fall. The 4 years include periods of both better business and poorer business. Yet in the worst of the 4 years—fiscal 1939, ended June 30, 1939—the amount collected in taxes was 81 percent greater than the amount paid out in benefits.

In the past fiscal year the tax levy produced nearly 206 percent of the total benefit payments.

During the entire 4-year period, says the American Taxpayers' Association, whose figures are taken from official Treasury statements, employers were taxed an aggregate of $3,310,808,000.

During the same period workers received benefits which aggregated only $1,548,975,000.

That, I submit, is not the sort of justice we have a right to expect under the Social Security program. It is not justice to the employers, to the workers, or to the general public, which in the long run stands the burden of the tax.

Social-security taxes should have no relation whatsoever with the matter of inflation. Social-security taxes are special taxes, and are not, therefore, of general application. Those who are primarily the beneficiaries of social security should not pay any penalties by increased taxes for the purpose of decreasing inflation. No additional burden should fall upon the wage earner.

If the tax over that period had been one-third lower than it was, the Government would have collected $2,208,000,000 and the employers of the country would have been saved $1,102,000,000.

If the benefit payments had been one-third higher over the same period, the workers would have received $2,065,000,000, or $516,000,000 more than they actually received.

And the program still would have been adequately financed, though this huge reserve fund would not have accumulated. Collections totaling $2,208,000,000 would have been $140,000,000 in excess of payments totaling $2,065,000,000.

That is water over the dam. We cannot change that picture for 1938, 1939, 1940, 1941. But we can change it for fiscal 1942. And we ought to change it. In the name of simple justice to the American employer, the American worker, and the American public, Congress should lose no time in lowering this tax one-third as a minimum measure of relief and increasing benefit payments substantially.

Address of Lt. Gen. Walter Krueger

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

RADIO ADDRESS BY LT. GEN. WALTER KRUEGER

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by Lt. Gen. Walter Krueger, commander of the Third Army, at Lake Charles, La., on August 24, following recent maneuvers in the South:

The Third Army is deeply indebted to the people of Louisiana. The Governor of your great State, other State officers, and city and county officials, landowners, school authorities, highway organizations, and a host of others have cooperated cheerfully and effectively with us to make the Third Army

maneuvers a success. We feel with special keenness our debt of gratitude to the city of Lake Charles. Here are located important parts of our headquarters, while in and about the city are situated many of our base and service elements. This is really the maneuver home of Third Army headquarters. Consequently, I was particularly happy to have the Third Army cooperate with Lake Charles tonight to make more effective and realistic the city's test black-out. I do not wish to imply that the Third Army can, in this simple way, balance its debt of appreciation to the city; but it was, nevertheless, most pleasant to have the opportunity to express in a practical way some small measure of that appreciation.

The Lake Charles black-out has for me a very deep significance. Such a test cannot be successful unless every individual in the community devotes himself promptly and effectively to his own part therein. It is extremely gratifying in these troublous times to observe such an example of unity—unity of purpose and unity of execution.

In unity there is strength. A people is strong as it is united; it is weak and a prey to predatory force as it allows petty selfishness and partisan discord to wreck its resources and dissipate its power. As Woodrow Wilson said, "The highe t form of efficiency is the spontaneous cooperation of a free people."

Unity is imperatively necessary to the success of any undertaking. An army has unity of organization; but it is a great army only if it is animated by spiritual unity, that is by love of country, by belief in its leaders and by belief in itself. It may be fully armed, its equipment may be excellent, it may be well housed, clothed, and fed, and well trained, but if it lacks spiritual unity, it cannot be a formidable fighting force.

The citizens of Lake Charles have had brought home to them, dramatically, tonight, an example of what can be accomplished when all individuals work toward a common end. Watching the black-out, it is difficult to escape the feeling that if a similar demonstration could be held on a gigantic scale, so as to include simultaneously every city and hamlet in an entire section of the country, the effect upon all our citizens would be electrical! If the world were made to understand that we—to the last man, woman, and child—stand squarely behind and are ready to defend with our lives the basic principles of democracy, it would be a bold nation indeed that would dare to challenge our position.

When war engulfs a nation, the Army represents only a small portion of the multitudinous forces brought into play. It is but the cutting edge of a gigantic weapon, a weapon that in its complete forging comprehends every person, dollar, thing, and moral force of the country. Everything must be devoted to the common cause, otherwise disaster threatens.

Disaster in war is terrible in itself; but it is intensified a thousandfold by the bitterness of defeat. No nation can suffer military disaster and limit the consequences to payment of a money indemnity or the surrender of a slice of territory. Degradation, dismemberment, slavery may and nowadays probably would be the price of defeat.

It is to insure that such will never happen to our beloved country that the Third Army is sweating and marching and maneuvering and working in the State of Louisiana. We are trying to perfect the technical proficiency that an army must have to be a true shield and buckler of the Nation in its hour of need.

Our men are doing just this. They are doing it uncomplainingly, earnestly, effectively.

Of course, much of our work is not particularly pleasant. Dust, bad weather, chiggers, ticks, and long tiresome marches are, to be sure, harder to endure than the comforts of home. Here and there we find a man that cannot take it! A few—a very few—have taken French leave and so escaped these discomforts, but they've forfeited the respect, the faith, and the comradeship of the finest body of men on this planet. For that's just what the Third Army is. We have 250,000 toughened, bronzed, willing, patriotic Americans—men who are developing day by day into a single, unified force that will equal, and surpass, in fighting effectiveness and devotion to country any other army the United States has ever before put into the field.

In other States the First, the Second, and the Fourth Armies are doing the same. The four of them, with the Air Corps and the armored force make up the Army of the United States—a body that, we hope, will shield us effectively from the impact of war. This is your army, your army and mine! It will be as efficient technically as its leaders can make it, as well equipped as American industry can assure, and as strong spiritually as the people it represents. To reach the goal of real security, each of us has a part to play—may all of us meet our obligations as true Americans! That is what the Third Army proposes to do!

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. LAMBERTSON. Mr. Speaker, the horse has been largely replaced, but what will we substitute for horse sense?

The interventionists are those who want us to go over there; the interventional lice are those who want to come over here.

Two Republican ex-Congressmen in Kansas are still with Wendell. Not 1 of the 160 serving minority Members rises in a party caucus to defend him.

The President has slipped; he got the Prime Minister only part way over, while 2 years ago he was successful in bringing the King and Queen all the way.

The Kansas City Star is alarmed at the multiplying Federal bureaucracy, while being a little content with the expanding war program. Both have the same sire, Roy.

The plan to spend $50,000 with Kansas newspapers for Navy advertising is typical of how the warmakers are trying to create war support. Editors, take their money, but—.

Mr. Churchill says Britain would join the United States in action against Japan. First thing we know she will be telling us how she will back us on an invasion of Europe.

The greatest celebration Labor Day has in Kansas is the opening of all schools outside first- and second-class cities. Parents work, too, so they can pay for time and one-half for overtime.

Mr. Rosenman has been brought in to settle differences between the set-ups of Hillman and Henderson. They should come to a common understanding, for they all speak some English.

While seeking with amendments to soften the blow to noncompliers, some fool friends of the farmers in the Senate tacked on a rider freezing cotton and wheat in the same bill, causing the veto.

The Bigger, Hidden Burden

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of August 27, 1941:

[From the Washington Daily News of August 27, 1941]

THE BIGGER, HIDDEN BURDEN

There will be twice as many Federal income-tax payers, if the Senate Finance Committee's version of the revenue bill becomes law. There will be twice as many citizens with a conscious pocket interest in economy.

Instead of one-sixth of the total number of Americans, two-sixths will be eagerly concerned with getting a dollar's worth of defense and good government for each dollar they have plucked from their purses.

But that doesn't mean that the other four-sixths of the people won't have a stake in the Government's fiscal policies. To the contrary they will continue to have a very real interest. Though they may not be touched by direct income taxation—for their incomes are below even the proposed new taxable levels—they will continue to carry a major share of the burden through indirect taxation, hidden levies added to the prices they pay for everyday goods and services.

Even if the income-tax exemptions are reduced to $750 for single persons and $1,500 for married couples, and even after the much stiffer income rates are imposed, the Government will still be getting most of its revenues from invisible taxes—the taxes to which President Roosevelt referred when he said they are "paid in the sweat of every man who labors." The most unfair thing about hidden taxation is that it falls heaviest upon those who are least able to pay.

Somehow, though, most people who pay only the indirect taxes which are picked from their pockets—and make no direct and conscious contribution to the Federal Treasury—seem to believe that the money the Government spends is somebody else's money.

Ever since it became evident that the Government had to get more revenue, and in tremendous volume, a fight has raged in Congress over whether to get it by stiffer income taxation or by an invisible levy, such as a general sales tax. We who believe that taxes should be proportioned to ability to pay should rejoice that the Senate committee has chosen to broaden the income rather than the sales-tax base. We should support Members of Congress who are fighting for this fairer method.

And when the next tax bill comes up—which probably will be sometime next year—we should insist on more of the same. For the only alternative, in raising such a volume

of money as war spending calls for, is taxation which falls heavier on the lower four-sixths than it does on the upper two-sixths. No matter how far down it reaches, the income tax graduates the burden according to ability to bear it, while the other kind of tax increases living costs and lowers living standards.

Another thing to remember is this: Whenever the income-tax base is broadened, the bulk of the additional revenue comes from the people who are already in the taxable brackets. For instance, the base broadening which the Senate committee proposes, will yield some $300,000,000, but only about one-tenth of that will come from the pockets of the new taxpayers. The rest will be paid by those who are already on the income-tax rolls. And the higher a man's income, the larger his share of the increase. That's fair.

The long-haul fiscal policy of our Government should be to get rid of all hidden taxes, and raise all revenue by visible levies proportioned to ability to pay.

Armored Forces and Our Armored Force

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

STATEMENT BY MAJ. GEN. ADNA R. CHAFFEE, UNITED STATES ARMY

Mr. SNYDER. Mr. Speaker, the following statement was prepared by the late Maj. Gen. Adna R. Chaffee, United States Army, and presented to the War Department Subcommittee of the House Committee on Appropriations during the consideration of the Military Establishment appropriation bill for the fiscal year 1942.

Certain parts of the original statement have been deleted because of their confidential nature, but the matter here presented will be found to be an admirable treatise upon armored forces and upon our Armored Force, the new defense organization in the creation of which General Chaffee had such a large part and of which he was the first commander.

STATEMENT OF MAJ. GEN. ADNA R. CHAFFEE, THE COMMANDING GENERAL OF THE ARMORED FORCE, UNITED STATES ARMY

Mr. Chairman and gentlemen, having been called upon by the chairman of the subcommittee of the Committee on Appropriations, I have the honor to submit the following prepared remarks relative to armored forces and our armored force.

For many years I have been an advocate of the development of armored means of warfare. I have watched and assisted in whatever way seemed proper and feasible the development of these methods in our service, and I am glad to see and to believe that real progress is being made

As you know, the tank is not a new weapon; the Roman legionnaire with his shield, the armored elephants of Hannibal, and the chariots of Alexander were in reality tanks using the best motive power then available. The modern tank has been made possible by the development of the internal combustion engine, both gasoline and Diesel.

In World War I the increasing strength of the machine gun prevented either side from reaching a quick decision and led to position warfare. The engine-powered tank then made its first appearance. Its invention, as usual, was mothered by necessity. The introduction of the tank was an attempt to endow the offensive with new and superior strength, an attempt to keep the attack in motion, an attempt to defeat the machine gun.

On November 20, 1917, at Cambrai, the British made a surprise attack with 360 tanks on a front of about 10,000 yards. This was the first use of the modern tank This tank attack gained initial success, but as an operation was a failure due to the method of employment and other reasons. Thereafter in World War I, the tank was employed in limited numbers and achieved some success.

In that war the method of employment of tanks was to launch them, accompanied by infantry, in surprise attack against the enemy fortified position.

There were two great weaknesses in this type of use:

First. Either the tanks would outrun their support (infantry and artillery) and thus become vulnerable to concentrated fire attack.

Second. Or the tanks held to the speed of their accompanying infantry and artillery support lost their most important characteristic mobility, and thus became victims of carefully planned defensive measures.

The speed of these World War tanks was about 3 miles per hour, and often after a few miles running the tanks were ready for overhaul.

During the post World War period France, Great Britain, and the United States experimented with tank design and developed by spasmodic efforts various types of tanks and armored vehicles.

Due to costs, to differences of opinions, to branch consciousness, to pacifist tendencies, and to many other reasons, no nation developed a unified program of armored study or construction. However, valuable thought and progress was gradually contributed to the idea of tank and armored units during this period. A review of the progress of this development in France, Great Britain, Germany, and the United States is necessary to a proper understanding of our armored problems of today.

France: Every country looks at the problem of the application of the mechanics of war in the light of its own particular needs. In the defense of continental France the problem was visualized with a definite enemy, a definite ally, and a definite battlefield in view. The military attitude of France was defensive and this defense was based upon fixed fortifications of the Maginot Line. The cavalry divisions were given added mobility and fire power, and light cavalry armored divisions were created. In these divisions armored-car elements were added. In France mechanization was developed independently by the infantry and cavalry along parallel lines, with little or no relation between the two, and it was not until the winter of 1939–40 that their separate efforts began to merge into a common conception of the tactical employment of armored troops.

Tank development in the French Army was entrusted to the infantry in the post-war period. Tank tactics were based entirely upon the use of the tank as a close support weapon of the infantry. In the immediate post-war period French tank doctrines envisaged the employment of light tank battalions immediately preceding and accompanying the infantry assault of an enemy position, to overcome the hostile automatic weapons on a specific objective. As antitank defense measures increased and particularly as a result of the war in Spain, the medium and heavy tanks made their appearance. These were grouped into mixed battalions loosely organized in time of peace into regiments for training purposes. The basic combat unit was the battalion. In 1939 the French doctrine for the employment of tanks did not visualize the use of large armored units. Tanks were classified as accompanying tanks, maneuver tanks, and heavy tanks, and were to be employed in battalions or occasionally in groupments of two battalions. It recognized the fact that tanks could not be used against prepared positions and stated that only when the defensive system had been disorganized could a tank attack be counted upon for decisive results. Tanks should be employed only in the exploitation of an initial success or where an enemy was unprepared. Units of fast tanks could be held in the hands of a commander of a large unit for use in battle as a flexible and powerful reserve. The French did not envisage the employment of large bodies of tanks in independent movements where they would not be supported by artillery already in position.

The French cavalry developed mechanization along quite different lines. Between 1931–33 the French cavalry experimented with a combined horse and motorized division having a reconnaissance element of armored cars. In 1935 the first light mechanized division was organized with armored cars, dragoon portée artillery, and services. Thus, at the outbreak of war in 1939, France had only 2 light mechanized divisions within the cavalry arm and 11 tank regiments, 22 battalions in the infantry arm. Up to this time the French Army had made no attempt to coordinate tank development and tank tactics between the cavalry and infantry. French doctrine made no provision for the employment of more than 1 mechanized unit habitually employed within the cadre of a larger normal unit.

Two months before the German offensive, May 10, 1940, the French doctrine as announced by General Gamelin was as follows:

"Generally speaking, a large armored unit cannot cover its own movement nor carry out the reconnaissance of an insufficiently determined enemy. It must always act within the cadre of a corps or of a mechanized groupment, under the orders of a cavalry or motorized corps commander."

As can be seen from the above even after the experiences of the Polish campaign were available for study, the French had no concept of the unified tactical action of the combined arms grouped in the armored division. Further, they failed to grasp the obvious lessons of that campaign as to the supreme importance of the role of combat aviation combined with the armored force.

Great Britain: British tank development under the Royal Tank Corps proceeded along lines similar to the French tank development under the infantry. The tank tactics of the Royal Tank Corps were those of the infantry-accompanied tank. British experiments resulted in the organization of the army tank battalion and the army tank brigade. The former was a light tank unit; the latter a medium tank unit. Both organizations were designed as infantry tank units to reinforce normal infantry formations.

The course of development of mechanization in Great Britain was stormy in the immediate post-war period. Bitter controversies retarded progress.

In 1926, as a result of General Fuller's ideas an experimental armored force was created which contained, organically, armored cars, tanks, motorized machine guns, artillery, and engineers, but no infantry. The purpose of this force was to test the possibilities of a self-contained armored fighting force independent of existing formations. The lessons learned from this experiment proved that infantry was indispensible to an armored formation. This force continued in operation until 1929, when it was finally abandoned.

This experiment can probably be regarded as the father of the German armored division.

In 1935 Great Britain commenced the mechanization of her horse cavalry, and in 1936 created a mechanized mobile division by combining units of mechanized cavalry with tanks. In 1939 Great Britain organized an armored corps consisting of a corps headquarters, two armored divisions, a support group of two motorized infantry battalions, two artillery regiments, and a mixed antitank, antiaircraft regiment. All armored vehicles in the armored divisions were tanks, while all unarmored vehicles were in the support group. This organization of an armored corps was abandoned by the British in January 1940.

At the outbreak of World War No. 2, Great Britain had three types of mechanized units—the mechanized divisional cavalry regiment, the army tank brigade, and the armored division. The tactical role of the army tank brigade was, with the assistance of the infantry, to break through enemy defenses. The role of the armored division was to penetrate beyond defensive positions in order to complete the victory. In defense the tank brigade would assist the counterattack.

Thus, although in the early days the British had conceived of an armored force, this idea had been abandoned. Development of mechanization had followed the lines of armored units organized to act within the cadre of larger normal forces.

A consideration of the British development prior to the present war shows that they, too, failed to evaluate properly the importance of the combined arms in armored units. Especially did they fail to appreciate the importance of specialist infantry and combat aviation support. They had not clearly determined the proper operational role for large armored units.

Germany: Following the World War, the German Army set up a section of their war-ministry staff to study in detail the causes of successes and failures of their armies during the past war. This section of the staff functioned during the 14 years prior to the 1933 reorganization of the German Army and was continued as a general staff section of the new army.

One of the principal problems studied by this staff section was the use of and defense against armored action.

A second important problem studied was the fact that Germany had been uniformly successful in breaking her enemies' front position, but had also never been able to exploit the initial success.

The solution to both of these problems was eventually found in the armored force of combined arms.

During the period immediately prior to the expansion of the German Army, selected officers were sent to the armies of the principal powers—the United States, England, France, and Russia—to get data and ideas as to the construction and employment of armored vehicles. To the United States came Warlemcut, Bechtoldsheim, and Von Schell, the latter now chief of motorization of the German State.

The data procured by the above-mentioned officers, together with that developed by the staff section of the ministry, was used in the organization of the first armored units during 1934.

Among the initial concepts with which the Germans began their armored divisional organization were the following:

(a) The armored division must utilize the combined arms in combat.

(b) Armored units must be used in sufficient mass to permit sustained driving power.

(c) Armored vehicles must be simple and rugged of construction and design and must be suitable for mass production.

(d) The mobility of all elements of the armored division must be such as to maintain a unity of action in all phases of open warfare.

(e) One hundred percent replacement of tanks and tank crews must be available during periods of active operations.

During late 1933 and 1934 extensive experiments on extremely varied terrain in a large area known as Luneburger Heide in northern Prussia were conducted. These tests were carried out in all types of weather. During these tests tactical procedures were determined upon. The organization of the units was then based on the tactical methods of their employment. Late in 1934 and 1935 the armored types determined upon were put into mass production and the organization of three armored divisions was begun. In the fall of 1935 the Germans gave a demonstration of the use of several elements of the armored division. In 1936 Von Schell made the statement that the "German general staff was satisfied that they had developed an effective method of armored attack." In 1936 the Germans officially stated that the war in Spain would be used as a laboratory in which to test their armored units.

The initial armored divisional organization consisted of a reconnaissance battalion.

Tank brigade of 2 tank regiments, each regiment consisting of 2 tank battalions, each tank battalion consisting of 79 light and 18 medium tanks.

Motorized infantry brigade, consisting of two motorized rifle regiments and one motorcycle rifle battalion.

Artillery regiment armed with 105-millimeter gun howitzers.

Supply echelon, consisting of medical, quartermaster, and other service elements.

At the beginning of the Polish campaign (September 1939) the Germans had organized about 10 armored divisions in general similar in organization to the one described above.

The major items of arms and equipment of each of these divisions were as follows:

Tanks, 416 (344 light and 72 medium).

Artillery, 36 (105-millimeter gun howitzers).

Antitank guns, 66 (36 in division artillery battalion; 15 in reconnaissance battalion; 12 in armored infantry regiment; and 3 in motorcycle battalion).

Armored cars, 50.

Total strength, approximately 15,000.

Operations: During the Polish campaign the armored divisions were not held together and fought as a complete armored unit. One group of these divisions was used with the Silesian Army, another group with the army attacking from east Prussia. The armored divisions were held in rear of the attacking armies and inserted after a break in the enemy front had been made by the army. The armored divisions were then utilized to exploit the initial success by disrupting and cutting into fragments the Polish armies. The operations of these armored divisions in Poland were closely supported by attack and bombardment aviation.

When the Germans began their campaign on the west front May 10, we find an entirely different tactical employment of the German armored divisions. It is reasonable to assume that this change in their tactical employment was indicated by the experience gained in the Polish campaign. In the attack against the western front, we find the armored divisions now, 12 to 14 in number, organized into corps and into an armored army. This army had no covering force other than the border guards and that furnished by itself. This armored army made the strategic main effort of the German combat forces. From all indications, there was attached to this army motorized divisions which were used defensively to cover the flank of the armored army, which in its drive first rested on the Aisne, then the Aisne-Oise Canal, the Oise-Somme Canal, and finally on the Somme River. The right flank of the armored army was covered by the attack of the advancing German XII Army, and by means of other motorized divisions probably attached to the armored army.

Later in the French campaign the armored army was again used as an independent battle unit. On June 10, 1940, this armored army crossed the Aisne River from a small bridgehead established by the XII army, quickly destroyed the French IV army, drove across the Langres Plateau, through Besançon, and to the Swiss border. By this maneuver the entire Maginot line was cut off from remainder of France.

Tactical methods: The important lesson in the French campaign is the use of an armored force as an independent army. This armored army, supported by combat aviation, made the main strategic and tactical effort of the German field forces. Its attack was made through an extremely rugged terrain zone, using only the combined arms of its component elements.

This armored army not only broke the border fortifications of Luxemburg and the Libramont-Neufchateau-Virton position, which is the defensive line of the Belgian frontier, but it crossed the Semois River, a most difficult terrain barrier. This armored army finally crossed the Meuse River and penetrated the French defensive position which constituted a continuation of the Maginot line. "In this break-through of the Allied defensive position, for the first time in history, exclusive use was made of an armored army in executing a large-scale strategic movement." The above is an official statement issued by the German War Ministry. Some conception of the magnitude of the armored operation may be gained by saying that 46,000 vehicles took part, and the armored army was echeloned to a depth of approximately 125 miles.

Although there are only meager reports available on the recent Balkan operations, every indication points to the use by the Germans of similarly organized armored armies in their destruction of the Yugoslavian and Grecian Armies.

The tactical action of the armored divisions is based on fire and movement of the component armored units of the combined arms. This tactical action is not comparable to the cavalry charge, as so many erroneously believe. It is the mutual use of armored and air fire power to assist and cover the movement of a maneuvering element. This German concept was not fully understood or accepted at the beginning of the present war by the French and British. It is at entire variance with the idea of independent tank or mechanized action and with the idea underlying the use of accompanying tanks.

The success of the German armored tactics has as we know been great and has rendered obsolete the tactical procedures of World War No. 1.

The great German victories in France and in the Balkans were won by offensive operations of armored armies supported by combat aviation. Former defensive methods cannot be successfully used against these armored operations. Defense against such operations can be made only by armored units of equal or superior power.

United States: At home, the Chief of Staff, General Summerall, early realized the value of the tank as an independent and mobile weapon and preached the importance of its employment. The War Department was, however, hampered by lack of understanding and funds, and further by the fact that the National Defense Act of 1920 prescribed that the Infantry should operate tanks.

Despite the experiments going on abroad, it was not until 1928 tat the Secretary of War approved in principle the initial plans for the organization and development, over a period of 4 years, of a mechanized force. This force, according to paper estimates, would cost $4,000,000. This was not considered prohibitive at that time, in view of the cost of mechanization abroad and the cost of material for our own Air Corps at home.

For the next 2 years the subject of mechanization lay dormant so far as appropriations

were concerned. In 1930 the Congress inserted in the Army appropriation bill the $284,000 previously requested for development work. Although this was a very meager amount, it did provide a start.

Accordingly, the War Department utilized this money to make possible the assembly of the mechanized force at Fort Eustis, Va., with the thought that the organization of an actual force, no matter how small or restricted in equipment, would take the development out of the realm of theory and give it a practical beginning. To the normal equipment of the selected units were added some experimental vehicles newly constructed.

This original mechanized force totaled 640 enlisted men. Every branch of the service was represented in it.

The first conception of this mechanized command was that it would be purely a striking force. Starting with one regiment, it would later be built up into a highly mobile armored force, with motorized fire power to strike an organized position. It was contemplated that this experiment would at least start thought along the lines of the development of the tactics of the combined mechanized or motorized arms.

In 1931 it was decided that the infantry would continue under the National Defense Act to operate tanks for the close support of foot soldiers and that the mechanized mission should be given to the cavalry. To permit the cavalry to operate tanks under this mission they were called combat cars.

That year, 159 men from various branches in the original mechanized forces were transferred to the cavalry, with station at Fort Knox. As an initial start one reinforced regiment of cavalry was to be mechanized.

However, it was not until 1933 that the War Department issued orders for the First Cavalry, stationed at Marfa, Tex., to be moved to Knox and mechanized.

From that time forward, the force of mechanized cavalry was gradually increased, until last year it consisted of two regiments of mechanized cavalry, a regiment of mechanized field artillery, a company of engineers, an attached regiment of infantry, an Air Corps squadron, and the necessary supply and service troops. With increased experience each year in maneuvers, it developed mobile mechanization on an apparently sound basis. During this period our companies of infantry tanks were removed from the infantry division and consolidated into battalions, and the Louisiana maneuvers of 1940 brought forth the combined effort of an infantry tank group and the mechanized cavalry.

During this period both the Infantry Board and the Mechanized Cavalry Board did considerable research in connection with the development of tanks and their related matériel and vehicles and weapons. This work has been of great value in the later development of our Mechanized Force.

Our present medium tank was projected in design by the Infantry Board. When the Armored Force was created experimentally for service test, the medium tank developed by the Infantry Board formed the basic design upon which, with few modifications, we were able to enter into the development of rapid production facilities.

A careful analysis of the armored operations during the present war leads to several definite conclusions.

(a) Armored forces of the combined arms are at present the most powerful means of offensive action.

(b) Given a suitable terrain for operations, the most effective defense against such armored forces would seem to lie in more numerous and more powerful similarly organized armored force.

(c) Armored units must be organized into large formations (corps and armies) to give tactical and strategical unity to their operations.

(d) A definite trend toward more complex combination of arms and toward heavier calibers and equipment has been shown during the war.

(e) To be successful in combat armored units must be manned and led by thoroughly and specially trained personnel. Such training requires much time and cannot be thoroughly accomplished with the turn-over of the mass of personnel each year.

OUR DEVELOPMENTS SINCE JULY 10, 1940

During part of May and June 1940 a major world power with an army conceded by many to be one of the finest in the world, backed by the manpower and equipment of powerful allies, was completely overrun and reduced to a state of comparative impotence by a military machine of astounding efficiency. Before this relatively short operation was completed, which is one of the greatest military phenomena of all times, the Chief of Staff acted promptly and decisively in effecting what I believe to be one of the foremost steps taken during my military service to increase the combat effectiveness of the Army High commanders from the field who had been working for years with our small mechanized cavalry and tank units were immediately assembled in Washington and participated in conference with members of the General Staff. It was the unanimous opinion of the conferees:

That the recent German successes proved the value, efficiency, and economy of armored units when properly used in adequate numbers on the modern battlefield.

That our tactical conception and technical development have been proceeding along sound lines, although on a most modest scale, since prior to the rearmament of Germany.

That our available mechanized resources must be brought together under one head to obtain the maximum value from our limited personnel and matériel, to further tactical development and employment and to eliminate duplication of technical development.

That an expansion of this component of our Army was imperative if we were to successfully engage a modern first-class army.

The recommendations of the above meeting were in a matter of days translated into action. A War Department directive was published July 10, 1940, which created, for service test, an armored force to include all armored corps and General Headquarters Reserve tank units, and prescribed the duties of the Chief of the Armored Force, combining the command functions of a commander of a large tactical unit and many of the responsibilities of a chief of a combatant arm; this included the development of tactical and training doctrines for all units of the Armored Force and research and advisory functions pertaining to development and procurement of all special transportation, armament, and equipment used primarily for armored units.

The small mechanized cavalry brigade, a few scattered infantry tank units, the Sixth Infantry, and 9,500 enlisted men were made available or authorized to implement this organization. From the foregoing, the following units and agencies were organized: The I Armored Corps, consisting of the First and Second Armored Divisions and the Seventieth General Headquarters Reserve Tank Battalion; the Armored Force Board, charged primarily with giving proper direction to the development of special transportation, armament, and equipment, and to the preparation of training manuals; and the Armored Force School, to provide the highly trained technicians to operate and maintain the many types of complicated and expensive equipment of armored units.

The Armored Force, as constituted above met its initial training objective as laid down by the Chief of the Armored Force "* * * To be prepared to take the field with available personnel and matériel by October 1, 1940 * * *."

The foregoing accomplishments, notwithstanding sympathetic cooperation received from the War Department, were carried out in the face of many difficulties, among which were supply and personnel which I will discuss later.

The role of a unit determines its organization. The role of an armored division is the conduct of highly mobile ground warfare, primarily offensive in character, by a self-sustained unit of great power and mobility, composed of specially equipped troops of the required arms and services. It should be employed on missions either strategical or tactical, whose accomplishment will effect to the maximum the total destruction of the enemy.

Armored division: The armored division of 12,700 officers and enlisted men has a tremendous fire power in its authorized allotment of over 19,000 weapons, including pistols; rifles; sub, light, and heavy machine guns; mortars; 37-millimeter guns; 75-millimeter guns; 105-millimeter howitzers; and over 3,000 caliber .30 machine guns. The armored division consists of five echelons: Command, reconnaissance, striking, support, and service. These echelons must operate together as a team if the division is to function efficiently.

Command echelon: The command echelon consists of the division headquarters and headquarters company which directs the operations of the armored division and a signal company that provides facilities for transmitting orders and information to all echelons.

Reconnaissance echelon: The reconnaissance echelon consists of a reconnaissance battalion and an attached observation squadron. The two, working in close coordination, constitute the eyes of the commander. The picture painted from the information gathered by these two reconnaissance agencies forms the basis of the commander's plan of execution of the division mission.

Striking echelon: The striking echelon consists of the armored brigade, with its headquarters and headquarters company, two light-armored regiments, one medium-armored regiment, and a field-artillery regiment. The entire division is built around the striking echelon and its principal weapon, the tank. While the tank is the principal weapon of the light-armored regiment, it is not the only one. This regiment also is equipped with its own reconnaissance, its own mobile machine-gun units, and a specially equipped mortar platoon. All other elements of the division are intent on maneuvering the striking echelon into position from which it can deliver the decisive blow.

Support echelon: The support echelon consists of an infantry regiment, a field-artillery battalion, and an engineer battalion. The support echelon assists the striking echelon by attacking to clarify the situation, seizing ground unfavorable for tank action, holding ground which the tanks have captured, neutralizing threats, and protecting the tanks during periods of refueling, reorganization, and rest. The engineers insure the uninterrupted advance of the division by the construction and repairs of crossings, by operating assault boats and ferries, by the use of their bridging equipment, and by improvised means. They assist in the all-around defense of the division in the establishment of antitank areas by preparing road blocks, obstacles, mine fields, and demolitions.

Service echelon: The service echelon consists of an ordnance battalion, quartermaster battalion, and a medical battalion. It furnishes the skilled mechanics and spare parts required to maintain weapons, fighting vehicles, and wheeled vehicles in operation. It supplies the division with gasoline, oil, and

rations. It collects and evacuates the wounded personnel of all units of the division.

Combat aviation must always support and frequently may be attached to an armored division during operations. In principle, combat aviation augments the power and extends the range of artillery.

Armored corps: Armored units are employed against vital objectives in rear of the hostile main battle position usually reached by a penetration of a weak position of the hostile front or an encirclement of an open flank. Such operations are premised on surprise, on rapidity of action, and on ability to sustain this action until the objective is gained. Therefore, it is apparent that armored units must be employed in mass, not hundreds but thousands of tanks, with adequate aviation, engineer, infantry, artillery, maintenance, and logistical support, with local superiority of the air assured. To train, fight, and supply these larger formations, armored divisions must be grouped into corps, consisting of an essential command echelon, two armored divisions, and necessary corps troops, organic or attached.

* * * * *

Group headquarters tank units: Group headquarters tank battalions, organized quite similarly to the battalions of the armored regiments, are provided to give added striking power to the infantry and cavalry divisions and for attachment to armored divisions as additional battalions. These units are organized into light and medium battalions, the former primarily for inclusion in special-task forces where landing operations must be initially accomplished in secondary harbors. The development of the heavy tank should be continued so as to insure its availability if and when needed.

As with the armored divisions, these tank battalions should be grouped under tank group headquarters. These headquarters are essential to supervise, coordinate, and further the training, and to assist in developing the technique and tactics of group headquarters tank battalion and group employment as well as being available as trained command agencies for field operations.

Organization will change with experience, and with changes in the supply and the strategical situation. With the introduction of the 75-millimeter gun in the medium tank, it is probable that the artillery regiment will be taken away from the armored brigade and become a divisional unit for general support. The division may easily be made lighter or stronger by adding or subtracting an integral part thereof to meet the needs of any theater of operation. We have seen the German Army vary its organization in this manner to suit the immediate tactical situation.

It is true that the organization of our armored division is very similar in principle to that of the German panzer division, but it is not a question of us blindly following the latter. Rather it proves the soundness of our own development, since the Germans in general followed the principles of our own mechanized cavalry organizations which existed prior to the development of the present German organization.

It is not desired to convey the idea that armored units will win a war by themselves. I do not believe that the swift successes of the German Army in Holland, Belgium, and France were due to the action of any one particular branch of service. Rather, I believe that they were primarily due to the close coordination and cooperation of the swift-striking dive bombers with the powerful panzer divisions, closely supported by well-trained, highly mobile infantry formations.

However, much of the German success may be credited to the panzer divisions, and it is not strange that the American public has shown an interest in this modern type of ground warfare, because we as a nation have a natural aptitude for the manufacture and operation of automotive equipment. So natural is this aptitude that the great mass of our public has wondered that foreign powers apparently had passed us in the utilization of mechanization for combat purposes. That this condition existed is only due to the fact that peacetime appropriations for our Army would not permit the establishment of an armored force of the magnitude employed by a nation committed to a period of rapid military expansion.

As matériel and supply have dominated recent battlefields, so have they dominated the development of the armored force. Its initial organization was governed by the type and quantity available; its future organization and rapidity of expansion will be dictated by timely execution of adequate manufacturing programs. It is essential that we manufacture the most modern type of fighting equipment for today and, concurrently, develop more efficient types for tomorrow. We are all too familiar with the long and precious time required to develop, tool for, and manufacture new types of critical items of equipment. We are also familiar with the uselessness of an army which is second best in matériel.

As at present organized, an armored division is equipped with 3,243 vehicles of all types. One thousand one hundred and forty of these are combat vehicles pure and simple, including scout cars, reconnaissance cars, tanks of all categories, personnel carriers and prime movers, machine-gun and other weapon carriers; 2,103 are motorcycles, engineer vehicles, ambulances, and trucks of every variety. Many of these have combat purposes, but the majority enter into the supply of food, ammunition, and fuel. The so-called bantam car is replacing the motorcycle in many instances.

* * * * *

The scout car, which is largely used as a reconnaissance and machine-gun vehicle in the armored divisions, has met all the requirements of expansion thus far.

* * * * *

Man will always remain master of matériel. Matériel must be conceived, moved, fought, and maintained by man.

Only an extremely small reservoir of Regular officers with mechanized cavalry and tank experience was available for the initial organization and immediate expansion of the Armored Force. All of the Regular officers now being assigned, as well as Reserve officers, must pass through intense orientation training courses on armored operation before assuming command of units commensurate with their rank from second lieutenants to generals. Many must then be given extensive schooling to qualify as motor and communications officers—armored units cannot roll, be controlled, or fought without the greatest proficiency on the part of these officers in all echelons.

In no other component of the Army are enlisted men charged with heavier responsibilities of command, operation, and maintenance duties. A large percentage of enlisted men comprise small vehicular combat teams whose success is dependent upon the instant, correct, and continuous operations of these teams. The men who operate the complicated and expensive tank with its airplane engine might better be called tank engineers than tank drivers.

Highly skilled mechanical and technical experts in large numbers are required to maintain the great amount of motor and radio equipment. Development of the potentialities of an armored unit is dependent in an unusual degree to the decentralization of command, operation, and maintenance to the enlisted man, coupled with his initiative, judgment, and degree of training to meet each situation. Experience has proved that it takes a minimum of 4 months to train an enlisted man to participate as a junior member of his team in field service. An additional 3 months' instruction is required in the Armored Force School as the first step in qualifying numbers of these men as technical experts. Fifty percent of all enlisted men in an armored division are classified as occupational specialists; it is highly desirable that a greater percentage be so qualified to provide essential replacements. Many enlisted men now assigned to the Armored Force have not the capacity to assimilate the instruction given in the Armored Force School.

* * * * *

The following units have been activated since the Armored Force was initially created:

Headquarters and Headquarters Company, Armored Force.

Third and Fourth Armored Divisions.

Headquarters, First Tank Group.

One Hundred and Ninety-first, One Hundred and Ninety-second, One Hundred and Ninety-third, and One Hundred and Ninety-fourth Tank Battalions.

Fifty-ninth Signal Battalion (armored).

The Armored Force replacement training center, with a capacity of 9,000, is now busily engaged in training selective-service men from all walks of life.

The Armored Force School has been expanded and, working on a two-shift daily basis with approximately 400 students entering each week, graduates 300 officers and 5,000 enlisted technicians every 5 months.

Housing, utilities, and hospitalization have been ready in every instance to meet the scheduled flow of personnel; sites had to be located and purchased and complete construction provided in practically all cases.

Commissioned and enlisted cadres, technical specialists, and selectees are now completing their training for 10 additional tank battalions to be activated next month.

* * * * *

I have attempted to bring out the magnitude of the task of expanding our small peacetime laboratory of mechanization to our present size. If I have done that, I know you will appreciate the fact that to expand the Armored Force so that it will be capable of defeating a skillfully led modern army possessing powerful air, mechanized, and motorized units requires timely, positive, and additional effort from all of us.

With world conditions existing as they are today, our Nation is confronted with the most important problem of national defense that has arisen in its history. However, the effectiveness of our national defense of tomorrow must be in proportion to our decisions and actions of today.

Distribution of Milk to the Children of America

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

RADIO ADDRESS OF HON. PETE JARMAN, OF ALABAMA

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on August 15, 1941:

Ladies and gentlemen, I am very grateful to that excellent organization, the Mutual Broadcasting System, for this opportunity to

briefly discuss with you the bill I recently introduced which provides for the distribution of milk to the children of America.

It is very simple and the administration of it is equally so. Its purpose is to make available, absolutely free, a quart of milk a day to each child in the United States who is 14 years of age or less. Your first impression may be, as mine was, that this is wishful thinking or toying with a utopian idea. but think it over and the more seriously you do so, the more probable do I believe it is that you will agree with my conclusion that this first impression is an erroneous one.

This milk is to be distributed under a white-stamp or coupon system which operates as follows: When the bill becomes law, the Secretary of Agriculture will fix the price which the Federal Government will pay for the milk to be distributed. Naturally this price will vary as the cost of production varies throughout the country, but to protect the farmers and milk distributors, it provides that the Secretary shall fix such price within a margin of 10 percent of the average price which has prevailed in each locality during the 6 months next preceding its enactment. Also, that at least 50 percent of the price must be paid by the distributor to the farmer who produced it.

When the Secretary has fixed these prices, he shall cause to be issued white stamps or coupons, the face value of each of which will be the price of a quart of milk in the locality where it is to be used. Any dairyman, dairy farmer, or milk dealer will be eligible to supply this milk to your child and to receive therefor the price fixed by the Secretary for milk in his locality. It will only be necessary for him to certify his willingness to the Secretary to accept these stamps in exchange for his milk. You will note that he is not compelled to sell at the price fixed unless he wishes to do so, and he may withdraw his consent by giving 30 days' notice of such a desire. If you have children 14 years of age or less, an adequate supply of wholesome milk will become available to them by the simple process of your making application each 30 days for these stamps. Upon proof that your children are not more than 14 years old, the Secretary will issue you 30 stamps per month for each child. Each month thereafter he will, upon a like application, issue you an additional month's supply.

If your dairyman has certified his willingness to accept these stamps in exchange for his milk—and you may rest assured that practically all of them will do so—you may exchange them at the rate of 1 quart of milk a day for each such child. Your dairyman will cash his stamps in a local place provided for that purpose, just as he would a money order. In rural localities where there are no commercial dairymen and no dairy health inspection, anyone having a cow may furnish this milk just as the commercial dairies do elsewhere.

I wish to make it clear that this is not a bill to place the Federal Government in the milk business. There will be no Government-owned dairies and no Government distribution of milk.

Should the Secretary find an insufficient quantity of milk in any locality to afford all the children a quart a day, he may commence by issuing pint stamps, and change to quarts as soon thereafter as he ascertains that enough milk has become available for each child to receive the full amount.

This plan was originated by W. D. Dobbins, a very successful businessman of Alabama, who was born and reared in the great congressional district it is my privilege to represent. He does not reside there now, nor is he connected with the milk industry in any way, but he has devoted years of study to American nutritional problems. It resulted in this plan, which will both aid the farmers and tend to alleviate and prevent malnutrition among our children and future generations at a cost of only a part of our present farm aid.

After several months of careful investigation and mature consideration, during which I explored the reasons advanced for it, and considered all possible objections to it, I reached the conclusion that, with the alarming number of 40 percent of our boys, and I presume girls, suffering from malnutrition or defects directly attributable thereto, we cannot afford to longer ignore this deplorable condition. Convinced that this plan offered the best solution of the problem I decided to introduce and sponsor it, with certain changes and modifications, as a bill in the Congress.

It is my firm conviction that this bill will prove a good investment to the taxpayers of America with very little or no cost to them in the final analysis. I am confident that when you and the Members of Congress understand the reasons behind it you and they will agree with me that we cannot afford to permit its failure to pass.

Luther Burbank, the great horticulturist, once said: "Had we paid no more attention to our plants than we have to our children, we would now be living in a jungle of weeds." These words are just as tragically true today as when he uttered them. We, the richest people on earth, living in a land of plenty, where crop surpluses are so great that finding storage space for some of them has become a major problem, suddenly learn that 40 percent of our boys are unfit for military duty, that most of these are suffering from malnutrition or defects attributable thereto.

Surely it is as important to build the man to man the gun as it is to build the gun with which to defend our country. The great war raging in Europe, which threatens to also engulf us, creates the necessity that we spend vast sums for national defense. As I said when advocating the lease-lend bill, all of this money cannot be repaid in our generation, probably in the next several generations. This fact, and the uncertainty of the future, will place enormous burdens and responsibilities on the children of today and the generations of tomorrow. Since we must bequeath them these heavy burdens and responsibilities, we should, and we must, provide, even in these trying times, for their normal growth and development, both physically and mentally. We cannot afford not to indulge in some organized effort to safeguard this development and prevent the deplorable condition of 40 percent of our people reaching maturity as sufferers from malnutrition.

My bill will aid the farmer, who constitutes the very backbone of this country, as well as the children, by greatly contributing toward a stable and profitable agriculture. It will provide him with a cash market for this essential product of diversified farming. It will help the farmer not directly connected with milk production. To produce the additional quantity of milk made necessary by this bill will require a vast amount of additional feed. This requirement will consume much, if not all, of the surplus grain which has depressed the farmers' market and which has necessitated the appropriation of vast sums for farm aid to prevent ruinous prices.

Much of the land now being used in the production of surplus grain and cotton can, and will be diverted to pastures for the production of this additional milk. This will tend to further decrease the surplus of crops that we do not need in favor of milk which is so sorely needed. Then, instead of paying the farmers for not producing more of these crops, as the Federal Government now does, it will pay him for producing milk for our future soldiers, statesmen, businessmen, and women. Necessary though these present payments be, the farmer would much prefer to be adequately compensated for producing than to receive a pittance for not doing so.

There is no better soil conservation known to science than dairying. The cover crops used for pastures protect the soil while the waste of the dairy herd fertilizes the land. Returning this land to pasturage will very naturally contribute to soil conservation, thereby greatly reducing the present very appropriate appropriations of the Congress for that purpose.

All of this will cause the farmers to become more self-supporting and will, not only save much of the cost of future Federal farm aid, but will avoid the necessity of many a farmer appearing on the W. P. A. rolls, with a consequent saving in that appropriation.

Another great saving will occur, which cannot be measured altogether in dollars and cents. I refer to the effect on our future crime bill. Crime is reliably estimated to cost the people of America more than $15,000,000,000 annually. The criminal of today was the child of yesterday. The child who steals today because he is hungry and discontented, becomes the bank robber and public enemy No. 1 of tomorrow. There is no better way to keep a child out of trouble than to keep it well fed and healthy.

It is quite probable that these savings will prove adequate to defray the entire cost of this humanitarian program, which will conserve American youth while conserving American soil.

Though you may never have heard the cry of hunger of your child, you know that millions of children in this great land crawl into their beds experiencing the actual pangs of hunger to haunt their little dreams. Though you may be able to provide for the wants of your child, it enjoys no security in the absence of security for its schoolmates and playmates. It matters not that you have well fed and clothed your own child. If it must go to school and play with, or sit next to, a child who has contracted tuberculosis because of the weakened condition caused by malnutrition, it, too, is in danger.

Malnutrition may well be compared with an insidious Nazi propaganda. It affords no warning of its danger. You may not realize its presence, but it dulls your mind and finally robs you of your strength and will to resist.

We have devoted much time to, and spent much money on, soil conservation; the development of fine flowers, cattle, hogs, bird dogs, and race horses. Is not the health of our children as important as either of these? I think so, and for that reason, I am resolved to indulge in a vigorous fight for the passage of this bill which will conserve the health of our children while conserving the soil of our farms. With the help of the American public, my efforts will be crowned with success.

A quart of milk a day per child will make the cheeks of American children rosy, the pastures green, and the farmers prosperous.

Is There Any Wonder That Confusion of Public Mind Continues To Grow?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. MICHENER. Mr. Speaker, just what is the status of this country in its

relationship to the World War now raging? We are not officially at war, provided the constitutional limitation still holds good, because the President has not asked the Congress for a declaration of war, and no such action has been taken by the Congress. Just how far is the President going by virtue of his lease-lend authority? Does this undeclared war mean troops in foreign countries?

The recent conference between President Roosevelt and Premier Churchill sheds no definite light on the subject, yet it is difficult to read the eight-point agreement, the President's press conference quoting the Lincoln statement, the Churchill speech, and the President's message to Congress and escape the conclusion that there is a definite expectation on the part of the President and at least a tacit understanding between the President and Churchill that our country will fight as one of the Allies before the desires, wishes, and determinations expressed in the eight-point statement of policy are accomplished. Why should there be any misunderstanding? For months and months some of us have been calling upon the President to talk straight from the shoulder, to take the people into his confidence, to use direct language that the people can understand and that was not susceptible of so many interpretations. The President knows how to use such language. Why does he not give us an example?

This matter was called to my attention this morning when I read an editorial from the Jackson (Mich.) Citizen Patriot, and pursuant to the permission given to me to extend my remarks in the RECORD, I include that editorial, which is as follows:

[From the Jackson (Mich.) Citizen Patriot]

THE SOURCE OF CONFUSION

Saturday, while traveling to Washington on his special train, fresh from his sea voyage, the President said no to the direct question, "Are we any closer to entering the war?" That was a proper question and one to which the people could expect an honest answer after serious consideration of all the facts. The President said no.

Then on Wednesday at his press conference the President went to some length to quote from statements made by Abraham Lincoln in the most serious and dark days of the War between the States and said they applied to our situation today.

"I have no word of encouragement to give," President Roosevelt quoted his predecessor in office. "The military situation is far from bright; and the country knows it as well as I do. The fact is that the people have not yet made up their minds that we are at war with the South. They have not buckled down to the determination to fight this war through; for they have got the idea into their heads that we are going to get out of this fix by strategy. That's the word—strategy. General McClellan thinks he is going to whip the rebels by strategy, and the Army has got the same notion. They have no idea that the war is to be carried on and put through by hard, tough fighting; that it will hurt somebody; and no headway is going to be made while this delusion lasts."

Last Sunday morning the Citizen Patriot top headline across page 1 read, "'Nation No Nearer War'—Roosevelt." On Wednesday morning the Detroit Free Press headline across page 1 read, "F. D. R. Indicates United States Must Fight to Win War." Both headlines reflected accurately the President's position in the news at that moment. Yet they are in direct contradiction.

Here are two statements from the White House in less than a week pointing in different directions. When we include the frequently made promise that no American soldier will be sent abroad to fight on foreign soil, there is no wonder that the public mind is confused, or, as was said, under "delusion."

There is both confusion and perhaps delusion, but that condition stems from the failure of the head of the Government to be frank and consistent in his statements and his unwillingness to take Congress and the American public into his full confidence. One day he says we are no nearer to actual war than before, and another he deplores the fact that the American public has not yet made up its mind to fight and get hurt. Thursday's statement to Congress contributed nothing to clarification of the situation.

Is there any wonder that confusion of public mind continues to grow? The White House is the chief source of confusion.

Flood Control of Cherry Creek, Colo., for the Protection of Denver and Adjacent Territory

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. LEWIS. Mr. Speaker, one of the most meritorious projects in the flood-control authorization bill recently approved by the President—Public, No. 228, Seventy-seventh Congress, approved August 18, 1941, being an enactment of H. R. 4911—is the project for flood control of Cherry Creek in Colorado for the protection of the city of Denver and nearby agricultural developments. Indeed, the Engineer Corps of the Army, after several years of careful study, believes this Cherry Creek project to be "of major importance" and "one of the most important" authorized in the recent act. When completely constructed in accordance with the plan set forth in the report of the Army engineers—House Document No. 426, Seventy-sixth Congress, first session—this project will protect from an ever-imminent major tragedy not only Denver, a city of 322,412, and its contiguous suburbs, with a population of about 62,000 more, but also the nearby agricultural developments. Although the entire comprehensive plan as set forth in the report of the Engineer Corps is expressly approved in the recently enacted statute, an immediate appropriation of only $3,000,000, out of the estimated total cost of $10,500,000, is presently authorized.

The item concerning the Cherry Creek project is printed at page 10 of the statute, Public Law No. 228, Seventy-seventh Congress, under the subheading "Missouri River Basin." It is as follows:

The comprehensive plan for the improvement of Cherry Creek and tributaries, Colorado, for flood control and other purposes in accordance with the recommendations of the Chief of Engineers in House Document No. 426, Seventy-sixth Congress, first session, is approved, and there is hereby authorized $3,000,000 for the initiation and partial accomplishment of the project.

During the debate on June 20, 1941, when the bill recently enacted was before the House for consideration, I made some remarks in which I included some extracts from the favorable report by the Corps of Engineers on the Cherry Creek project, House Document No. 426, Seventy-sixth Congress, first session. These remarks are printed at pages 5441–5443 of the CONGRESSIONAL RECORD for June 20, 1941.

The statement in the unanimous report by the Committee on Flood Control of the House of Representatives—Report No. 759, Seventy-seventh Congress, first session—filed June 9, 1941, is as follows:

CHERRY CREEK AND TRIBUTARIES, COLORADO

(H. Doc. No. 426, 76th Cong., 1st sess.)

The possibility of a major flood on Cherry Creek threatens the city of Denver, Colo., with a major catastrophe. Cherry Creek rises in El Paso County, Colo., flows northerly to join the South Platte River in Denver. The topography of Cherry Creek Basin is such as to cause large floods of great intensity which may descend on Denver with little warning. For the lower 5½ miles of its course, Cherry Creek flows through industrial and residential sections of the city. The great flows which would result from major floods on Cherry Creek would submerge a large part of the central portion of Denver, including important business districts, railroad yards, industrial establishments, and extensive residential areas. Denver is the most important industrial center between the Missouri River and the Pacific coast, and any disruption of the normal activities of that city would be detrimental to the whole country. The need for flood control on Cherry Creek has been investigated by the Chief of Engineers in accordance with the Flood Control Act of 1937, and a report has been submitted to Congress.

The plan of protection recommended by the Chief of Engineers provides for the construction of two reservoirs on Cherry Creek at the Cherry Creek No. 1 site and at the Castlewood site, both above Denver, at an estimated cost to the United States of $10,500,000.

Construction of the recommended project would protect Denver against any flood reasonably to be expected and would eliminate practically all further damages from Cherry Creek floods in the agricultural valley above that city. In addition, water for irrigation is to be stored in the Castlewood Reservoir. Unquestionably the benefits of the improvement would greatly exceed its cost. The Flood Control Committee reaffirms its previous recommendation that the plan recommended by the Chief of Engineers should be approved by Congress, and because of the need for the contemplated flood protection at Denver $3,000,000 should be authorized at this time to provide for the construction of the Castlewood Reservoir and the completion of the detailed plans and other necessary preliminary work for the Cherry Creek Reservoir No. 1.

Provision for this Cherry Creek project, in the same form as in the recently enacted statute, was also embodied in the flood-control bill favorably reported to the House last year during the Seventy-sixth Congress, House bill 9640. Because of the preoccupation of the House with other matters, this bill was never considered on the floor of the House before the expiration of the Seventy-sixth

Congress. Consequently, H. R. 9640 died last January with all other bills which had been introduced in the Seventy-sixth Congress, and which had not been enacted into law. In unanimously and favorably reporting last year's bill the Committee on Flood Control of the House made the following statement, at pages 23–24, Report No. 2103, Seventy-sixth Congress, third session, filed May 7, 1940:

CHERRY CREEK AND TRIBUTARIES, COLORADO

(H. Doc. No. 426, 76th Cong., 1st sess.)

Cherry Creek rises in El Paso County, Colo., and flows north to join the South Platte River in the city of Denver. The valley of Cherry Creek for over 20 miles above Denver is a rich farming area and for its lower 5.5 miles Cherry Creek flows through the residential and industrial sections of the city. The need for flood control on Cherry Creek has been investigated by the Chief of Engineers in accordance with the Flood Control Act of 1937, and his report has been transmitted to Congress. This report indicates that the Cherry Creek Valley lies in a cloudburst zone and has suffered damaging floods since its earliest settlement. Major floods of Cherry Creek have caused extensive damages at Denver and the flood of 1933 destroyed the old Castlewood irrigation dam above the city. It has been estimated that the maximum probable flood on Cherry Creek would cause damages in Denver of from forty to fifty million dollars, and might cause large loss of life.

The plan of protection recommended by the Chief of Engineers provides for construction of two reservoirs on Cherry Creek, at the Cherry Creek No. 1 and Castlewood sites above Denver, at an estimated cost to the United States of $10,500,000.

The recommended reservoirs would protect the city of Denver against any flood reasonably to be anticipated and would largely eliminate flood damage in the valley above the city. In addition, it is proposed to reserve water for irrigation in the proposed Castlewood Reservoir. The benefits of the improvement would be greatly in excess of its cost. The Flood Control Committee therefore believes that the project merits approval by Congress and that it is of such an urgent nature that $3,000,000 should be authorized at this time so that the necessary lands can be secured and detailed plans can be initiated as soon as funds are appropriated by Congress.

At the outset of the hearings held this year before the House Committee on Flood Control, it was decided in the interest of saving time and money, not to repeat the exhaustive hearings on projects which had been carefully considered and unanimously and favorably reported in 1940 and embodied in last year's bill, House bill 9640, Seventy-sixth Congress. Accordingly no hearings were had in 1941 on the Cherry Creek project; but on March 18, 1940, at the opening of the hearings during the Seventy-sixth Congress on H. R. 9640, page 11, Maj. Gen. Julian L. Schley, Chief of Engineers, United States Army, made the following statement concerning floods in so-called flash streams in the West and the necessity for flood control of Cherry Creek for the protection of Denver:

General SCHLEY. Those are in the semiarid sections, where the river channels have very small capacities and where the rains come like cloudbursts. As the cities grow larger and become more important, the destruction by these cloudbursts is very much greater.

The CHAIRMAN (Mr. WHITTINGTON of Mississippi). You have also submitted a report and recommendation for the protection of the city of Denver, Colo., have you not?

General SCHLEY. That is right

The CHAIRMAN. That is a rather populous area?

General SCHLEY. The possibilities of danger there are very great. It has been simply a matter of great luck that Denver has not had a great catastrophe since it has been a large city. The floods, according to the historic record, have not been anything like as great as they might be.

On April 4, 1940, extensive hearings were held by the Flood Control Committee of the House of Representatives on the Cherry Creek project, 1940 hearings, pages 551–607, 624–625, portions of which I quote as follows:

CHERRY CREEK PROJECT, DENVER

The committee met, pursuant to adjournment at 10:30 a. m., Hon. WILL M. WHITTINGTON (chairman) presiding.

The CHAIRMAN. The committee will be in order, please.

Gentlemen, we have under consideration the projects in Colorado and western areas for today, and we have with us as witnesses representatives from the Army engineers, and others interested in those projects.

The first project we have under consideration is a report published as Document No. 426, Seventy-sixth Congress, First Session, Cherry Creek and its tributaries in Colorado. Mr. LEWIS, of Colorado, is author of the bill and he has furnished me the name of Mr. McQuaid.

Mr. LEWIS, of Colorado. Mr. Chairman, Mr. Dan J. McQuaid, an eminent engineer of Denver, Colo., is recuperating from an accident and is unable to be present. I greatly regret his absence. However, his statement would really be cumulative of that which will be made by the Army engineers of the situation which I wish very briefly to outline, and of the facts set forth in the favorable report of the Corps of Engineers, which is printed as House Document No. 426, Seventy-sixth Congress.

The CHAIRMAN. We will identify the project first.

* * * * *

STATEMENT OF COL. CLARENCE L. STURDEVANT, DIVISION ENGINEER, MISSOURI RIVER DIVISION

The CHAIRMAN. Colonel Sturdevant, you are the engineer in charge of the division in which Denver is located?

Colonel STURDEVANT. Yes; the Missouri River division.

The CHAIRMAN. In which Denver, Colo., is located?

Colonel STURDEVANT. Yes.

The CHAIRMAN. And did you submit the report on this project for your division?

Colonel STURDEVANT. The district engineer at Omaha prepared the basic report and I submitted a recommendation on his report.

The CHAIRMAN. I would like for you to tell the committee generally what this project consists of.

Colonel STURDEVANT. Cherry Creek is a tributary of the South Platte River which flows through the city of Denver, Colo.

The CHAIRMAN. Here is a map if you wish to use it to indicate the locations.

Colonel STURDEVANT. The map showing the drainage area is back of you. The shape of that drainage area is leaf like.

The CHAIRMAN. What are the dimensions?

Colonel STURDEVANT. The total length is about 57 miles and the average width is approximately 15 miles.

The total drainage area is 416 square miles.

The CHAIRMAN. May I interrupt you with a question? This Cherry Creek has its source where with respect to the city of Denver?

Colonel STURDEVANT. About 57 miles south of Denver.

The CHAIRMAN. And flows north?

Colonel STURDEVANT. Flows north into the city of Denver and right at this point [indicating] the creek joins with South Platte River.

The CHAIRMAN. And the creek takes its source down here [indicating]?

Colonel STURDEVANT. Yes.

The CHAIRMAN. And flows north.

Colonel STURDEVANT. Goes right through the middle of Denver.

The CHAIRMAN. And the Platte River flows through Denver also?

Colonel STURDEVANT. Yes.

The CHAIRMAN. Now, along what cities does that pass in that valley?

Colonel STURDEVANT. There are no cities. There are one or two small towns of about 200 population, one of which is somewhat subject to flood and one of the small towns is not subject to flood.

The CHAIRMAN. Now, this creek passes through the city of Denver?

Colonel STURDEVANT. Yes.

The CHAIRMAN. What is the population of Denver?

Colonel STURDEVANT. About 290,000, according to the 1930 census.

NOTE.—According to the final figures on the 1940 census, the population of Denver, not including contiguous and adjacent suburbs, was 322,412.

The CHAIRMAN. Cherry Creek passes around the city?

Colonel STURDEVANT. Right through the city.

The CHAIRMAN. What is the normal discharge of that creek in Denver?

Colonel STURDEVANT. It has a very small, ordinary discharge. It is a very flashy stream, and is just a small creek at times, but the area is subject to very violent cloudburst storms. The peak discharge of record at Denver is 20,000 cubic feet per second.

The CHAIRMAN. That is up in the mountains?

Colonel STURDEVANT. The foothills of the Rocky Mountains. The elevation here [indicating] is about 7,700 feet above sea level, and the city of Denver is approximately 5,200 feet elevation, so there is a drop of about 2,500 feet in that 57 miles, and of course there are some tributaries; it has several tributaries.

The CHAIRMAN. What is the flood problem in Denver and the vicinity of Denver?

Colonel STURDEVANT. The problem is that the watershed of Cherry Creek is located in an area subject to frequent storms of cloudburst intensity, giving the stream a long record of damaging overflow in the city of Denver.

The most damaging flood of record was in 1933, and did a great deal of damage to the city of Denver. On the map just behind you, Mr. Chairman, is shown in blue the area in the city of Denver inundated by the 1933 flood. That flood did physical damage of something over a million dollars.

Just to illustrate the danger, will you look at the small map on the wall [indicating]? There is, we think, a possibility—a very strong possibility—of a flood much more severe than any flood they have ever had in the past. That is illustrated by this chart here, which shows the area in blue where they had an actual rainfall of from 5 to 15 inches in a period of 8 hours, and if that particular flood had been moved over to where the red plot is shown it would have covered—almost fully covered—the drainage of Cherry Creek and would have produced a flood some 10 to 14 times greater than any flood of record.

So we feel that there is quite a dangerous situation in view of what could happen to the city of Denver.

We have proposed to protect the city by means of two detention reservoirs. One of them is located about here [indicating] in the middle of the drainage area at the site of a previous dam that failed during the 1933

flood, and another up here 6¾ miles above the city limits of Denver [indicating on map].

The CHAIRMAN. What is the estimated cost of that project?

Colonel STURDEVANT. Ten million five hundred thousand dollars.

The CHAIRMAN. And what sort of reservoir will it be—earthen or concrete?

Colonel STURDEVANT. They are earth-filled dams—both of them. The upper dam we call the Castlewood Reservoir, which has a height of 212 feet and will store 42,500 acre-feet of water. The lower dam has a height of 104 feet and is to store 69,000 acre-feet of water.

The CHAIRMAN. The largest will store how much, please?

Colonel STURDEVANT. Sixty-nine thousand acre-feet of water.

The CHAIRMAN. What is the estimated cost of the dam in the larger reservoir, and will you give the name of that reservoir for the record again?

Colonel STURDEVANT. The upper one is the Castlewood, and the lower one is designated in the report as Cherry Creek No. 1.

The CHAIRMAN. What is the largest one to cost—the estimated cost?

Colonel STURDEVANT. The upper one, $2,300,000; and the lower one, $8,200,000.

The CHAIRMAN. What is the cost of the rights-of-way in the upper one—the Castlewood Reservoir?

Colonel STURDEVANT. The cost of lands, damages, and rights-of-way is estimated to be about $45,000.

The CHAIRMAN. What is the character of lands that are required at the reservoir site?

Colonel STURDEVANT. They are farm lands.

The CHAIRMAN. Are there any highways or railroads to be removed in the valley to be covered by the projects?

Colonel STURDEVANT. There are no railroads or major highways to be relocated. However, above the upper dam site there is about 1 mile of county road that will have to be relocated and a few county roads above the lower site.

The CHAIRMAN. And that reservoir has a storage capacity of about 43,000 acre-feet?

Colonel STURDEVANT. The upper one has a capacity of about 43,000 acre-feet.

The CHAIRMAN. And the lower one, Cherry Creek No. 1, has how much?

Colonel STURDEVANT. About 69,000.

The CHAIRMAN. And yet it is going to cost four times as much as the one that has 43,000 capacity?

Colonel STURDEVANT. That is right.

The CHAIRMAN. Why the difference in cost?

Colonel STURDEVANT. Due to the conditions at the site. We have a much better site for the upper dam, as the location is in a canyon. The lower dam is necessarily very wide across the valley and is really not a very good dam site, but it is the best we can find.

The CHAIRMAN. The water that is to be accumulated in the lower reservoir has got to pass the Castlewood Reservoir?

Colonel STURDEVANT. Not entirely.

The CHAIRMAN. In other words, there are tributaries?

Colonel STURDEVANT. Yes; there are many tributaries.

The CHAIRMAN. I am talking about the two dams in between the two reservoirs. What is the distance from the one to the other?

Colonel STURDEVANT. About 24 miles.

The CHAIRMAN. Twenty-four miles. Now, will the Castlewood Reservoir accumulate the water which comes down above that reservoir?

Colonel STURDEVANT. Yes.

The CHAIRMAN. And the reservoir at Cherry Creek No. 1 accumulates largely the water which empties into the creek between the Castlewood Reservoir and the lower reservoir?

Colonel STURDEVANT. Yes; largely. Of course, it also receives the regulated flow from the upper reservoir as well.

The CHAIRMAN. Are there any power developments to be installed at either of these reservoirs?

Colonel STURDEVANT. None is contemplated.

The CHAIRMAN. Any penstocks to be installed?

Colonel STURDEVANT. No.

The CHAIRMAN. Is it open, or what is the provision made for the ordinary flow of the water in here between the two reservoirs?

Colonel STURDEVANT. The maximum regulated flow from the upper reservoir will be 2,500 second-feet and from the lower one about 7,500 second-feet.

The CHAIRMAN. Is that continuous at both reservoirs?

Colonel STURDEVANT. Yes.

The CHAIRMAN. They are left open?

Colonel STURDEVANT. They are left open.

The CHAIRMAN. Are there any highways or railways or towns above the lower reservoir?

Colonel STURDEVANT. No railroads or major highways will have to be relocated. Some county roads and a small community of a few houses (Melvin) will have to be relocated.

The CHAIRMAN. What is the estimated cost of the lands and the damages for Cherry Creek No. 1?

Colonel STURDEVANT. The estimated cost of lands, damages, and rights-of-way is approximately $150,000.

The CHAIRMAN. In the report here you show the total estimated cost of both these reservoirs up around $10,500,000?

Colonel STURDEVANT. Yes.

The CHAIRMAN. Now, how far is it from the city of Denver to the mouth of Cherry Creek?

Colonel STURDEVANT. The mouth of the creek is in Denver.

The CHAIRMAN. That is what I wanted to find out. How far is it from Denver to the mouth?

Colonel STURDEVANT. It flows into the Platte River in Denver.

The CHAIRMAN. And what happens to the Platte River from there?

Colonel STURDEVANT. It flows east into Nebraska.

The CHAIRMAN. Is there any flood problem by reason of the Platte River flowing through the city of Denver?

Colonel STURDEVANT. No; no great flood problem on the Platte itself.

The CHAIRMAN. Has there ever been any danger to the city or community from that river?

Colonel STURDEVANT. From the Platte?

The CHAIRMAN. Yes.

Colonel STURDEVANT. No.

The CHAIRMAN. Does it go through as much of the city as Cherry Creek?

Colonel STURDEVANT. I think more, but it does not have the flood problem.

The CHAIRMAN. Very well. About where does Cherry Creek empty into Platte River with respect to the city of Denver?

Colonel STURDEVANT. Very close to the center of the business section. On the map you will see that it is near the railroad station.

The CHAIRMAN. But the flood problem is largely from Cherry Creek and not the Platte?

Colonel STURDEVANT. Yes. There is no record of a serious flood at the same time as a flood in the creek, nor of a serious flood caused by the Platte alone.

The CHAIRMAN. What local protective works have been constructed along the Platte River or along Cherry Creek?

Colonel STURDEVANT. The entire length of Cherry Creek within the city limits has been improved by the city; that is, the banks have been smoothed up and concreted so that it has a carrying capacity now of about 10,000 second-feet.

In addition to that the local interests have built a dam about 5½ miles above the city, called the Kenwood Dam. That is a detention reservoir which limits the flow to about 7,500 cubic feet per second and it is satisfactory for the protection against such floods as have occurred in the past, but it is obvious that Denver should have a much larger degree of flood protection. If Kenwood Dam should be overtopped and destroyed, the resulting damage to Denver would be greater than if the dam had not existed.

The CHAIRMAN. Where is that located with respect to Cherry Creek Reservoir No. 1 and Castlewood Reservoir?

Colonel STURDEVANT. The Kenwood Dam is right on Cherry Creek just about a mile and a quarter below No. 1, and Castlewood is here [indicating].

The CHAIRMAN. About 20 miles above?

Colonel STURDEVANT. Twenty-four miles.

The CHAIRMAN. What is the capacity of the Kenwood Reservoir?

Colonel STURDEVANT. The original capacity was about 10,000 acre-feet at spillway-crest elevation. Of course, this capacity has been decreased somewhat by sedimentation.

The CHAIRMAN. Is that reservoir still being maintained?

Colonel STURDEVANT. Yes.

The CHAIRMAN. When was it constructed?

Colonel STURDEVANT. Shortly after the flood of 1933.

The CHAIRMAN. And when were the improved channels and bank facilities constructed?

Colonel STURDEVANT. I think they have largely been constructed since that time also.

The CHAIRMAN. Prior to the year 1933 what local protective works have been constructed in the city of Denver and about the city of Denver for protection by the local interests?

Colonel STURDEVANT. I cannot answer that.

The CHAIRMAN. Are there levees in the city?

Colonel STURDEVANT. Yes; they have not only done bank-protective work but have built levees. I cannot say how much.

The CHAIRMAN. What is the existing valuation of the property that will be protected by these two dams you referred to?

Colonel STURDEVANT. About $23,000,000 in the city of Denver.

The CHAIRMAN. Any other property to be protected?

Colonel STURDEVANT. Of course, they will protect the whole valley, but there will not be a great deal of property involved compared to that in Denver.

The CHAIRMAN. And how far is it from the city; when you say the valley, you mean from the city of Denver to the first reservoir?

Colonel STURDEVANT. Yes; and in between the two reservoirs. Between the two reservoirs property would be protected. Farm lands and ranches would be protected, and that amounts to something, but protection of Denver is the main purpose of the reservoirs.

The CHAIRMAN. What local protection works have the farm landowners ever constructed for their own protection?

Colonel STURDEVANT. None so far as I know.

The CHAIRMAN. I see. Now, the river flows through the city 5 or 6 miles?

Colonel STURDEVANT. Yes.

The CHAIRMAN. This creek, I mean?

Colonel STURDEVANT. Yes.

The CHAIRMAN. Five or six miles?

Colonel STURDVANT. Yes.

The CHAIRMAN. Outside the city limits how far is it to Cherry Creek Reservoir No. 1?

Colonel STURDEVANT. Six and three-quarter miles.

The CHAIRMAN. Any questions, Mr. Curtis?

Mr. CURTIS. Yes. During what months of the year are there heavy rains in the Cherry Creek Basin?

Colonel STURDEVANT. The big floods usually come in May, June, and July.

Mr. CURTIS. What do you propose to do with the water in the reservoir; will it be held and released immediately when the flood danger is passed?

Colonel STURDEVANT. At the upper reservoir a small amount will be held, about 8,000 acre-feet out of 43,000 feet will be held there for such other uses as may be desired, possibly irrigation or any other purpose. But the remainder of any floodwater caught would be released immediately, as fast as it could safely be done. At the Cherry Creek No. 1, water would be held no longer than necessary.

Mr. CURTIS. That is the one closest to town?

Colonel STURDEVANT. That is the one closest to Denver.

Mr. CURTIS. And you say about 8,000 acre-feet will be held at the upper one?

Colonel STURDEVANT. Will be held at the upper site; yes.

Mr. CURTIS. What effect will that have upon the water released into the Platte Basin that flows on through Colorado into Nebraska for irrigation; will it affect the amount of water?

Colonel STURDEVANT. Not very appreciably; no. The capacity of those reservoirs is very small, and even if filled by flood they will be emptied in a very few days. They will not greatly change any low-water stage in the lower Platte region.

Mr. CURTIS. It will not interfere with water they are getting for irrigation in that section?

Colonel STURDEVANT. No.

Mr. CURTIS. How much land could be irrigated by this 8,000 acre-feet?

Colonel STURDEVANT. About 4,300 acres.

Mr. CURTIS. That is all.

The CHAIRMAN. Was there a reservoir formerly at Castlewood?

Colonel STURDEVANT. Yes.

The CHAIRMAN. About when was that destroyed?

Colonel STURDEVANT. It was destroyed in the 1933 flood.

The CHAIRMAN. Who constructed it?

Colonel STURDEVANT. A private irrigation company.

The CHAIRMAN. It was built by some private irrigation company?

Colonel STURDEVANT. Yes.

The CHAIRMAN. At the same location where the present Castlewood Reservoir is to be located?

Colonel STURDEVANT. Yes.

The CHAIRMAN. Does the private irrigation company still own the reservoir site?

Colonel STURDEVANT. It is my impression they have abandoned it.

The CHAIRMAN. It has been abandoned?

Colonel STURDEVANT. Yes; I have been so informed.

The CHAIRMAN. Was any flood protection afforded by that reservoir?

Colonel STURDEVANT. Yes; but evidently it was too small for flood protection, as indicated by the fact it was overtopped and destroyed.

The CHAIRMAN. We are very glad to have had your statement.

STATEMENT OF HON. LAWRENCE LEWIS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF COLORADO

Mr. LEWIS of Colorado. Mr. Chairman and gentlemen of the committee, at the outset I wish to say that the entire Colorado delegation is interested in this project. All would be here this morning to evidence their interest were it not that they are obliged to attend meetings of other committees.

The CHAIRMAN. They will have opportunity to appear along with other Members of Congress next Tuesday.

Mr. LEWIS of Colorado. Yes; I do not know that they will all be able to come even then.

Congressman CUMMINGS was here a few minutes ago, but he had another committee meeting and was obliged to leave.

Congressman EDWARD T. TAYLOR, the beloved dean of our delegation, also asked me to say to you and to your committee that he should like to be here. As you know, he has not been well, but he asked me to express to you, Mr. Chairman, and to this committee his very great interest in this project for the flood control of Cherry Creek for the protection of Denver, the capital city of Colorado.

Senators ADAMS and JOHNSON of Colorado sent word to me that they are obliged to attend Senate committee meetings; but they charged me to say that they also are deeply interested in this project.

You referred at the outset to the fact that I had expected to have here as a witness Mr. Dan J. McQuaid, the engineer and executive secretary for the Denver Flood Control Association, which is an informal organization of prominent businessmen of Denver. But Mr. McQuaid has been detained in Denver by illness.

Judge Clifford H. Stone, director of the Colorado Water Conservation Board, and Mr. J. M. Dille, also of that board, are here to manifest their interest in this project. But they tell me that, in order to save the time of this committee, they do not care to make any statement, but wish to have the record show their presence and that they favor the project.

Mr. William P. Redding, a representative of the Denver Chamber of Commerce, also expected to be here, but he was obliged to be in New York City today. He has, however, sent me a letter in which he asks me to say that the Denver Chamber of Commerce wishes to go on record as earnestly requesting your committee to give most serious consideration to the Cherry Creek flood-control project for the protection of Denver. I have also received letters from public officials, various organizations, prominent businessmen, and other citizens strongly urging the approval of this project.

However, I believe your committee is more interested in the technical side of this project, as set out in the Army engineers' report, and in the statement by Colonel Sturdevant.

First of all, I wish to cover one or two points. In the basin of Cherry Creek, upstream from Denver, are a few small towns and other settlements—for example, Franktown, Parker, Melvin, and Sullivan. Of these comparatively small places, Parker, with a population of 200, would suffer the most—including some loss of life—from a major flood. But, except at Parker, most of the loss from a major flood upstream from Denver would be to the farms and ranches—to the agricultural and grazing interests in the Cherry Creek Valley to the south of Denver, and to the highways, including bridges.

As Colonel Sturdevant has said, this stream rises 57 miles south of Denver, and, on reaching the city, it flows between two tree-lined boulevards, first through one of the finest residential districts, known as the Country Club district, then through the business, wholesale, and industrial districts, and through the railroad yards to its confluence with the South Platte.

There is a drop of 2,500 feet in the 57 miles from the source of Cherry Creek to the point where it empties into the South Platte River in the heart of the city. As shown by that long topographic map [indicating map], the entire drainage area of Cherry Creek is about 57 miles long and only about 15 miles wide. The total area of the watershed is about 416 square miles. The main channel is located in about the middle of the watershed and extends slightly northwest downstream. The main channel is fed by almost innumerable tributaries, which are all very steep and comparatively short. Ordinarily they are mere dry gulches.

The site of the new Castlewood Dam recommended by the Army engineers is about 200 feet downstream from the site of the old Castlewood Dam, which failed during the flood of August 2–3, 1933. This new dam site is about 4 miles south of Franktown and about 27 miles south of the corporate limits of Denver.

When reference is made to a flood which threatens the safety of a city, doubtless there comes to the minds of most Members of Congress a picture of the comparatively slowly rising waters of a great river swollen by melting snows or by heavy rains at the headwaters. Of the approach of such a flood there is usually a period of a day or two or several days—sometimes as much as 10 days or 2 weeks—within which the menaced city can make preparations to safeguard life and property before the arrival of the crest of the flood. During such interval, emergency dikes or levees can be erected to supplement permanent flood-control works and inhabitants can be warned to get out of the lowlands.

Denver's "Sleeping Tiger"

In Colorado and elsewhere in the so-called semiarid regions of the West, cities are menaced by floods with entirely different characteristics, by floods from insignificant-looking "flash streams," floods which come almost with the suddenness and lack of warning of a stroke of lightning and which, after wreaking terrible damage, quickly subside. Although such floods rarely last more than 24 hours, nevertheless, because of their sudden incidence and the lack of time to make emergency preparations against their attack, they are more disastrous to the city so inundated than are floods in the great rivers. The only sure safeguard for a city so menaced is the provision of permanent works adequate to control any flood which is likely to occur.

Such is the type of flood which, every year, from the last of April until the first of October, is an hourly menace to Denver, from the usually insignificant appearing and seemingly harmless stream known as Cherry Creek.

Since Denver was first settled, floods from this stream have, in the aggregate, caused the loss of millions of dollars of property and about 100 lives. So treacherous is Cherry Creek and so dangerous when aroused that I have often referred to it as "Denver's sleeping tiger."

Denver is a comparatively young city. It is only 82 years old. It was founded in 1858 when some gold seekers from Georgia who had been to California looking for gold found a few Indians who were camped near the confluence of Cherry Creek and the South Platte River in what is now the heart of Denver. That was the first group of white men that had come in there, except a few trappers and a few explorers who had gone through the country some years before.

These Georgians panned for gold in Cherry Creek. They found "color" of gold in the stream and they followed it down to the South Platte on to Clear Creek, which is another tributary of the South Platte, and then up Clear Creek, where later were discovered lode deposits in place. These discoveries started the so-called "Pike's Peak or bust" gold rush in 1859 and 1860. It was so called because the entire region north of the Arkansas River and east of the Rocky mountains in what is now Colorado, was then known as "the Pike's Peak region."

Denver was settled as a result of that gold rush. There are men living today, one or two of them Members of the Congress of the United States, whose span of life is equal to the entire age of the city of Denver.

When the white men first came in there, the Indians warned them not to build in the Cherry Creek Valley. "No build tepees down there. Big flood come some day."

The Indians undoubtedly knew from experience and tradition of the dangers of which they warned the white men. Indeed, the topography of the Cherry Creek Valley clearly indicates that there have been in the past few centuries larger floods than have been experienced since Denver was first settled.

It is perfectly clear that, in all probability amounting to a practical certainty, far greater floods may be expected in the future than have come since the arrival of the white men. Eighty-two years is but a moment in the life of a stream—a mere "cat nap" in the life of "Denver's sleeping tiger."

Denver has experienced 14 major floods from Cherry Creek since the first settlement in 1858–59 and several smaller ones.

Probably the largest flood was that of May 19–20, 1864, of which the records are very meager, but which did a tremendous amount of damage even to the little pioneer village. As Colonel Sturdevant has indicated, the flood of August 2–3, 1933, covered the portion of the city which is colored in green on this map [indicating map]. That was the second largest flood. After this 1933 flood there was constructed, at a cost of about $880,000, the so-called Kenwood Dam, about 5½ miles above the city limits. Cherry Creek Dam No. 1—one of the two dams, construction of which is recommended by the Corps of Engineers—would be about 1¼ miles upstream from the present Kenwood Dam and about 6¾ miles upstream from the corporate limits of Denver. This Cherry Creek Dam No. 1 is, in addition to the proposed Castlewood Dam, already mentioned. The Engineer Corps of the Army in their report emphasize that the construction of both of these dams is essential for the protection of Denver from a ghastly major catastrophe.

Mr. TIBBOTT. May I interrupt you?

Mr. LEWIS of Colorado. Yes.

Mr. TIBBOTT. What flood on Cherry Creek was it that took away the courthouse and the records?

Mr. LEWIS of Colorado. That was the flood of 1864. Furthermore, as this map indicates during the flood of 1933, much of the downtown area—colored green on the map—was covered, and in the basement of the old city hall there were a large number of records which were damaged or destroyed.

Referring further to this map: This area—beyond the area colored green but enclosed within the red and black broken lines—is above the area inundated by the 1933 flood [indicating]. But that entire area within the red and black broken lines would be inundated by the major flood which the Army engineers predict is threatened. It is the additional area to be protected by the two dams recommended by the Army engineers in their report.

The South Platte River flows through Denver as appears on this map. Beginning at a point some distance beyond the city limits to the south, continuing throughout its entire course through the city and for some distance downstream beyond the corporate limits to the north, the channel of the South Platte has been widened, deepened, and the banks have been raised and riprapped with stone.

I am not an engineer, but studies indicate that, since these widenings and straightenings of the river through the city and the levee work, there is no danger of flood from the South Platte. The greatest menace to our city comes from this insignificant and harmless appearing stream called Cherry Creek.

The CHAIRMAN. Has other protective work been done on Cherry Creek?

Mr. LEWIS of Colorado. It has been walled and straightened and the channel has been deepened; but, as Colonel Sturdevant indicated, it is very clear that that work is not sufficient to take care of this flood which is apprehended. I dare say there has been enough said here about the character of these flash floods to acquaint the members of this committee with them. I think the average man, and probably the average Member of Congress, has in mind floods brought about by slowly rising waters of the great rivers.

The CHAIRMAN. I think we have a pretty fair understanding of the situation.

Mr. LEWIS of Colorado. It is much different in our State. They come like a flash of lightning.

The CHAIRMAN. We have heard all about them.

Mr. LEWIS of Colorado. And there is no time to prepare for them or to get out of their way. And there is no possibility of determining when they will come or how big they will be. I think the gentleman from Nebraska, Mr. CURTIS, understands that situation.

As a consequence, our only protection is to erect permanent works of sufficient size and capacity to take care of any flood which will probably come. Perhaps you would like to know why we say this danger is imminent and—imminent all the time, every day and every night, between the last of April and the following October. First of all, we have the experience of adjoining watersheds. Colonel Sturdevant has referred to the fact that this area here [indicating on the map] which is marked in blue is the watershed of Kiowa Creek. Right adjacent thereto is the watershed of Bijou Creek. The storm of May 30–31, 1935, covered the entire drainage areas of these two creeks. Walls of water, literally walls, like waves in the ocean 11 feet high, came down Bijou Creek and Kiowa Creek and did immense damage. A number of lives were lost as a result of that flood.

Now, I wish to emphasize this point particularly: All of the floods in Cherry Creek from which Denver has suffered since its settlement were caused by storms the intensity of which prevailed over only a part of the entire Cherry Creek watershed or drainage area. During the last 82 years, there has been no intense rainstorm or cloudburst which has covered at one time the entire Cherry Creek drainage area and its innumerable tributaries.

But, as Colonel Sturdevant has pointed out, if the storm of May 30–31, 1935, which visited the entire drainage areas of Kiowa and Bijou Creeks, had moved westward only 10 or 15 miles and had covered all the drainage area of Cherry Creek, Denver would have experienced a flood 14 times as great as any that has been experienced since 1858 when Denver was first settled.

Ordinarily, the water in Cherry Creek amounts to nothing more than an amount of water that could be supplied by three or four fire hydrants turned into the bed of the creek. These floods come with great suddenness. They pass off within 24 or 48 hours. They come with lightning-like suddenness and then this treacherous stream, if you may call it such, returns in a short time to its normal state of quiescence.

If I may draw the committee's attention, Mr. Chairman, to this aerial mosaic map over here, I can answer some of the questions which the chairman was asking.

This is the boundary of the city limits here and this is Cherry Creek. This is the South Platte River. [Indicating mosaic map.] The confluence is here just in the heart of Denver.

In the heart of the city, damage has been suffered from the 14 floods Denver has experienced. These are the railroads, and in entering the city limits you come to Cherry Creek. This creek goes through a very fine residential district—the Denver Country Club is there [indicating] and then down on into the business and wholesale and industrial district and down into the railroad yards.

This anticipated flood to which I refer—the limits of the flood which would occur if a major storm moved over 10 or 15 miles and covered the entire Cherry Creek watershed—the limits of it are indicated by this broken red and black line on the map.

I wish to refer to some of the Government buildings which would be flooded. This is all a very closely built section, as shown by this mosaic map [indicating]. The business district and wholesale and industrial district is down here, and over here is the city and county building, which is a new building, costing two or three million dollars.

The CHAIRMAN. Is that above the flood area?

Mr. LEWIS of Colorado. No, sir; it is within the area of the predicted flood.

The CHAIRMAN. This is the flood area here, is it?

Mr. LEWIS of Colorado. This green area is the area which the 1933 flood covered.

The CHAIRMAN. That is your maximum flood according to your report?

Mr. LEWIS of Colorado. No.

The CHAIRMAN. Of record?

Mr. LEWIS of Colorado. Of record; yes. The predicted flood would cover the area included within the broken red and black line. Here is the United States Mint [indicating]. Something just under $4,000,000,000 in gold bars is stored in the vaults in this building. There is also stored there about a billion and a half of silver. A few years ago nearly all the gold and silver stored on the Pacific coast was, for obvious reasons, moved to Denver for storage—far from the seacoast. This bullion would not be destroyed by water; but if it was covered with silt-laden water, the loss in cleaning would be considerable, because the mere handling of fine gold bars always causes considerable loss.

The CHAIRMAN. All of this area in here is where major floods have occurred and the red lines indicate where the predicted floods will take place?

Mr. LEWIS of Colorado. Yes, sir.

The CHAIRMAN. And the buildings you mention are within the limits of the predicted floods?

Mr. LEWIS of Colorado. Yes. And there are a great many other important buildings within the limits of the predicted flood, including hospitals, streetcar barns, electric power and light substations, factories, industrial and manufacturing buildings, and so forth.

I do wish, however, to call your particular attention to the loss of life which would come with the predicted flood. We have already lost about 100 lives from floods in the past and some millions of dollars of property damage. But when this predicted flood comes, it is the considered opinion of the Army engineers, who are not alarmists, that "the flood would arrive with little warning and velocities would be sufficient to prevent rescue work. * * * Numbers of people would probably also be trapped in the area between Cherry Creek and the South Platte, as there would be a heavy flow over the divide between the two streams. It is quite possible that a loss of several hundred lives might occur." And such a flood is sure to come, in my judgment, and, more important, in the judgment of the Army engineers. Not this year, we hope and pray, perhaps not next, maybe not in the next 5. But we may be sure that the "big flood" the Indians warned against and that careful meteorological calculations demonstrate continually impends is coming sooner or later. We have no means of protecting ourselves against it except by the erection of permanent works.

Now, in the district here [indicating], if I may again call the attention of the chairman and members of the committee to the map, there undoubtedly would be an overflow right across this area between Cherry Creek and the South Platte River. This area is very closely built up with comparatively modest residences. If that major flood came and went in through here [indicating], it would seem inevitable that the loss of life would be terrific.

I emphasize again, there is no time when one of these floods comes for the people to get out of the inundated area; there is no time or chance for warning. It comes like a stroke of lightning. It comes in a wall of water, literally like a tidal wave in the ocean. I was not in Denver during the flood of August 2–3, 1933, but I have been told about it by those who watched it from high ground. There was a low, rumbling roar, and down the creek came a wall of water 10 feet high, which, of course, was heightened by the failure of the Castlewood Dam. It carried

dead cows and horses, outhouses, logs, even good-sized trees and debris of wooden bridges. It swept everything before it.

Cherry Creek is in the cloudburst zone. It may reasonably be anticipated that, any spring or summer, another storm of intensity equal to that which visited the entire drainage area of Bijou and Kiowa Creeks in May of 1935 will occur 10 or 15 miles to the west and will cover the entire drainage area of Cherry Creek and cause a flood, the effect of which upon Denver would be that of a first-class catastrophe. As Maj. Gen. J. L. Schley, Chief of Engineers, stated in his testimony before this committee on March 18, 1940:

"The possibilities of danger there are very great. It has been simply a matter of great luck that Denver has not had a great catastrophe since it has been a large city. The floods, according to the historic record, have not been anything like as great as they might be."

The CHAIRMAN. Was there any actual loss of life in that flood?

Mr. LEWIS of Colorado. I understand there was in the flood of 1933; but I do not have the figures at hand and dare not trust my recollection.

The CHAIRMAN. Prior to 1933, what improvements had the local people made along Cherry Creek in the city of Denver?

Mr. LEWIS of Colorado. Prior to 1933 they had widened and straightened the channel of the creek through the city here [indicating on map] and lowered the bed of the channel and also raised the levees through there [indicating]. It cost one or two million dollars, as I recall.

The CHAIRMAN. Now, what works have been built since 1933?

Mr. LEWIS of Colorado. Since that they have erected this Kenwood Dam that Colonel Sturdevant referred to. The experience of the Kiowa flood in 1935, May 30 and 31 of 1935, has changed the estimates——

The CHAIRMAN. Did the Federal Government contribute to the cost of the Kenwood Dam?

Mr. LEWIS of Colorado. I think the P. W. A.; yes, sir; I am quite sure they made some sort of a grant. I don't know how much, or it may have been a loan.

The CHAIRMAN. Did W. P. A. or any other Government organization assist in improving these works along the stream here since 1933?

Mr. LEWIS of Colorado. Up above here [indicating], above the city limits—the city limits are right here [indicating], which does not show on this map. They have done some levee work there; yes, sir.

The CHAIRMAN. Was it work of any consequence or was it just minor protection?

Mr. LEWIS of Colorado. Well, relative to these dams which the engineers have recommended, they are minor.

The CHAIRMAN. What would you say the various relief agencies, emergency agencies, and employment and unemployment agencies have spent during the present administration on this project?

Mr. LEWIS of Colorado. You mean during the Roosevelt administration?

The CHAIRMAN. That is right.

Mr. LEWIS of Colorado. They have done a good deal of W. P. A. work. I can't tell you exactly, but I can procure those figures for you.

The CHAIRMAN. You may insert them in your remarks when you revise them.

Mr. LEWIS of Colorado. I would say, and this is subject to revision, that the Public Works Administration contributed perhaps several hundred thousand dollars. Then the W. P. A. labor on the levee construction, which was carried on by the city engineers, has been considerable. But I haven't that definite information here at the moment.

The CHAIRMAN. These two reservoirs are primarily for flood control?

Mr. LEWIS of Colorado. They are absolutely for flood control.

The CHAIRMAN. With all deference, according to the report here, the Castlewood Reservoir is also for irrigation purposes and expects an income of something like $11,000 annually.

Mr. LEWIS of Colorado. I might say that the two Federal agencies other than the Corps of Engineers that have examined this problem, namely, the Department of Agriculture and the Reclamation Bureau, have agreed with the Army engineers as to the character of the flood which is coming. For reclamation in the Castlewood Reservoir they estimate or contemplate about 8,000 acre-feet of storage. * * *

The reclamation feature is relatively so unimportant when compared to the great importance of the protection of our city against this ghastly tragedy which impends that it is not worth considering. The total income that would be derived from that, as estimated, is only about $11,000 a year, and it is doubtful as to whether that could be secured.

* * * * *

The CHAIRMAN. If this project is approved as reported by the Chief of Engineers will it provide for reclamation features?

Colonel STURDEVANT. It simply provides for the possibility of future development for irrigation if it is desired, but the estimate here includes nothing for irrigation. The control works will be so located that 8,000 acre-feet will be available for any use that may be desired, but the estimates do not contemplate any expenditures whatever for the development of irrigation.

General ROBINS. What he means is that provision is made, and the reservoir's capacity is sufficient, to permit of irrigation if they need it.

The CHAIRMAN. And what he further means is that the income from that would be around $11,000 a year.

Mr. LEWIS of Colorado. Possibly.

General ROBINS. Possibly.

The CHAIRMAN. Any further statement, Mr. LEWIS?

Mr. LEWIS of Colorado. I think I have pretty well covered the situation. I could talk for hours on it. I have pictures and I have graphs, but I don't know that the committee is interested in those. In conclusion, I wish to call attention, briefly, to some important facts:

Including the contiguous suburbs not in the corporate limits, Denver's population is now about 350,000. [NOTE.—In the so-called Denver metropolitan district, including the adjacent suburbs, which are outside the corporate limits of the municipality known as the city and county of Denver, the population, according to the final figures on the 1940 census, which were not available at the time of these hearings, was 384,372. Of this number, 322,412 were within the corporate limits of the municipality.] It is the commercial and financial center of the entire Rocky Mountain region. A glance at the map shows that on the main stem of the Ohio River, from Louisville, Ky., down to Cairo, Ill., and on the main stem of the Mississippi from St. Louis to New Orleans, there is no city as great in population or in wealth as Denver, and no city which is as vulnerable to floods from those great rivers as Denver is vulnerable to attack by floods from the comparatively insignificant Cherry Creek.

The CHAIRMAN. Any questions by Mr. Ball or by Mr. Curtis or by Mr. Lewis [Ohio]?

Mr. LEWIS of Ohio. No; I think no.

The CHAIRMAN. Mr. LEWIS [Colorado], we are glad to have your statement, sir. If you have any other witnesses we will be glad to hear them at this time.

Mr. LEWIS of Colorado. None at this time. I simply want to repeat that the Senators and Representatives of our entire Colorado delegation are unanimously in favor of this project.

The CHAIRMAN. We are glad to have had your statement.

ADDITIONAL STATEMENT OF COL. CLARENCE L. STURDEVANT, DIVISION ENGINEER, MISSOURI RIVER DIVISION

Now, Colonel Sturdevant, as I understand the Chief of Engineers recommends Castlewood Reservoir and I read from this report that the proposed dam at Castlewood Reservoir would have 8,000 acre-feet of storage for irrigation works and that the sale of irrigation water should yield a revenue estimated at $11,000 annually. And you recommend the construction of the Castlewood Reservoir and the Cherry Creek Reservoir at an estimated cost of $10,500,000, and at present no provision is made for irrigation?

Colonel STURDEVANT. No, sir. The only provision is for the location of outlet works in order to retain the 8,000 acre-feet.

The CHAIRMAN. The Platte River into which Cherry Creek empties is a tributary of what stream?

Colonel STURDEVANT. It joins the North Platte River near the city of North Platte, Nebr., and then flows into the Missouri River a short distance below Omaha at a small town called Plattsmouth.

* * * * *

The CHAIRMAN. At this time the Senate is in session, and they have a very important matter pending. I notice Senator JOHNSON is here, and I wonder, Mr LEWIS [Colorado], if the Senator desires to make a statement at this time.

We have a day set aside for Senators and Representatives next Tuesday, but we shall be glad to extend the privilege to you now, Senator.

STATEMENT OF HON. EDWIN C. JOHNSON, A UNITED STATES SENATOR FROM THE STATE OF COLORADO

Senator JOHNSON. Mr. Chairman and members of the committee, I thank you for your courtesy.

I understand that Congressman LEWIS [Colorado] has presented the Cherry Creek matter to you, and I know when he presents a matter to you it is exhaustively done and it doesn't leave very much for anyone else to say.

I am simply here to show my interest in the Cherry Creek flood-control project. Senator ADAMS had to attend a meeting of the Appropriations Committee or he would have attended this meeting with me to show his interest, as I am showing mine.

Thank you.

The CHAIRMAN. Do you feel that the public welfare would be promoted and that this project as reported by the Chief of Engineers is justified?

Senator JOHNSON. I certainly do.

The CHAIRMAN. We are glad to have your statement, Senator.

Senator JOHNSON. It is a very, very necessary project, because great damage may ensue from a flood unless the project is undertaken.

The CHAIRMAN. We are glad to have your statement.

Mr. Speaker, at the time the President signed the flood control authorization bill, he made a statement as follows:

The flood-control bill (H. R. 4911) authorizes the construction of new flood-control projects, but it does not make any appropriations for that purpose. The projects are to be undertaken "as speedily as may be consistent with budgetary requirements" from whatever funds may be appropriated.

In approving this bill I wish to make it clear that during the present emergency I do not intend to submit estimates of appropriation or approve allocations of funds for any project which does not have important value in the national defense.

Since the bill was approved I have received a letter from Maj. Gen. Julian L. Schley, Chief of Engineers, which is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, August 22, 1941.

Hon. LAWRENCE LEWIS,
House of Representatives,
Washington, D. C.

MY DEAR MR. LEWIS: As a result of your recent conference with this office, I am pleased to give you the following information with respect to the proposed project for flood control on Cherry Creek at and in the vicinity of Denver, Colo.:

The Flood Control Act of August 18, 1941, approves the comprehensive plan for the improvement of Cherry Creek and its tributaries for flood control, and other purposes, in accordance with the recommendations of this Department as set forth in House Document No. 426, Seventy-sixth Congress, 1st session, and authorizes the amount of $3,000,000 for the initiation and partial accomplishment of the project. The plan of the Department, as presented in House Document No. 426, consists of two reservoirs on Cherry Creek above Denver, to be located at the Castlewood site and at a site known as Cherry Creek No. 1, which is located near the upper limit of the existing Kenwood Reservoir. The entire project is estimated to cost about $10,500,000.

As the authorization contained in the Flood Control Act of 1941 will not cover the entire cost of both reservoirs, the Department must select the work to be undertaken pursuant to the partial authority made available by that act. Since the Flood Control Act provides authorization only and does not make funds available for the projects authorized, the start of the actual construction work is dependent upon the provision by Congress of funds applicable to that work in a subsequent appropriation act. In this connection I may mention that the President, in his communication of July 3, 1941, to the Speaker of the House of Representatives regarding the flood-control bill (H. R. 4911), stated that until the end of the present international emergency the initiation of new construction work should be restricted to projects having important defense values. In approving the flood-control bill the President reaffirmed this statement of policy with respect to the initiation of new flood-control projects.

In the development of the comprehensive plan for flood control on Cherry Creek the Department made very extensive investigations of the flood problem on that stream including surveys of the areas subject to flooding and detailed analyses of the meteorological and hydrological conditions which cause flood-producing storms in the Cherry Creek Basin. Cherry Creek lies in the cloudburst zone of eastern Colorado and has suffered damaging floods since the earliest development of that region. It was found that it would be entirely possible for a flood much larger than any previous flood to occur on Cherry Creek and that such a flood would result in enormous damages to property at Denver and might cause loss of life. The project proposed by the Department, which has now been approved by Congress, will control adequately the largest flood which can reasonably be expected on Cherry Creek at Denver and will also elminate nearly all damages to the agricultural lands along Cherry Creek upstream from that city. In addition to the flood-control features of the project, water can be stored in the Castlewood Reservoir to provide a water supply for irrigation when development for irrigation is feasible.

As is clearly brought out in the report of the Department in House Document No. 426, and in the testimony of the Department's representative before the Flood Control Committee of the House of Representatives, the Department considers the Cherry Creek project to be of major importance for the protection of the City of Denver and nearby agricultural developments. It believes that that project is one of the most important projects authorized in the recent act from the standpoint of flood control, because of the seriousness of the potential flood hazards in that area and the tremendous damage which would result from major floods which may occur at any time in that watershed. You may be assured that the Department is fully prepared to initiate the construction of the approved dams on Cherry Creek without delay when funds for that purpose become available.

Very truly yours,
J. L. SCHLEY,
Major General,
Chief of Engineers.

Resolution of Young Democratic Clubs of America

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

Mr. RIVERS. Mr. Speaker, the resolutions committee of the Young Democratic Clubs of America, in convention assembled at Louisville, Ky., August 21, 1941, met and considered many resolutions that were submitted on various subjects. It was the consensus of the committee membership that all resolutions should be tabled with the exception of a resolution dealing entirely with the present world crisis. It was further decided that seriousness of the hour demanded that no other subject be permitted to detract from the importance of bringing to the attention of the American public that the young Democrats of America, representing 4,000,000 of the cream of American youth, stood solidly behind the national administration and President Roosevelt in all present foreign and domestic policies.

The following resolution was adopted by the Young Democratic Clubs of America in convention assembled, Louisville, Ky., August 23, 1941:

In the past 2 years since our last convention, the wave of aggression has grown. Today it threatens to engulf the entire world. If it succeeds, it will force mankind to live in a state of servility to godless and brutal overlords.

The wave is Nazi Germany, accompanied by its twin jackals, Japan and Italy. Against this menace the nations of Europe were divided in their councils. They failed to take the measures necessary to protect themselves. Some tried to appease Hitler. Others were too frightened to act or were beguiled by insidious propaganda and lies. And, one by one, the nations of Europe paid in blood and indescribable suffering. We know now that any nation which tries to ride the wave will inevitably be engulfed. Continental Europe lies prostrate under the heel of the Nazis. Only Great Britain and Russia are left and they are fighting for their lives.

The wave of nazi-ism has reached other continents and threatens the Western Hemisphere. Its armies are marching in Africa. Its marauders are raiding the seas. Its ally, Japan, seeks hegemony over the Orient. Its agents and saboteurs are in America. We believe that the Nazis will try to attack America as they have invaded other continents. The United States must heed the danger it faces. We must be united in our councils. We must aid in every way the nations and peoples who are resisting aggression. We must fight to safeguard our security and our freedom. The United States can never be assured peace and security unless the wave of aggression is swept back and defeated.

Now, therefore, we commend our great President, Franklin D. Roosevelt, and our great Secretary of State, Cordell Hull, for their courageous and astute conduct of our foreign affairs, and we stand with them in their titanic fight against the armed might of Nazi Germany.

We approve of the policy of full and complete aid to the people of Great Britain who are today serving in the front line of the war.

We approve of the policy of full and complete aid to China, which for 4 terrible years has battled to a standstill the militaristic overlords of Japan and has helped us protect our interests in the Pacific.

We approve of the policy of full and complete aid to Russia, believing that our hatred of communism and our determination to destroy its roots in this country should not blind us to the fact that Russia is battling our common enemy.

We further believe that to aid nations and peoples resisting aggression the policy must be implemented by the effective measures to insure delivery of materials utilizing every facility at our disposal.

We are in complete accord with the President that those obstructionists who still wear the Democratic label are in the wrong party.

We believe that Democrats must follow the leadership of President Roosevelt in the conduct of our foreign affairs. Those Democrats who have consistently opposed the foreign policies of the President have no place in the Democratic Party.

We believe most Democratic Members of Congress do not doubt the authenticity of the statements of the President, the Secretary of War, and the Chief of Staff of the United States Army that our country is in dire peril.

We condemn irresponsible persons who are trying to sow the seeds of disunity by their reckless statements, incompetent opinions, and irresponsible utterances which have gone so far as to disclose vital military information.

We believe that our military leaders should be authorized to use our armed forces to occupy and defend such strategic areas and bases as such leaders deem essential to the security of our country.

It is the declared national policy of the United States to furnish material aid to all countries resisting aggression until aggressor nations are rendered impotent ever again to disturb the peace of the world.

Over a million young men have been called into the armed forces of the Nation and today are making many sacrifices.

If we turn all of the Nation's resources and manpower at once to the production of arms for the destruction of nazi-ism, we shall soon reach the peak of our powers and bring a speedy end to this threat to our security: Therefore be it

Resolved, That we heartily support the efforts of our President, Franklin D. Roosevelt, as stated on many occasions, including the monumental eight-point program agreed upon with Winston Churchill, to spread throughout the world freedom of thought, freedom of religion, freedom from fear, and freedom from want; and be it further

Resolved, That the production of commodities not essential to our national defense be curtailed where necessary to cope with the requirements of national defense, and that the citizenry of the country, especially the young men not in the armed forces, are will-

ing and glad to sacrifice their comforts, and even necessities, to divert to the men in the camps any products required for their training or comfort.

September in American History

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

HISTORICAL HIGH LIGHTS COMPILED BY HON. SAMUEL A. WEISS, OF PENNSYLVANIA

Mr. WEISS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am herewith submitting historical high lights for the month of September:

SEPTEMBER IN AMERICAN HISTORY

September 1: The Herald of Gospel Liberty, America's first religious review, published in 1808; first trip of the first Pullman sleeping car, from Bloomington, Ill., to Chicago, 1859; first settlement established in northern Oregon by Rev. Marcus Whitman in 1836.

September 2: Treasury Department organized in 1789; Eugene Field, noted poet and essayist, born in 1850; schooner *Hannah*, first regularly commissioned warship by American Colonies, takes the sea in 1775.

September 3: Treaty of Versailles ending Revolutionary War signed in 1783.

September 4: United States flag first flown on high seas in 1777; Los Angeles founded in 1781; world's first electric power station opened in New York City in 1882.

September 5: First Continental Congress met in Philadelphia in 1774; Gen. Sam Houston elected first President of Republic of Texas in 1836.

September 6: Puritans sail from Plymouth, England in *Mayflower* in 1620.

September 7: Boston settled in 1630.

September 8: First permanent white settlement in America established at St. Augustine, Fla., in 1565; Harvard University, first college in America, opened in 1636; cornerstone of first American synagogue, Congregation Shearith Israel, laid in New York City in 1729.

September 9: Continental Congress agrees on term United States of America as name of new Nation in 1776; California admitted to the Union in 1850.

September 10: Lt. O. H. Perry wins Battle of Lake Erie during War of 1812 in 1813; Elias Howe patents first sewing machine in 1846.

September 11: Battle of Brandywine fought during Revolutionary War in 1777; first World's Parliament of Religions met at Chicago Fair in 1893.

September 12: First national prohibition society organized at Chicago in 1869.

September 13: Siege of Fort McHenry, Baltimore, during War of 1812 in 1814; Northern Pacific Railroad completed in 1883; Battle of Chapultepec won by Americas during Mexican War in 1847.

September 14: Francis Scott Key writes Star-Spangled Banner in 1814; President William McKinley died in 1901.

September 15: James Fenimore Cooper, greatest American novelist of first half of nineteenth century, born in 1789; President William Howard Taft born in 1857; patent for gasoline-driven automobile granted to George B. Selden in 1895.

September 16: Francis Parkman, great American historian, born in 1823; Battle of Antietam during War between the States fought in 1862; Congress incorporated American Legion in 1919; United States Mint created in 1786.

September 17: Constitution of United States completed and signed by Constitutional Convention in 1787; Baron von Steuben, hero of Revolutionary War, born in 1730.

September 18: George Washington lays cornerstone of Capitol of United States in 1793.

September 19: George Washington makes Farewell Address to Nation, refusing public office again; Battle of Chickamauga in War between the States fought in 1863; song Dixie sung for first time by Don Emmett, minstrel, in New York City, in 1859; President James A. Garfield died in 1881.

September 20: American Association for the Advancement of Science organized in 1848; Congress bans slave trade in the District of Columbia in 1850.

September 21: Pennsylvania Packet and Daily Advertiser, first daily newspaper in United States, published in 1784.

September 22: Nathan Hale hanged as spy during Revolutionary War in 1776; Abraham Lincoln issued preliminary Emancipation Proclamation freeing the slaves in 1862.

September 23: John Paul Jones, in the *Bonhomme Richard*, captures the British *Serapis* in greatest naval victory of American Revolution; William H. McGuffey, author of famous McGuffey readers, born in 1800; first baseball club organized in New York City in 1845.

September 24: John Marshall, great Chief Justice of United States Supreme Court, born in 1755; Office of Attorney General created in 1789.

September 25: Congress adopted first 10 amendments to Constitution, known as Bill of Rights, in 1789; Vasco Nunez Balboa discovers Pacific Ocean in 1513; Publick Occurrences, Forreign and Domestick, first American newspaper, published in 1690.

September 26: First political nominating convention for President and Vice President held by Anti-Masonic Party at Baltimore in 1831; Federal Trade Commission established in 1914.

September 27: National Catholic Welfare Council organized in 1919.

September 28: Frances E. Willard, founder of Woman's Christian Temperance Union, born in 1839.

September 29: Cotton spinning introduced into United States at Providence, R. I., in 1790.

September 30: Dr. William Morton makes first successful use of ether as anesthetic in 1846.

Letter From Carl Vrooman to Dr. E. Stanley Jones and National Ministers' No-War Committee

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

EXCERPTS FROM LETTER

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter addressed to Dr. E. Stanley Jones and the National Ministers' No-War Committee by Hon. Carl Vrooman, former Secretary of Agriculture. The letter discusses a subject which was injected into the RECORD on April 22 by the Senator from Wisconsin [Mr. WILEY], who had a letter of Dr. Jones printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BLOOMINGTON, ILL.

EXCERPTS FROM AN OPEN LETTER TO DR. E. STANLEY JONES AND THE NATIONAL MINISTERS NO-WAR COMMITTEE

DEAR DR. JONES: I express the hope and fervent prayer that you may speedily segregate yourself, not only in your heart, as you undoubtedly have done, but also in the public mind, from those subversive propagandists who, echoing Cain's guilty and cowardly alibi, "Am I my brother's keeper?" openly scorn the transforming truth for men and nations taught in the parable of the Good Samaritan and deride the vitalizing principle that he that saveth his life shall lose it and he that loseth his life for the sake of Christ and His kingdom shall save it.

Our appeasers and isolationists have been disseminating actively the poisonous fallacy that national selfishness, shortsightedness, and fear, rather than self-sacrifice, foresight, and courage are the best safeguards of America. Of course, you are endorsing no such monstrous doctrine, but subversive elements are using your statement among ministers and church members throughout the United States, in order to convey the erroneous impression that you and they are fighting the same unholy fight.

I must reveal to you my conviction that your present campaign, if persisted in, will do irreparable harm to the cause of Christ and His kingdom, which both of us have so deeply at heart. If there is even a remote possibility of this being true, should you not stop, reconsider, and wait for an unmistakable gleam of light from the Almighty before saying or doing anything further that may give aid and comfort to the most gigantic concentration of evil the world has ever seen?

I wonder if you realize that your proposal that in the present struggle America refuse to participate, even to the extent of throwing "her resources, short of war, to the side of right," probably has been acclaimed and publicized by Hitler, Goebbels, and Goering? As a logical climax to your insistence on "peace, peace, when there is no peace," you refuse, and are exerting your influence to persuade Americans generally to refuse, not only to use reason or conscience, but even to invoke Divine guidance to determine the relative right and wrong in this world conflict.

I quote from your own words, "The large majority of people think that this is the role of America—namely, to stay out of the conflict but to decide the right and wrong of the dispute and then throw in her resources, short of war, on the side of right." You conclude, "I disagree, for that presupposes that right is on one side and wrong is on the other. The facts seem to point otherwise. * * * I do not decide the relative right and the relative wrong—that remains for a later stage." Does this "later stage" mean a time when the United States of America, if the isolationists should have their way, would be called upon, alone and unaided, to defeat the mechanized military might of five Nazi-controlled continents or to take its place as a fellow victim, alongside the "united slaves of Europe," Asia, Africa, South America, and Australia? Or is your later stage when totaliterrorism has overrun the world, and no recourse or recovery apparently

would be possible for an indefinite future of tears and torture and slavery?

I do not think you feel what your readers may be led to believe, that a decision of the relative right or wrong on the greatest moral issue of our generation should be postponed until it is too late to do any good. Surely, with your admiration for the efforts of the great Christian leaders to eradicate intolerable moral evils, you cannot feel that.

No court of justice, even in a semicivilized land, would refuse to determine the relative guilt of two men, one of whom had shot down the other in cold blood to avenge some minor offense. And yet because Britain, like all other countries, has been guilty of some selfish policies, you apparently feel justified in ignoring the abysmal difference between the sadly human sins and shortcomings of Britain and satanic drive of the Axis powers to conquer the world and herd the entire human race into military and economic chain gangs, with every man's activities, thoughts, loves, hates, and religion either dictated or forbidden by a godless and merciless egomaniac. Unquestionably British imperialism, like American commercialism, has its sordid and brutal features. If our boasted Anglo-Saxon civilization is to endure it will have to be not only reformed but transformed. But in spite of all the obvious faults of the British, few unbiased students of history will deny the statement of James Truslow Adams that no other people "during so long a period or so consistently has done so much for the increase of law, order, and liberty in the entire world, wherever the race has penetrated."

It seems incredible that on this plane of the relative on which we all live, anyone should refuse to decide which is the more guilty, the murderers or their peaceable victims, whose chief faults were that they believed the Nazi propaganda that nobody would attack them; that they didn't raise their boys to be soldiers; and that too many of them hated their political opponents or Britain more than they loved their native lands.

How can any Christian forget for a single hour the Czechs and the Poles, the Danes and the Dutch, the Belgians and the French, and the citizens of a dozen other countries overrun or endangered?

I do not believe you intend to give the impression that such injustices as are found in the Treaty of Versailles can excuse the savagery and lust for power, the blasphemy, torture, and mass murder of the most sinister forces in world history. Although you say that "drunk with victory we laid the foundations of this war in the Versailles Treaty," you surely are aware that the Versailles Treaty was not usually vindictive as treaties of peace go, and was comparatively mild when compared with the treaties forced by Germany on France in 1871, and on Russia in 1918.

Unquestionably, as you imply, if the victors had made a more Christian treaty at Versailles, the results would have been vastly better for all concerned. But could not a similar criticism truthfully be made of practically every human transaction carried on, in peace or war, in church or state? While Hitler's emissaries, and even many well-meaning folk who unconsciously have become impregnated by totaliterrorist propaganda, still continue to talk of the Treaty of Versailles as the cause of the present war, Hitler while at first using his grievances against that treaty as a temporary pretext for his program of unlimited mass murder and conquest, afterward repeatedly and emphatically declared that this is a war of ideologies, of races, and of a new order founded on force, fighting to destroy our free civilization and replace it by the rule of Nazi force. Our present problem is not how we could have written a better treaty at Versailles in 1919, but how we can in 1941 safeguard and promote the Christian future of the world. Your emphasis on the Treaty of Versailles as a primary cause of the Nazi terror clearly seems to me to be one element of propaganda which has unconsciously crept into your thinking and writing.

I think your comments on our participation in the World War can also lead astray some of your less-informed readers. Speaking of the first World War, you say: "Our participation last time was disastrous to everyone concerned." Would it not be more in accord with the facts to say that in going into the first World War we chose the lesser of two evils, since our participation resulted in the defeat of the Kaiser's attempt to conquer the world, and at least the temporary defeat of that worship of force from which Hitlerism stemmed? Can any patriot or Christian characterize our victory then as a disaster now?

Indeed, will not future historians say that while the first World War was as successful as such a destructive conflict could ever be, the post-war multitude of evils they call peace proved both a failure and a tragedy—a tragedy for which our publicists, politicians, and clergy were more responsible than our soldiers? Our military leaders won their war but in the years that followed the so-called moral leaders of the Nation lost theirs—lost the opportunity to hold the dominant national motive up to the wartime level of service and sacrifice. Indeed, did they not also lose an unparalleled opportunity to bring about a spiritual awakening that would have enabled America to lift its way of life up to something approximating the Christian standard? Frank Buchman once said, "If the church had given Russia adequate spiritual leadership there would have been no red revolution and if the church had given Germany adequate spiritual leadership there would have been no Nazi revolution." Is it not equally true that if during the years immediately following the first World War, the church had given America adequate spiritual leadership, we might have been qualified spiritually to act then in the role you suggest now, as mediator between the peace-loving countries and the nations which for the past 2 years have been deliberately destroying civilization? During those plastic years, before the aggressor nations so completely had sold their souls to the gods of force, might they not have been more capable than now of listening sympathetically to the proposal of a permanent world peace based on a Christian world order?

Your antiparticipation campaign and your opposition to our national-defense policy apparently are based on the fatally false assumption that has lured many peace-loving nations to their doom, namely, that a desire for peace and a decision to "keep out of war" guarantees immunity from a Nazi attack. These attitudes have immobilized nation after nation until Hitler was ready to devour them. There is no division in America opinion as to the desirability of staying out of war, but an ever-increasing majority of our people are coming to realize that the decision as to peace or war rests not with us but with the aggressor. Except for his broken promises, Hitler never has offered peace to any nation except under conditions equivalent to slavery. Ask the people of any of the 16 nations that have been savagely overrun.

How many more unmistakable proofs will our isolationists require before they acknowledge this grim fact—to ignore which means inevitable attack at Hitler's convenience. To question that Hitler will make new moves toward world conquest, with or without our attempted mediation, is as absurd as to question whether a player standing on third base will make a dash for the home plate on the first base hit. Your problem, and that of all earnest Christians, is to decide how the wave of international-gangster terrorism can best be stopped.

You said that you did not consider the function of war analagous to that of a police system, because of the lack of any established tribunal before which to hale the aggressor nations. Is not the lack of such a tribunal chiefly due to America's selfish and short-sighted decision, after the first World War, to "let Europe stew in its own juice"? Indeed, in the present World War is not the isolationist movement dominated and inspired by the same suicidal spirit which a score of years ago made America refuse to join the League of Nations and participate in the most promising constructive effort ever launched in the direction of world peace?

Handicapped, as unfortunately we are, by a lack of any established tribunal to deal with the gangster nations, does not the present generation find itself forced to do as did the western-frontier communities before they were able to provide themselves legally with courts of justice and officers of the law? They improvised the nearest possible approximation to such legally constituted authorities. Out of those crude but determined efforts to achieve some degree of order and security, civilized methods of procedure gradually were developed. But the one thing they did not do was to ignore the distinction between bandits and peaceful citizens and thus allow robbery and murder a free hand until a better system could be established. They never talked about mediating between a criminal and his victim, even though the criminal could prove that the victim was not as good as he should have been.

So far as we are able, we should utilize the entire armory of the Spirit not only to free ourselves and the rest of the world from the deadly and imminent menace of nazi-ism but also to free the German Nation from its present baleful subjection to the "powers of darkness," which, working in and through it, literally have made the Continent of Europe a hell on earth. But this positive Christian effort has nothing in common with your attempt to induce church members in particular and the American people in general to refuse to use the only weapons the majority of them are capable of wielding in defense of their blood-bought freedom to think, speak, vote, work, and worship. In Bible history I find no precedent for such a policy. After David had slain Goliath with a sling and pebble neither he nor anyone else suggested that the other Hebrew soldiers should throw away their arms and equip themselves with slingshots. Similarly, it would seem that even if you or any one of your associates could qualify as a modern David, it would hardly justify you in demanding that the rest of our defensive forces should break ranks, stack their arms, and attempt to follow suit. In our present stage of spiritual unpreparedness the adoption of such a suicidal policy could only result in permitting the devil to take possession of our Nation and the world. It constitutes no part of the message to our age of Christ, the coming King, who will "smite the nations" and "rule them with a rod of iron." "Who in righteousness doth judge and make war," "to destroy them that destroy the earth."

When the Jews under Nehemiah rebuilt the wall of Jerusalem a part of their men stood guard as soldiers armed to the teeth, and as for the rest, "everyone with one of his hands wrought the work and with the other hand held a weapon." Would it not be an equally good plan for Americans, in the present crisis, to spend a part of each day on their knees and the rest of each day on their toes, helping to carry out our dangerously belated program of national defense?

It seems incredible that people, in the name of religion, should renounce and denounce the use of material means of defense against unprovoked aggression, mass murder, and attempted world conquest, when they are not sufficiently developed spiritually to be able to dispense with material means when dealing with most of their personal and family difficulties and dangers. A vast majority of them in the case of a toothache rush to a dentist; when suffering from other

physical disabilities they consult a doctor; when financially embarrassed they apply to a banker; and when involved in legal complications they employ a lawyer.

If most of us are unable to overcome by purely spiritual means most of the minor trials and tribulations of life, how can we as a nation gamble all that is most priceless and sacred in civilization on being able to stop the present Nazi tidal wave of conquest without the use of material weapons? Would it not be the part of wisdom, for those who are tempted to adopt and advocate such a policy, first to prove its soundness by moving a few molehills, or even molecules, by purely spiritual means before attempting by faith and prayer alone to move vast volcanic mountains in full eruption from the fires of the nethermost hell? Had David acted on such an irrational assumption in dealing with the rebellion of his son Absalom, the Hebrew people would have become subject to an arch criminal who, like Hitler, worshipped at the twin shrines of unscrupulousness and force. Had Charles Martel and the Franks at the Battle of Tours acted on such an assumption, Christians in the eighth century would have been conquered and forced to renounce Christianity and slavishly "Heil" Mohammed and Allah or die. Had the British at the Battle of Waterloo acted on such an assumption Napoleon would have conquered the world.

You urge America to act as "mediator," although the sincere attempt of the British at mediation for "peace in our time" eventually only helped the aggressor to prepare for his next victims. Do you imagine that if Hitler, owing to our refusal to help block his program of world domination, should be enabled to plant the swastika above the cross throughout the length and breadth of Europe, there would be the smallest chance for us to play that role? If Hitler wins, manifestly, we shall be victims, not mediators. Moreover, if in Britain's extremity we ignore her cry for help do you think that, if later by some miraculous intervention of God she finally should win without our help, America could expect to exert any spiritual influence or speak with any moral authority, either to Britain or to the enslaved neutral nations whose only hope of freedom so obviously is dependent on a British victory?

Similarly, if Christian ministers, acting in accordance with the policy outlined in your statement, consciously or unconsciously, allow their influence as spiritual leaders to be used to camouflage the objectives and reinforce the power of subversive groups now feverishly striving to betray America into Hitler's hands, as during the past few months similar subversive elements succeeded in betraying nearly every one of the 16 conquered and enslaved neutral nations, can you imagine that the counsel of these ministers would be sought, or even considered by the statesmen who, during the sweat and tears and blood of war, were required not only to defeat the massed might of the kingdom of hell on earth but also to overcome the unconsciously sinister influence of such tragically misguided "men of God"?

Surely Christians unanimously will endorse your statements that you want God to conquer both Britain and Germany, that you "do not want any existing national spirit to be dominant in the world," and that you "want a 'new' spirit." You also strike a responsive chord when you quote Paul's great phrase describing Christ's way of "making peace by the creation in Himself of a new man out of both parties." But do you really think that our acquiescence in the Nazis keeping their plunder will lead them to repent? For myself, I cannot see that Hitler, flushed with victory and soiled with sin would feel any such urge.

Is it not the duty of Christian leaders in this crisis to try to lift the present struggle above the plane of national self-interest to that of a Christian mobilization with a full arsenal in defense of freedom, justice, and a righteous peace, as a prelude to the coming of the kingdom of God on earth? Such a challenge necessarily would have to be positive, not negative, and surgical rather than sentimental. Presumably it could only be made by a Christian warrior who worships not only Christ the Saviour whose first coming was in material weakness to die, but also Christ the Judge and King, whose second coming is to be in power—to destroy the impenitent and relentless enemies of God and man and to rule not only in men's hearts but also in their bodies, laws, institutions, and even in the sin-cursed earth we till and tread upon.

Your seven Steps Toward Mediation are worthy of most careful and prayerful consideration. In the compass of this letter I cannot undertake to discuss all of the momentous and complicated political, psychological, and economic world problems involved in them. But I am in full agreement with you that as rapidly as possible we should begin to work out a Christian program of world-wide reconstruction. The first step in such a program must necessarily be the decisive defeat of the forces of aggression, mass murder, and tyranny. Another vitally important provision should be an offer to the German people not only of terms devoid of the brutal, crushing injustices now being imposed by the Nazis on their conquered neighbor states but of even more favorable conditions than the Germans themselves would receive from their present power-mad warlords if the Axis dreams of world conquest were to be realized. In short, the defeated Germans should be offered every conceivable opportunity to utilize to their own advantage and that of the world their splendid abilities as scholars, scientists, musicians, organizers, and administrators. The final provision must make it forever impossible for the spirit of conquest again to erupt in a holocaust of death and destruction upon the peace-loving peoples of the world.

A spiritual awakening for America long has been overdue. But if that awakening from our present sleeping sickness of the soul is to be at all adequate to this cosmic crisis, it will have to be whole-souled, wholehearted, and militant. A recently published booklet entitled "You Can Defend America" stresses the need for the development of that spirit in our country and challenges every civilian to put into his every-day duties the same quality of Christian heroism that will be required to hold the line of battle against the steadily advancing hosts of evil.

We should all know that there is a desperate need for that spirit as we face the realization that we must win with Britain or fight alone at Armageddon.

May we not yet look for a similar militant Christian message from your heart and pen?

Very sincerely yours,

CARL VROOMAN.

America's State of Preparedness

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

ARTICLES FROM THE WASHINGTON POST

Mr. BYRD. Mr. President, on August 25, I asked unanimous consent to have printed in the RECORD a number of articles dealing with America's state of preparedness, which had been published in the Washington Post under the title "Guns for Soldiers." Because of the fact that the printing of all these articles would exceed two pages in the CONGRESSIONAL RECORD only three of the articles were printed in the RECORD at that time, and the remainder were returned to me. I now ask that the remaining articles be printed in the RECORD at this time.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of August 23, 1941]

GUNS FOR SOLDIERS—O. P. M. LACKED FAITH, SO PLANTS WAITED YEAR FOR CONVERSION

At a meeting June 18 of the O. P. M. defense contract service, attended by representatives of scores of large and small businesses, the idea was driven home that civilian concerns must undertake defense work.

The businessmen were willing. They asked, only, "Where are the orders?"

Whereat Col. A. B. Quinton, an Ordnance Department field officer, arose. He announced, flatly, that of all the companies known to the Ordnance Department as suitable for and capable of supplying ordnance items, only 20 percent would be needed. He explained why.

That 20 percent, Colonel Quinton said, were considered adequate to meet this year's demands and those of the next.

But the figures are these as of the end of June:

Of some $5,000,000,000 appropriated for Army ordnance items—"shooting stuff," not plant construction—contracts for only 55 percent had been let. The other 45 percent, mainly for ammunition and lease-lend materials, had not even been started on its work; no orders had been placed to translate it from money to guns.

THE FIGURES HAVE ANOTHER STORY TO TELL

Of about $8,000,000,000 appropriated for Army and Navy ordnance and combat vehicles, only $5,000,000,000 worth of contracts had been made.

And how are we doing with the three billions of Army ordnance funds that had been placed under contract? The Army expects less than half of it to come back in the form of guns and shells and tanks by the end of the year.

A better gage of progress than the numerical totals cited by Senator BYRD and the President at another place in this paper are these data relating to requirements and the extent to which they have been met and will be met:

Of tanks and trucks and jeeps and scout cars, we had, as of July 1, between 9 and 10 percent of ultimate requirements for ourselves and export to Germany's foes. Not until early next year shall we have more than half of the total requirements.

We had from 6 to 10 percent of total requirements of field artillery. By the end of the year we shall still have less than one-third of the amounts required. By the middle of 1942—a year from now—we shall be half supplied.

We were similarly situated with respect to antiaircraft guns. By the end of the year we shall still have only one-fourth of total requirements, according to Army expectations.

Finally, a full year from now, the Army expects deliveries on less than three-fourths of even the relatively small amounts now under contract.

To cap the climax, with $3,000,000,000 of existing appropriations still not under contract, the Ordnance Department is about to be deluged with three billions more from an appropriation bill now pending, and another four or five billions from a new lease-lend bill.

WHEREIN O. P. M. ACTIONS BELIE O. P. M. WORDS

Are 20 percent of the "suitable" ordnance suppliers adequate, in the light of these figures?

As yesterday's article in this series showed, "adequacy" for the gigantic armament effort that is required of America can be nothing less than full utilization of, and "all out" production by, every metal-working shop, durable-goods factory, and machine works in the country which can possibly be converted to defense production.

But the National Defense Advisory Commission and the Office of Production Management, despite the sententious motto of their Tools Division, "Nothing is impossible," have long and loudly insisted that such conversion is possible only to a very limited degree.

The contention is so important, and the problem of conversion is so basic, that it deserves a little discussion.

The only thing wrong with the O. P. M. contention is that it is simply not true.

NECESSITY SHOWS THAT IT CAN BE DONE

For proof, one needs only observe that now, after 14 months of saying "It can't be done," the O. P. M. is holding meeting after meeting with industry after industry, discussing with them what new defense work they undertake.

O. P. M. Chief William S. Knudsen recently declared he was leaving to the "ingenuity" of the auto industry the problem of how to compensate for curtailed civilian production, cut by raw-material shortages, with armament work.

Apparently it can be done.

Or, for an even simpler proof, there is the convincing fact that many individual firms from the durable-goods industries are already making defense items—in their existing plants, with their existing equipment, machine tools and labor.

Packard and General Motors machine shops are making some defense-destined machine tools. A carpet company, using machines once devoted to the manufacture of looms, is turning out what an O. P. M. expert describes "one of the sweetest" machine tools he ever saw.

Even the Dictaphone Co. is making machine tools.

One firm which makes excavating equipment is processing military items for the British.

A textile machinery company in New England is using its machine tools on a Dutch order to such effect that an O. P. M. technician says: "It can give cards and spades to its competitors and still beat the socks off them in making automatic rifles."

It can't be done? It is being done, but at nowhere near the volume and extent necessary and possible if the woefully low armament production schedules are to be upped in a period when time is short.

One O. P. M. Production Division technician estimates that a year has been lost, both in the production of machine tools and in actual armament production itself, through failure to force orders on the auto, refrigerator, washing machine, stocking, textile, and shoe machinery, road-building, earth-excavating machinery, and printing-machinery builders.

Another Production Division official, immersed in the most difficult and technical of all the Army ordnance jobs, has been trying for 8 months to have orders awarded to outsiders, to dozens and dozens of firms not now included in the defense program, so that many hands can join in the work.

IF THEY'D JUST DIVERT, SAYS ONE OFFICIAL

" 'Convert' isn't even the word," he shouts. "It isn't even as difficult as that. All they have to do is 'divert.' Just divert their machine tools from civilian production, just change their jigs and fixtures. But the Army doesn't ask them to, doesn't place orders with them, and they keep right on making nondefense gadgets. Meantime we sit around waiting for brand new plants to be built and brand new machine tools to be constructed."

From one end of Washington to the other, and even in the O. P. M. Production Division itself, can be heard the comment that "the greatest crime in the defense program" has been to allow the auto industry to produce more than 5,261,000 vehicles, of which 4,297,000 were passenger cars, in the year ended last August 1, a production greater by 20 percent than any other year in history except 1929.

In the manufacture of those 5,261,000 vehicles the industry used, and thus took away from defense uses, these amounts of the following scarce and strategic raw materials:

Steel: 7,730,000 tons, or about half the additional annual output which now must be added to the steel industry.

Aluminum: 48,700,000 pounds, equivalent to about 1 month's production of the aluminum industry, or enough to build more than 2,400 heavy, four-engine bombers.

Nickel: 16,000,000 pounds of a metal of which there is now an acute shortage even for military purposes.

Nickel steel: 430,000,000 pounds.

Zinc: 203,000,000 pounds.

Chromium: 23,000,000 pounds of a metal of which present stockpiles are woefully inadequate.

Copper: 244,000,000 pounds of a metal so much in demand that stockpiles of it cannot now be accumulated.

Tin: 17,500,000 pounds.

Tungsten: 220,000 pounds.

Rubber: 578,000,000 pounds, more than two-thirds the annual consumption of a material the future supply of which is gravely threatened; an amount considerably larger than our present stockpile.

USE IS LOST OF 600,000 SKILLED MEN

And while the auto industry was turning out passenger cars, the Engineer Corps is still deficient in trucks.

During the process, the defense program was denied the services of America's finest production and technical engineers and the work of 600,000 skilled production employees.

When the proposal was first made, a year ago, that the auto industry convert its equipment to defense work rather than, for the most part, do its $2,000,000,000 of defense work in new plants with new equipment, the old cry went up, "It can't be done." The tools were specialized, unconvertible.

At best, the industry estimated, only 15 percent of its tools could be adapted to defense work. Even this, be it noted, is no mean battery of equipment. However, now that the industry knows that its supply of raw materials for passenger cars will be drastically cut, and that it must convert to defense work or starve, the estimates have suddenly been revised upward.

O. P. M. technicians believe that from 40 to 60 percent of the industry's machine tools are convertible.

It is a very heartening prospect, this conversion of a $3,000,000,000 industry into an arsenal for the United States. It would have been more heartening, and would have been accompanied by much less tragic unemployment of men and machines during the change-over period, had it been begun in volume a year ago. Or even if plans were now prepared, which they are not, for placing defense orders in the auto plants.

MATERIALS SHORTAGE ENDS THE FOLLY

This impending shift, belated as it is, reveals the most cheering ray of hope on the defense horizon.

Against a background of failure to convert civilian industry to defense production—of fantastic attempts to pile the Ossa of defense production on top of the Pelion of civilian production—there is finally the grim fact that a shortage in raw materials is about to make an end to the folly.

Civilian durable-goods industries, like automobile manufacturing, see the writing on the wall. Their representatives, aware that the end has come to their raw-material supplies, are in Washington by the hundreds seeking defense orders. American industry can and will do what O. P. M. and Army never asked it to do—never forced it to do.

Thus, ironically, a shortage of materials for civilian purposes may beget, finally, "all out" military production by forcing erstwhile nondefense industries to take armament orders if they are to work at all.

The O. P. M. and the administration can take no credit for it.

The best they can do to redeem themselves somewhat is to hasten plans for conversion—plans still unmade—but which an imperiled nation might reasonably have expected to have been prepared a year ago.

[From the Washington Post of August 24, 1941]

GUNS FOR SOLDIERS—ARMY'S LARGELY "ON ORDER," AND ITS MEN ARE ON EDGE

Last Thursday at A. P. Hill Military Reservation in Virginia you could see a column of trucks stream across a rutted field with grim little guns in tow.

Whistles shrill and the trucks scatter and halt, and the men clinging to them leap to the ground and unlimber the guns, and the trucks scamper off to cover. Machine guns appear, flanking the guns, and almost before they are settled in place tanks rumble out from the fringing woods.

A machine gunner stoops, applies the end of his cigarette to something in his hand, and suddenly flings what he holds toward the tank. It trails a thin wisp of smoke.

Where it strikes the ground an unearthly popping breaks out and little red sticks dance among the flame and smoke.

It is a package of firecrackers.

Over at the guns men hurl somewhat larger firecrackers, while their mates go through the motions of loading and firing the gun considerably faster than its rated 20 rounds a minute. Back toward the rear other guns, big 75-millimeter fellows, point long snouts toward the tanks, and still bigger firecrackers, which the gunners treat with much respect, boom at intervals.

Still farther back, where 3-inch antiaircraft guns are set up, flashes appear at intervals, flashes without sound or smoke. The battle is joined and the serious business of stopping tanks is under way.

IT LOOKS LIKE A GUN—BUT IT WON'T SHOOT

When it is ended, walk up to the little antitank gun whose crew sits back aimlessly waiting for directions. It appears strangely incomplete and you ask the gunner about it.

"It's a dummy, sir," he tells you, and there is an unaccountable light of pride in his eye. "Ain't it a honey, sir? You can't tell the difference at a hundred feet."

He twists a wheel and the muzzle rises. "You see. It elevates." He spins another wheel and the gun's long nose smells across the horizon. "And it traverses. It's just like a real gun, sir."

But it won't shoot. And if it would your gunner still would fling firecrackers at tanks on maneuvers. There isn't any blank ammunition to give point and zest to the business of clinging to a truck careening across old plowed fields, of placing, aiming, and loading the piece.

Defense against mechanized attack is a matter so terribly important that it may place in the hands of a few men the lives and liberties of millions. It is so pressing that the Army has been in unending labor since the summer of 1940, shaping a succession of organizations and ideas to meet it.

AND THE RECORD ON HOWITZERS IS FAR WORSE

The basic weapon of the antitank unit is the 37-millimeter gun, designed for great mobility, to be rushed to the threat of tanks on time, and high muzzle velocity, to stop tanks when it hits them.

The square Infantry division is entitled to 84 of these little guns. Of the 18 square divisions now in Federal service, the first 4, inducted in September, are high on the "priority list." Of their 84 antitank guns, each has 24.

The other 14 square divisions have none at all. They train with dummies.

To back up the 37, the square Infantry division is entitled to 16 antitank guns of 75 millimeters. So far, most have 4 each.

One of the first two antitank battalions organized in the Regular Army, an organization that has been in being since last September, is entitled to 36 of the 37-millimeter weapons. It has 6, while 30 gun crews still train on dummies.

More than a year ago, all the light Field Artillery regiments of the Army were reorganized around the 105-millimeter howitzer. It was made clear to them that the present 75-millimeter gun is inadequate against the field howitzer of the German Army.

Not a regiment is equipped today with the 105 howitzer, though a few are in the hands of troops here and there. Meanwhile, Field Artillery men are training on guns they have been told can be outshot and outranged in battle. And they know that sooner or later they must unlearn what they know about the 75 and learn all over again on the 105.

You can tell a soldier the richest nation in the world is unable to provide him with equipment. But you can't always make him believe it.

Part of an ordnance unit was given a 155-millimeter howitzer to repair. These ordnance men are highly skilled mechanics; many of them earned $75, $85, $100 a week in civil life. Now they make $21 a month and upward.

They took this 155 howitzer and worked on it until suppertime. Then they went back to the shop and worked until midnight to put the weapon back in service.

They had to stop at midnight. They lacked one small piece of equipment, which cost $2.75, to repair the howitzer.

It couldn't be found anywhere. The big gun lay in the ordnance park for days and weeks, out of service, its crew idle. One of the ordnance men asked his commanding officer about that.

"Captain," he said, "why can't we get that little piece of metal? You'd think, sir, the Army could find $2.75 for a gun part with all these millions being collected for shows and dances and stuff like that."

Quartermaster men tell you it's cheaper to buy a new truck than to tie up those with major ailments while waiting for parts to repair them.

Coast Artillery men, who will be responsible for defense of harbors, for ground defense against air attack, for manning the great railway and tractor-drawn guns that go after the enemy's communications, are not learning to handle the guns they will be expected to fire in battle.

Every piece of equipment they've got, except a few antiaircraft weapons, is of World War vintage. They learn to load and point 155-millimeter guns built for service in France. They drill on 8-inch railway guns that never will be fired in battle except under frantic necessity. They man coast-defense guns new when America girded itself to grapple with Spain.

Because antiaircraft defense is more or less new, their antiaircraft guns are somewhat new. But * * *

The 3-inch gun they now fire is to be superseded by a more powerful, longer ranged 90-millimeter gun. There aren't any of the latter, and the whisper goes around among the men that the first built were so badly designed they were liable to take off a man's arm should he try to load one.

The antiaircraft gunner will be equipped some day, he hopes, with a lot of terrific little 37-millimeter guns which fire 120 rounds a minute at planes or tanks. There are some of these in service, after an extensive job of redesigning the aiming mechanism. But they can't be fired 120 rounds a minute for any length of time. The barrels get so hot they bend.

IN THE MANUAL, BUT IT'S NOT IN REASON

In its Field Manual 100–5, the Army's new summation of combat doctrine, the use of antiaircraft weapons in antimechanized defense is stressed. But FM 100–5 does not explain how a gun designed to be fired at a target 5 miles away and 20,000 feet high is to be aimed at a target on the ground 400 yards off and coming in fast.

Word goes round that the antiaircraft-fire directors can be changed to aim accurately at close targets on the ground and that they will be changed. But the antiaircraft gunner is skeptical. He is still waiting for his 90-millimeter guns and his 37-millimeter quick-firers.

In one respect, engineers are better off than most of their brothers in arms. A great part of their equipment is commercial stuff painted olive drab. All of their earth-moving machinery comes from the same production lines that supply the civilian contractor. In the matter of pontoon bridges, foot bridges, and the like, the Corps of Engineers seems to have done well by itself.

But when it comes to weapons, the engineers are no better off than anybody else.

They are learning to fire Springfield rifles which they will be expected to discard some day in favor of Garands. They are short of light machine guns, caliber .50 machine guns, and mortars.

Everybody is short of mortars. And the troops can't understand why.

"A mortar is just a piece of pipe on a slab of iron," the soldier says. "I could make one myself."

It is not as simple as that, but he does make mortars. He makes 60-millimeter mortars of iron pipe and he makes 81-millimeter mortars of discarded gutters. And he lugs them faithfully through maneuvers while he learns nothing at all about how mortars are aimed and served.

ONE REASON FOR THE WORRY OVER MORALE

The soldier who has spent 6 to 10 months training without weapons, without ammunition, without other necessary equipment, or has seen it come to him in driblets, is discouraged. It is not what he was promised would come from the most productive Nation on earth.

There is scarcely an artilleryman in the Army who has seen the 105 howitzer he may use in battle. Thousands of National Guard men and selectees charged with defending their fellows against tanks and armored cars have never seen an antitank gun.

Tens of thousands are becoming proficient with rifles they will soon discard. Men in heavy-weapons companies are wondering what a real mortar will do, how it sounds when it goes off, and what results it will achieve in destruction.

Meanwhile, they train. They train in the din of popping firecrackers and the flash of mirrors simulating gunfire. They race across the country with dummy guns and spend hours loading dummy shells in the heavy artillery of 1918.

Dairy Day Meeting Address

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I delivered before the Dairy Day meeting at the Barron County Fair, Rice Lake, Wis., August 12, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, fellow citizens, we are met today to discuss the place of dairying in the national-defense program. Each of us here today is interested directly or indirectly in the problems of the dairy farmer.

I myself feel that I can qualify as one of the dairy farmers—and I am proud to be classified with that group. I own and operate a dairy farm in Barron County—the same farm which my father owned before me.

Those of us who are dairy farmers, those of us who have tried to balance our milk checks against our expenses, know that the dairy farmer hasn't been getting the cost of production. At the present time it is true that the return of the dairy farmer is rising. That, however, is not a permanent answer to our problems.

One immediate problem which confronts the dairy industry in connection with defense is the possibility of Government limiting domestic consumption of dairy products. According to Secretary of Agriculture Claude R. Wickard, Americans may have to curtail their consumption of cheese and dairy products in order to supply enough of these products for Britain.

That does not make sense. For years Wisconsin producers have sought to build up a market for their products and there is no logic in destroying that market overnight. In recent years the administration has urged the farmer to curtail production in order to cut down the surplus. Today the farmer is urged to increase production of exportable foods such as cheese, canned milk, and eggs. In other words, he is urged to increase production and cut domestic consumption.

British purchases thus far have included cheese, evaporated milk, dry eggs, and powdered milk. At the present time the question is whether the dairy farmer can stretch his production to meet the British needs and also meet the needs of a domestic market which has been steadily increasing.

I believe the dairy farmer can meet these needs with intelligent effort. I do not believe that there is any necessity to tell Americans that they will have to eat fewer dairy products. Surveys of the agricultural college show that in our State we could increase cheese production 30 percent.

Wisconsin farmers have increased their herds 4 percent. We now have 2,350,000 milk cows and a record milk production of 12,665,000,000 pounds. That is about 11 percent of the national supply. Wisconsin

cows are now turning out an average of 25 pounds of milk a day. That is 2 pounds more than a year ago.

Dairy herds throughout the State have increased their production on an average of 57 pounds a day. Our milk production in Wisconsin has been increased fully 10 percent according to recent estimates. Nationally milk production has been increased about 6 percent.

This increased production will probably amount to 1,266,000,000 pounds. It takes about 10½ pounds of whole milk to make a pound of American cheddar cheese, and consequently this increase could produce about 120,000,000 pounds of cheese. That is about half of the British demands.

In our State alone we can produce 350,000,000 pounds of American-type cheese. That is an increase of 11 percent over last year's production. If we were to divert our production from butter to cheese, it might be possible to increase our cheese production 3t percent. Experts have stated that almost every cheese factory equipped for American-type cheese could handle from 15,000 to 30,000 pounds more milk per day without more equipment.

This is a time for the Federal Government to do a constructive job so that America and England can have all the dairy produce they need. This is not a time to cripple the domestic markt.

A few moments ago I said I was a dairy farmer and proud to be one. The reason I am proud to be a dairy farmer is that the dairy farmer is part of our front line of defense. He has been given a job to do, and he is doing it. He is doing an excellent job, and he is a good soldier.

The requirements of our national defense for dairy products have presented a distinct challenge to the dairy industry. The dairy industry is meeting that challenge and will continue to meet it.

The sudden demands and new requirements on many of our industries have always created havoc in many of our industries, but the great dairy industry has rolled up its sleeves and is meeting the challenge.

Milk production on our Nation's farms showed an increase of 7 percent in May. In June milk production was up still further. In the first 6 months of 1941 the records disclosed a total of 59,318 000,000 pounds or 5 percent more than the first half of 1940. That is an all-time record.

Our own military forces recognize the value of milk in the defense program. At the present time our own soldiers are being supplied with fresh milk in their daily diet for the first time in American history.

It has been estimated that our armed forces are using more than 350,000 quarts of fresh fluid milk per day. In addition to that they are using 175,000 pounds of butter, 22,000 pounds of cheese, and large quantities of other dairy products each day.

I am advised that the Army ration (that is the food provided for one man for 1 day) specifies, among other things, 8 ounces of fresh milk, 2 ounces of butter, 1 ounce of evaporated milk, and one-fourth ounce of cheese.

Incidentally, during the American Revolutionary days the ration list called for 1 pint of milk for soldiers each day. I believe that that was the only time fresh milk appeared on the ration list until the present time. From the historical records, however, it is somewhat doubtful whether Washington's soldiers ever got that milk allowance unless they succeeded in corralling a stray cow occasionally.

The Army nutritionists in the Surgeon General's Office decided that 1 pint of milk and its equivalent was a safe minimum amount in the soldier's daily diet to protect them against deficiencies in calcium and vitamin B2.

It is difficult to get exact figures on the consumption of milk by the armed forces, but it has been reported that the Army purchases of dairy products in 1 year will probably total about $30,000,000.

During the last World War the Government made many appeals to the farmers—the farmers responded to those appeals. They produced more food per man than had ever before been grown in the history of the world in a similar length of time. When the post-war period came, the farmers, however, were the very first group to be deflated.

In the fall of 1919 the Attorney General's office launched a crusade against high food prices. The Government owned certain stocks of food and these stocks were advertised at bargain prices in post offices all over the land.

These supplies were thrown on the home markets and retailers were requested to handle them without profit. These supplies were accumulated for war purposes. They dropped like a bomb on a market that was already collapsing.

All of us believed in a reduction of the costs of living. All of us believed in a return to normalcy after the war, but none of us believed that the price of farm products should be blasted to bits overnight.

That was not the case with other materials * * * there the surpluses were dribbled into the market slowly so that prices did not break overnight.

The Federal Reserve System after the last World War adopted certain credit policies designed to break certain farm commodity prices. The Federal Reserve System jacked up its rediscount rates to such a level that the farmers could not get funds. As a consequence they were forced to throw their crops and livestock upon the market, and it was a falling market.

We know that the Government repaid manufacturers for certain losses which they sustained after their contracts were canceled in the post-war period, but they did not give a similar treatment to the farmers.

Our job now is to insist that there must be no repetition of the rank injustices which confronted the farmer after the last World War. After the present armament period our condition may be much worse than it was in 1918, because our debt will be proportionately larger.

The answer to this problem is not that Government should take over all of the means of production and distribution. The answer must be found in a revitalized system of free enterprise, and I am in fervent agreement with the purposes of proposed legislation to establish a post-emergency economic advisory commission so that we can anticipate the problems of the future and do something about them now.

Where there is no vision the people perish. We need vision today; we need leadership. The time to meet these problems is before they come into existence.

After the last war farm and dairy prices skidded down from wartime boom levels. We know that after the war our foods will be needed to feed a hungry world. Our problem today is to plan intelligently to protect farm markets for several years after the crisis has passed.

At the present time, if it is necessary, milk can be diverted to the cheese factories and the condenseries in line with the administration's request.

We can do these things but we have a right to demand the same treatment and protection which government gives industry. The prices of butter must not be permitted to skid down to such levels that the farmer's standard of living is shot to pieces by Government sniping.

Government purchases of dairy products are essential to defense, but there is no reason why there should not be an adequate differential over butter and other competitive dairy products.

I can see no reason for establishing maximum price ceilings for dairy products unless similar price ceilings are imposed on other segments of our economy, and in that case it would also be necessary to establish a floor price.

While I have never subscribed to the administration's program of a bureaucratic, swivel-chair farmer regulation of American agriculture, I feel that at this time it is necessary for us to merge our cooperative efforts with the Federal bureaus wherever it is possible.

However, I can see no reason for dictatorial Federal farm regulations to encourage manufacturers to use low-price vegetable oils and animal fats for synthetic products to compete with our dairy products—particularly when these dairy producers are not permitted to use these same synthetic elements.

I might add that I recently made a protest directly to the Secretary of Agriculture in connection with the efforts of the Department to popularize synthetic products competing with butter. I feel that it is extremely undesirable for the Department of Agriculture (which should be concerned primarily with protecting the American farmer just as the Department of Labor protects the American laborer) to spend its time and the people's money propagandizing the American people into using synthetic products. That is not only undesirable from an economic standpoint because it affects the dairy farmer adversely, but it is also undesirable from a health standpoint where it adversely affects the health standards of the American people. I might say that the Secretary of Agriculture himself as late as July 1941 admitted this fact when he stated that we need to produce more products if we are going to give everyone in the United States a satisfactory diet. To do that the Secretary said we needed 15 percent more butter and 20 percent more milk as protective foods, rich in minerals and vitamins for our American diet.

Dr. Thomas Parran, the Surgeon General of the United States Public Health Service, confirmed that fact. He said, "In the weeks and months to come we shall need not only planes and munitions, a growing Army and Navy, but also rugged health and courage."

I agree with the Surgeon General when he says we need a nation of people who are more fit, more vigorous, and with higher standards of health. That means we have to put to work our scientific knowledge for the nutrition of all our people. We have the capacity, the fertility of the soil, the equipment, the facilities for distribution; in fact, every element which we need to raise the standards of public health through better nutrition, which certainly means an increased rather than a decreased use of dairy products.

It has been said that less than one-fourth of our people are on a "good diet" even when measured by the old standards. The Surgeon General has admitted that our deficiency in diet will require at least a 50-percent increase in our national production of milk and milk products. I believe fervently that every drop of milk and every pound of butter which we can convert into human protein foods represents a substantial advance in the front lines of our health defense. We need to build a stronger and healthier people through a more complete diet.

The emergency today instead of lowering our standards should stimulate us to raise them and should serve as a foundation for our post-armament economy and our post-armament health standards. We need to raise our people to the highest possible level of health and vigor, and I hope that the Washington agencies, such as the Coordinator

of Health, Welfare, and Nutrition, will operate to achieve this objective.

We know that when the European holocaust is over, we in America will need all the strength and courage which we can muster to continue to give the American people the highest standard of living of any people on the face of the globe.

The dairy farmer is entitled to have something to say about agricultural-defense policies.

Wisconsin produces half the cheese, one-third of the evaporated milk and much of the powdered skimmed milk, and we are increasing our production rapidly.

We are producing ample milk for rising domestic consumption, and we will do everything possible to produce sufficient milk for 250,000,000 pounds of Cheddar cheese, 15,000,000 cases of canned milk, and 200,000,000 pounds of dry-skimmed milk for the allied forces overseas.

At the present time we know that there is an elevator and storage space shortage. I can see no reason why the dairyman should not be permitted to use the carry-over grains to increase the production of milk, poultry supplies, and meats.

I cannot subscribe to the logic of the administration's priority program which has denied priorities to farm-machinery companies.

If the dairy industry is going to be required to divert its production to cheese for shipment to England, it must be an orderly plan of diversion so that we do not have a post-emergency crisis.

I cannot subscribe to any federally inspired, haphazard patchwork plans which do not seek to anticipate the problems which will result for the dairy farmer when his market is curtailed.

In connection with our discussion on the place that the dairy industry has in the national-defense program, it is interesting for us to note that Public Law 147 (which was passed by the present 77th Cong.), to extend the life and increase the credit resources of the Commodity Credit Corporation, establishes a policy for nonbasic agricultural commodities.

Under the program the price of these nonbasic commodities is pegged and it is always done with reference to some percentage of the parity value or price of that specific commodity. I do not say that we should do less for the so-called basic commodities. I do favor doing more for the so-called nonbasic commodities.

In order to participate in any of the provisions of this legislation it is necessary for the nonbasic agricultural commodity to be brought under a control program, under which production could be controlled. After the nonbasic commodity has been brought under such a control policy, it has been possible for it to receive benefits under the terms of the program.

Now, let us consider the possible application of this idea to the dairy industry. If the milk producers desired to submit themselves to a control program, if they desired to give the Department of Agriculture power to regulate them and to regulate the marketing of their product, then there could be no reason why that commodity should not have equal treatment along with the so-called basic commodity with corn, rice, cotton, wheat, and tobacco.

Public Law 147 of the Seventy-seventh Congress, first session, states:

"(b) It is hereby declared to be the policy of the Congress that the lending and purchase operations of the Department of Agriculture (other than those referred to in subsection (a)) shall be carried out so as to bring the price and income of the producers of nonbasic commodities not covered by any such public announcement to a fair-parity relationship with other commodities, to the extent that funds for such operations are available after taking into account the operations with respect to the basic commodities and the commodities listed in any such public announcement and the ability of producers to bring supplies into line with demand."

I believe there are a great many serious objections to our program for the basic commodities, but as long as the administration majority retains this plan for the basic commodities, then I say there is no reason why nonbasic commodities should not be permitted to receive similar benefits, if they desire to subject themselves to the same control, and if they desire to stay within substantially the same limitations of production.

If the idea behind the Surplus Commodities Corporation and the Commodity Credit Corporation is fair for the basic commodities, then it should also be fair for the nonbasic commodities.

As a matter of fact, the production of our dairy industry, which is not considered a basic commodity, is just as great as some of the so-called basic commodities. It is a further fact that the dairy industry is an extremely vital part of our economy, and is certainly more basic than rice.

If there is anything at all to this theory of protecting the agricultural producer, according to the terms of the Surplus Commodities Corporation or the Commodity Credit Corporation, then that protection should be extended to agricultural products not included in the so-called basic commodities.

In this very year the present Congress voted for a guaranty of 85 percent of parity price for the basic agricultural products. The reason for that was that the farmer had been limited in his production, he had complied with the Government demands and he felt that he was entitled to parity. Congress gave him 85 percent of the parity price for the basic commodities.

Again I ask: How does the price of rice, which is a basic commodity, compare with milk and butter prices?

I have never completely agreed with the idea that farm benefits must be based on a voluntary reduction in production by the farmer, but as long as the administration follows this policy and as long as no better policy is accepted, I believe that nonbasic commodities should receive the same protection if they desire to submit themselves to the same control provision and limited production.

In other words, just because Congress says rice is a basic commodity, that is no reason for discriminating against another important product which has not been considered as a basic commodity.

I submit this point merely for our long-range consideration. In a post-armament period the dairy industry may need this protection.

I realize that it would be impracticable for many of the nonbasic commodities to submit to control programs. I realize further that the Secretary of Agriculture is not required to take in all perishable crops.

It is true, however, that whenever there is a crop which can be treated under a diversion program or a loan program, and when similar or identical provisions restricting production, price control, or marketing-control provisions can be adopted with reference to such a crop, there is no reason why that general policy should not prevail even with respect to perishable crops.

The reason I have discussed the possibility of the dairy industry participating in the various programs of the Government is that I feel the dairy farmer is entitled to expect something of Government. At the present time we have a tremendous tax bill. Now, the farmers are ready to do their share in relation to the tax bill, but they expect that the Government will use its head.

For over 8 years now about 80 percent of the farmers have been losing ground because they have not gotten the cost of production out of their milk. The Government has been taking over farms. Insurance companies have acquired multitudes of them.

Now, when there is $500,000,000 available in the Lease-Lend Act for farm products to give to Britain, the farmers expect that this Government will see to it that they get at least the cost of production for the products that the Government gives away; for the products which the Treasury of the United States buys with the people's money.

The Surplus Marketing Administration advises me that from mid-March through July purchases of dairy products under the Lease Lend Act included 48,000,000 pounds of cheese, 3,620,000 cases of evaporated milk, and 16,000,000 pounds of dry skimmed milk. We are gratified to learn of these purchases, but we must insist that these purchases must be made at a fair price to the farmer and must not be made with the thought of closing off the domestic market.

Wisconsin's cheese is selling in London for $1 a pound. If it costs the Wisconsin farmer $1.85 a hundred pounds to produce his milk in this period, when wages and everything else are going up, he does not want the Government he is now asked to support, to chisel in and take from him the opportunity to get the cost of production out of his product.

This brings us to the question, What should the dairy farmer do during this defense period?

First. The dairy farmer should, of course, continue to do everything he can to raise his production, as he has already done.

Second. The dairy farmer should not permit his domestic market to slip away from him while we are sending dairy products abroad. If we lose these foreign markets, we would then have a tremendous problem in reeducating the American people to the consumption of dairy products, and we would have a tremendous job in recapturing the American market. This is no time for a curtailment of American consumption of dairy products.

Third. The dairy industry should work with the Army in accumulating information on the effects of including dairy products in the Army rations.

The use of dairy products in the Army rations gives us a large-scale laboratory in which to prove the value of dairy products in our diets. The use of dairy products in the Army rations can stimulate a greater consumption of dairy products when these men are returned to civilian life.

We must begin now to anticipate the post-armament problem which will confront the farmer. We must begin now to insure against the collapsing farm market which followed the last World War. We must make certain that government gives fair treatment to the farmer in the post-armament period rather than deliberately collapsing their legitimate prices and battering the farmer down to a hand-to-mouth economic level.

Fourth. The dairy farmer must continue to oppose the establishment of maximum price ceilings for dairy products unless similar price ceilings and floors are imposed on other segments of our economy.

Fifth. The dairy farmer must investigate the use of low-price vegetable oils and animal fats in making synthetic products competing with dairy products.

Sixth. The dairy farmer should see to it that government permits him to use the carry-over grains to increase the production of milk, poultry supplies, and meats.

Seventh. The dairy farmer must insist that the administration give priorities to concerns which produce farm machinery.

Eighth. If the Government requires any diversion of the milk production, the dairy farmer must insist that it is an orderly diversion according to a plan rather than a haphazard day-to-day scheme. This will do much to eliminate the post-armament prices.

Ninth. The dairy farmer must at some future date consider the wisdom of further

participating in Government programs with the Surplus Commodities Corporation and the Commodity Credit Corporation.

Tenth. The dairy farmer can continue to insist that he be given the fair cost of production. He is entitled to insist that his fair price be maintained by some kind of a differential of butter or other competitive dairy products.

Eleventh. The Wisconsin dairy farmer can seize on the present market as an opportunity to put his financial house in order rather than to make financial commitments which may be difficult to meet in a post-armament period.

Twelfth. The dairy industry should insist that the administration should not enact legislation which would remove all tariff safeguards for dairy products.

At the present time, for example, there is a bill pending which would provide that commodities or articles for defense could be imported free of duty or tax. That would mean that Government could decide that any product which they believed was a defense product could be imported free of all existing tariff duties.

We know that dairy products are playing an important role in the Government defense program. As a consequence, dairy products might be declared commodities or articles for defense. That might mean a complete removal of the tariff on casein. Whole milk and cream and butter and cheese might be declared defense articles and all existing tariff duties removed. Similarly, the milk and cream importation restrictions contained in the Lenroot-Tabe law might be eliminated.

In other words, such legislation might be practically a blanket repeal of existing tariff laws and import restrictions on dairy products.

The dairy industry may have to fight legislation of this sort which might eventually mean that the farmer would again have to pay the freight.

I do not believe that appropriations alone will solve the farm problem. We will not solve the farm problem by dealing with special appropriations from year to year.

I believe, however, that such appropriations are necessary in order to at least enable the farmer to exist until such time as he gets his legitimate and fair share of the national income.

I am willing to support any workable plan or legislation for the farmer but thus far we of the minority have not been able to get favorable consideration for those plans which have been suggested.

It cannot be denied that the rise in the price of manufactured goods has been more rapid than the rise in the price of agricultural commodities.

Some 25 percent of the American people live on farms and last year they received only 9 percent of the national income, and that 9 percent included the food that the farmer's family itself consumed.

If we consider cash income the farmer's share in our national income is cut down still further to approximately 6 or 7 percent.

The farm program deals with 32,000,000 people—probably the most underprivileged people in the land. Yet all of the payments which have been made to the farmer are far less than half of the sums which have been appropriated for relief. I am not complaining of that. I am making the comparison so that we can see the necessity for effecting some small measure of justice to the American farmers.

Sooner or later this defense program will be over. When that period comes I do not want to see the buying power of the American farmer absolutely dried up so that industry and labor will have no market whatever for their products. It is true that the farmer produced so much food and fiber that if he were to be out of business it wouldn't hurt the rest of the people immediately, because there has been a reserve of food and clothing sufficient for 2 or 3 years.

When this period is over, however, and we again look for a market for the products of industry geared to peacetime, we may be faced with a dried-up farm buying power. That will bring about an economic collapse in this country—an economic collapse infinitely worse than 1932 and 1933.

The defense program has assisted industry, and in some cases has built their factories. It has given them cost-plus-fixed-fee contracts so that they couldn't lose a dime on their activities. Legislation has been passed to protect the labor interests of this country. We have a National Labor Relations Act.

Congress has placed a floor under wages and a ceiling on hours. Congress passed a Social Security Act, and that Social Security Act raises the prices of everything the farmer uses. Yet the farmer cannot share by so much as one dime in the distribution of the funds collected under the social-security program.

Congress has enacted artificial devices safeguarding every segment of American economy except the farmer, who produces the clothes we wear and the food we eat.

I do not advocate the repeal of these laws. I know that the farmer is not opposed to higher wages for labor and reasonable profits for industry, but I know also that he is entitled to a reasonable share of the national income. He is entitled to have legislation enacted which will give him a fair share of that income.

I feel that no farm program will ever be satisfactory as long as it neglects to consider the dairy farmer. However, that does not mean that in the interval we should neglect to do what we can for farmers as a group.

Incidentally, I myself have introduced a number of bills directed at assisting the farm problem, and I regret keenly that because of administration opposition they have not received favorable consideration.

I feel today that it would be more sound from an economic standpoint to advocate payments for specialized production rather than a curtailed production. In other words, I can see considerable merit in the idea of making an incentive payment.

These would be payments made to farmers for growing crops which are not now grown. They could be paid to farmers for growing specialty crops needed in the national-defense program. They could also be paid to farmers for following certain types of agriculture which would benefit the Nation. They would put men and acres to work.

I believe that the Government today should do a great deal more in research designed to use casein and dairy byproducts. However, in the meantime we cannot afford to neglect the depressed economic condition of the farmer in general.

Today we talk about sacrifice to make the defense program a reality. I contend, however, that the farmer alone should not be singled out to be that sacrifice.

The farmer has never had a cost-plus-fixed-fee contract. We never had to pass any laws limiting his profits, because in most communities he has been selling far below the cost of production. He never had any National Labor Relations Board to protect him against speculation and a decrease in income and unfair trade policies. The farmer has never gone on a strike in an effort to force the consumer to pay higher prices. He doesn't have a wage and hour law. He works from daybreak until nightfall.

He has the lowest income of any group of workers in the United States, but he has never gone communistic. He and his products are still the backbone of the Nation, and I will support any legislation designed to safeguard the buying power of the American farmer until such a time when the farmer will receive a more just proportion of the national income.

Bankhead-Eastland Bill (S. 1815)

EXTENSION OF REMARKS

OF

HON. JAMES OLIVER EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

ARTICLE BY W. C. NEILL

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relative to Senate bill 1815, written by Mr. W. C. Neill, a prominent banker and farm leader of Mississippi.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BE BANKHEAD-EASTLAND BILL, S. 1815, SEVENTY-SEVENTH CONGRESS

Enactment of legislation having the main import of this bill is vital to the security of the United States, because:

1. A policy of economic isolation and restricted production purposed to maintain artificial prices will certainly be cracked, either by the adoption of totalitarianism, or by internal revolution, or by external military pressure. A foreign military machine backed by an economy allowing unlimited production, with attendant abundance of materials and supplies, will overwhelm an American military machine backed by an economy of restriction, restraint, and regimentation, with attendant scarcity, disunity, depressed morale, and pressure-group paternalism.

2. Such legislation opens this country's only avenue of escape from totalitarian dictatorship developed from within, or imposed from without, because: (a) World trade hereafter must be on a basis of commodity exchange since no other basis exists (the United States has approximately all the gold); (b) American agriculture, geared to export trade, must disemploy vast multitudes if exports cease; these multitudes cannot be absorbed by manufacturing industry geared to supplying a constricted and stifled domestic market at the usual juicy profits. (c) Totalitarianism will be necessary to victual and to discipline the unemployed, disemployed, and dispossessed multitude, or else a recurrence of 1929–33 conditions will so weaken and disrupt the United States that it will be an easy prey for totalitarianism from without.

To whomsoever may be impressed by fact rather than by propaganda it is submitted that totalitarianism did not spring, full armed, from the brow of Hitler, but from economic restriction of the German people.

It can happen here.

W. C. NEILL.

Defense Strikes and Foreign Affairs

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

EDITORIALS FROM THE OMAHA EVENING WORLD-HERALD

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Omaha Evening World-Herald of August 21, 1941, and an editorial from the same newspaper of August 22, 1941, both on subjects of current interest.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Omaha Evening World-Herald of August 21, 1941]

NOW, AS IN '62

"The military situation is far from bright, and the country knows it as well as I do. They have no idea that the war is to be carried on and put through by hard, tough fighting, that it will hurt somebody; and no headway is going to be made while this delusion lasts."

The words are Abraham Lincoln's, spoken in the dark days of 1862, but Franklin D. Roosevelt, by quoting them, made them his own.

And a remarkably accurate parallel it is, Mr. President.

For now as then there are people who "have not buckled down to the determination to fight this war through, for they have got the idea into their heads that we are going to get out of this fix somehow by strategy."

There are people who believe we "can get out of this fix" by passing a conscription law or holding a conference at sea.

There are people who believe this war can be "carried on and put through" on a closed-shop basis and a 40-hour week.

There are people who have got it into their heads that we can win a war with social workers.

Who are they?

Look around you, Mr. President. You will see them on your left hand and your right. You will see them in front of you at the conference table, or perhaps lecturing learnedly to rubber-stamp Congressmen.

The same papers which related the story of Mr. Roosevelt's parallel also told the story of the tram strike in Detroit.

Detroit. The key city of the defense program. Its public transportation tied up by a labor dispute.

And what is the argument about in Detroit? About whether the transportation workers shall pay their dues to a C. I. O. union or an A. F. of L. union. The type of bitter, senseless controversy which became common in America under the rule of left-wing N. L. R. B.

The same papers also told of the continuing strike at the Kearny, N. J., shipyards, where Mr. Roosevelt's agencies have demanded that the employer grant closed-shop privileges to a certain union. And they told of perhaps a half dozen other jurisdictional or ideological disputes which were holding back defense work in other areas.

And they also told of the progress being made by the administration's left-wingers in their campaign to bring American industry and the American standard of living fully under the Government's management.

And perhaps they also told something of the President's plan to revive the St. Lawrence seaway project, and his friends' plans to revive the Florida ship-canal project, and his congressional leaders' many small plans for making Government pap available for "boondoggling" projects in every congressional district.

Yes, Mr. President; it is a truly deplorable situation.

By the formal, considered action of our Government we are a partisan and to a considerable extent a participant in the cruelest war the world has ever known. Probably our Nation was never in greater jeopardy, even in the dark days of 1862.

And yet there is a feeling in some circles that the war need not interfere with politics as usual.

Sound the alarums, Mr. President; but sound them first in Washington, where the bureaucrats sleep and reformers dream.

The American people, we believe now as always, would respond quickly and happily to alert, tough, fighting leadership.

[From the Omaha Evening World-Herald of August 22, 1941]

HOPE DEFERRED

When "hope springs exulting on triumphant wing," that, like peace, is wonderful. One feels good all over.

Thursday morning there came advance announcement that President Roosevelt would address a message to Congress on his historic Atlantic Ocean conference with Prime Minister Churchill.

And hope exulted. Now, at last, hope whispered, it could and would be told. Told whether, in this world of war, our own country and its Government is fish, flesh, or fowl. Where, as a matter of fact, we "are at." In the words the President was to use very shortly, "freedom of information," without which, as he was to say, no society organized along the lines of the eight points could survive.

This was what was needed. Information, free and candid. It was about all that was required to banish bewilderment and confusion, and so restore the dangerously shaken morale of the people and of the Army.

In the morning paper General Marshall had been quoted:

"Morale is vital to an army; far more important than the character of equipment. It depends in a large measure on the morale of the people behind the army and their unity of purpose."

True as gospel.

Then came the message. Only to recall the gospel truth that "hope deferred maketh the heart sick."

For Mr. Roosevelt told the Congress and the people exactly nothing at all that was new.

He repeated the eight points—his and the Prime Minister's hopes and plans for a better world that will assure "freedom from fear and want" to "all men in all the lands."

He told again why the Lend-Lease Act was adopted.

He told again that he and the Prime Minister are arranging for a conference with the soviets to provide them with aid for their defense.

He reiterated his stand against peace with the Nazis.

He added a postscript to the eight points to include "freedom of information" and freedom of religion as essentials of the new world order.

And this was all. Unless it was to embalm the eight points in the formal record the message might as well have gone undelivered.

The disappointment is great. The President and Commander in Chief, of course, has his reasons. He is using his best judgment as to what may and may not be told the American people and their representatives in Congress.

But however weighty the reasons for withholding information, the policy of the Government weakens morale. It does not make for unity.

Nor is it fair or wise to draw an indictment against the American people because morale is weak and unity is lacking.

Repeatedly they have been assured that it is the purpose and hope of their Government to keep this country out of the World War. That means we should be kept out. It is difficult, then, for the people to unite enthusiastically in support of policies and acts and words tending certainly to involve us. Many of their leaders insist we are already in; others assert that the policy still is to keep us out.

What are the people to believe? How can they understand?

What really was the purpose of the Atlantic meeting? Was it for war or was it for peace; or was it merely to proclaim what kind of world this ought to be, and to decide how much help should go to the "reds," and from whom—and how far the "reds" may be trusted in the establishment of a good earth?

At the best there is mystery—mystery all along the line—and mystery confuses.

So with the Army—the selectees. They were to serve for 12 months. Then Congress was asked to extend their term of service without limit. Then a "compromise" extension of 18 months reluctantly was accepted. When Senator TAFT proposed only a 6-month extension that was strongly opposed and denounced as menacing to our national security. Yet now, a few days later, the 6-month extension seems about right.

A while ago it was contended that no training of 12 or 18 months would be nearly sufficient for a dependable Army. Today the trainees of from 12 to 18 months are to be released and replaced by new draftees. Meanwhile the army of defense is still without arms and equipment, while in the kindergarten stage of training.

Whom and what to believe? What is it all about? For what must there be unity? For what, in high purpose, must we be sternly resolved?

We say it is not the fault of the people if their morale is low. We say they are entitled to voice their bewilderment, to be critical of leadership that leaves them groping in the dark and then complains of their lack of enthusiasm.

The Government can trust the people. Americans are a mighty fine people, good citizens as they are good soldiers. But as gropers-in-the-dark they don't belong. They are not the material of which robots are made. They want to know. If not all the whys and hows, anyhow the direction in which they are going.

Until they are informed—much better informed than now—as to the ultimate purposes of their leadership in domestic as well as foreign affairs, unity will be impossible and the national morale will continue to be a matter for concern.

A Simple Procedure

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

EDITORIAL FROM NEBRASKA DAILY NEWS-PRESS

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Simple Procedure," appearing in a recent issue of the Nebraska Daily News-Press. The editorial was written by a former Member of the House of Representatives, Mr. J. H. Sweet.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nebraska Daily News-Press]

A SIMPLE PROCEDURE

In his Tuesday press conference, the President very aptly quoted Mr. Lincoln who, at the beginning of the Civil War, found his toughest job was convincing the people they were at war.

It was appropriate for the President to mention that, but as he did so he added to the confusion.

According to his own statements, we are not yet in a shooting war. Mr. Lincoln definitely was commanding an army when he remarked on the complacency of a republic in direst travail.

Mr. Lincoln took the people into his confidence. He called to his Cabinet a group of men who represented all types of thought. His Secretary of War was a man of ability; his Secretary of the Navy was a man trained in organization. He had no Secretary of the Interior, glory be, and there were no Sister Perkinses to throw monkey wrenches into the machinery.

When Mr. Lincoln conferred he did not assume his new-hatched Republican Party represented all that was good and holy in the land. He knew his military forces must be made up of Republicans, Democrats, and what not. There were no conniving politicians to proclaim that only Republicans should have defense jobs in Des Moines et al.

Eventually, but only after Bull Run, Fredericksburg, and Antietam, the people awoke to the fact that if they were to win they must stand behind Lincoln and see to it that he got some generals. After a while, but at a terrible cost, Grant, Sherman, and Sheridan came to the fore and the issue was resolved.

F. D. R. need not go back to Lincoln to find a text for a sermon on unity, disunion, or what have you.

He need go back only so far as Woodrow Wilson, that other war President. Wilson was reluctant, deliberate, and aware of popular resentment against war. But he did keep his people informed. His Cabinet for the most part was made up of intelligent, patriotic, able men. He sold the people on unity through the simplest device known to man—complete and open-minded conferences with them and, what's more, confidence in their ability and willingness to take it. Also, he was willing and eager to delegate authority to others.

The trouble in Washington today, according to our best authority, is that this seems to be a one-man show.

The President has his finger in every pie. He must dabble in every detail of the defense program. He must be Secretary of State when he isn't dictating to Congress what sort of a tax bill it should enact to relieve rich women from paying a fair share of the defense costs. It is too bad, when you think of it, that he does not supervise the Department of the Interior and the Labor Department.

When Mr. Roosevelt plainly tells the people, as he should, that they are entirely too complacent, let him also tell them he intends to delegate authority to good men and hold them responsible for what has been done.

When he goes on a fishing trip, let the people be told what sort of "fish" are to be caught, and what sort of bait is to be used. He might also tell us that since British members of the fishing party are to be accompanied by responsible and authoritative men of the press he, too, will permit representatives of public opinion to accompany him.

Above all, let Mr. Roosevelt indicate he has confidence in the people of the United States. He is fond of saying we are a democracy. Sometimes the people wonder about that, too.

Keeping America Safe and at Peace

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 29, 1941

RADIO ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me over station WISN, Milwaukee, Wis., on August 11, 1941, the subject being Keep America Safe and at Peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, these times demand plain talk. As a nation, we are now in a twilight zone where facts count—where reason and common sense must come into play. We owe it to ourselves and to the Nation to be calm and speak plainly.

All America agrees that there is a great need for a reasonable, sensible defense program. All America is ready to dig down to pay its share of that defense program. The need is apparent because the world is aflame with the madness of war.

It is apparent to everyone that the need for this defense program grows out of the war madness abroad. It is apparent that the totalitarian powers are out to slice up the world.

But this defense program calls for the sanest kind of thinking and planning so that we do not wreck our American economy and do not, contrary to the wishes of the great majority of the American people, precipitate this Nation into war by the overt acts of our leaders. It is well that we pause a moment to understand the situation.

We are a peculiarly blessed people. We are blessed because of our geographic position, being 3,000 miles off from Europe and 7,000 miles off from Asia.

But we are also blessed in our form of government. We are a republic, peculiarly formed. Our Executive, according to the Supreme Court, has plenary powers in dealing with foreign affairs, but the Congress alone has the power to declare war.

The Executive is Commander in Chief of the Army and Navy, but the Congress has to vote the money to support that Army and Navy.

The Executive and the Members of Congress are elected by the people.

Now, you ask—what has that got to do with the present situation? Just this: Between 80 and 85 percent of our people have indicated clearly that they do not want the managers of government to commit any overt act that would precipitate this country into this war. The elected representatives of the people are aware of that fact. It would be a serious tragedy at this time for either the Executive, or any of his officers, or the Congress to disregard the wishes of the people.

In my opinion, there isn't over 1 percent of the people of this country who can be classified as interventionists, and probably there isn't over 5 percent of the people who could be classified as strict isolationists. In between these two groups are found the great mass of the American people who are calmly appraising the international situation; who are aware of the terrible tragedies and the cost of war; who realize that this Nation has been set apart for a great and noble purpose.

Now, are these people lulled into false security on this great issue today? Not at all. They are in favor of an adequate defense. They are standing back of the national policy of aid to Britain, recognizing that as long as the war is confined to Europe there is little or no possibility of it coming to America.

Is this group downhearted or filled with the spirit of defeatism? Not at all. They are conscious of the power of 131,000,000 people. They are also conscious of the obligations which they owe to the present and to the future generations of America and of the earth. They want this country to remain safe, and free, and at peace.

They are also conscious of the fact that other nations wanted to remain safe, free, and at peace, and have been overrun and conquered, and they know that if any other nation commits an overt act of war against this people that 131,000,000 people will respond as one man to the defense of this Nation and the principles for which this Nation stands.

Everyone is aware of the fact that great waves of propaganda are being poured out over America. By being aware of this situation—not being asleep—the American people are becoming more and more discriminating in their thinking. They are weighing everything and they are casting out the dross. We are resisting propaganda, because we want to do everything that is right to avoid involvement in this war. We want to avoid the bankruptcy of a great people, and we want to avoid the needless waste of life and property, and we want to keep intact the great institutions which are called American, the institutions which have been minted out of the struggles of a thousand years. Of course, we shall be ready for any emergency. We will be strong, and if any one people or group of people challenges our way of life, we will be ready to defend it. But we do not want foreign influences to determine the course we shall take.

Yes; we Americans are thinking things through with courage and vision. We know we have enough to do to love America without hating any other people. Of course, we hate wrong. We Americans stem from all the national roots of Europe, but when our forebears came over here they uprooted themselves from the hates and the strifes and the limitations and the "isms" of Europe. So

now we are thinking more and more about American values, the American way of life.

For years we have been accepting all the privileges that result from being an American—now we are awakened to the fact that there are obligations which we must fulfill, and we are meeting those obligations head-on by willingly sacrificing our material means to sustain government in this great emergency. But we want our Government managers to sustain America also.

We do not believe in meddling in foreign affairs. We realize, of course, that a great international poker game is on, but we Americans want to stay out of that game. Why? Because we feel that the hour is coming when we shall, indeed, have an opportunity to serve tired, hungry, dying humanity, and we feel we can best serve America by keeping out of the European holocaust.

The hour is probably nearer than we think when hungry, exhausted Europe will want a helping hand, when they will need food and clothing and succor.

I am continually asked, Will America get involved in this war? In my opinion, we are further away from it now than we were 6 months ago. I do not say that war is inevitable. It is my fervent conviction that American involvement, if our leaders keep their heads, is not necessary.

We have heard a great deal said about unity. America is unified on defense, on keeping out of this war, but not for involvement. I repeat what I said before—that if we are attacked, if any other nation strikes at the Western Hemisphere, there will be 131,000,000 people back of the Commander in Chief.

In the bewildered, confused, chaotic thinking and loose statements which have sometimes characterized the discussions of our foreign affairs one thing is certain—we are not prepared for a European war.

We do not have 50,000 mechanized troops. We do not have a two-ocean Navy. We could fight a defensive war on our side of the Atlantic, but we are not prepared to send an expeditionary force abroad.

I am wholeheartedly for every measure which will bulwark America's defenses. I believe we should arm to the teeth. I believe in an independent air arm, a great fleet, and mobile, fast-moving, synchronized, mechanized units.

I want to see the Nazi machine and everything it represents completely annihilated—and, consequently, I believe in aid to Britain, but not to such a degree that it impairs our defenses or leads us to commit an overt act of war.

I believe in the four freedoms, and I believe in anything and everything which will keep them alive here at home.

In these days, which try men's souls, I believe in sacrifice to build our defenses strong. I believe in sacrifices for labor, management, the consumer, the taxpayer, and also for a government which must cut out its expensive nondefense frills.

I believe fervently that Congress must not surrender its powers; that the Executive must not usurp the congressional power to declare war by committing an overt act which would rob Congress of any alternatives.

Above all, in these dark hours, in the twilight zone of world decency, I believe in the American people. I believe in the average American citizen who keeps his head and maintains his mental balance. I believe in the American people who, without bias or prejudice, without hatred or malice, are providing the mental ferment which will cleanse America of any sectionalism, bigotry, or hate.

I repeat, when our fathers came to this country they left the other country because of economic, political, social, religious, or other reasons; but they left it, and when they came here they dug their roots deep down in the soil of America, and they became a peculiar breed. Whether they stem from Ireland or Poland or England or Germany or Scandinavia or France, they became not German-Americans, Irish-Americans, or Scandinavian-Americans, but they became Americans. In doing that they severed their connections with all the hatreds of Europe and all the limitations of Europe, with all the viciousness and all the barriers that the centuries had built up in Europe. They cast out those things, and when they came here they became a peculiar people. We call ourselves Americans. We as a people—and that is history—do not believe in meddling in foreign affairs.

I have faith in the American people who believe we have enough to do to love, preserve, and protect things American—the American way of life and the great freedoms. We hate the ideologies of the dictators of Europe, but we are realistic, and we recognize the significant fact we have a great job to do here in the Western Hemisphere. Because I have faith in the American people I believe we will keep America safe, free, and at peace.

President Roosevelt's Labor Day Address

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

ADDRESS BY THE PRESIDENT

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD was included the privilege of including the Labor Day address of the President of the United States, Franklin D. Roosevelt, delivered today at Hyde Park, N. Y., over a national hook-up. Mr. Speaker, this timely and appropriate address follows:

On this day—this American holiday—we celebrate the rights of free laboring men and women.

The preservation of these rights is now vitally important, not only to us who enjoy them but to the whole future of Christian civilization.

American labor now bears a tremendous responsibility in the winning of this most brutal, most terrible of all wars.

In our factories and shops and arsenals we are building weapons on a scale great in its magnitude. To all the battle fronts of the world these weapons are being dispatched, by day and by night, over the seas and through the air. And this Nation is now devising and developing new weapons of unprecedented power toward the maintenance of democracy.

WE DO NOT COVET TERRITORY

Why are we doing this—why are we determined to devote our entire industrial front to the prosecution of a war which has not yet actually touched our own shores?

We are not a warlike people. We have never sought glory as a nation of warriors. We are not interested in aggression. We are not interested—as the dictators are—in looting. We do not covet one square inch of the territory of any other nation.

Our vast effort and the unity of purpose which inspires that effort are due solely to our recognition of the fact that our fundamental rights—including the rights of labor—are threatened by Hitler's violent attempt to rule the world.

These rights were established by our forefathers on the field of battle. They have been defended—at great cost but with great success—on the field of battle, here on our own soil, and in foreign land and all the seas all over the world.

RIGHTS INTERDEPENDENT

There has never been a moment in our history when Americans were not ready to stand up as freemen and fight for their rights.

In times of national emergency one fact is brought home to us clearly and decisively—the fact that all of our rights are interdependent.

The right of freedom of worship would mean nothing without freedom of speech. And the rights of free labor as we know them today could not survive without the rights of free enterprise.

That is the indestructible bond that is between us all—all of us Americans—interdependence of interest, privileges, opportunities, responsibilities, interdependence of rights.

That is what unites us—men and women of all sections, of all races, of all faiths, of all occupations, of all political beliefs. That is why we have been able to defy and frustrate the enemies who believed they could divide us and conquer us from within.

ENORMOUS PRODUCTION GAINS

These enemies all know that we possess a strong Navy—gaining in strength. They know that that Navy—as long as the Navies of the British Empire and the Netherlands and Norway and Russia exist—can together guarantee the freedom of the seas. These enemies know that if these other navies are destroyed, the American Navy cannot now or in the future maintain the freedom of the seas against all the rest of the world.

These enemies know that our Army is increasing daily in its all-round strength.

These enemies know that today the chief American fighters in the battles now raging are those engaged in American industry, employers and employees alike.

These enemies know that the course of American production in the past years has shown enormous gains and that the product of these industries is moving to the battle fronts against Hitlerism in increasing volume each day.

But these enemies also know that our American effort is not yet enough—and that unless we step up the total of our production and more greatly safeguard it on its journeys to the battlefields, these enemies will take heart in pushing their attack in old fields and new.

HITLER NOT YET STOPPED

I give solemn warning to those who think that Hitler has been blocked and halted that they are making a very dangerous assumption; when in any way your enemy seems to be making slower progress than he did the year before, that is the very moment to strike with redoubled force—to throw more energy into the job of defeating him—to end for all time the menace of world conquest and thereby end all talk or thought of any peace founded on a compromise with evil itself.

And we know that a free labor system is the very foundation of a functioning democracy. We know that one of the first acts of the Axis dictatorships has been to wipe out all the principles and standards which labor has been able to establish for its own preservation and advancement.

Trade-unionism is a forbidden philosophy under these rule-or-ruin dictators. For trade-unionism demands full freedom of expression and peaceful assembly. Trade unionism has helped to give to everyone who toils the position of dignity which is his due.

The present position of labor in the United States as an interdependent unit in the life

of the Nation has not come about by chance. It has been an evolutionary process of a healthy democracy at work.

Hitler has not worked that way. He will not; he cannot work that way. Just as he denies all rights to individuals, he must deny all rights to groups—of labor, of business, of learning, of the church. He has abolished trade unions as ruthlessly as he has persecuted religion.

LABOR HAS STAKE IN VICTORY

No group of Americans has realized more clearly what Nazi domination of the world means than has organized labor, what it means to their standard of living, their freedom, their lives. No group has a greater stake in the defeat of nazi-ism, in the preservation of the fundamental freedoms, in the continuance of democracy throughout the world.

We have already achieved much; it is imperative that we achieve infinitely more.

The single-mindedness and sacrifice with which we jointly dedicate ourselves to the production of the weapons of freedom will determine in no small part the length of the ordeal through which humanity must pass.

PRECEDENCE FOR DEFENSE

We cannot hesitate, we cannot equivocate in the great task before us. The defense of America's freedom must take precedence over every private aim and over every private interest.

We are engaged on a grim and perilous task. Forces of insane violence have been let loose by Hitler upon this earth. We must do our full part in conquering them. For these forces may be unleashed on this Nation as we go about our business of protecting the proper interests of our country.

The task of defeating Hitler may be long and arduous. There are a few appeasers and Nazi sympathizers who say it cannot be done. They even ask me to negotiate with Hitler—to pray for crumbs from his victorious table. They do, in fact, ask me to become the modern Benedict Arnold and betray all I hold dear—my devotion to our freedom—to our churches—to our country. This course I have rejected—I reject it again.

PLEDGES DEFEAT OF HITLER

Instead, I know that I speak the conscience and determination of the American people when I say that we shall do everything in our power to crush Hitler and his Nazi forces.

American workers and American farmers, American businessmen, and American churchmen—all of us together—have the great responsibility and the great privilege of laboring to build a democratic world on enduring foundations.

May it be said on some future Labor Day by some future President of the United States that we did our work faithfully and well.

Election of Representative in First Wisconsin District

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

ADDRESS OF HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered by me at Kenosha, Wis., on August 27 entitled "Why I Would Vote for Mr. Smith."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY I WOULD VOTE FOR MR. SMITH

I am happy to be in Kenosha to speak to my many friends here. We are engaged in a very important political campaign. The eyes of the Nation are centered upon the First Congressional District of Wisconsin.

I am happy to be here to endorse the Republican nominee for the high office of Congressman of this district.

In the discussion that I shall carry on this evening I shall not engage in any personalities; I shall not attempt to tell the voters of this district how they shall vote; that is their personal right. I shall, however, present the important issues involved in this congressional fight. I said the eyes of the Nation are on this contest. The results may act as a barometer showing the pulse of the Nation.

The former incumbent of this high office, Stephen Bolles, was a personal friend of mine. He was a very able public official. This district honored itself in sending a man of his character and ability to Washington. This district is a sane-thinking district. Its voters are people of judgment. By and large, there isn't any hysteria here. The people are looking the world situation square in the face.

If I were a voter in this district, I would support Mr. Smith for the following reasons:

First. He is a man of experience, trustworthy and fearless.

Second. He is a clear thinker—a sound thinker.

Third. He is a lawyer of high standing—a student of government.

His work for years has trained him in the art of sensing the issue. It is very important now in Washington that we have clear thinkers—men who will not be swept off their feet.

I have been told that pressure is being brought to bear on certain groups in this district.

Just as I would not attempt to tell any man how he should vote, so as long as this country remains free I feel each man and woman should be free from any group pressure—free to determine how he or she shall vote. I am told that there is an attempt to interject into the present situation an element of labor or anti-labor. I don't believe that that will work. Why? Because there is no place for such an argument in this contest. If Mr. Smith goes to Washington he will go there representing all the people of this district, the same as I represent all the people of the State of Wisconsin in the Senate of the United States.

When I was elected as your Senator certain labor unions were told to vote against me. I spoke to labor in the mills, in the shops. I told them how I had labored in the mills, in the sawmills of the North. I told them how, if we were going to keep America strong, we had to keep out of our politics and our economy the racketeers and those who stand for disintegrating our country. I drew the picture how in Germany the leaders without vision had created classes who hated each other, who got to fighting each other, who would not work with each other. There was no unity, no cohesion, and the result was that a Hitler arose.

Unionism has its place. Management has its place in our economy. Communism, nazi-ism, and fascism, however, have no place in our free America.

There are those in our land who are working for a post-war period which will give them the opportunity to become a Hitler or a Mussolini or a Stalin. It is for you and me to do our part to see that they don't get that opportunity.

We are all in the same boat, labor, farmer, merchant, and management. That boat is called America. If it goes down, we all go down. It won't go down, if we pull together. If we do not work together the consequences may be dire.

Now, Mr. Smith is sympathetic toward labor, he is sympathetic toward the man who has to meet the pay roll. He wants an ordered society. He wants this Nation to grow and develop. He does not want buccaneers in capital, in labor; he wants sane men, calm men, honest men to work out the destiny of this country.

I understand that another issue which has been interjected into this picture is that of "support the President." I think the real issue should be phrased, "Will the leaders follow the will of the people?" Let me draw a picture for you. Except for a very few people, the American people want to stay out of this war. Probably 1 percent of the people could be called interventionists. Probably 5 percent could be called strict isolationists. In between is the common mass of American people who are calmly thinking this world situation through. They know that other nations desired peace and got war and slavery. Therefore all America is in favor of a defense program—a defense program which will be adequate, effective to accomplish the purpose in mind. Where then is the difference that exists? It is very simple.

We are a republic. A peculiarly formed government. The President is given certain powers. He is Commander in Chief of the Army and Navy. He is in full control of foreign affairs, except as the Constitution limits his authority.

But the Congress alone has the power to declare war. If 80 to 90 percent of the people are against involvement in a foreign war unless we are precipitated into it by the overt act of some other nation then the constitutional power to declare war by the Congress should not in any manner be invaded by the Executive. Now, Mr. Smith takes his stand on good constitutional ground. He recognizes the authority of the President in relation to handling foreign affairs, but he insists also that neither the President nor any Army or Navy officer must be guilty of an overt act which would precipitate this country into war.

Now let's make one situation clear. Mr. Smith, because he takes this stand, in no way indicates any approval of the philosophy for the acts of Hitler. Mr. Smith is a realistic man. He senses the imperative need of getting this country prepared on land and sea and in the air. I need not tell this audience who read the newspapers that we are not prepared on the land or in the air to wage any war. In spite of the columnists and all those who insist that we should get into a fighting war it is just common sense that we do not involve ourselves in war. If you are going to take a tiger by the tail you have got to have something to knock his head off with. And we are not prepared after 2 years of this administration's preparedness.

As to aid to Britain, Mr. Smith has said that this is a national policy declared by the Congress. Even without the lease-lend bill we were sending England all the aid possible. Today she is getting 90 percent of our airplane production in bombers and fighters. Churchill, in his recent speech Sunday, told of a convoy of 70 ships sailing toward Britain from America. You don't have to worry about Mr. Smith backing up the President if the President is right. The real rub is, Will the President back up the people? Mr. Smith will back the President in all matters where he has the authority to act, but he will not be back of the President if he exceeds his constitutional authority or if, without the act of Congress, he attempts to precipitate this country into war.

This war situation requires common sense. While the sympathies of all America are with

Britain; while we here in this land stem from all the blood streams of Europe, we must remember that we are not British-Americans, German-Americans, or Polish-Americans. We are a peculiar breed called the American. We owe a primary obligation to America, and that involves this responsibility that we must not lose our head by an emotional spree. Just stop and think; if you were a Britisher you would do everything you could to bring America into the fight on the side of Britain. If you were a Nazi follower you would do everything you could to stop it. Now, if that is true, we must be very careful in our reactions in what way re read here, what we read in the papers, and what we hear over the radio. How much of it is propaganda? How much of it is truth?

In my opinion it is all-important that you send men to Washington who will think things through, who will not simply be "yes men."

I don't want to become partisan in this argument, yet I think it is imperatively necessary that you have men in Washington to represent you who have a little financial sense, who know what a dollar is because they have sweated for it, who know the obligation of a trustee, and who will not spend our money foolishly. In the last 8 years your Government has run into the red $3,500,000,000 a year. This year we will run $10,000,000,000 into the red. Next year it is estimated we will run into the red somewhere between ten and fifteen billion. Does labor or management believe that their big business of government can carry on indefinitely that way? There are some so-called liberal thinkers and communistic thinkers in Washington who want this Government to smash up. Mr. Smith is not that sort of a chap.

Now, Mr. Smith does not want war, and neither do you; but if anyone attacks this country or this hemisphere, he will be, like all of you, for a total defense of America and what she stands for.

There is another phase of this matter that I think should appeal to you. Mr. Smith is not a crackpot artist. He has no notion that 2 times 2 by legislation can be made to equal 5. He knows that government is just as good and just as sound as the people who constitute it.

As I understand, there is an appeal by the President and his group that Smith be defeated, and I think the people of this district will resent these tactics. Even in the South, which is solidly Democratic, they resented interference of this kind.

In speaking for Mr. Smith you notice I have said nothing about his opponent. You people have to judge; you people have to determine what kind of a man you want to represent you in Washington. As I stated before, it is all-important now that we have men who think straight, who act straight, and who live straight—men like Mr. Smith, who devotedly love their country and its institutions; men who have courage and vision.

There is another reason why Mr. Smith should be sent to Washington, as I see it:

It is not a healthy thing for government, for the general welfare of its people, that one party remain in power over any extended time. It is not a healthy thing that the Democrats constantly maintain the control of the House and the Senate. These sentiments have been expressed from the earliest period of our history down to the present time by great political observers.

Power entrusted in one man's hands or a group of men's hands over an extended period of time becomes autocratic.

In my opinion, it would be a healthy thing to turn out all the bureaucrats in Washington. When we got into this war situation, Roosevelt turned to the practical men in the Nation. He got rid of his "brain trusters," most of them, and his theorists.

If you send Mr. Smith to Washington, it will be equivalent to saying that you people here in this district would like to have the administration cut out a lot of unnecessary spending. You would be saying, "Get an adequate defense, but don't waste our money in getting it; cut down the disbursements made for a lot of nondefense items; when you spend the people's money, see that you get a dollar's worth of value for every dollar spent."

When Hoover went out of office he was called a bureaucrat. On June 30 of 1941, there were almost three times as many executive civil service employees in Washington as there were on June 30, 1932, and since that time the number of civil service employees in Washington has been tremendously increased along with increases in noncivil service Federal employment, and that makes the present powers dangerously near autocratic.

Send Mr. Smith to Washington, and his very going will operate as a check on the excesses of this administration.

After all, you and I cannot pass the buck. We are custodians of America. We are the builders of the present. What America is going to be will be determined by our acts.

I am not a fearist or a defeatist. I am aware of the fact that the international war situations has relegated to the background the mistakes of the last 8 years. The people of this country elected Mr. Roosevelt as President in 1940, but they didn't elect him to become the Congress of the United States or to become the Supreme Court. He has his functions to perform.

Now we want a man to go from this district to Washington who will recognize that as a legislator he has functions to perform independent of the White House. That does not mean that he has to disagree with the President's ideas on all fronts. It does mean that he will be independent and judicial and patriotic.

In perilous times it is imperatively necessary that the legislative branch of government and the executive branch cooperate and yet operate as a check on each other. In Germany, Italy, and Russia the executive branch of government obliterated the legislative branch. That must not happen here. That it shall not happen here, it is necessary that we elect independent Representatives to represent us in Washington.

Comment on Appointment of Mr. Biddle as Attorney General

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

EDITORIALS FROM LEADING NEWSPAPERS OF THE UNITED STATES

Mr. HATCH. Mr. President, recently the President of the United States appointed Mr. Francis Biddle Attorney General. Mr. Biddle's appointment to this high office comes as a recognition of his qualifications and is a natural promotion to a high an honorable office, a promotion which is well deserved and with which I am in hearty accord.

In this connection it gives me pleasure at this time to ask unanimous consent to have published in the Appendix of the RECORD certain editorials from leading newspapers of the United States concerning Mr. Biddle's appointment. These editorials speak for themselves.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of August 26, 1941]

NEW ATTORNEY GENERAL

The promotion of Solicitor General Francis Biddle to be Attorney General brings into the Cabinet one of the earliest and stanchest members of the New Deal, but withal, one of the least conspicuous of those who have been prominent in the inner circles of the Roosevelt administration.

Scion of the famous Philadelphia family whose name he bears, and a descendant on his mother's side of Edmund Randolph, first Attorney General under Washington, Mr. Biddle, one-time Bull Mooser, was named chairman of the old Labor Relations Board in N. R. A. days, after a successful law practice in which he battled with equal vigor on behalf of well-entrenched corporations and not-so-well-entrenched citizens whose cause was appealing. Later, he was special counsel for the congressional committee investigating the Tennessee Valley Authority, and then a member of the Third Circuit United States Court of Appeals, relinquishing this life appointment to the bench to become Solicitor General.

In the Department of Justice, he enjoyed a sympathetic association with Attorney General Robert H. Jackson, whom he now succeeds, and in consequence assumed much of the administrative detail that ordinarily falls to the Attorney General, while also carrying on his regular duties as chief counsel for the Government. He successfully argued the constitutionality of the Wages and Hours Act and the Federal Power Act in the Supreme Court, while at the same time directing the administration of the Alien Registration Act under which approximately 5,000,000 noncitizens were listed and fingerprinted by the Department without a hitch.

To each task, Mr. Biddle has brought thoroughness and intensity of purpose, and his new responsibilities no doubt will be discharged in the same spirit.

[From the New York Herald Tribune of August 27, 1941]

IN PRAISE OF MR. BIDDLE

To the New York Herald Tribune:

A consistent reader of your always lively and stimulating editorial page, I was shocked this morning to see your unfair editorial on the nomination of Mr. Francis Biddle as Attorney General of the United States.

It is true that Mr. Biddle has been loyal to the President. But does loyalty disqualify a man for a high post?

It is not true that Mr. Biddle's career in public office has been undistinguished. His brilliant record at the Harvard Law School, his successful career at the bar in Philadelphia, his record as judge of the circout court of appeals, and his excellent handling of the heavy responsibilities in the Department of Justice both before and since the elevation of his former chief, Mr. Jackson, to the Supreme Court are all ignored in your analysis.

And, what is perhaps most important, your editorial writer forgot, apparently in his haste to make the deadline, the vital significance at this critical time of having as Attorney General a man whose whole record, both private and public, gives assurance that, no matter how inflamed public opinion might become in the event the United States were drawn into war, hysteria and witch hunting

would find no support in the office of the Attorney General.

JAMES G. MCDONALD.

BROOKLYN, *August 26, 1941.*

[It is a pleasure to be able to agree heartily with Mr. McDonald's final point.—Editor.]

[From the New York Times of August 27, 1941]

ATTORNEY GENERAL BIDDLE

Mr. Roosevelt has been a little slow to appoint Francis Biddle, who has been Solicitor General, Assistant Attorney General, and Acting Attorney General, to the office for which he has had so much experience and high qualifications. He has been a member of the bar for almost 30 years. Lawyers who have been counsel with or against him speak with respect of his talent and his learning. As Chairman of the National Labor Board, chief counsel of the committee that investigated the Tennessee Valley Authority, and Federal judge, he has shown, most of all, a certain moderation and flexibility of mind. As a judge, according to the circumstances of the case, he has supported the closed shop and the company union, and he has held that an employer cannot be compelled to reinstate a striker for whom there is no work and who has not been replaced by another.

Of his work in the Department of Justice, one remembers particularly his good sense about the registration of aliens and his defense of civil liberties. He is no timeserver. He has no itch for popularity. He was one of Mr. Justice Holmes' private secretaries. We like to think that from that noblest liberal of them all he learned to have a clear, open, and independent mind. Men on the left side of the street say he is too conservative. On the right side they say he is too radical. That is a pretty good sort of reputation. We may differ with him more than occassionally, but always with the regard due to an accomplished, thoughtful, courageous man.

[From the Philadelphia (Pa.) Record of August 27, 1941]

THE BIDDLE APPOINTMENT

Some appointments are "naturals." One such is President Roosevelt's nomination of Solicitor General Francis Biddle as Attorney General of the United States.

Biddle's whole career; his exceptionally broad experience in Government administration as well as law; his temperament and sheer ability—all these fit him eminently for the Nation's highest legal office.

That Biddle's manifold qualities are recognized generally is evident in the widespread and hearty approval of his appointment—approval from conservative as well as liberal sources.

In the Senate the accolade has been so pronounced as to suggest unanimous as well as swift confirmation. Even conservative leaders who fought Biddle in the old days, when he was Chairman of the National Labor Relations Board, hail his advancement because they know he is as sincere as he is able; that he will not permit partisanship to warp his sense of justice.

To the Record, this warm support of an outstanding liberal is encouraging indeed. It betokens, we believe, a gradual but steady closing of that rift in American ranks which New Deal reforms necessarily and inevitably engendered.

Major change is always a difficult dose for the opposition to down. But recognition of Francis Biddle's record in both private and public affairs overrides partisanship. So has the willingness of many Republican leaders to put political prejudice aside to stand behind President Roosevelt in the task of arming and defending this Nation.

Philadelphians naturally are proud that Francis Biddle is chosen to join the President's Cabinet. They have watched his career with interest and affection. They remember his early days as secretary to Supreme Court Justices Holmes, his private legal career in Philadelphia, and the recent period in which he has been one of the keymen of the Roosevelt New Deal, serving not only as N. L. R. B. Chairman but as counsel for the congressional investigation of T. V. A., judge of the Third Circuit Court of Appeals, and as Solicitor General.

Yet, amid these manifold activities, Biddle took an active interest in Pennsylvania affairs, also. He served on the committee on special policing in industry named by Gifford Pinchot. He drafted major changes in State laws during the Earle administration, organized the Philadelphia branch of the Foreign Policy Association, fought notable cases for the Civil Liberties Union—and, in his spare time, wrote a novel, short stories, reviews, and legal articles.

This brief summary is enough to show the breadth of viewpoint and agility of mind of our Attorney General-designate. We have not the slightest doubt he will more than uphold the record of his 57 predecessors in the office.

In extending our own congratulations to Francis Biddle, we feel, too, that we are offering the every good wish of all his friends and neighbors here in the home town. He has, indeed, made good.

Sugar Act Administered to Detriment of American Sugar Beet Farmers and Processors

---

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, sugar-beet farmers and processors, as well as all others having knowledge of the importance of this valuable industry to our national economy, must be bewildered indeed by the gyrations of the administration in attempting, on the one hand, to convince our beet-growing farmers that it at all times acts solely in their interests and, on the other, takes advantage of every opportunity to so administer the Sugar Act as to increase the sugar allotment of the Cuban sugar companies to the detriment of our American farmers who desire to grow more beets, and to the embarrassment and disgust of the processors when, for month after month, they are prevented from marketing their stocks on hand.

The latest Agricultural Department press release on sugar, dated August 29, 1941, announced an increase of approximately 1,000,000 tons allotment to the various areas supplying the United States market, thus bringing the "presumed" consumption for the year up to the staggering figure of 9,002,976 tons, a figure utterly fantastic, provided it represents the best judgment of those in the Department whose duty and responsibility it is to prophesy the probable consumption.

Actual consumption will not even approach this figure. To make this possible, the people of this country must increase their consumption of this commodity approximately two and one-quarter million tons over that of last year, or almost exactly 33 percent. Fantastic? It is worse than fantastic. These figures indicate that somewhere, lurking in the vicinity of the wood pile, will be found the proverbial Ethiopian.

While our continental producers still have on hand small quantities of last year's sugar crop, they by no means have enough, even though they were permitted to dump it all on the market at one time, to disturb or to interfere with the program of the Agriculture Department to open our market to the Cubans for an additional 375,609 tons of sugar. To quote from the release:

> While it is not known at the present time whether the continental beet Puerto Rico and foreign countries other than Cuba will deliver this year as a result of their increased quotas, the present revision will enable Cuba to market in this country 375,609 tons more.

Let me again remind the folks that the money invested in Cuban sugar activities is very largely American money; that the benefits to the Cuban peon resulting from our sugar policy are meager, indeed, while the benefits to the owners are most generous. Consequently, the ordinary Cuban people, the farmers, the workers, and others in modest circumstances have not realized an increase in their purchasing power sufficient to enable them to buy more American products to a noticeable degree, this being the assumed objective of the administration in establishing this policy.

Let me again remind the people also that the only time the American housewife is compelled to pay an exorbitant price for her sugar is when the Cubans can control the price by withholding their imports to this country. This occurred in 1920 and again in 1939.

On August 12 last Mr. Leon Henderson, Price Administrator, because of the rapidly rising price of raw sugar—which controls the price of the refined product—fixed a maximum price of $3.50 per hundred pounds. The price had risen to $3.80. Under ordinary circumstances $3.50 would be considered a handsome price by those with raw sugar to sell. Not so at this time, however.

It is a well-known fact that Cuba's surplus is a large one. Under normal conditions she would jump at the chance to dispose of that surplus or any part of it at a price less than that fixed by Mr. Henderson. Strangely since that action was taken Cuban offerings have become scarcer than hens' teeth. It remains to be seen whether Mr. Henderson will keep the price where it is or whether the administration solicitude for those Cuban interests and the good-neighbor policy will bring about a modification of the mandate and an increase in the maximum price. Of course, the same objective can be reached by a reduction of the duty on Cuban sugar, and already we have heard rumblings of that.

All this is a matter of interesting speculation. The questions which arise in the minds of those of us who have been

informed about these matters are "Will the American housewife again be soaked for the sugar she buys; and, if so, how much and how long is this administration going to cooperate to that end?

Youth and American Ideals

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered by me on August 13 at Eau Claire, Wis., entitled "Youth and American Ideals."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, my friends, there are many reasons why I am particularly gratified to be with you this evening.

First of all, I appreciate the opportunity of visiting with so many old and valued friends and neighbors. Secondly, I agree wholeheartedly with the objectives of Kiwanis and of the 4-H Club movement; and, consequently, I want to do everything I can to advance these objectives.

It is fitting that Kiwanis and the 4-H organization should hold this joint meeting. The Kiwanis motto is "We build," and the 4-H organization is also concerned with building.

The 4-H organization has pledged its head to clearer thinking, its heart to greater loyalty, its hands to greater service, and its health to better living—for its organization, its community, and its country.

Today a large part of the world is at war. America has recognized certain dangers to our institutions, our great freedoms, and our way of life.

Each of us has a stake in the preservation and defense of our land. It is heartening, therefore, to know that a splendid group of young American citizens such as this group is concerned with the grave problems which confront our country today.

The front line of American defense will always be found in the hearts and minds of its people, particularly its young people.

The hopes, the aspirations, and the ideals of America are bound up inextricably with the lives of our youth. As long as American youth has the ideals and the spirit which groups such as this one evidence, just so long is our American heritage secure and our destiny assured.

I have read with great interest the seven-point program of the 4-H organization for national defense, and I can endorse its objectives.

First. Interpretation of the total national-defense program to the community.

Your 4-H organization reaches approximately 60 percent of all the farm youth, and in interpreting the problems of the day to these rural communities, you can perform a great constructive task.

In your pledge you pledge your head to clearer thinking. We need clear thinking today. We need mental balance and poise. We need the judicial appraisal and the perspective that a group like yours can give to our national thought.

We need thinking not only in terms of material values but in terms of the great spiritual values with which your group has always been concerned.

Everyone is aware of the fact that great waves of propaganda are being poured over our country. How important this is. If I could speak to every American, I would say: Be discriminatory. Put yourself in such a position that you can discriminate between what is false and what is fact. Put yourself in such a position that you realize that if you were an Englishman you would do all that you could to aid Britain by getting the United States into the war on Britain's side; and if you were a Nazi, you would probably do all you could to stop it, including sabotage and "fifth column" activities.

As Americans we must be realistic to that fact. We must recognize once and for all that there are great waves of propaganda going over the ether, through the motion pictures, through the newspapers, trying to influence our thinking, trying to unbalance us.

Today there is a great need for proceeding rationally and reasonably to find the issue and apply the truth to it.

Groups like this can resist propaganda and can play an important educational role in these trying times. A group such as this, without bias or prejudice, without hatred or malice, without racial rancor, can provide the mental ferment which will cleanse America of any sectionalism, bigotry, or hate.

A group such as this can call Americans up to the mount of vision, first showing them the greatness of America and the value of being an American, and shooting them through with a flame of patriotic fervor which will keep America safe, free, and at peace.

A group such as this, when it pledges its heart to greater loyalty, reaffirms its allegiance to this land, rekindles a patriotic flame, and recovenants our devotion to the American ideals.

In the defense of America, no force is greater than morale. Your group can make a great contribution to American morale.

Second. Production of food, clothing, and home equipment for better family living.

In the weeks and months that are up ahead, we will need not only planes and munitions and an army and a navy, but we will need rugged health and courage to face the problems of a war-torn world. We need a nation of people who are more fit, more vigorous, and with higher standards of health.

That means that we will have to put to work our scientific knowledge for the nutrition of all of our people. We have the capacity, the fertility of the soil, the equipment, the facilities for distribution—in fact, every element which we need to raise the standard of public health through better nutrition.

We need a strong people—a virile people. Your home-defense organizations can play an effective part in this field. The farmers are an integral part of our defense. They have been given a job to do, and they are doing it.

Third. Conservation of human and natural resources on the home farm and in the local community.

In a world of destruction it seems almost paradoxical to speak of conservation, and yet, oddly enough, it is in times of destruction that we most need sane, intelligent conservation. Our heritage is both physical and spiritual. A group such as this group is, in a sense, a trustee of this heritage.

It is our job not only to preserve this heritage to hand on to yet other generations but it is also our obligation to increase it for those who follow.

Fourth. Development of the health of the individual and the community.

The Surgeon General of the United States recently made the statement that we need higher standards of health for our people.

It has been said that less than one-fourth of our people are on a good diet, even when measured by the old standards.

These deficiencies in diet will require an increase in the production of farm products. I believe fervently that every drop of milk and every pound of butter which we convert into human protein foods represents a substantial advance in the front lines of our health defense.

The emergency today, instead of lowering our standards, should stimulate us to raise them and should serve as a foundation for our post-armament economy and our post-armament health standards.

We need to raise our people to the highest possible level of health and vigor, and we can find no finer examples of healthy young manhood and young womanhood than this group tonight.

Fifth. Acquirement of useful, technical, and mechanical skills.

For years I have urged the creation of a scientific laboratory of human skills and human initiative. We have become a great people. We have carved cities from the wilderness, and we have in the last half century seen more material progress than any race has ever seen since the beginning of time.

These things have resulted from great ideals, great arts, and great skills. Today, as never before, we need a reservoir of these skills so that in a battered and disillusioned world we can supply leadership and a progress directed not to the creation of more terrible war machines but an ever-improved social order bounded on the bedrock of American principles.

Sixth. Practice in an appreciation of the democratic way of life.

Your organization is well grounded in democratic procedures because it is conducted along democratic lines. Moreover, living as you do in close contact with the soil, you have a God-given sense of the fitness and the eternal rightness of our pattern of life—a pattern in which the far-flung threads of rural life throughout the Nation are an important part.

Seventh. Development of an understanding of the social and economic forces at work, particularly in the Western Hemisphere, and steps to take.

Destructive forces are at work today, not only in this land but throughout the world. It is well that you understand not only these destructive forces, these liabilities, but also the great values, the great assets, with which we can antidote subversive forces.

The American mind is stable and is not going to be swung off its balance by any form of propaganda or loose thinking.

Yes; we are thinking things through. We know that we have enough to do to love America without spending our time hating other peoples. Of course, we hate wrong. We have no time for the international marauder; we have no time for the international privateer, or the international rapist; but we have enough to do to think in terms of loving America.

When our fathers came to this country they left the other country because of economic, political, social, religious, or other reasons; but they left it, and when they came here they dug their roots deep down in the soil of America, and they became a peculiar breed. Whether they stem from Ireland or Poland or England or Germany or Scandinavia or France, they became not German-Americans, Irish-Americans, or Scandinavian-Americans, but they became Americans. In doing that they severed their connections with all the hatreds of Europe and all the limitations of Europe, with all the viciousness and all the barriers that the centuries had built up in Europe. They cast out those things, and when they came here they became a peculiar people. We call ourselves

Americans. We as a people—and that is history—do not believe in meddling in foreign affairs.

I have faith in the American people, and I have faith in the youth of America. Because I have faith in the American people, I believe we will keep America safe, free, and at peace.

Address by Hon. Alf M. Landon at Sparks, Kans.

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

ADDRESS BY HON. ALF M. LANDON

Mr. CAPPER. Mr. President, I ask permission to have printed in the RECORD an address delivered by former Governor Alf M. Landon, at Sparks, Kans., on August 30, 1941.

The VICE PRESIDENT. Is there objection?

Mr. CONNALLY. Mr. President, reserving the right to object, whose speech is it the Senator from Kansas desires to have printed in the RECORD?

Mr. CAPPER. A speech delivered by former Governor Alf M. Landon, of Kansas.

Mr. CONNALLY. Oh, Governor Landon; I have no objection.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROOSEVELT-WILLKIE POLITICAL PROGRAM

There is an obvious attempt being made these days to smother political debate in this country. The national administration accuses the minority of playing partisan politics when it fulfills its duty of questioning and exposing, for discussion and debate, the record of that administration. This attempt to eliminate all opposition has reached the point that the row now is not over the question of whether the administration is doing wrong but that we who think the administration is making mistakes may not even debate it.

Always every administration tries to hurl the charge of cheap partisan politics at its critics. This is true whether national, State, or local.

Right now the administration is joined in this traditional political strategy by all those who think our country should be enlisted as an active belligerent in another foreign crusade to "save the world for democracy." This war party desires to encourage Mr. Roosevelt in his belligerent moves. Therefore they attribute to the opponents of going to war the meanest kind of partisan politics and the most unworthy motives.

It makes no difference to this war group that the opponents to war policies are standing on the platform pledges of both parties to the American people in the last campaign. Mr. Roosevelt himself, since the election, has abandoned all pretense of neutrality, and 's in the process of abandoning all pretense of "business as usual," which was one of his campaign slogans.

As I have said repeatedly in the past year, we shall not be able to conduct business as usual. We shall not be able to keep our social gains and high standard of living. It will be a long, tough fight.

I am glad to see the President showing some inclination toward a realistic view of this situation. Obviously, business as usual was impossible if we were to be the "arsenal of democracy" and the apostle of the "four freedoms" to all the world. Last week the President for the first time got close enough to brass tacks to tell the American people it was going to be a long, tough war. The American people are not weaklings. They are not laggards in defense of their country. They are not now seeking any "'fraid hole." So I welcome the President's belated recognition of the long, tough fight ahead of us, because "forewarned is forearmed."

Another important policy which the President announced was that he would cut normal expenditures—and they were far from normal to begin with—to offset the increase in appropriations necessary for national defense. But this has proven another forgotten promise.

The fact is that the President has made practically no attempt to cut what he calls normal expenditures. Despite our high taxes, our expenditures are exceeding our income, and we are adding to the national debt at the rate of $277.50 per second. That's not the total of our expenditures. It's what we are adding to our national debt. The national debt is now almost double what it was at the end of the last war. The World War debt reached a total of $26,596,701,648, and on August 13, 1941, our national debt reached $50,000,000,000, or almost double the World War debt. Yet the President says we must do more for the English and the Russians and the Chinese. In fact, he now agrees with some of the rest of us who have been saying that this is only the beginning, and yet there is not the slightest attempt by the President to reduce the current normal expenditures. Our breath-taking tax bill is only the beginning—a drop in the bucket—of what we will have to pay. Already investigating committees of the House and Senate have revealed startling waste and extravagance in national-defense preparations.

I agree with Senator BENNETT CLARK, of Missouri, who yesterday suggested that before we were through we would have a capital levy.

The criticism of the President's foreign policy has not come entirely from the Republicans. Neither has criticism of the President's handling of defense preparations come entirely from Republicans. As a matter of fact, the leaders of the criticism in both the issues have been distinguished members of the President's own party. They are not always the same ones. Some of the President's fellow Democrats in the Congress have been most vigorous in their criticism of the progress of our defense measures, and the President has answered them only with his usual wisecracks, and by the appointment of another board.

But the good administrator does not ignore the charges of responsible men, or answer them with wisecracks, as the President did the recent bill of particulars of Senator BYRD, of Virginia, regarding the failures of our defense program. We know we do not have sufficient modern equipment to train the draftees properly. We have confused and indefinite information as to the amount of material aid available at our ports for England, and the amount that is being lost and destroyed at sea.

It was bad enough before the war, when no one could be sure regarding the President's domestic policies; but it is tragic now, when we do need national unity, not to have a labor policy; not to know definitely what the administration's policy is toward private business; to have a vague but threatening authority, acting without authority of Congress, in the complex and difficult field of price control; to have the boys in camp describe our Army in letters home as "the finest unequipped army in the world."

The average American would like to see the Army situation straightened out. They would like to see the production snarls untangled. They would like to see us equipped for whatever war emergency arises. They are willing now, as they always have been, to give freely of their money and blood for the defense of America. But they would like to be better informed and, insofar as possible, taken into the confidence of their Government. We are not asking that important military secrets be revealed. But we wish the President had spoken for himself instead of quoting Mr. Lincoln. And I believe that you feel, just as I feel, that serious questions being asked by responsible persons are not being adequately answered. You would feel better, and I would feel better, if Mr. Roosevelt would answer these questions and stop his "wisecracking." This war situation is not a joke.

Another evidence of the real nonpartisan, instead of the partisan, position on these major questions of money and blood of the American people is the fact that a good majority of the Democratic Members of the House of Representatives north of the Mason and Dixon line voted against the extension of the Draft Act.

I personally was for the extension, because, as I have said, no one can question the fact that the President since the election has abandoned for the American people all pretense of neutrality. The ordinary ultimate result of such a policy is war. In the face of this obvious fact, I felt the President had maneuvered us into a position where we could not disband the only land defense we have.

I have said from the first that 1917 and 1918 would seem a picnic compared to this war. But once in it, we must fight through to a victorious end.

I have not indulged in any wishful thinking of "business as usual," of telling the American people that we would not have to sacrifice any of our social gains, as the President did up to and including his last "fireside chat," May 27. Or that we could win the war simply by naval and air forces. I have said from the beginning that it would take another A. E. F., and that is the recent view of the two highest field commanding British officers, Generals Wavell and Auchinleck.

As a matter of fact, I supported the President's foreign policy until he abandoned all pretense of neutrality and proposed making all the world safe from want and fear. It became not simply a case of stopping Hitler, but the President proposed to lick want and fear for every race in the world. And I did not feel that it was within our power to be a big brother to all the world.

Furthermore, when it became evident that the President was going further all the time in abandoning any pretense of neutrality, I felt that it was not a policy that all the American people should take on faith.

I am perfectly aware that a good majority of the American people do have faith in the President's repeated specific promises to keep us out of war. Therefore they are not disturbed by his belligerent foreign policy.

But always in our history in similar situations we have had the beneficial restraining effect of a minority who do not accept on faith all the policies or the claims of accomplishment of the administration in power. This is true of the Democrats when the Republicans are in power. It is true in every State and in every city and county administration. Yes; in every township.

Yet we are commencing to hear the demand of half-baked liberals that the time has come to suppress the right of free speech and the Bill of Rights. That demand was recently made on the Chicago University Round Table by a member of that faculty. It is strange that this attack on freedom would come from the self-styled liberal academic-freedom group itself.

For months we have witnessed the attempt to discourage the right of the nonpartisan minority to question and interpret the claims of the national administration, not only as to the dangers of its war policies but also its claim of satisfactory progress in national defense.

Let me read to you the latest, from the Topeka State Journal of August 28:

"WILLKIE-F. D. R. IN TWO-PARTY PURGE IN '42 ELECTION? OPPOSITION FOR OBSTRUCTIONISTS IN CONGRESS IS FORECAST

"(By Drew Pearson and Robert S. Allen)

"WASHINGTON, August 28.—There was real political dynamite behind that letter President Roosevelt sent the Young Democrats' convention in Louisville blasting Democratic isolationists as 'obstructionists who are in the wrong party.'

"The scorching attack was a tip-off on undercover plans which may make next year's congressional elections the hottest in years.

"Nothing has been said about it, but certain administration and Republican leaders have discussed united Democratic and Republican forces to oppose all congressional isolationists regardless of party label.

"Under the proposed plan administration-G. O. P. backing would be thrown behind incumbent anti-isolationist Congressmen whether they are Democrats or Republicans. Furthermore, strong coalition candidates would be entered against isolationist Congressmen seeking reelection.

"One of the significant things about the plan is that it has the hearty approval of Wendell Willkie.

"Discussing it with a group of friends, the G. O. P. standard bearer declared: 'The people should have the opportunity in every senatorial and congressional election next year for a clear-cut expression of opinion on this all-important issue of foreign policy. This referendum should not be cluttered up with phony or inconsequential issues.

" 'In districts represented by isolationists we should put the strongest candidate in the field we can get, regardless of his party label or economic views. I'd like to see young men and women brought into this campaign. Let's get away from the old political hacks. Let's bring youth into this fight. It's theirs primarily, and they should be in the lead in it.

" 'Personally, I am prepared to support anti-isolationist candidates regardless of their party affiliation or economic views. If they are right on the foreign issue, then I will be for them and will take the stump for them.' "

My first thought was that this was too ridiculous to treat seriously. But my second thought was that here is a serious matter, not only for the Republicans but for all those opposed to the one-party system of Germany and Russia, and that dictated thought has no place in America.

Of course, we will have a referendum on the major question of foreign policy. But we will also have a referendum on the management of our national-defense preparations. If we are engaged in actual combat, the people are more apt to be interested in that than in who got us into it. That will come later. It is to be hoped that those engaged in the debate will not indulge in "mere campaign oratory," to quote Mr. Willkie's description of some of his own most serious charges in the last campaign. And it is to be hoped that everyone will state his policies definitely and forthrightly, in a way that is understandable to the average observant citizen. That, I think, time will prove the President has not done.

I want to say, right here and now, if Mr. Roosevelt keeps his specific promises, in view of his belligerent policies and abandonment of neutrality, of not sending another armed expeditionary force of American boys abroad, I will be the first to yield him credit for a job of masterly statesmanship.

But the course this new firm of Roosevelt and Willkie favors really means personal loyalty to the President. It means the attempt to eliminate from public life all who disagree with the President's policy. That is exactly the course Hitler and Mussolini and Stalin followed in building their power and maintaining it.

A healthy situation in popular government, whether it be in a municipality, State, or the Nation, requires the benefit of criticisms by the minority. Mr. Roosevelt and Mr. Willkie would destroy this situation and deprive the country of the benefit of debate by its representatives in Congress, regardless of party. This carried to its logical conclusion, would mean the elimination of Congress as a constitutional check on the President, and set up an absolute dictatorship of one man.

Mr. Willkie is attempting to use the high position the Republican Party gave him to accomplish that end. Thus, fighting to preserve democracy in the world, we lose it at home. However, the Republican Party still belongs to the people, and as long as that is the case I do not think we will have a successful political pogrom.

We must let people talk and express their opinions in Congress, as well as elsewhere, regardless of whether we agree with them. That is the basis of Republicanism. If I am on one side of a question, and my neighbor is on the other side, no one on my side, as far as I am concerned, is going to tell my neighbor he can't express his political and religious opinions. Even if I do not agree with my neighbor, we are both American citizens.

I have said repeatedly since the election that if Mr. Roosevelt wishes to change the policies which he favored in that referendum, he should submit them to the people's representatives in the Congress. I supported Mr. Roosevelt in his opposition to the Ludlow bill calling for a referendum on war, on that ground. That is, that the people's representatives in the Congress should pass on the question of war or peace. And that was the way of a representative form of government. But the proposal of Mr. Roosevelt and Mr. Willkie means, if it prevails, that we no longer have representative government.

What Mr. Roosevelt and Mr. Willkie do in the Democratic Party is not any Republican's business. But what Mr. Roosevelt attempts to do in the Republican Party, through the agency of Mr. Willkie, is every Republican's business.

Mr. Roosevelt has tried before to eliminate from his party many of its distinguished leaders, because they differed with him. In this he shows the same traits of demanding personal loyalty that Hitler, Mussolini, and Stalin demand. The attempted purge by Mr. Roosevelt was unsuccessful in the Democratic Party. After the primary contests were over all the Democrats abided by the decision of the majority.

But Mr. Willkie proposes that the minority Republicans refuse to abide by the decision of the majority, and vote for the Democrats. Of course, that is highly satisfactory to Mr. Roosevelt.

Even in the midst of the stress and strain of war, the Parliament of Great Britain insists the Government's actions can be and they are reviewed. Even occasionally there has been held a vote of confidence for or against the policies. Certainly in this country neither Mr. Roosevelt nor Mr. Willkie should be permitted to take away from us this inherent right, granted by our Constitution, of reviewing in discussion and debate the policies of the United States Government.

Now, by this attempt we realize what the "iron hand in the velvet glove" means. Now we are witnessing the concrete effects of the repeated blank checks asked for and received by the national administration.

Now we are witnessing the concrete effect of centralization of too much personal power in the Nation's Chief Executive.

Now we are witnessing the concrete effects of what was meant when Republicans and some Democrats protested against a government of men instead of laws.

As far as I am concerned, I am going to continue to speak my mind; and I am going to insist on the freedom of others to speak their minds, whether on all points or no points I agree with them. While a declaration of war means that we will close ranks behind the flag, as we always do, it does not extinguish the rights of citizens to discuss the war and its prosecution. But the last one of us will fight for America, under any kind of leadership.

Duty on Sugar

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

STATEMENT OF NEBRASKA NON-STOCK COOPERATIVE BEET GROWERS' ASSOCIATION

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a statement opposing a reduction in the duty on sugar filed by the Nebraska Non-Stock Cooperative Beet Growers' Association before the Committee for Reciprocity Information in connection with the forthcoming negotiations of a supplemental trade agreement with Cuba.

In the last few days the American refiners and the Office of Price Administration and Civilian Supply have been faced with a dilemma because of the refusal of Cuban sugar interests to sell their sugar in this market at the ceiling price of $3.50 a hundred pounds set by Mr. Henderson. This price nets them a higher return than they have received from sales to us for some time, and a much higher return than they receive from sales to Britain.

Last Friday Cuba received another favor in the form of a further increase in quota to 2,750,000 tons, an increase of over 1,000,000 tons over their last year's quota, or more than a 50-percent increase. Of course, domestic beet production also received a quota increase, but that does not mean anything, since we have not the sugar to sell because of the curtailment in acreage forced on us last spring in spite of the protests made by myself and other Senators in this Chamber and with the Department of Agriculture. One of our beet factories in Nebraska, that at Minatare, was forced to close down, as well as others in some of the other States, because of the cut in beet acreage, while Cuban sugar production was being financed by the Export-Import Bank.

Nevertheless, in spite of the favors already given to Cuba, it appears likely that the present administration, rather than hurt Cuban feelings, is willing to go still further and make whatever concessions may be necessary in order to satisfy Cuba, regardless of the cost to the American sugar farmer, and that, therefore, the duty on sugar will be reduced, freight rates will be reduced, and possibly even, as has been rumored, Cuban sugar will be bought by some agency of this Government at an advanced price. For this reason I do not expect that such representations as this will do any good, but I ask that this statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SCOTTSBLUFF, NEBR.,
August 21, 1941.

CHAIRMAN, COMMITTEE FOR RECIPROCITY INFORMATION,
United States Tariff Commission Building, Washington, D. C.

SIR: The Nonstock Cooperative Beet Growers Association of Scottsbluff, Nebr., is a member of the National Beet Growers Association and represents some 4,000 sugar-beet growers of the North Platte and the South Platte River Valleys and the Lodgepole Creek Valley of western Nebraska, who grow the raw material (sugar beets) for six beet-sugar-factories located in this territory.

This great industry of producing and processing sugar beets into refined sugar has, within the last 30 years, become an enormous factor in the development of a community of many thousands of good industrious and honest people who through the encouragement of their Government built this splendid industry that now, in this territory alone, represents the investment of many millions of dollars in farm lands and factories and supports thousands of laborers in both the field and the factories. These lands and factories provide a large part of the tax money by which splendid schools and churches are maintained, contribute vastly to the support of our transportation systems, both railroads and public highways. And not the least of these contributions is our full quota of young men and money for defense of our country in this awful hour of dire necessity.

We are confirmed in the belief that we have an inherent right to the pursuit of this industry upon these lands, at a return for our product that assures the status of a respectable American citizenry. Any arbitrary action that lowers this standard will be met with the stern disapproval of our people.

We know of no just reason why an old and established as well as efficient domestic industry should be destroyed that foreign interests may be served, and that at the hands of our own Department of State.

This same Department of State has already in recent years unjustly and unwisely favored the sugar interests of Cuba in ways similar to the present proposed action. These have taken the form of Presidential orders reducing existing tariff rates, suspending quotas, as well as the manner of quota reinstatement.

Following closely Presidential action in lowering the tariff on Cuban sugar from $2 per hundred pounds to $1.50 per hundred pounds. The Department of State by trade agreement in 1934 further reduced the Cuban sugar tariff from $1.50 to 90 cents. This, together with the establishment of sales quotas gave Cuba an advantage in the American sugar market not shared by any other foreign sugar-producing area. Not only was Cuba's sales increased but the cash returns were greatly enhanced. The American producer received but one assurance in this agreement which was, that in case quotas were suspended or otherwise became inoperative the duty on Cuban raw sugar would automatically be restored to $1.50 per hundred pounds, as noted below this assurance was later lost.

During the period between 1934 and 1937 the amount of sugar Cuba might sell in the United States increased from 1,836,482 short tons to 2,148,951 short tons, the value of these sales increased from $55,217,000 to $103,808,000. Notwithstanding this highly favorable position of the Cuban producer, the Department of State gave notice on November 3, 1938, that it would negotiate a supplemental trade agreement with the Government of Cuba, and indicated sugar would be an item under consideration. The day before the Department gave domestic producers notice that it intended to negotiate the supplemental agreement, the Cuban dictator, Col. Fulgencio Batista, gave to the newspapers a story in which he set forth that an oral agreement had already been reached to reduce the tariff to 75 cents a hundred pounds. This interview was published in the New York Times, November 30, 1938.

"HABANA, November 29.—Col. Fulgencio Batista, Cuban chief of staff, said in an interview today that an oral agreement had been reached for reduction of the tariff on Cuban sugar entering the United States. In return, he said, Cuba would throw open her market for Louisiana rice and other North American products, manufactured and agricultural, and grant certain exemptions under her nationalistic labor laws.

"Formal negotiations for modifications of the present reciprocal trade treaty between the United States and Cuba will be started in a few days, he said. Reduction of the United States tariff on Cuban sugar will not affect the United States import quotas but will benefit Cuban growers by giving them a better price.

"Colonel Batista said the present tariff on Cuban sugar of 90 cents a hundredweight would be reduced to 75 cents, the maximum reduction President Roosevelt is permitted to make under his reciprocal trade powers.

"And we expect a further reduction when the United States Congress meets again, says Colonel Batista."

Batista's statement was denied by the State Department. Unfortunately, the incident created a grave doubt in the minds of not only our American industry but in the minds of certain legislative leaders as to whether the Department of State had not inadvertently exceeded its authority under the act to negotiate trade agreements before due notice had been given all parties at interest.

The supplemental agreement, when completed in late 1939, showed no reduction in the tariff. However, the agreement did take away from domestic producers virtually the only protection we were accorded in the first agreement, the provision which automatically restored the duty to $1.50 in case quotas were suspended or became inoperative for some other reason. The agreement did, however, contain a provision whereby the tariff would remain at 90 cents in case of a suspension of quotas. Thus, if the quotas were suspended now, the domestic producer would be subjected to the full weight of Cuban competition with but a 90-cent rate of duty, which is ridiculously inadequate to absorb the difference in cost of producing sugar in the United States as compared to costs in Cuba.

Only recently, through the Export-Import Bank, our Government provided the Cuban sugar industry with a loan of $11,200,000 to finance a production of 400,000 tons of sugar which could not have been produced without the financial assistance of this country. Our Government had thus placed itself in the position of furnishing assistance to an already overindulged foreign competitor of its own people while its Department of Agriculture had but recently compelled these same people to reduce the production of this identical commodity—sugar.

What further concessions the Department of State may contemplate granting to the sugar industry of Cuba is beyond the power of our imagination to conceive. However, the fact that the Department has announced its intention to negotiate is ample evidence that the Department has in mind some further concessions to that country.

It is our contention that by all rules of fairness and justice this Government has already seriously overindulged an impulse to befriend this foreign industry to the injury of its own domestic producers, and that rather than continue this unfair course in granting further concessions to a foreigner it should recall some of those favors already granted and bestow them upon its own people.

The statement of the National Beet Growers Association and the United States Beet Growers Association has been read, fully considered, and approved by representatives of our association.

We hereby include it as a part of our statement and request that it be so considered.

Yours very truly,

NEBRASKA NONSTOCK COOPERATIVE BEET GROWERS ASSOCIATION,
By CHAS. E. FRANKLIN, *President*.

National-Defense Equipment

EXTENSION OF REMARKS
OF
HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

STATEMENT BY HON. J. BUELL SNYDER, OF PENNSYLVANIA

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, including a statement I made about 1 year and 3 months ago relative to what I thought the Nation's national-defense equipment should consist of, I have been reminded by some of my friends that my estimates were not far wrong.

When I made this statement July 11, 1940, some of my real friends spoke to me confidentially that I was too visionary. These same friends now come to me and tell me that they believe that my estimates were about right. The statement that appeared in the CONGRESSIONAL RECORD on July 11, 1940, follows. Since we did not start to build my superhighway system in 1936 or 1937, it now seems advisable that we stand by with that program till after this emergency, when we will have to find other employment for five or six million men who will be dropped from national-defense pay rolls.

Mr. Speaker, the statement I refer to as appearing in the RECORD of July 11, 1940, was as follows:

[From the CONGRESSIONAL RECORD of Thursday, July 11, 1940]

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to

include what I think is a conservative estimate for national-defense equipment and installations if we are to think in terms of protecting our country and the Western Hemisphere against foreign foes during the years to come. It goes without saying that the Government and industry must, and I feel sure will, speed up production at a rapid rate such as was never attempted or accomplished in this country. I hope I am wrong, but I am compelled to take into account recent acts and achievements of foreign powers who could and might be knocking on our back door, demanding admission to disturb our freedom and liberty-loving institutions as well as our very lives. I say I hope I am wrong, but taking these factors into consideration we must be prepared and keep prepared until such time that the war lords and conquerors across the water show us by their actions over a space of years that they no longer desire to disturb us. It will take at least five decades for them to show us this. Therefore we must prepare in a big way. I recommend that we equip the Nation with at least the following:

A. That we manufacture and have on hand by July 1, 1943, 100,000 airplanes of different types and kinds.

B. By July 1, 1943, we should have manufacturing facilities and plants in perfect maintenance and upkeep in order to be able to manufacture 1,000 airplanes a day if an emergency would arise.

C. We should have manufactured by July 1, 1943, 4,000,000 rifles, and facilities to manufacture 2,000 of them a day.

D. We should have by July 1, 1943, 4,000,000 machine guns of different types and kinds, with facilities to manufacture 2,000 a day.

E. We should have on hand by July 1, 1943, 75,000 tanks and armored cars of different types and description, with manufacturing facilities to produce 500 a day if necessary in an emergency.

F. We should have on hand by July 1, 1943, 2,000,000 antiaircraft guns of the finest and best type, with facilities to manufacture 1,000 a day.

G. We should have on hand by July 1, 1943, 100,000 antitank guns, with a certain percent of them capable of piercing 3-inch armor plate, with facilities to manufacture 500 a day.

H. We should have on hand by July 1, 1943, clothing, tentage, shoes, and full field-service equipment for 4,000,000 men.

I. We should have by July 1, 1943, manufacturing facilities scattered throughout the Nation to manufacture sufficient replacements for all these commodities at a speed necessary to assure equipment on hand in case of an emergency invasion of our shores or institutions.

J. By July 1, 1943, we should have completed at least three transcontinental superhighways, as outlined in my bill, H. R. 8503; that is, an eight-lane highway, following the general route of the Old National Pike, or Route 40, across the Nation, built as straight as possible, and with a grade of not more than 4 percent at any one place. The same type of highway should be built up and down each coast, some 30 to 60 miles from each coast. Of course, the other six highways embodied in my bill should be and will be built in time; but these three should be built without fail, to be used for the transportation of the commodities of commerce as well as a military road in case of necessity. Experts think this would be the cheapest national-defense installation, looking to the conservation of our whole Nation, that we could build. These three highways would cost about $4,000,000,000 to build them eight lanes, or 100 feet wide, with proper facilities along the highways.

K. We should have by July 1, 1943, about 2,000 air bases or air fields developed. In the interim the United States Army engineers should select throughout the Nation about 15,000 landing fields; that is, fields that, if an emergency day came, could be put into condition for landing planes within 48 or 120 or 168 hours. These should be circled within a radius of so many miles outside of each city that is considered a large industrial and manufacturing center.

L. By July 1, 1943, we should have several scores of underground hangers along our main highways, as well as underground storage facilities for our munitions. The hangars in time of battle are very essential, as discovered in the war now going on across the sea.

M. And, finally, we should have by July 1, 1943, sufficient munitions of all kinds in storage to use these guns and weapons for months, if necessary, without running out of munitions. The two things that hampered the French the most were traitors within her own ranks and, second, a shortage of munitions.

I have no doubt that some who read this will think that my estimates are exaggerated; that the program is too ambitious. Some will think it is not necessary to make such provisions. Others will think it is too expensive, and so forth.

But, Mr. Speaker, it seems to me that all of us are convinced that our way of life is worth preserving. We are convinced that our schools, our churches, and our homes are worth preserving.

We are convinced that this blessed endowment that we received from our forefathers called freedom of speech, freedom of press, and religious freedom, is worth fighting for. Yes, we are convinced that if we wish our children and our children's children to enjoy these blessings, we will have to build up a national defense that will insure their preservation. The partial recommendations that I enumerated above, I think we will find absolutely essential within the next score of years to defend our precious institutions. Yes, Mr. Speaker; we will have to eat fewer ice-cream cones, chew less chewing gum, burn less gasoline, deprive ourselves of a lot more things we classify as semiessential or pleasure and recreational adjustments, to provide this equipment. But it is better to have no equipment at all than to be one-fourth, one-half prepared.

We learned the lesson over and over again in the last year. We saw nation after nation in Europe that was one-fourth or one-half or one-tenth perpared, being ruthlessly run over—and, my fellow citizens, whenever a barbarous ruler directs his forces to run over a peaceful, God-fearing people like the people of Holland, Belgium, or similar nations, then it is time for us to prepare in a big way to see to it that no force will be able to run over us or to fly over us and destroy us.

The trouble is, my friends, that we here in America do not realize the horrors and hardships that result when a dictator takes over a country such as Poland, Czechoslovakia, and so forth. We do not seem to realize that they kill off the educated and intelligent people. We do not seem to be aroused over the fact that they close all of the schools except the very elementary schools. We do not seem to understand that all the precious things that are near and dear to us would be wiped out under a dictatorship such as now reigns over Poland, Czechoslovakia, Denmark, and so forth. We do not seem to realize that our Negro slavery was heaven compared with the slavery that these conquered people have to endure.

Yes, my friends, I believe if you were in possession of the facts and background that I have as chairman of the appropriations subcommittee for national defense, you would agree with me that my suggestions or recommendations, if you please, enumerated above are moderate compared with the value of our liberties and our free country.

Price Fixing on Lumber

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

STATEMENT BY M. L. SIGMON

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks, I am including a statement made by Mr. M. L. Sigmon, of Monticello, Ark., at a meeting of citizens held in the office of the Governor of Arkansas on August 27, 1941, to protest the action of Mr. Leon Henderson in fixing prices for southern pine lumber. The statement of Mr. Sigmon clearly and concisely evidences the demoralizing effect on the lumber industry of the unwarranted action of O. P. A. C. S. Certainly neither the consumer or any other group is benefited or protected when an industry upon which a large part of our people are dependent for a livelihood is arbitrarily and unnecessarily strangled. The statement referred to is as follows:

I am a timber owner, and as such am very much interested in this meeting with you. I have gone into this question of pine price ceiling and from what I know of it, I have already determined I cannot afford to sell my timber on the basis lumber producers will be able to pay me, if Mr. Henderson's ceiling prices prevail.

I want to congratulate you, Mr. Governor, on the success you have had, not only in refinancing the State's indebtedness, but also on your success in securing additional new industry, as well as Arkansas' share of defense. However, as a timber owner, I am concerned less in your zeal to secure new industries in view of the fact that we say, perhaps, lose the oldest and biggest and most important industry of all—namely, the lumber industry.

In the first place, Mr. Governor, we want you to understand that we believe in the principle of price control during this emergency. We, however, would like to have this control exercised legally and intelligently by a commission or board which is familiar with the lumber business. President Roosevelt, himself, has recommended some legislation to legalize price control. His bill suggests that the price to be used is the market price prevailing on July 29, 1941, the day of his message to Congress. On that very day, the Government, itself, bought in Memphis millions of feet of lumber at public auction, attended by 80 mills, in open competition, at approximately $31 mill, net, for items which Mr. Henderson has set at $25. On August 13 and 14, only 2 days before Mr. Henderson established his ceiling prices on yellow pine, the Government again bought millions of feet of lumber for which it paid $31, mill, net, for items, again, on which Mr. Henderson fixed a ceiling of $25 per thousand.

These ceiling prices on yellow-pine lumber are the only ceiling prices that have been established up to date, so far as we know, that have not frozen the current market prices. On Arkansas soft pine, the ceiling prices have reduced the current market prices 25 percent. In the face of this, there has been approved a new minimum wage rate for

the southern lumber industry, which will shortly advance the minimum wage from 30 cents to 35 cents per hour. This is an increase of 16⅔ percent in wage costs, to say nothing of the tremendous advances in costs brought about by increases in the price of supplies.

These ceiling prices rate Arkansas soft pine along with North Carolina roofers. Whereas, through the years, Arkansas pine has continuously sold for a differential of $5 and up per thousand feet. Buyers for two generations have recognized this superiority in quality by the prices they willingly pay. It involves, among other things, substantially higher production costs. The ceiling price list has disregarded differentials in price as between grades, sizes, and lengths, which the trade has recognized for 40 years. Mr. Henderson brushes these natural differentials aside and writes his own ticket, establishing differentials that are simply ridiculous.

Dealing particularly with Arkansas soft pine, we quote from the Commercial Bulletin of Boston, dated August 23, 1941, the following:

"Worst blunders of the southern pine ceiling prices are two in number: Failure to recognize the wholesaler, who must get his profit by subterfuge or by a mill surrendering part of his ceiling price; second big blunder, failure to recognize superiority of lumber and higher costs of certain Southwestern and Gulf mills.

"Failure to recognize superiority and higher value of, let us say, Arkansas soft pine, is plain stupid. Buyers for two generations have recognized this superiority in the prices they willingly paid. And this superiority involves among other things, substantially greater production costs. For example, $58, mill, for 1 by 4 inch B rift flooring in both North Carolina and Arkansas, is just a bit screwy."

Now, this Commercial Bulletin of Boston is recognized throughout the country as one of the most trustworthy sources of information with reference to the markets on various commodities. They have no financial interest in lumber and their opinion is entirely disinterested and unprejudiced.

Again quoting from the Commercial Bulletin, we refer you to their issue of August 16, the day that Mr. Henderson published his price list, which issue shows the relative value of Arkansas soft pine as compared with pine from other southern territories. This authentic report of the New England market on that day shows Arkansas pine as carrying a premium in the upper grades averaging $25 to $30 per thousand feet. It also shows in the lower grades, such as 1 by 6 inches and 8 inches No. 2 common, a difference, delivered Boston, as between North Carolina and Arkansas pine, of $8 per thousand feet. A copy of this paper is here.

Looking at this situation from another angle, and dividing the yellow-pine producing area by the Mississippi River, records show that the sales of 8 representative east-of-the-Mississippi-River mills for the first 7 months of this year average $32.07 per thousand feet. Whereas for 11 identical mills west of the river for the first 7 months of 1941 a price of $37.32 prevailed.

If the ceiling prices as established by Mr. Henderson are permitted to prevail, in our opinion the effect on the State of Arkansas will be disastrous. Estimating the production of pine lumber at present in Arkansas at 950,000,000 feet per year means an annual income at today's market, averaging $32 per thousand, of $30,400,000. The cut occasioned by Mr. Henderson's prices averages $6 per thousand feet, or $5,700,000 yearly, assuming the same production were maintained, which, however, will not be the case. As a matter of fact, many mills have been operating 2 shifts, and all of them, on a basis of 50 hours or more per week, paying time and a half for overtime for hours worked over 40 hours per week. The only reason the mills have maintained these expensive schedules is that there has been a reasonable profit, which is now about to be wiped out by Mr. Henderson's ceiling prices. In our opinion, if these ceiling prices are permitted to remain in effect, the Arkansas production of yellow-pine lumber will be reduced 40 percent. If this comes about, it will reduce Arkansas' yearly production to approximately 600,000,000 feet at a price of approximately $26 per thousand feet, or a little better than $15,000,000 yearly—half of what it is now. Certainly no mills will, on this basis, operate more than 40 hours per week, which immediately cuts production a minimum of 20 percent. This will have the effect of reducing the weekly income of the wage earners in the lumber industry in the State of Arkansas a minimum of 27½ percent.

What has been said heretofore deals with the general and almost positive effects of Mr. Henderson's ceiling prices. The picture is not complete without considering the predicament in which this ruling, if permitted to become effective, puts the small yellow-pine sawmill operator, particularly those who have bought stumpage recently at prices predicated upon the existing lumber market.

The small mills, in our opinion, make approximately 50 percent of the Arkansas soft pine. These small mills—several hundred in number—employ an average of 20 to 25 men apiece. These smaller mills, by reason of their very size, are unable to market their own product, and so sell it green, rough, to the larger mills with sales organizations. These larger mills dry it, machine and refine it, and sell it.

Up until now the bigger mills have been able to pay a fairly satisfactory price for this rough green pine. However, with this drastic cut, they will no longer be able to do so and many, if not all, of the smaller mills will immediately have to cease operations, since they cannot legally continue at the prices that could be paid them in view of the radical reduction which the finished product has suffered through fixing these ceiling prices.

A considerable number of the smaller mills referred to have already received notices from the bigger mills they have been supplying to the effect that after August 30 the bigger mills will be unable to take any more of their lumber.

Another angle to be considered is that the United States Forest Department is selling Government timber each year in order to maintain their Forest Service. A few mills are located in these forests and are buying Government timber along with timber owned by them. The ceiling prices set by Mr. Henderson are based something near the 1938 prices, and at that time the Government timber was selling around $7.50 per thousand, log scale. At the present market price of lumber the Government is selling their timber around $11.50 per thousand. If the prices set by Mr. Henderson are put into effect for all lumbermen, they will be unable to buy any Government timber, and this should be an important factor in the Forest Service, as it is our understanding that this Government timber is sold to maintain the Forest Service.

Since the beginning of the lumber industry, a very large percentage of its production has been sold through wholesalers and commission lumber salesmen. Many firms have found it to their advantage to sell their output through wholesalers, who, in turn, employ commission salesmen rather than salaried salesmen. The customary wholesale discount allowed wholesalers is 8 percent of the net f. o. b. mill price. At the level of prices established by this order, there would be no margin between cost of production and the selling prices to permit mills to protect their wholesale and commission connections. Mills who have for years depended upon wholesalers and commission men to sell their output will be forced to attempt to sell their entire output directly to the retail trade, eliminating both wholesaler and commission man. This can result only in destruction of the entire wholesale and commission lumber business of the South, and will affect thousands of wholesalers and commission salesmen located in the larger consuming centers throughout the Middle West and the East, who deal almost exclusively in southern yellow pine, although having their headquarters outside of this area. In this connection, and again quoting the Commercial Bulletin of Boston:

"If these ceiling prices on southern pine prove workable, it will be the biggest surprise of 1941. The relationships proposed between 1- by 4-inch, 6-inch, 8-inch, and 10-inch boards are absurd. There seems also a very observable disposition to deprive the wholesaler of the means of livelihood. Leaving out the injustice of this, such a move would make orphans of a lot of retailers."

The effects of all this on labor are almost too obvious to call for much discussion. Probably all that is necessary to say is to repeat that the minimum reduction in production—20 percent—will reduce the weekly income of the wage earners in Arkansas' lumber industry a minimum of 27½ percent. If this price schedule should stay in effect, labor would lose most of the gains made during the past few years. The foregoing has to do with the men who continue to work, but at lesser weekly incomes, and says nothing about the thousands of men who will be thrown completely out of work by the shut-down of the smaller mills referred to previously.

The effect of this ceiling is just as obvious on Main Street, the merchant and bankers, of every sawmill community in the State, because the success of their business is in the lumber communities directly in proportion to the pay rolls of those communities, and likewise will be reduced in proportion, as formerly stated.

The lumber industry is desirous of furnishing to the Government in this emergency all the lumber for defense purposes that they will require. It is feared that through the proposed reduction in prices the over-all production of lumber will be reduced to such an extent that the Government will not be able to secure promptly the tremendous amounts of lumber which it presently needs.

Some weeks ago Mr. Henderson set ceiling prices on the products of the textile industry. He arbitrarily fixed those prices too low. When he found that out, through the inability of the manufacturers to supply the demand, on Saturday, the 23d, he adjusted the price upward. However, this did not come about until the Governors and Members of Congress of the Southern States offered violent opposition.

All the Southern States producing yellow pine are vitally interested and very much exercised over this action. I am reliably informed that the Louisiana yellow-pine industry is having a State-wide indignation meeting Thursday of this week. We also understand that Governor Jones, of Louisiana, has telegraphed the Louisiana congressional delegation that this action by Mr. Henderson is, in his opinion, disastrous to his State, and further that he has telegraphed the Governors of seven other Southern States of his feelings in the matter and asking them to take similar action.

It is my sincere belief, in view of the foregoing, that you will be vitally interested in helping us have these prices adjusted to some basis somewhat nearer the natural value of the product as currently determined by the law of supply and demand. Something will have to be done quickly, as Mr. Henderson's order is effective September 5.

Views of Hon. L. Ert Slack on the War Situation

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

LETTER TO HON. STEPHEN A. DAY, OF ILLINOIS

Mr. LUDLOW. Mr. Speaker, under unanimous consent granted by the House of Representatives, I present for printing in the CONGRESSIONAL RECORD a letter written by Hon. L. Ert Slack, former mayor of Indianapolis, a distinguished statesman, lawyer, and publicist, to our colleague, Representative STEPHEN A. DAY. The letter is as follows:

INDIANAPOLIS, IND. *August 13, 1941.*

Hon. STEPHEN A. DAY,
Member of Congress, House of Representatives, Washington, D. C.

DEAR SIR: I have your letter and your card, which is a ballot for persons to make a decision whether we should enter the war or stay out of the war, and as an American citizen, having been in public life quite a lot, and you can read about my record in different books if you want to, I am not going to sign that we enter the war or that we stay out of the war because of the following opinions that I have in regard to many world and local matters:

1. I do not believe that any citizen of this country can make a decision at this time that this Nation enter the war or that we should stay out of the war. Of course, we all should want to stay out of the war if possible, but we also should enter the war if conditions are not changed.

2. This Nation at this time ought to be considered by all other nations in the whole world to have the best form of government, and the best possibilities of God's children to get education and proper religious training, and to be successful and happy during their entire lives.

3. This Nation should now give great publicity to all other nations, advising them that their nation should also build up and promote proper education for their children, as they grow up, and also recognizing that religion is absolutely necessary, because all of the people, regardless of their nationality, are God's children, and we should have a better chance for every individual to be living comfortably and happy.

4. This Nation should also get a very much closer connection with all of our Western Hemisphere nations, and we should now send representatives to all of the Western Hemisphere nations and let them stay there and promote better governments in these Western Hemisphere nations, also to give them assistance in building up their nations by turning over to them quite a lot of our products, so that these nations can be improved and built up, as this Nation was improved and built up by our forefathers, and also give all of these Western Hemisphere nations an absolute promise and understanding that this Nation wants to cooperate with all of the Western Hemisphere nations, regardless of what happens in this terrible, bad situation that is now going on in practically all of the Eastern Hemisphere nations.

5. I personally would like to stay out of the war, but we should get our Western Hemisphere organized together, and if this Hitler stuff or the Mussolini stuff or any other part of that very bad and dangerous Eastern Hemisphere conditions, should try to get in control of any of the Western Hemisphere, or should try to get control of the majority of the world affairs, then I want our Nation and the Western Hemisphere nations to get together by the largest amount of war preparations possible, and then go into those bad nations in the Eastern Hemisphere, and get rid of those individuals like Hitler and Mussolini and get rid of this world war trouble that should not occur at all or be continued very much longer.

6. My conclusion is that we must have in our country a fine and proper government, so that all of our individuals, regardless of their nationality will be not only loyal to our nation, but they will be sensible, religious and handle all public and private matters involving business in a proper way. We must be promoting religion and loyalty and also proper public and private affairs of all kinds in this Nation, and as a nation, we should also try to do something in all the other nations of the world. In other words, the other nations of the world would be in better shape today, if they had adopted and promoted the form of government and business affairs of all kinds, promoted religion, had followed the wonderful promotions of every kind and character involving God's children that our forefathers did when this Nation was inaugurated and started out in affairs of the world.

Very truly yours,

L. ERT SLACK.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

RECESS

Mr. DIRKSEN. Mr. Speaker, the middle of August 1941 found the Congress preparing for a 30-day recess after an almost uninterrupted session of 8½ months. It recessed on a high note, with many controversial things still ahead. The echoes of the Roosevelt-Churchill conference were still in the air. The House had just completed action on the Draft Extension Act by the slender margin of one vote. A bill to seize materials and machines had been twice rejected by the House and was sent back to a conference committee of the two Houses. The huge three-and-one-half-billion-dollar tax bill had already been passed by the House and was now receiving the careful scrutiny of the Senate Finance Committee. Lodged in the Banking Committee of the House was the highly controversial bill to fix price ceilings, fix rents in defense-housing areas, and give the President power to license industries. Still to come were additional billions for lease-lend aid to countries whose defense is deemed vital to the defense of the United States. Doubtless, there will also be additional funds for the Army and Navy. Much, therefore, still remains to be done by the Nation's lawmakers.

THE RECORD

But what has Congress contrived during the last 8½ months? First it might be said that the Appropriations Committee, the Ways and Means Committee, the Committee on Naval Affairs, and the Committee on Military Affairs handled the bulk of the legislation since the major emphasis was on national defense. Perhaps the Committee on Foreign Affairs should be included because of its work on the lease-lend measure. A vast amount of testimony was taken before the major measures were reported to the floor for action and most of the time devoted to a major measure is taken up with this work of preparation. Let us then list some of the measures which have been passed and inscribed upon the statute books.

DEFENSE AND DEFENSE AID

(1) The Lease-Lend Act provides for such aid to foreign countries as the President may direct; (2) the personnel strength of the Navy was expanded to 232,000 with emergency authority in the President to lift it to 300,000; (3) authority was given the Maritime Commission to build hundreds of cargo vessels; (4) pay of parachute troops was placed at a maximum of $100; (5) the draft act was amended to include certain exemptions which were omitted from the original act; (6) provision was made for the construction of housing in congested defense areas; (7) the Navy was authorized to construct necessary auxiliary vessels; (8) the Priorities Act was extended to apply to lease-lend operations so that materials and supplies can be placed under priority if needed to aid foreign countries now resisting aggression; (9) the President was authorized to take over title or to take over the use of certain foreign merchant vessels in our ports; (10) payments on the debt owed this country by Finland were postponed; (11) the Navy was authorized to carry out a very substantial program of public works, including yards, docks, training facilities, etc.; (12) training and service of draftees was extended to 30 months.

MEASURES OF STATE

To safeguard the sovereignty of this hemisphere, Congress implemented the historic doctrine of President Monroe by declaring invalid any transfer of territory in this hemisphere from one non-American power to another. This was designed to prevent Axis Powers from transferring or securing territory in this hemisphere. Certain passport restrictions were imposed in addition to those now provided by law to better control the movements of persons who might be unfriendly to this country. Consulates were also empowered to refuse the issuance of passport visas of certain persons who might prove inimical to the welfare of the United States.

AGRICULTURE

(1) For practical purposes, peanuts were made a basic crop under the provisions of the Farm Act of 1938 and made subject to certain marketing provisions and quotas; (2) the benefit of crop insurance was extended to cotton so that

wheat and cotton production is now insured against weather hazards; (3) the original Farm Act of 1938 was further amended with respect to marketing quotas on wheat and corn and the penalties for excess production substantially increased.

BILLS IN PROCESS

Several measures have passed the House or the Senate, or both Houses, and are either in conference or in a state of disagreement, or awaiting action by one of the two bodies. The 1941 Revenue Act, to provide about three and one-half billions in new income, estate, gift, and excise taxes is awaiting Senate action after having passed the House. A bill to authorize the President, through the War Department, to commandeer machinery, materials, or supplies deemed indispensable to national defense has passed both Houses and was subsequently rejected by the House of Representatives in the form of a conference report.

THE VETO

By overwhelming majorities both House and Senate enacted a measure to expand the strategic network of highways, improve access roads, provide for airplane landing strips along highways, and for other purposes. This bill authorized the appropriation of more than $250,000,000. It was vetoed by the President. The Senate overrode the veto but by a few votes the House sustained the veto. Both House and Senate passed a measure to freeze stocks of cotton and wheat in which the Commodity Credit Corporation has an interest and keep these commodities from the market for the duration of the war and thereafter until released by Congress. Only method of releasing them for consumption would be for relief or national defense. This measure passed the House by a narrow vote and has been vetoed by the President. It is unlikely that Congress will reenact this measure over the veto.

APPROPRIATIONS AND BUDGET MEASURES

This Congress authorized an increase in the statutory debt limit from $49,000,000,000 to $65,000,000,000. Present annual interest outlay is $1,275,000,000. Appropriations for general governmental purposes other than national defense for the year which began on July 1, 1941, were approximately $7,145,000,000. Army appropriations for this fiscal year were $12,000,000,000 and Navy $5,000,000,000. Seven billion dollars was appropriated for lease-lend aid to other countries. This will be increased by an amount ranging between five and ten billion dollars. Total defense appropriations for the 2 fiscal years of 1941 and 1942, including completion of the two-ocean Navy and $7,000,000,000 for lease-lend aid, will total $53,000,000,000.

RESULTS

Total active strength of Army, Navy, and Marine Corps, including officers and enlisted men, 1,872,731. Defense-plant expansion totals 2,023 projects as of June 30, 1941. Total number of persons enrolled in all forms of defense training totals 1,500,000. Number of defense housing units allocated to August 3 totals 123,433 dwellings and trailers. Plane production of all types, including trainers, combat, interceptors, service, and bombing planes, is presently on a basis of about 18,000 per year. Powder and shell-loading plants are going into production. Quantity production of tanks is about to begin. Small-arms production is speeding up. The program is moving.

Hon. Joseph E. Davies Addresses National Encampment of Veterans of Foreign Wars

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 2, 1941

ADDRESS OF HON. JOSEPH E. DAVIES, FORMER AMBASSADOR TO BELGIUM

Mr. CONNALLY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by Hon. Joseph E. Davies, former Ambassador to Russia and Belgium, on the occasion of the forty-second national encampment of the Veterans of Foreign Wars, at Philadelphia, Pa., on August 25, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Commander in Chief and Veterans of Foreign Wars, it is a privilege and an honor to address this great convention of citizens, whose devotion to our country and to our freedoms has been tested by the fire of war.

You, the Veterans of Foreign Wars, have a peculiar and exceptional basis for sound judgments in connection with America's paramount problem of today.

Many of us Americans, generally speaking, have been fortunate enough for generations to have been isolated from the rest of the world both in our security and in our prosperity. As a result many of us have developed "hat brim horizons" and have not seen how closely our lives and liberties are tied in with world conditions.

You, who have served in foreign wars, know from personal experience those forces in world affairs which have brought about the shrinking of the earth and have made us a part of a very small world community wherein the existence of an outlaw threatens very immediately our lives and our freedom.

This great organization has never failed to live up to its highest duties and fullest responsibilities. It will not fail in this time of new danger. It is typical of the soundness of your judgment and the farsightedness of your patriotism that you during these times should have chosen for your slogan one which should become the rallying cry for the Nation—Unity for victory.

Our country is today not engaged in a shooting war. It is, however, engaged in a debating war. Voices are resounding over the radio; words, and still more words, are flooding the press. Some honest, some misinformed, some criminal and traitorous, are trying to lull the people of this country into a sense of false security when the world is on fire. It is urged, first, that Hitler has no purpose or intention of attacking our country or continent; and, second, that even if he had, he couldn't do it.

RECORD OF HITLER'S BROKEN PROMISES

To support the first, Hitler's benevolent intentions and direct statements, amazing as that may be, are still cited as proof. And still some people seem to be willing to place reliance on the promise of this man.

Lies are a part of the technique of dictators of all times. With that horrible Nazi philosophy which denies the principles of every ethical system the world has known, Hitler has made a specialty of false promises to break down and destroy one nation after another. He openly proclaims the morality of such technique when employed for his purposes.

To assume that our people would place reliance upon any such statements is an insult to American intelligence. Yankee common sense applies to these promises the test of what this man has said and has done in the past. We will not rely upon the word of a proven liar. Mark Twain has said: "Even a cat will not sit on a red-hot stove—the second time."

We all know the record. But it is well to recall it, to see the sheer, callous brutality of Hitler technique. Under the Austro-German accord of July 11, 1936—a formal treaty—Hitler recognized the full sovereignty of Austria and most solemnly promised to keep hands off the internal affairs of that country. The fears of Chancelor Schuschnigg were lulled by expressions of reassurance and brotherly love. And what happened? Within 18 months Hitler and his strong-arm men marched into Austria and took over the country. Austrian leaders, among them Schuschnigg, disappeared. The reign of terror in Vienna which followed was too horrible for words. Austria was destroyed.

Again, in Czechoslovakia, President Benes was again and again reassured by Hitler that he had no designs upon that country's sovereignty. At Munich he solemnly agreed with Great Britain and France that no territorial change as to Czechoslovakia would be made, except after full conference with them. But this was not all. Hitler gave to the whole world the explicit promise that the Sudetenland was his last "territorial claim in Europe," and "Ich will kein mehr Czech haben."

But within 2 weeks after the "peaceful" occupation of the Sudetenland by Hitler's forces, the President of Czechoslovakia was forced into exile. As the Czech troops withdrew from the ceded area brutality was given full rein—plundering, beating, destruction of property, and insults, injury, or death to minority or dissenting groups. In March 1939, without notice, and in the night, Hitler marched into Prague and destroyed the Czech state. The solemn pledges, thrice given, made not only to the Czechs but to Britain and France and to the entire world, were ruthlessly, cynically thrown onto the ash heap of dishonor.

In 1934 the German Reich and Hitler entered into another formal treaty, this time with Poland, that the Polish Corridor and Danzig would not be disturbed for 10 years. Pledges of nonaggression and friendship were repeatedly made.

As late as 1939, in response to a plea for peace directed to him by President Roosevelt, Hitler replied: "As far as Germany is concerned, I know nothing of * * * (a) * * * threat to other nations." Even then his plans were being projected to invade Poland; and within a few months his bombers and his mechanized land forces invaded his neighbor's land. Hitler took Danzig, the Polish Corridor, and destroyed the Polish state.

Not once, but repeatedly; not casually, but with greatest solemnity, Hitler promised to sustain his sacred pact with France, to respect and to maintain intact existing French frontiers. Alas, poor France.

On October 13, 1937, Hitler, by formal note, pledged German honor to respect the territorial integrity of Belgium and to "grant assistance to Belgium in case she should become the object of aggression or invasion." That assurance was given again and again thereafter. But brave Belgium was overrun and her Government destroyed.

On August 24, 1939, Hitler entered into a formal treaty whereby he promised not to attack Russia for 10 years. German Foreign Minister von Ribbentrop, who negotiated the treaty, pledged fullest friendship and profuse professions of good neighborly relations. He struck at Russia in the night and without notice.

What were these promises which Hitler made? They were simply lies.

On April 28, 1939, in reply to President Roosevelt's note, Hitler disclaimed any threat on the part of Germany to any nation, including the United States, in what he called a solemn declaration.

Since then he has violated his word again and again. Since then he has attacked and conquered Poland, Denmark, Norway, Luxemburg, the Netherlands, France, Greece, Bulgaria, Rumania, and Hungary, with Yugoslavia subjected to economic and at least partial military domination, and with Great Britain and Russia besieged.

Even more conclusive than the record of Hitler's broken promises, so far as what America may expect from him, is the published record of what he and his advisers have openly said and written of what is in fact their real purpose and the Nazi plan.

Such statements cannot now be recalled. They are a matter of public record. They constitute direct threats, not only to those who are vanquished but to those of us who still must withstand the test.

In Mein Kampf, Hitler wrote: "Germany will be either a world power or will not be at all."

On December 6, 1940, Richard-Walther Darre, a member of Hitler's cabinet, predicted that Germany "is predestined to rule the whole world," and outlined the plan of attack to dominate all countries, including the United States.

Which are we to believe, the lying assurances of peace and protestations of good will of Hitler and his spokesmen—the same sort of assurances and protestations of good will with which nation after nation was beguiled, and then destroyed—or the open threats, which recent history proves are the guide and compass with which he pursues his course in the conquest of the world to secure "Deutschland uber alles"?

PHYSICAL THREAT TO THE UNITED STATES

This brings us to the second contention of the reassurers—that Hitler couldn't invade this country even if he wanted to. Suffice it to say that the highest opinion of military and naval authorities is that there is not only the possibility but the imminent probability of physical invasion of the United States in the event of totalitarian success abroad.

As a matter of simple sense, I need not ask you what would be the situation if Russia and Britain should fall. You Veterans of Foreign Wars know, better than many of us know, that then the Mediterranean, the oil fields of Persia and Russia, the Suez Canal, and the Dutch East Indies all would be within the control of the dictator aggressors, with all that this would mean. You know that then Africa and South America would be within the hollow of Hitler's hand.

Such a situation envisages the possibility of the fleet of the United States alone standing between the aggressors and our liberties with the combined war fleets of Italy, Japan, Germany, and France, and possibly that of conquered Russia and Britain, under the command of the aggressors dominating the Seven Seas. The shipyards and the labor of the world, under slave conditions, despite all our capacity would insure a continuation of such mastery of the seas and constant threat to our coasts.

This is not an exaggeration. It is a simple statement of fact which you soldiers of other wars can testify to as to what our condition would be if Hitler's armies do to Britain and Russia what they have done to the rest of Europe.

Do we dare assume this risk to our precious liberties? If we follow the counsel of the isolationists—the appeasers—the reassurers—we will underwrite this terrible risk. We will be taking a terrible gamble. It is common sense to resolve all doubt in favor of our own safety. No step which we can take now to insure that no such catastrophe shall confront us, can we refuse to take for our own safety and that of our children.

PEACE WITH HITLER IMPOSSIBLE

There are those among us who have another suggestion which, whether intended or not, is simply to play Hitler's game. It is the suggestion that the United States sponsor a peace with Hitler now. What would such a peace mean? We would have to make a peace on the terms that Hitler would accept. Every well-informed man in international affairs today knows that for a year and a half Hitler has been doing his utmost to project a peace, and an appeasement peace. The Nazi textbooks on political and military strategy set forth cold-bloodedly that this is the classic Nazi formula to secure most easily ultimate conquest and total victory.

And what good would be such a peace? You cannot make peace with an evil thing that does not talk your language. A contract is no better than the man behind it. You cannot either make or maintain peace with a madman who conceives himself to be the divine fuehrer destined to rule the earth. Of what value would such a peace be? Your answer is nothing; absolutely nothing; for Hitler's peace, like his promise, would not be worth the paper it is written on.

OPERATIONS OF THE QUISLINGS

There is a new word in the world vocabulary, my friends. The word is "Quisling." I am sure there are no Quislings here, but, unfortunately, there are some—too many—throughout the country. The man who contributed this word to the world vocabulary was a major in the Norwegian Army. His name was Quisling. He has had a counterpart, sometimes many of them, in every country which Hitler has conquered. The Quislings betrayed their country to the Nazis consciously and willingly. They did everything they could to break down the morale of the country, to make the going soft for the aggressor. Hitler failed to keep his promises to many of them after they had contributed to the downfall of their respective countries.

But scarcely less dangerous than the Quislings who sold out their countries for a price—either money or promised power—were the appeasers, who were duped by Nazi promises that their countries would escape through reliance upon Nazi good faith. Every European country which was conquered by Hitler had its appeasers of this kind. Czechoslovakia had its Rudolf Barens and its Schvalkovisky; Yugoslavia had its Circar Babornic, who preached reliance upon Hitler's promise; Rumania had its Antonescu and its Gafencu, who preached reliance upon their ability to prevent Hitler domination through their superior intelligence and capacity; France had its Laval; Belgium had its DeGrelle; Slovakia had its Tiso; and Bulgaria, its Tsankoff. In the long halls of time, they will be unhonored and unsung.

These men raised their voices, either in good or bad faith, even as voices in our land are raised today, and preached the same doctrine of credulous optimism. The American people will not gamble their security in childish reliance upon the professions of a proven liar and in direct contradiction to the experience of all nations who trusted and were betrayed.

UNHEEDED WARNINGS

Unfortunately we are more prone to listen to the reassurers than to those who warn for our own good. I want to read you a brief warning which might well have been heeded:

"The political situation in the world, which of late has been growing progressively worse, is such as to cause grave concern to all the peoples and the nations who wish to live in peace and amity with their neighbors. The present reign of terror and international lawlessness began a few years ago * * * through unjustified interference in the internal affairs of other nations or the invasion of alien territory in violation of treaties, and has now reached a stage where the very foundations of civilization are seriously threatened. * * * The peace-loving nations must make a concerted effort in opposition to those violations of treaties and those ignorings of humane instincts which today are creating a state of international anarchy and instability."

These prophetic words were spoken 4 years ago. They were spoken by the President of the United States.

Again and again has he anticipated the trend of events and called the turn months ahead of the fact. Again and again has the event proven him right and his critics wrong. His information and his uncanny judgment of future developments has commanded the admiration of the free world and the hate of the dictators of the earth. Quislings, appeasers, and reassurers mistake the spirit of America when they challenge the good faith or high purposes of this greatest of Americans.

REAL ISSUE OF THIS WAR

The President of the United States has said that we are no nearer to war. He has not said that war is no nearer to us. But of one thing the American people are sure: They know that the devoted purpose of the President of the United States is to prevent the United States from being at Hitler's mercy and conquered by aggression, and that he also is doing his gallant and strongest utmost to prevent the spilling of the blood of our young men on foreign fields if it can possibly be avoided.

You and I know that the President's farsighted and devoted purpose is to make this country not only an arsenal for war against aggression but, if it is humanly possible and still assure victory, to keep it also as a storehouse for peace to heal a stricken civilization, a weakened manpower, and a scorched earth. If the war were to end tomorrow, the world as never before would need a good Samaritan to save itself and civilization. Unless stricken lands and stricken people can be restored, anarchy will surely stalk over the earth and threaten to engulf us all.

No one can lift the veil of the future. But if, under the guidance of the President, our youth may be spared the spilling of their blood, and if our contribution can be made through things and money and the mechanisms of war, and if, in the providence of God, victory may still be won and liberties preserved, surely then countless generations yet to come will rise up and call the President of the United States thrice blessed. For there will still be preserved here the manhood and second and third generations to carry on the burdens of peace; there will be no lost generation. That is the prayer and the hope of those who see in the farsighted purposes of the President, one of the greatest services which any political leader in the world today could possibly achieve.

Still I am sure the people of this country know, just as you and I, my friends, know,

that victory must come no matter what the cost, for the issue is supremely vital to us all. It is not whether Britain survives; it is not the kind of material world that we might save out of the wreck; it is far more important than either.

The simple issue is whether the world is going to be governed by a rule of law or a rule of might; the rule of Christ or the rule of Mars.

Upon this issue will depend the survival not only of our economic well-being but our spiritual freedoms as well.

The question is this: Could we hope to remain freemen in a world otherwise enslaved by a group of war-mad Nazi supermen? Do you believe that, under such conditions, we would be permitted to follow the precepts of Christ's teachings in a world dominated by a man who has said: "We are not against the hundred and one different kinds of Christianity, but against Christianity itself"?

We are freemen. We believe in the Sermon on the Mount and the Ten Commandments. We believe in law, justice, charity, and decency. We believe that the state was created to serve mankind and that men were not created to serve a thing called a government. We believe that the closest thing to God on earth is man. It is because of Him that we have fought for our ideals. In full faith in Him, if need be we will fight again. These are the precious things, beyond all price, which demand unity for victory and victory for unity.

We Must Save Our Republic

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

RADIO ADDRESS BY HON. STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address I delivered on August 29 over the red network of the National Broadcasting Co.:

The actions of this hour are aimed, not so much at an actual shooting war as they are designed to break down the spirit of the American people. Slowly but surely our constitutional liberties and our Christian faith are being choked to death in the very temple consecrated to their preservation.

In 1934 Dr. William A. Wirt, of Gary, Ind., testified that the radicals in Washington proposed to overthrow the established American way of life. He stated:

"I was told that they believe they would be able to prolong the country's destitution until they had demonstrated to the American people that the Government must operate industry and commerce. * * * We believe that we have Mr. Roosevelt in the middle of a swift stream and that the current is so strong that he cannot turn back or escape from it. We believe that we can keep Mr. Roosevelt there until we are ready to supplant him with a Stalin."

On the other side of the Atlantic, Prof. Harold J. Laski, English radical and close friend of Supreme Court Justice Felix Frankfurter, is reported to have said in 1935:

"In the United States, because of the success of a political democracy, it would be extraordinarily difficult to impose a dictatorship. Only a long period of distress which broke the spirit of America would offer the temper of acquiescence it requires to be successful."

On October 23, 1933, the New York Sun published the following editorial:

"President Roosevelt's invitation to Soviet Russia is a shock as well as a surprise. If Moscow, instead of Washington, had suggested a preliminary conference on recognition, the approach would have seemed natural, although few would have accepted immediately that recognition was certain to come. But instead of waiting for the Soviet Government to appear cap in hand, repentant of its sins of omission and commission, we find President Roosevelt taking the initial step toward rapprochement, applying the word 'abnormal' to the situation that has existed for 15 years, and creating the impression throughout the world that recognition is practically assured."

President Roosevelt on July 8, 1941, after the alliance between Britain and the Soviet Union had been consummated, sent the following message to Kalinin, President of the Presidium of the Supreme Soviet:

"The American people abhor aggression. They are bound with strong ties of historic friendship to the Russian people. * * * I extend best wishes for yourself and for the welfare and success of the Russian people."

Mr. David Lawrence, in an article in the Washington Evening Star on August 20, 1941, reviewing our present critical situation, observed:

"The administration must be prepared to look at unpleasant factors if it expects to carry through successfully a grave international emergency that affects the United States. It must recognize that many of its arguments about the danger that faces America have fallen on deaf ears in the Middle West and this is largely because there exists a deep-seated distrust of the President and his advisers.

"This distrust arises from the fact that misuse of public power exists in Washington and reaches out into the Nation. The distrust springs largely from the fear that the war situation is being used as a camouflage to put over a scheme of state socialism, and there are millions of citizens in America who do not believe in either fascism or communism or state socialism or New Dealism. * * *

"The men in power control in key agencies are mostly radicals. Conservatives have been brought in for window dressing here and there, but it is common gossip in Washington that they have no power or authority, and the moment the President essays to give them a real position, the sniping against them begins from New Deal quarters."

The declaration of principles announced by President Roosevelt as the result of his agreement with Churchill furnishes the foundation for black discouragement. My reason for saying this is easily stated. The President has pledged this Nation to the triumph of the Soviet Union. He is so intent upon this object that he is compelled to state in his message to the Congress of August 21, 1941, in speaking of this declaration of principles:

"It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazi-ism; or to agree to a world peace which would give to nazi-ism domination over large numbers of conquered nations."

Has the hatred of Hitler grown so strong that it shuts out the love of America? Has the desire to uphold Stalin grown so powerful that it would blind us to the teachings of Christ? Dare we admit that there is no hope of peace?

While expressing friendship for the Russian people, the declaration of principles is an abject confession that the German people are irredeemable except by the use of force—force employed in the cruelest way by blowing innocent women and children to pieces by high explosives dropped from the sky far beyond the reach of human vision. Roosevelt and Churchill have turned their back on Christian leadership. When they gathered on the seas to do their best for the future of mankind they thought of empire, economic gains and said not a word of spiritual leadership. This is the most discouraging statement of principles since the birth of Christ.

This means that the United States will be engaged for long years to come wallowing in the mire of President Roosevelt's statement of "matching destruction with more destruction, slaughter with greater slaughter."

When the President speaks in the sixth point of the declaration of principles of the final destruction of the Nazi tyranny, does he mean that the Nazi Government can be overthrown on land without an American expeditionary force? When he states in the eighth point of the declaration of principles that no future peace can be maintained if land, sea, or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers and that pending the establishment of a wider and permanent system of general security, the disarmament of such nations is essential, what part will the Government of the United States play in compelling such disarmament?

The conclusion is irresistible that the President is waging war, but the Congress is not. I speak not for myself alone but for the Congress of the United States. The war today in America is a war between the Congress and the President. Supporting the Congress are 83 percent of the American people. When the history of this period is recorded, it will be said that the representative form of government was vindicated through the triumph of the people's representatives in the Congress who successfully preserved the Constitution of the United States against usurpation by the President. The vote of 203 to 202 on the extension of the draft shows that the fight will be won.

I have been called a Nazi. My enemies are mistaken. I am not a Nazi; I am a Nazarene. Those who turn their backs on Christ will have to fight me to the finish. I proclaim here and now that it is impossible to redeem a world sunk in the blood-soaked fields of battle except we follow the Prince of Peace. To those who have abused me, I answer with Christian fortitude, Father forgive them; they know not what they do.

Reverting again to the testimony of Dr. Wirt, it is well to recall that he stated over 7 years ago, in speaking of the radicals surrounding the President:

"They insist that the America of Washington, Jefferson, and Lincoln must first be destroyed and then on the ruins they will reconstruct an America after their own pattern."

As a part of this scheme I have been accused of being a "fifth columnist," and that my efforts are directed at the overthrow of our Government. Pearson and Allen, who have recently smeared me, wrote the book The Nine Old Men, which was a filthy attack upon the Justices of the United States Supreme Court, the same Court upon which my father sat for over 23 years, appointed by President Theodore Roosevelt. It was the curtain raiser for the packing of the Supreme Court of the United States. This dastardly plan was branded in the official report of the Senate of the United States:

"It is a measure which should be so emphatically rejected that its parallel will never again be presented to the free representatives of the free people of America."

In my broadcast of June 15, 1941, I charged that our form of government under the Con-

stitution and our American independence would be overthrown not by a foreign invasion using military force but by a treasonable betrayal which was already in the making. I charged that there was a powerful movement thoroughly financed throughout the British Empire and in all parts of the United States to surrender great, free America into a permanent confederation or union which will cancel the Declaration of Independence written by Thomas Jefferson in 1776 and completely undermine the Constitution of the United States; that it had been publicly stated in London that the plans had been worked out, and it only awaited a word from Winston Churchill and President Roosevelt to complete the colossal surrender of all time.

Surrounded with great secrecy, there was a meeting last week at sea between these two leaders. Why was the conference at sea between Winston Churchill and President Roosevelt veiled in such secrecy? Why could not Harry Hopkins carry the word to Winston Churchill? Here is the answer:

Under section 4 of the Lend-Lease Act, Great Britain had to pledge that it would not transfer title or possession of the defense articles or defense information by gift, sale, or otherwise, or permit the use of such defense articles and defense information by anyone not an officer, employee, or agent of Great Britain. But, there was an exception inserted in the Lend-Lease Act. These transfers could be made only on one condition, and that condition is this—the consent of the President. This means that Winston Churchill had to see the President of the United States face to face to get his consent in order to transfer our American defense articles to Stalin. Was that consent given?

If the President feels that he is justified in his present course of action under the provisions of the Lend-Lease Act, I feel safe in stating that there is no justification in constitutional law for his position. In my book, We Must Save the Republic, published by the Shaw Publishing Co., of Washington, D. C., I state, on page 86, as follows:

"No matter what may be the true extent of the powers of the President as Commander in Chief, these powers stop short of an authorization for aggressive acts. In this connection we wish to quote Senator WALTER GEORGE, chairman of the Senate Committee on Foreign Relations:

" 'Nor have I held the view that American armed forces, military or naval, could be sent anywhere in the world for any purpose. That has not been my view of the Constitution, and it is not now. My view of it has been, without any attempt to indicate all the limitations that must be kept in mind, that, generally speaking, the President may send the Army and Navy to protect American rights, American property, and the lives of American citizens. That contemplates, in my judgment, primarily defensive action and not offensive action.' "

In the alliance recently made between Great Britain and the Soviet Union it was provided that "the contracting parties have agreed that the aforesaid agreement enters into force immediately upon signature and is not subject to ratification." That may be good law so far as the British Empire and the Soviet Union are concerned. Under our Constitution the signature of the President is of no value to bind the Government of the United States until that signature is confirmed by a two-thirds vote of the United States Senate. Woodrow Wilson found this out when he brought back his covenant of the League of Nations. His signature was never ratified by our American Senate and we were saved the tragedy of membership in the League of Nations with all of its sorrowful history and humiliation.

No further lend-lease funds can be given to Britain because of the alliance with the Soviet Union. House Concurrent Resolution No. 51 which I introduced on August 5, 1941, has been referred to the Committee on Foreign Affairs. This would revoke the powers of the President under the Lend Lease Act so that no gift could be made to the Soviet Union. We will win this fight with your help.

Forty-seventh Annual Meeting of Pennsylvania Bar Association

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

ADDRESS OF WILLIAM M. HARGEST, PRESIDENT

Mr. WALTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address to the Pennsylvania Bar Association by William M. Hargest, president, at the forty-seventh annual meeting held at Bedford Springs, Pa., June 24–27, 1941:

Ladies and gentlemen of the association, this is a solemn year.

The disturbed condition of the world and the defense activities of our own country have created obligations and opportunities for service, to which patriotic American lawyers everywhere have responded, and nowhere with more loyalty and ability than in Pennsylvania.

While these conditions have increased the work and responsibilities of all our officers and committees, we shall refer only to a part of the work more directly connected with war activities.

Throughout the whole State the members of the bar and of this association are serving on selective-service boards, appeal boards, as legal advisers to registrants, Government appeal agents, and masters, to pass upon the claims of conscientious objectors.

The Pennsylvania Bar Association committee on civil rights, of which D. Barlow Burke, of Philadelphia, is chairman, and the committee on legal aid, of which John S. Bradway is chairman, have cooperated with the very active committee on national defense of the American Bar Association, of which Edmund R. Beckwith is chairman.

In addition to that, your president has been asked to name a committee of this Association on National Defense, and appointed the following committee to cooperate with the corresponding American Bar Association committee: Joseph W. Henderson, D. Barlow Burke, John S. Bradway, George Scott Stewart, Jr., John S. Laughlin, Paul Bedford, Robert M. Fisher, and Douglass D. Storey.

The president of the American Bar Association initiated a movement to have the lawyers of the country become interested in and cooperate with any efforts to properly celebrate "I Am An American Day," otherwise known as New Citizens' Day. At the request of Joseph P. Gaffney, of Philadelphia, chairman of the American Bar Association committee on American citizenship, I communicated with the president of each local bar association and the chairman of the Junior Bar Conference, urging that the local associations contribute as far as possible to making any celebration of that day a success, or initiating a celebration if none was being arranged in any particular community.

During the year we have also been requested by the presiding judge of the third circuit of the United States district to appoint delegates of this association to attend the judicial conference of that district, and the following were appointed: Robert T. McCracken, Frederic L. Clark, Arthur B. Van Buskirk, and Douglass D. Storey.

We were also requested to appoint delegates to attend the meeting of the American Academy of Political and Social Science which met in Philadelphia, and the following were appointed: Bernard J. Myers, W. W. Montgomery, Jr., and William Clarke Mason.

We were asked to appoint an advisory committee of this association to cooperate with the Committee on Rules of Criminal Procedure of the Supreme Court of the United States, and we designated Frank P. Slattery, John H. Fertig, Carl B. Shelley, Thomas L. Anderson, Charles H. Bruner, Jr., and John W. Murphy.

Fred B. Gernerd, William S. Culbertson, M. Louise Rutherford, James S. Benn, Prof. William G. Masterson, and Miss Ella Graubert were appointed delegates to the Inter-American Bar Association meeting held at Habana, Cuba, in March.

However, with all this special activity and the great volume of regular work, we have still maintained and perhaps increased our routine work.

ADMINISTRATIVE LAW

I desire to discuss the outstanding single legal problem, which, during the past year, has necessarily awakened the attention and stirred the interest of every patriotic lawyer devoted to the preservation of our constitutional liberties and guaranties. It is the subject of the administration of justice through administrative tribunals. At this moment there is no subject in the whole domain of American law that carries greater responsibilities for the American lawyer.

The complexities of our modern life have tremendously complicated and multiplied the functions of the executive department of our Government. This complication and multiplication has found expression in the creation of administrative agencies to discharge these executive and legislative functions. There are more than 150 of such agencies in the Federal Government alone. Every State has them, and in Pennsylvania we have more than 40, issuing powerful adjudications and decisions not only affecting individual and property rights of citizens but also valuable public privileges and functions. It is utterly useless to criticize the necessity for these tribunals, but their growth has been abnormal, aberrant, and alphabetical. Intricate, interwoven relationships necessarily require regulation but not regimentation. The State must regulate economic life. Neither the courts nor the legislature can effectively furnish such regulation combining, as it does, executive and judicial as well as legislative functions. In order to properly provide such governmental control over economic life the administrative tribunal is essential.

Administrative agencies exercise threefold functions: They are legislative in making their own rules; they are executive in instituting their own prosecutions; and they are judicial in judging the cases that they themselves bring.

Men, even in high positions, cannot always resist the temptation to exercise unwarranted power. Too often they extend it beyond the law. When officers of administrative agencies do this, somebody is the victim. Each such step is a step toward regimentation, and the sum of such efforts has made a serious situation. To be at once legislator, executive, and judge is not far removed from a dictator. So paternalism that regiments is not far removed from totalitarianism that dictates. Shakespeare said: "Upon what meat doth this our Caesar feed that he is grown so great." To the extent that one

sitting in judgment is controlled by his inclinations, to that extent justice is endangered. Persons who sit in administrative positions as prosecutors and judges, determining findings of fact and of law, are tempted to find both the law and the facts either according to their own preconceived notions or according to the interests of their employers. The frequency with which they yield to this temptation is appalling. Perhaps it may be regarded sensational to go into specific instances, but the seriousness of administrative problems confronting this country justifies some reference to them.

MULTIPLICATION OF AGENCIES

The multiplication of administrative agencies has been startling. In the last 140 years our national population has multiplied 25 times. Measured by administrative personnel, the machinery of Federal Government has multiplied by the astounding figure of 17,950 times, more than 700 times faster than the population. Ten departments; 134 subsidiary bureaus, divisions, authorities, and agencies; and 58 tax establishments employ altogether over a million persons. In 1939 there were returned to the Federal bureaus 135,500,000 reports, questionnaires, accounting forms, tax schedules, and inspection sheets in which there was a substantial amount of duplication. Twenty-one agencies now require reports from farmers, 11 from railroads, 8 from communications companies, 19 from food processors, 12 from textile mills, 17 from banks, 12 from construction industries, and 26 from retail stores. These do not include State reports. With approximately 150 administrative units of the Government grinding out rules and regulations, orders and decisions—often conflicting, overlapping, and contradictory—deriving their powers from 965 statutory provisions and perhaps 75 Presidential orders, it is entirely beyond the human grasp of the unwitting citizen, and often of his lawyer, to know when he is not violating the law. The Federal Government has now some 13,000 more or less intelligent agents checking citizens' private accounts. They may commandeer books and records; they have tapped telephone wires and intercepted mails, and bureaucracy's power to harass has, in scores of cases, kept citizens from extending their work or business to the benefit of the whole community. Congressional inquiries have shown that coercion and intimidation exist on a large scale, and yet a bill to provide reasonable judicial review has been vetoed.

So much for the national situation. Before we discuss it further let us take a glimpse at the situation in our own State. Pennsylvania is little better. The profession and every other person interested in the subject is indebted to Gilbert Nurick, Esq., of the Dauphin County bar, a member of this association and secretary of our administrative law committee, for a comprehensive study contained in an article entitled "Much Ado About Something—The Story of Administrative Chaos in Pennsylvania." Mr. Nurick supplemented his article by a survey prepared for the procedural rules committee. He points out the chaotic condition resulting from a total lack of system in the writing of the statutes creating the 40 or more separate agencies in Pennsylvania. His résumé deserves to be quoted. He says:

"Specific examples will illustrate the point. If the license or registration of an accountant, investment banker, airport operator, architect, physician, barber, optometrist, osteopath, or pharmacist is revoked or suspended by the officer or agency regulating his particular profession or occupation, there is no right of direct appeal to the courts. On the other hand, if a pawnbroker, real-estate agent, beautician, insurance agent, milk dealer, dealer in securities, nurse, undertaker, teacher, dentist, or engineer is similarly aggrieved, he has a right of direct appeal.

"If the department of agriculture revokes a registration under the Carbonated Beverage Act or revokes a cold-storage warehouse license, ice-cream plant license, a license as a dealer or broker in domestic animals, or a license under the Farm Standards Act or the Plant Pest Act, the aggrieved person has no right of direct appeal. If, however, the same Department should take similar action with regard to a license to operate a bakery or a license as a dealer in farm produce, a direct appeal is authorized.

"If the department of welfare should revoke a license to operate a maternity home or hospital or a private hospital or private nursing home, no direct appeal is available. If, however, the same department should take similar action with reference to licenses of institutions for the care of mental patients, an appeal is authorized in certain cases.

"If the insurance commissioner should revoke or suspend a certificate of authority for underwriters, no appeal is provided. If, however, the same official should revoke an agent's, broker's, or adjuster's license, or other types of certificates of authority, an appeal is authorized.

"If the Pennsylvania Securities Commission should refuse to issue a license or should revoke a license authorizing an investment business, there is no direct appeal available. If the same commission should revoke a dealer's license or agent's license, an appeal may be taken.

"If the department of health should revoke or suspend a permit to operate a public bathing place, there is no appeal. If the same department should take similar action with regard to a permit to sell milk or milk products, an appeal is available.

"Many of the statutes are entirely silent on the procedure before the administrative tribunal. Others prescribe procedure in careful detail, and in such instances there are almost as many differences as there are statutes.

"With regard to those administrative determinations from which a direct appeal to the courts is provided by statute, the various statutes are consistent only in their utter lack of uniformity. In many cases the time within which the appeal must be taken is not prescribed. In others, the appeal limitations are 5 days, 20 days, 30 days, and 60 days. Some of the statutes provide for supersedeas on appeal; most of them are utterly silent on this point, while others expressly provide that the appeal shall not act as a supersedeas. Some statutes provide for the filing of security on the appeal, but most of the existing laws either overlooked or ignored this phase of appeal procedure. Some of the acts describe the procedure on appeal in great detail. A large number of them, however, provide no light on this point.

"The scope of review on appeal is variously stated without sound basis for distinction. Some appeals are limited to questions of law. In others the facts may be challenged and reviewed. On some appeals the case is heard solely upon the record certified. In others, the hearing is de novo, while in many cases the statutes fail to state on what basis the appeal must be considered by the court. Some statutes provide that the findings of fact by the agency are conclusive if supported by evidence. Others prescribe that the findings shall have the same weight as findings of a referee under the act of May 14, 1874. Most do not furnish any indication as to the weight to be accorded to the findings of the administrative agency.

"In some instances the statutes expressly provide for the right of further appeal from the order of the court to which the appeal was originally taken. Others prescribe that the action of the court shall be final, while in most intances the statutes are mute on this point."

OVERREACHING FOR POWER

In addition to the statutory confusion, there is confusion as to their interpretation. In the court in which I have the honor to preside, we find repeated attempts by misguided administrative officers of the State to assert illegal powers. Not long ago the attorney general of the State suggested that in the decision of a case then before us we should, in open court, advise the administrative officer of the limits of his authority, because that officer felt disinclined to take the attorney general's advice, although bound by law to do so. On another occasion in a hearing involving an administrative tribunal, the court felt it necessary to criticize the unlawful action of a board and to suggest the limits of its authority, whereupon a deputy attorney general, also in open court, said he was glad that the court had so advised the board.

In the case of *Green et al* v. *Milk Control Commission* (340 Pa. 1) the chief justice said, with reference to the power of administrative tribunals:

"The principle guiding to decision is this: The power and authority to be exercised by administrative commissions must be conferred by legislative language clear and unmistakable. A doubtful power does not exist. Such tribunals are extrajudicial. They should act within the strict and exact limits defined."

The tendency, however, of administrative officers is to reach for all power not expressly prohibited. To illustrate: In the case of *Fire Association of Philadelphia* v. *Insurance Commissioner* (40 Dauphin 386), that official issued a regulation on September 19, 1939, to the effect that "all funds which represent capital stock as well as reserves or liabilities must be invested" in accordance with the provisions of two sections of the insurance law, "even though the word 'capital' alone is used in such sections." The insurance law referred to had been on the statute books since 1911. From that time until the date of the regulation in 1939 the word "capital" had not been construed to include "reserves," and every insurance commissioner during that whole period, including the insurance commissioner who issued the regulation, during a prior term of office, had so construed the law. The regulation would have required the great insurance companies of this State to have put upon the market approximately $85,000,000 of securities and reinvest the funds at a much lower interest rate, to the loss and prejudice of not only the companies but of their insured.

This is an illustration of the violation of the principle which I have quoted from the chief justice.

In 1940 the State board of pharmacy refused to issue a permit to conduct a pharmacy. It found no facts; it simply said that it deemed the concern "not qualified to receive a pharmacy permit." Upon a preliminary proceeding the court filed an opinion outlining the rights of the board. A new application was filed, and, notwithstanding our opinion, the board again, without a hearing upon the facts, determined that "for the protection of the public health and welfare, we deem Nevins, Inc., not qualified to conduct pharmacies in this Commonwealth." After further resistance by the board, we were required to write a third opinion directing the mandamus to issue. This is the same board whose representative at the hearing held by the joint State government commission opposed any court review of its findings.

The extent to which some administrative processes have gone surprises and shocks the citizen who values constitutional freedom. While it is now settled that the Government may fix prices in a wholesale way, and that industry cannot, it is at least interesting to

find an administrative agency prosecuting an individual for selling a better product than the price structure permitted. That happened in my county. A milk dealer was prosecuted for selling milk with a higher butterfat content than the regulation permitted. Another rather astounding illustration appeared in the public press this year showing the extent to which we are being regimented. The report indicated it was necessary that the Public Utility Commission give truckers authority to carry, without charge, dolls, toys, and other Christmas packages from public and parochial schools to charitable institutions at Christmas time.

Let us now look briefly at some Federal instances. Last year a congressional committee investigating the National Labor Relations Board discovered some startling facts. The ordinary proceeding when a charge of unfair labor practice is lodged against an employer is to refer it to one of the Board's regional directors, of whom there are 25 scattered throughout the Nation, with attorneys, investigators, and clerks to assist them. These trial examiners hear the evidence, make findings of fact and conclusions of law, which are incorporated into a report and sent to the Chief Trial Examiner at Washington. The trial examiners are mostly men of maturity, with experience in the practice of the law. If a finding is made of unfair practices the Review Section assumes control of the dispute, and here is a startling revelation. There were at the time of the testimony before the congressional committee 105 attorneys in this Review Section, whose average ages were 29 years and whose average experience was practically nothing. The evidence disclosed that a number of them were appointed before they were actually admitted to the bar. A number had never practiced law after being admitted to the bar. According to the evidence before the congressional committee, one 27-year-old applicant for appointment of review attorney, with important political affiliations, appeared before an experienced regional director who was required to consider his capabilities. The director reported him "inexperienced in all matters relating to labor and labor problems and strongly advised against his employment," suggesting that he would fear to turn the applicant "loose on even our simplest case." He was appointed.

One of these review attorneys, a young woman, had never represented a client, yet she reviewed the records of an imposing list of corporations charged with unfair labor practices, such as the Ford Motor Co., Columbia Broadcasting Co., American Radiator Co., and many others of national importance, and boldly told the committee that she felt at liberty "to comply with or ignore the supervisor's suggestions." Another young woman, appointed because "she was unusually able, with a liberal point of view," whose recommenders said that her liberal point of view had turned "left," reviewed many cases of importance, such as the Firestone Tire & Rubber Co., Republic Steel Corporation, and others. In one instance, according to the committee's report, she received instructions from the Board to draft a certain decision, but "calmly proceeded to substitute her own independent judgment for that of the Board" and drafted a different decision. In still another case, the trial examiner, a man of wide legal experience, had excluded the testimony of a certain witness, but, in reviewing the case, a young lady who was appointed before she was admitted to the bar, wrote the Board's legal representative and sternly demanded to be informed concerning "what Mr. Mellon would have testified to had he been permitted to answer." A regional director complained of one attorney, whose private practice had consisted of only one uncontested divorce case before his appointment, in this language: "Your office assigned him to this region as an attorney absolutely inexperienced in our line of work and with little if any experience in private practice behind him." Another Board attorney complained of the same young man, yet notwithstanding these complaints he was transferred to the position of review attorney and had handled at the time of the committee investigation 43 cases, some of great importance. With a record such as this, is it any wonder that those summoned before an administrative tribunal and trial in such a manner, as well as the members of the bar trained to respect constitutional safeguards and liberties, should cry out for some effective method of regulation and review?

Still another startling exercise of administrative control happened in reference to an order of the National Railroad Adjustment Board requiring the Pennsylvania Railroad to rehire a locomotive engineer. The man in question was dismissed for intoxication in 1935 and again for another serious infraction of the rules in 1937. He was reinstated following his 1937 dismissal upon the self-imposed condition that any further failure "will be sufficient cause for my being immediately dropped from the service." A third dismissal came in February 1939 when he was reported by other trainmen and a physician to have been intoxicated when he came on duty. Notwithstanding the testimony of the fireman, conductor, and doctor, all of whom reported him unfit for duty, and the fact that the lives of many people would be in his hands, the board decided the case on a technicality affecting the dates when the order dismissing him occurred, and, instead of giving an opportunity to correct the record in that respect, categorically ordered his reinstatement. And yet we are told that it would shackle the function of government to have a n impartial judicial review of actions of this character.

LANDMARKS OF CONSTITUTIONAL SECURITY

In the case of *Railroad Commission* v. *Rowman & Nichols Oil Co.* ((1940) 310 U. S. 573, 581), it is said:

"Courts must not substitute their notions of expediency and fairness for those which have guided the agencies to whom the formulation and execution of policy have been entrusted."

On the other hand, Mr. Justice Brandeis said, in *St. Joseph Stock Yard Co.* v. *United States* (298 U. S. 38, 72):

"The inexorable safeguard which the due-process clause assures us * * * that there will be opportunity for a court to determine whether the applicable rules of law * * * are observed. * * * The order of an administrative tribunal may be set aside for any error of law, substantive or procedural. * * * There must be the opportunity of presenting in an appropriate proceeding at some time to some court every question of law raised, whatever the nature of the right invoked or the status of him who claims it."

With the right vested in administrative agencies to initiate complaints, thereby to become the prosecutor, and the right to make the rules of procedure by which the defendant is to be judged, it is unthinkable that such an administrative tribunal should be able to enter any judgment without provision for an appeal to an impartial judicial tribunal. Such a situation gives the rules of an administrative agency greater sanctity than the laws of the legislature, the administration of which can be reviewed by judicial processes. It is no wonder that those who love the liberties which our forefathers have established should be appalled at the administrative absolutism which does not provide a day in court. It is no wonder that the situation aroused the attention of Congress. It is no wonder that the Attorney General of the United States constituted a committee for a thorough examination of the whole subject. The wonder is that when Congress did finally act by the passage of the Walter-Logan bill, that bill should receive a Presidential veto.

This important bill was the result of years of study and effort by able and farsighted lawyers. As far back as 1916 Elihu Root, the outstanding statesman of his time, in his annual address as president of the American Bar Association, invited attention to the need for reform in administrative procedure so that "the regulators might themselves be regulated by law."

In 1933 the American Bar Association created a special committee on administrative law, the direct result of whose work was the Walter-Logan bill, approved by the American Bar Association's board of governors and house of delegates, and urged for passage.

In 1939 the Attorney General of the United States created a committee of six, to which six more were subsequently added, which committee prepared a 474-page report. That this report would not be unanimous was to have been expected since the original committee consisted of three representatives of the United States Department of Justice, the Chief Justice of the Court of Appeals for the District of Columbia, a former president of the American Bar Association, and a former Under Secretary of the Treasury then in private practice in Washington, and the six added consisted of the Solicitor General and five law-school professors.

Two bills have been prepared by that committee. The majority favors one of the liberal type; the minority a much more comprehensive bill recommended by Arthur T. Vanderbilt, a former president of the American Bar Association, a practicing lawyer; Carl MacFarland, former Assistant Attorney General, and now a practicing lawyer, and Prof. E. Blythe Stason, of the University of Michigan Law School.

Both bills happily agreed on the creation of an office of Federal administrative procedure, somewhat analogous to the Administrative Office of the United States Courts, which would be given supervision of the agencies and their procedure.

All of the members of the Attorney General's committee agreed to the statement of Dean Acheson, chairman, quoted in the March 1941 issue of the American Bar Association Journal, that the hearing commissioners "should be men of ability, stature, and prestige, should be appointed for definite terms of 7 years, and should be paid substantial salaries fixed by law. * * * They should have no functions other than those of presiding at hearings or prehearing negotiations and of initially deciding cases that fall within the agency's jurisdiction."

The fundamental difference between the majority and the minority seems to rest upon (1) the need for separation of the judicial function from other activities of the administrative agencies, (2) the necessity of more effective judicial review of the decisions of administrative agencies, and (3) the high desirability of a code of legislative standards of fair procedure.

Chief Justice Groner, not fully agreeing with either bill, submitted four basic principles to be obtained: First, that the administrative official should be separate and distinct from the official charged with the duty of passing judgment upon alleged violations; second, assuming the complete separation of the functions of prosecutor and judge, the findings of fact of the administrative officer, if supported by substantial evidence, should be conclusive in any judicial review, except where a constitutional right is in issue; third, where, from the nature of the subject matter, separation of the functions of the administrative officer or tribunal, including findings of prosecutor and judge, would be impracticable, the decision of fact should be subject to review by an independent body; and, fourth, in cases where a constitutional right or privilege is asserted, the power of

judicial review should be as extensive as may be necessary, in the opinion of the reviewing court, to decide the issue.

The committee on administrative law of the American Bar Association reported to the meeting of the house of delegates, March 17, 1941, a statement of principles which should properly govern administrative processes. That meeting was largely devoted to the consideration of the two bills prepared by the attorney general's committee.

With reference to them, Mr. Lloyd Garrison said, for the committee:

"All 11 members of the Attorney General's committee were agreed:

"First. The creation of a so-called Office of Federal Administrative Procedure.

"Second. Provisions looking toward increasing the independence, tenure, salary, and quality of trial examiners called hearing commissioners."

The house of delegates, after thorough discussion, adopted the following:

"The house of delegates expresses the opinion that Senate bill 674 (which was drafted by the minority of the Attorney General's committee) is the bill which up to this time best embodies the above statement of principles."

The bill approved by the house of delegates has also been introduced in the House of Representatives, H. R. 4238. I recommend that unless this association desires to take action at this session the two proposed acts be referred to the committee on Federal law for study and report at the January 1942 session.

May we again refer to the fate of the Walter-Logan bill. This bill, while it stopped short of fully covering the obvious abuses, opened the way for attack upon them. It sought uniformity in procedure so far as practicable; it aimed to create standards of inherent fairness and justice and canons to guide the conduct of impartial judges and right-minded lawyers; and it provided for modified judicial review.

The veto message of the President was a peculiar document. It contained a statement which seems far from the fact. It says: "A large part of the legal profession has never reconciled itself to the existence of administrative tribunals." I venture to say that it would be hard to find a lawyer who has the slightest acquaintance with governmental functions, State or Federal, who would assert that we can get along without administrative tribunals. Lawyers do assert that we can and ought to get along without a multiplication of them on the slightest pretext or on no pretext.

The veto also said: "The bill would turn the clock backward." Is depriving a citizen of a fair, impartial hearing before a competent tribunal turning the clock backward? If so, it would only turn it back to the time when every man had a fair and impartial adjudication of his rights. Subjecting a citizen to trial by a tribunal which is not only the prosecutor but also the judge, under rules which the prosecutor itself has made and from which there is no appeal, may be turning the clock forward, but it is turning it toward Germany, Italy, and Russia. It certainly is obliterating the hands which have heretofore pointed with unerring accuracy to constitutional guarantees. If to preserve constitutional liberties by providing a review of a prosecutor's own prosecution, hearing, and judgment is turning the clock backward, then the Walter-Logan bill did it. The veto also said: "The bill strikes at modern reforms by sterilizing the administrative tribunal which administers them." If the sterilization destroys the bacteria which multiplies such agencies ad infinitum and which produces the character of judgments disclosed by the congresisonal committee to which I have referred, then such sterilization should be administered.

This veto has received a rather scathing review by so liberal an exponent of the law as Roscoe Pound in the March 1941 issue of the American Bar Association Journal. Among other things, he said:

"No one urges that an administrative hearing or investigation be conducted in all respects as a trial at law. No one has objected to any reasonable informality or application of common sense to the ascertainment of facts. But the abuses, well known to the profession and ignored by the message, to which the measure in question was directed go much deeper. To a less degree in some but to an alarming degree in other of our administrative agencies, there has been a disposition to ignore two maxims which have long been held fundamental in justice: (1) That no one is to be judge in his own case, and (2) that both sides of a controversy shall be heard and that no one shall be prejudiced by an adverse determination without an opportunity of being fully heard and fully apprized of what may be used against him in reaching a decision and allowed to argue with respect to it, if he desires to take advantage of the opportunity. To say that these elementary requirements of justice are 'technical legalism' and that seeking to make available to all who are adversely affected the constitutional guarantee that a decision against them shall have a basis in evidence of rational probative force and not in prejudice, preformed opinions without hearing the other side, gossip, and made to order interviews under the name of investigation, is insistence on applying 'technical rules of evidence,' is simply to say that all rights are to be at the mercy of administrative agencies. * * * It is legalism to require such tribunals to keep within the limits of the jurisdiction and powers given them by the statute creating them. It is legalism to require them to take the policies they apply from the act of Congress under which they sit and not from their own ideas of particular cases. It is legalism to require them to apply the standard provided by statute instead of making one of their own or acting on no standard. It is legalism to require them to find the facts upon which they base their orders, as all other tribunals are required to do, so as to have some minimum of check upon them. * * * If thes tribunals can only act effectively by acting without law, we shall have to remake our whole policy. * * * What lawyers do object to is the proposition that these agencies, alone of all the agencies of government, shall act without any substantial check, shall be free to ignore rights, to act in the teeth of evidence, or upon no real evidence, shall be free to keep the basis of their action concealed and cut off all opportunity for refuting or disputing it, and shall be at liberty to make rules of highly serious import, with none of the checks which are imposed on legislative and judicial rule making."

THE EXTENT OF JUDICIAL REVIEW

In *Edison Co.* v. *National Labor Relations Board* (305 U. S. 197, 229), Chief Justice Hughes said:

"The statute, in providing that 'the findings of the Board as to the facts, if supported by evidence, shall be conclusive,' means supported by substantial evidence. Substantial evidence is more than a mere scintilla. It means such relevant evidence as a reasonable mind might accept as adequate to support a conclusion. * * * Desirable flexibility in administrative procedure does not go so far as to justify orders without a basis in evidence having rational probative force."

During all the discussions which have been anywhere had upon the subject of judicial review, the question has always revolved around the extent and scope of such judicial review, and the discussion in the house of delegates of the American Bar Association was no exception, but it was there stated by Mr. Arthur T. Vanderbilt, an exponent of the minority bill, whose inclinations would be for a wider judicial review, as follows:

"In our opinion the best we could get would be to provide for review where the findings were contrary to the substantial evidence upon the whole record. By the phrase upon the whole record we were aiming to get away from the habit which has grown up within the last 5, 10, or 15 years of imposing on or importing into the word 'substantial' a meaning which it did not formerly have."

Perhaps I should not close this review without referring to the decision of *Federal Communications Commission* v. *Pottsville Broadcasting Co.* (309 U. S. 134), decided January 29, 1940, in which the Supreme Court of the United States, in an opinion by Mr. Justice Frankfurter, declared for the first time that there was a different philosophy involved and different principles to be applied in the review by a court of the action of an administrative agency than that to be applied in the review by an appellate court of the action of an inferior court. I urge all students of administrative law to study this decision.

While many leaders of the bar have been active nationally, we in Pennsylvania have made much progress toward an ultimate solution of the administrative-law problem as related to State agencies.

The committee on administrative law first made a detailed survey to ascertain the facts so that it might be informed as to the actual names and functions of Pennsylvania administrative agencies, the law creating them, the existing procedure before them, and the situations which urgently required improvement. Representatives of the committee attended all of the hearings of the joint State government commission when that commission was inquiring into the practice and procedure before all boards. Our committee has studied hundreds of pages of reports, speeches, essays, articles, and tabulations. Its work has had the sympathetic interest of 123 lawyers who have taken the trouble to write their views to the committee and, of course, many others are interested who have not taken this trouble.

We are now ready to work out in detail the best cure for the disease which might be called administratum chaotica. The administrative law committee proposes the creation of a section on administrative law, and in confidence that you will at this session adopt the necessary bylaw for that purpose it has already set up its first section meeting for 1 o'clock today. We are attempting to convert our theoretical efforts into practical results.

I look with confidence to the continued efforts of the American lawyers, notwithstanding the castigation they sometimes receive from high sources, to wage an unending fight for the preservation of those ideals of constitutional liberty and freedom so that in this respect we shall "destroy not the ancient landmarks that our fathers have set."

National Defense Now

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 3 (legislative day of Tuesday, September 2), 1941

RADIO ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in

the RECORD a speech delivered by me over the radio on September 1, during the National Radio Forum program, on the subject National Defense Now.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

As one among the great radio audiences listening on Monday evenings to the Star Forum, I express to the Washington Evening Star my profound gratitude for its patriotic and informative public service. I appreciate as an honor and a privilege the opportunity to participate tonight in the forum. I trust what I shall say will equal its high standards of endeavor.

The assigned subject of national defense now is one directly vital to the lives and even the souls of every individual among us.

Tonight I want all of those who hear me to know I speak on the failures of our national-defense program and of the delays in giving expeditious and effective aid to England as one who has supported, up to this time, all—every single one—of the foreign policies of the President of the United States, as one who is anxious to be helpful and to make these policies fully and quickly effective, as one who believes that the American people are entitled to know the truth respecting the progress of our defense program; that a free and frank discussion of the inefficiencies of disorganization and the unwarranted delays that have occurred will act as an incentive to remove the obstacles that now exist in the great effort our country is making.

If democracy means anything, it means that in times of great crisis the people should know the true facts upon which they must make vital decisions. Events in recent days make it more imperative than ever that the American people know the truth about the progress of our defense program and aid to England.

From the beginning of the European conflict I have believed that the surest way for America to avoid war is to be ready to repel any attack made upon us and to be prepared to conquer and destroy any nation or nations making that attack. I believe unstinted aid to England in war equipment and supplies is clearly to the interest of America, and that this assistance should be given today—now—and not further delayed. Already avoidable delays have diminished seriously the effectiveness of our assistance. We have done more in talking than in effective action.

The avoidance of war, except to repel attack by our own strong defense and by giving aid to England has been and will be the controlling influence in my official acts. In any event, in my judgment, it would be an act of utter folly to become a voluntary shooting belligerent in the European conflict in our present state of unpreparedness.

I am not an isolationist. I am not a pacifist. As a Member of the Senate of the United States my concern is first and last the protection and security of our own Republic—to preserve our freedoms and our American way of living—to cast my vote and act as an official of the United States Government solely to promote the best interests of America. I believe firmly that our safety lies in total preparedess for ourselves and giving aid to England in equipment and military supplies.

Winston Churchill said to America: "Give us the tools and we will finish the job." Anthony Eden, speaking for the English Government, only 2 days ago, said that the struggle will finally be decided in the quantity of production of mechanized war equipment, and he called for further efforts and further sacrifices in the immense task that lies ahead in the field of production. Speaking directly to America, Mr. Eden said: "All over the world we need your weapons—in Russia, in the Far East, in Libya, and over Germany."

So far we have failed woefully in sending to England the fighting planes—the long-range, four-engine bombers—the heavy tanks, the antiaircraft guns, the merchant ships, the powder and the shells, all of which she must have.

The conservative London Sunday Times said in its leading editorial published in London yesterday, "Only a fraction of American industry is harnessed to war production," and then this English paper continued, "Is it asking too much of the comfortable New World to devote some more millions of man-days to salvation?" The London Times said further, "'Let it roll,' said Mr. Churchill of Anglo-American cooperation. But it doesn't. There is a stream but no river. Poor glorious Greece," the Times continued, "got literally nothing."

America is the greatest industrial nation in the world. We have the greatest resources of any nation in the world. Our most effective aid to England is to mobilize the productive capacity of this country so as to produce, and produce quickly, the bombing planes, the huge tanks, the vessels, and those other implements of war England needs so desperately. Our job in America is a production job, and if we do this job well, America will save the world for democracy.

On March 11 last the distinguished Secretary of War, the Honorable Henry L. Stimson, said in a public address:

"A free government does not go to war until its people are convinced that such a course is necessary and that they have a just and necessary cause for going to war. They, the people," said Mr. Stimson, "are not afraid of the real news. What they want to be sure of is that there is no ballyhoo on one side and no sensational knocking on the other." Then Mr. Stimson made this very pertinent observation: "It is vital," he said, "that both the Army and the people behind it must know the real basic facts, free from any false exaggeration, either one way or the other."

The people of America are, as Secretary Stimson says, entitled to know the facts. They must know the facts if this Nation is to unite in an all-out preparedness effort for ourselves and for England, which means all-out sacrifice on the part of all our citizens. So long as our defense progress is measured in official statements by percentages of some previous production period, the people, of course, will never know the facts. We are told from time to time by our officials that the production now of tanks, for example, is 900 percent over the production last December, and the production of other equipment is expressed in similar language. As not a single modern effective tank of the design now approved was produced last December, a production figure of 800 percent of zero still remains zero, and such statements are likely to be misleading to the public.

Just 2 years ago the war in Europe began. In this period Germany has conquered and now occupies 14 nations. The conquests were made by the effective use of superior military equipment; the coordination of huge tanks on the land and dive bombers in the air—complemented by all types of offensive and defensive equipment, adequately manned by trained personnel and with ample reserves to meet any reverses.

At the end of these 2 long years of ruthless and desperate struggle, with the whole world engulfed in war, save only the Western Hemisphere, you and I and every other American citizen has the right—in fact, in this free country, it is our duty—to ask of those in authority for an accounting of what has been done to prepare our country for defense and to give to England quick aid so vital for our own protection.

Let us not duplicate here the errors made in France and England. It is a gigantic task to which we have set our hands. What have we undertaken? We have undertaken to arm the United States of America to an extent greater than any other nation or group of hostile nations in the world. We have undertaken to protect the Western Hemisphere. We recognize that our safety lies only in our strength. Then we have agreed to provide to the democracies, especially England, the arms these nations need—to become an arsenal for the democracies of the world.

The magnitude of this task is emphasized by the fact that Congress has so far appropriated and authorized the colossal sum of $53,000,000,000 to pay for this undertaking. This sum will be greatly increased, as even now the administration contemplates asking for $5,000,000,000 more for lend-lease purposes. It is possible and probable that even without our fighting participation in the war the cost of the program we have assumed will reach $100,000,000,000 for military purposes alone. In fact, this is the cost General Marshall estimated to be the military effort of Germany up to the beginning of the war.

The sum of $53,000,000,000, which has already been appropriated and authorized, is equal to about one-seventh of the total actual wealth of America, according to the most reliable estimate—a wealth the citizens of America have been accumulating by industry and frugality throughout the many years since our Republic was founded. The anticipated ultimate cost of $100,000,000,000 is more than one-fourth of this estimated wealth, and, remember, these new costs must be pyramided upon an already top-heavy and burdensome public indebtedness incurred by profligate peacetime spending.

Speed in the achievement of the program is its greatest and most important factor. Speed in sending vital military equipment to England will shorten the war. The delays that have occurred, and are occurring, will lengthen the war. Speed in our own production for defense means our own security. Hitler does not wait for his adversaries to prepare. He strikes when they are unprepared, and this accounts for his phenomenal victories.

This is a mechanized war of great tanks, huge bombing planes, and all implements of war so coordinated as to be more effective in destruction than in any other war in the world's history.

Andre Maurois, renowned French author, said after the fall of France: "It is no mystery, but as a tragically simple explanation, the battle of France was not lost in the spring of 1940 but between 1935 and 1939 in the factories of France. It is not so much a military defeat as an industrial defeat. France worked 40 hours a week and Germany 60 hours."

The failure of France to do the work and make the sacrifices essential for her defense destroyed her nation as a democracy. It gave England the closest call in the long and great history of that nation. Should we not profit by these examples?

The overwhelming sentiment of a majority of the American people demands that America be prepared so as to be impregnable to any attack, whether it comes from the Atlantic, the Pacific, or both; that we have the greatest and most effective air force in the world, the greatest navy in the world, and all defense equipment essential in modern warfare.

At least two-thirds of all Americans are in favor of giving to England quickly the war materials and equipment she needs, and then a large majority desire that we keep out of the European war as a fighting belligerent.

Many eloquent speeches have been made by the leaders of our country in the crisis, but let us remember that the only effective language today in dealing with Hitler and other ruthless dictators is language translated into real action in producing actual fighting planes, warships, great guns, tanks, and other military equipment, adequately manned with trained and efficient personnel. Wars are not won by planes on order. Wars are not won by appropriations unspent. Wars are not won by materials yet undelivered.

Tonight I speak as an advocate of our American defense policy adopted by Congress, which has been implemented by granting so far every single executive request. I have voted for the policy and all that has been described as required to carry it out.

All-out sacrifice and effort on the part of government, business, and private citizens—by all—is required for its earliest and fullest consummation. The facts, figures, and conclusions presented to you are intended to embarrass no one. It is information which I know the American people are entitled to have. Those of us in public life can, I hope, discuss vital matters from the standpoint of high patriotism. It is vital, I think, for us to realize the facts as they are, and to blast ourselves out of the sixth column of deadly apathy. The sooner our national leadership provides the effective administrative machinery to do the job and convinces the country that we are not getting prepared as we should; that we are not sending the aid to England as quickly as England needs it; that we can only accomplish successfully the great task we have undertaken by all-out sacrifice and self-denial, the better our safety will be assured.

Sacrifice now, today, is infinitely better than a much greater sacrifice we shall have to make should we be involved in the war.

In a speech in the United States Senate I discussed facts as to the production of defense equipment in the hope that the delays now existing would be remedied. In a democracy you and I and every other American citizen have the privilege of free speech and the benefits of a free press, as such are the bulwarks and foundation stones of our liberties.

The figures on production which I presented to the Senate were secured from one of the very highest responsible Government sources, and, as I said in the Senate, are accurate in all essentials, though, of course, may be approximate in some minor details. The fact that the President received somewhat conflicting figures from another source, no higher than mine, as to certain guns and tanks, indicates again the confusion that now exists in Washington with respect to our preparedness program.

The President admitted the accuracy of the plane-production figures I used. Our low production of combat planes is the most glaring and conspicuous failure of our Government in our own preparedness program and aid to England.

The President did not question the small output of cargo ships and tankers so vitally needed by England in the war of the Atlantic. Neither was any question raised as to my statements on the construction of naval vessels. Planes and ships are the most effective and important aid that we can render England and are the most imperative need in our own defense.

As the production figures on military planes are agreed upon, the public has definite information and can decide whether or not our great Nation has failed or succeeded in the production of these—the most vital equipment of all. It is, I think, the No. 1 failure.

It was 2 years ago when the war began. We have had 2 years for preparation. From September 1, 1939, to September 1, 1941, our Government has actually spent in cash for defense the great sum of $10,000,000,000. After all, it is only the facts that really count in the production of military equipment.

What are the facts with respect to our plane production? We recall that the President, on May 15, 1940, asked for 50,000 military planes. We recall that he has more recently asked for 500 bombers per month. In July, this year, 1,460 planes were produced. Of this number about 700 were training planes, which are comparatively simple to produce, and can be built quickly in mass production from standard designs. What we are primarily concerned about are combat planes. England needs only combat planes, not trainers. Little more than 700 combat planes were produced in July, 16 less than in the previous month of June, and the total production was 200 less than the schedule. But more significant than this was the number of the most effective types of fighting planes produced. The great need of England today is 4-engine, heavy bombers. Heavy bombers can be flown to England and avoid the perils of boat shipment as is the case of other planes. Heavy bombers in quantities in England today in the hands of the Royal Air Force would permit the wholesale bombing of Germany while Germany is engaged in her struggle with Russia. Only 14 4-engine, heavy bombers were produced in the United States in July. Fourteen heavy bombers per month is a far cry from the 500 the President asked for. It is a production failure of the first magnitude. Only 12 were produced in June, while 21 were produced in April, so the production has actually declined. In July only 95 medium bombers were produced and 243 light bombers.

In my Senate speech I stated that 60 heavy bombers were produced in July, but now I have positive and indisputable proof of the production of only 12 in June and only 14 in July.

I say again, and I say it on the record, that 2 years after the war began and 14 months after the President called for 50,000 planes, the state of our production of combat planes, and especially heavy bombers, is one of the most discouraging chapters in our national-defense program, and one that calls for such drastic action as may be necessary to remedy this failure. Combat planes are the first line of defense of America. If heavy bombers could be sent to England now at the rate of hundreds each month to bomb Germany, as Germany bombed England, the trend of the war would be infinitely more optimistic from our standpoint.

For the entire year 1940 only 43 merchant ships and tankers were constructed in America, and for the entire year 1941 only 105 merchant ships and tankers are expected to be built. This production for the whole year of 1941 is hardly more than the gross sinkings by the Germans in one of the heaviest casualty months. This I have in writing and is not denied.

The American Navy is equal to or better than any other navy in the world. We have the best one-ocean navy in the world, but now we need desperately a two-ocean navy of at least 700 major vessels. This we will not have until 1946, 5 years hence, unless extraordinary means are taken to speed production. For the year 1941 only 29 major naval vessels will be added—2 battleships, 17 destroyers, 9 submarines, no aircraft carriers, and no cruisers. This I have in writing and it has not been denied.

In my Senate speech I made the statement—and I repeat it now—that after 2 years of effort we have not produced a sufficient number of long-range antiaircraft guns to protect one single city in America. At the present rate of production, as estimated by the President to be sixty-one 90-mm. antiaircraft guns per month for the next 4 months, it will be several months before we will have sufficient long-range antiaircraft guns to protect the city of New York, alone, which it is said would require 800. Not a single long-range 90-mm. antiaircraft gun has been sent to England.

In speaking of the lag in American defense production, the London New Statesman and Nation said in London yesterday: "The President's own figures of some 61 antiaircraft guns, 72 antitank guns, and less than 700 operational aircraft, in addition to 1,000 trainers, are almost as shocking as the charges of Senator BYRD."

I want to assure my listeners that no one has "sold me down the river" on these figures. They come from the most authoritative sources and tell the true facts.

I want you to know of a letter I have seen from a boy who was drafted to go to the camps. He is no dissenter from our foreign policies. He is not complaining about the officers or about the Army. This letter reads:

"Get us some equipment to work with. We can't learn our coast artillery out of textbooks. We've got to have practice firing. And what have we got? We've finally acquired one 37-mm. gun for our battery, and we're supposed to have eight. No ammunition, and we have never been out on the range with it. Give the men the equipment," he said, "give them something with which to work, and they'll turn into a swell outfit. But until you do, the men might just as well be back at their civilian jobs."

Unfortunately, this situation is not a singular case. We have 1,545,000 officers and men in training, but mostly lacking the huge quantities of specialized and complicated equipment, without which any army today would be helpless and hopeless.

Is there any wonder that the boys in the camps who are being trained with wooden guns and trucks camouflaged as tanks feel that the sacrifice they are making is not being utilized to the best advantage?

If speed in our defense program and aid to England is the controlling guide for our efforts, it becomes very obvious that fundamental replanning and basic reorganization of the defense program must be effected immediately. For 2 years we have been attempting to superimpose this $50,000,000,000 defense effort, which may later be doubled, on doing business as usual. No better illustration of defense superimposed on normal business is given than in the automobile industry. For the year ending August 1, 5,261,000 automobiles were produced. This is 20 percent more than were produced in any period in our history, excepting the boom year of 1929, and consumed huge quantities of steel, aluminum, copper, and other materials required in the defense program. We cannot build the planes we need and all the automobiles our manufacturers can sell at the same time.

A new planning of our defense effort in relation to civilian needs is imperative immediately and must be successfully accomplished before we can produce military equipment with the speed essential for our own safety and aid to England. We have the choice of a shorter European war providing we speed up our defense production. We have to make the sacrifices sooner or later. Why not make them now when the most good will result?

Today is Labor Day, and I well know the average workingman is among the most patriotic of American citizens, but a short-sighted minority should not be allowed to delay our program of preparedness by strikes in defense industries. Since January, nearly 6,000,000 man-days have been lost by strikes in Army and Navy defense contracts. This number of man-days applied to the construction of heavy, 4-engine bombers would produce 1,000. For the emergency, the 40-hour workweek in defense work should be suspended and every defense plant placed on a full workweek.

The administrative machinery still requires further reorganization. The new board just appointed by the President serves the useful purpose of defining the duties between Mr. Knudsen and Mr. Henderson, both able men, but who have been attempting to function under an almost unbelievable overlapping of authority and conflicting efforts. Yet, after all, the job of spending billions for defense is an executive one. One man, and we should have the ablest citizen in America, can do a better job in executive management than a seven-man board superimposed on other boards. Let us have a procurement director for all military supplies with the power to act.

In this hour of national peril there has never been a time more important than now

to remind ourselves of the blessings that have come to us from our form of representative democracy which has given to the American people greater happiness, greater peace, greater contentment, and greater progress than ever enjoyed by any people in the history of the world. By the same token there has never been a time in our history when we should think more in terms of our duty to our Government; the sacrifices we must make to preserve the freedoms of our institutions.

We have before us the tragic example of conquered people who were once free and are now slaves, because they did not recognize their dangers, because they were unwilling to change their accustomed mode of living, because they would not give up their luxuries, because they preferred the soft and easy life to that of sacrifice and self-denial.

In America, the greatest of all democracies, we must demonstrate that a democracy can be efficient and effective, that a democracy can be strong and hard, if need be, that a democracy can act firmly, wisely, and expeditiously.

This is our obligation—yours and mine—we must not fail.

Dairying and Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 3 (legislative day of Tuesday, September 2), 1941

RADIO ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech I delivered over station WEAU, at Eau Claire, Wis., on August 14, 1941, entitled "Dairying and Defense."

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Fellow Americans, when the common people of earth are dying by the millions, when nations are striving for mastery, when our own President is out in the mid-Atlantic meeting with the leader of one of the combatant nations, it may seem prosaic to discuss the subject Dairying and Defense, yet the situation, national and international, is focused more and more on national defense.

Our Wisconsin dairying interests are making a valuable contribution to that national defense, and it is about that contribution that I speak today.

DAIRY FARMER HASN'T BEEN GIVEN COST OF PRODUCTION

Those of you who are listening who are dairy farmers—those of you who have, in the past years, tried to balance your milk checks against your expenses—know that the dairy farmer (that is, about 85 percent of them) hasn't been getting the cost of production. At the present time it is true that the return of the dairy farmer is rising. That, however, is not a permanent answer to our problems.

CURTAILMENT OF CONSUMPTION OF DAIRY PRODUCTS UNNECESSARY

One immediate problem which confronts the dairy industry in connection with defense is the possibility of Government limiting domestic consumption of dairy products. According to Secretary of Agriculture Claude R. Wickard, Americans may have to curtail their consumption of cheese and dairy products in order to supply enough of these products for Britain.

That does not make sense. For years Wisconsin producers have sought to build up a market for their products, and there is no logic in destroying that market overnight. In recent years the administration has urged the farmer to curtail production in order to cut down the surplus. Today the farmer is urged to increase production of exportable foods such as cheese, canned milk, and eggs. In other words, he is urged to increase production and cut domestic consumption.

I do not believe that there is any necessity to tell Americans that they will have to eat fewer dairy products.

Surveys of the agricultural college show that in our State we could increase cheese production 30 percent.

WISCONSIN HAS ALREADY INCREASED ITS PRODUCTION

Wisconsin farmers have increased their herds 4 percent. We now have 2,350,000 milk cows and a record milk production of 12,665,000,000 pounds. That is about 11 percent of the national supply. Wisconsin cows are now turning out an average of 25 pounds of milk a day. That is 2 pounds more per day than a year ago.

Dairy herds throughout the State have increased their production on an average of 57 pounds a day. Our milk production in Wisconsin has been increased fully 10 percent, according to recent estimates. Nationally, milk production has been increased about 6 percent.

This is a time for the Federal Government to do a constructive job so that America and England can have all the dairy produce they need. This is not a time to cripple the domestic market.

DAIRY INDUSTRY IS MEETING CHALLENGE OF NATIONAL DEFENSE

The dairy farmer is part of our front line of defense. He has been given a job to do—and he is doing it. He is doing an excellent job, and he is a good soldier.

The requirements of our national defense for dairy products have presented a distinct challenge to the dairy industry. The dairy industry is meeting that challenge and will continue to meet it.

WE MUST ANTICIPATE THE FARMER'S POST-ARMAMENT PROBLEMS

During the last World War the Government made many appeals to the farmers—the farmers responded to those appeals. They produced more food per man than had ever before been grown in the history of the world in a similar length of time. When the post-war period came, the farmers, however, were the very first group to be deflated.

In the fall of 1919 the Government owned certain stocks of food, and these stocks were advertised at bargain prices in post offices all over the land.

These supplies were thrown on the home markets and retailers were requested to handle them without profit. These supplies were accumulated for war purposes. They dropped like a bomb on a market that was already collapsing.

All of us believed in a reduction of the costs of living. All of us believed in a return to normalcy after the war, but none of us believed that the price of farm products should be blasted to bits overnight.

That was not the case with other materials. There the surpluses were dribbled into the market slowly so that prices did not break overnight.

THERE MUST BE NO REPETITION OF INJUSTICES WHICH CONFRONTED FARMERS AFTER LAST WAR

Our job now is to insist that there must be no repetition of the rank injustices which confronted the farmer after the last World War. After the present armament period our condition may be much worse than it was in 1918 because our debt will be proportionately larger.

The answer to this problem is not that government should take over all of the means of production and distribution. The answer must be found in a revitalized system of free enterprise, and I am in fervent agreement with the purposes of proposed legislation to establish a post-emergency economic advisory commission so that we can anticipate the problems of the future and do something about them now.

Where there is no vision the people perish. We need vision today—we need leadership. The time to meet these problems is before they come into existence.

WE MUST PROTECT DAIRY PRODUCTS AND THEIR DOMESTIC MARKET

We know that after the war our foods will be needed to feed a hungry world. Our problem today is to plan intelligently to protect farm markets for several years after the crisis has passed.

Government purchases of dairy products are essential to defense, but there is no reason why there should not be an adequate differential over butter and other competitive dairy products.

While I have never subscribed to the administration's program of a bureaucratic, swivel-chair farmer regulation of American agriculture, I feel that at this time it is necessary for us to merge our cooperative efforts with the Federal bureaus wherever it is possible.

However, I can see no reason for dictatorial Federal farm regulations to encourage manufacturers to use low-price vegetable oils and animal fats for synthetic products to compete with our dairy products—particularly when these dairy producers are not permitted to use these same synthetic elements.

AMERICA NEEDS GREATER USE OF DAIRY PRODUCTS TO CREATE BETTER DIET SO WE HAVE HIGHER STANDARDS OF HEALTH AND VIGOR

Dr. Thomas Parran, the Surgeon General of the United States Public Health Service, recently said, "In the weeks and months to come, we shall need not only planes, and munitions, a growing Army and Navy, but also rugged health and courage."

I agree with the Surgeon General when he says we need a nation of people who are more fit, more vigorous, and with higher standards of health. That means we have to put to work our scientific knowledge for the nutrition of all our people. We have the capacity, the fertility of the soil, the equipment, the facilities for distribution—in fact, every element which we need to raise the standards of public health through better nutrition, which certainly means an increased rather than a decreased use of dairy products.

I believe fervently that every drop of milk and every pound of butter which we can convert into human protein foods represents a substantial advance in the front lines of our health defense. We need to build a stronger and healthier people through a more complete diet.

The emergency today instead of lowering our standards should stimulate us to raise them and should serve as a foundation for our post-armament economy and our post-armament health standards. We need to raise our people to the highest possible level of health and vigor.

WHAT THE FARMER HAS A RIGHT TO EXPECT OF GOVERNMENT DURING THIS DEFENSE PERIOD

For over 8 years now about 80 percent of the farmers have been losing ground because they have not gotten the cost of production out of their milk. The Government has been taking over farms. Insurance companies have acquired multitudes of them.

Now, when there is $500,000,000 available in the Lease Lend Act for farm products to give to Britain, the farmers expect that this

Government will see to it that they get at least the cost of producion for the products that the Government gives away—for the products which the Treasury of the United States buys with the people's money.

BUYING POWER OF FARMER MUST NOT BE DRIED UP IF WE ARE TO AVERT COLLAPSE

Sooner or later this defense program will be over. When that period comes, I do not want to see the buying power of the American farmer absolutely dried up so that industry and labor will have no market whatever for their products.

The defense program has assisted industry and in some cases has built their factories. It has given them cost-plus-fixed-fee contracts. Legislation has been passed to protect the labor interests of this country.

Congress has placed a floor under wages and a ceiling on hours. Congress passed a Social Security Act and that Social Security Act raises the prices of everything the farmer uses. Yet the farmer cannot share by so much as one dime in the distribution of the funds collected under the social-security program.

Congress has enacted artificial devices safeguarding every segment of American economy except the farmer, who produces the clothes we wear and the food we eat.

I do not advocate the repeal of these laws. I know that the farmer is not opposed to higher wages for labor and reasonable profits for industry, but I know also that he is entitled to a reasonable share of the national income. He is entitled to have legislation enacted which will give him a fair share of that income.

FARMER HAS NEVER GONE COMMUNISTIC

The farmer has never had a cost-plus-fixed-fee contract. We never had to pass any laws limiting his profits, because in most communities he has been selling far below the cost of production. He never had any National Labor Relations Board to protect him against speculation and a decrease in income and unfair trade policies. The farmer has never gone on a strike in an effort to force the consumer to pay higher prices. He doesn't have a wage and hour law. He works from daybreak until nightfall.

He has the lowest income of any group of workers in the United States, but he has never gone communistic. He and his products are still the backbone of the Nation, and today he stands as a valuable soldier in the food lifeline of our front-line defenses.

WHAT SHOULD THE DAIRY FARMER DO DURING THIS DEFENSE PERIOD?

(a) He should do everything to increase his production.

(b) He should fight for his domestic market and not let it slip away.

We should constantly keep on educating the American people to the value of dairy products, and not have the post-armament task of reeducating the American people and recapturing the American market.

(c) We should insist that more and more dairy products go into the Army rations.

(d) We must now anticipate the post-armament problem which will confront the farmer and insure against a collapse in farm market similar to what followed the last World War.

(e) We must make certain that government does not sell the farmer down river now and during the post-armament or post-war period.

If there is a ceiling placed on dairy products there should be a floor also placed. Not only that, government should not injure the local dairy market by boosting synthetic products.

(f) The farmer must insist that carry-over grains can be used to increase the production of milk, poultry, and meats.

(g) The farmer must insist that the administration give priority to concerns which produce farm machinery.

(h) We milk farmers must now give thought to the idea that in the post-armament period we may have to participate in Government programs with the Surplus Commodities Corporation and the Commodity Credit Corporation.

(i) We dairy farmers must continue to insist that we who produce the food be given a fair cost of production.

(j) The dairy farmer should now seize on the present market as an opportunity to put his financial house in order and not get into debt.

(k) The dairy farmer should insist that he have all necessary tariff safeguards now and in the future.

America in this great emergency can count on the dairy farmers of the Nation. The dairy farmers want to make sure that they can count on America. In other words, the dairy farmers issue a challenge to every other segment of our national economy. Can such segment show the equivalent in production that the dairy farmer has shown?

France went down because she would work only 40 hours a week during the critical period from '36 to '39. Germany worked 80 hours.

The farmers of America are awake to the challenge of the hour; they are producing. What does the record show in relation to our production of airplanes, of antiaircraft guns, antitank guns, tanks, etc.? The answer is: There is a woeful lag in the production of these things.

The farmers of America are awake; they are at work; they are producing. Can that be said of our managers of government? Can that be said of those who are supposed to get production for defense?

The farmers have answered the challenge by longer hours by their wives and children working in the fields (in many places they cannot get labor because nondefense Government agencies use that labor), by more intensive work, by cutting corners, by thrift and industry. And they know, because life has taught them that lesson, that there is no other way to get results; there is no magic remedy.

And so the farmer of America, singing at his work, goes forward. Pray God the other segments of our society may catch the same spirit and do likewise.

American Defense Production

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 3 (legislative day of Tuesday, September 2), 1941

ARTICLE BY ARTHUR KROCK

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by one of the best of American writers, Mr. Arthur Krock, entitled "American Defense Production in War's Third Year," published in the New York Times of September 2.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of September 2, 1941]

IN THE NATION—AMERICAN DEFENSE PRODUCTION IN WAR'S THIRD YEAR

(By Arthur Krock)

WASHINGTON, September 1.—When he addressed labor today and called for a speed-up in armament production, the President once more conceded that "our American effort is not enough," that "our enemies know it," and "unless we step up the total of our production and more greatly safeguard it on its journeys to the battlefields these enemies will take heart in pushing their attacks in old fields and new."

Inasmuch as this candid statement was made at the beginning of the third year of the war in Europe by the chief of the American defense effort which began under his direction at the opening of that war, it calls for complete acceptance of the fact that our rearmament and aid to Great Britain have measured up neither to the needs of Great Britain nor our own. The admission is official, on the highest authority. And although British policy has excluded any public statement of disappointment from that Government, the fact is mournfully admitted in private over there.

A logical assumption would be that the President, conceding the unsatisfactory state of rearmament and British aid and calling earnestly for acceleration, would welcome any criticism calculated to reveal graphically to the American people the lag of production. A second logical conclusion would be that, short of giving to the enemy information of value, administration officials would be encouraged to make their public reports in such form as to explain why armament production is as yet insufficient. How, otherwise, can the American people be made to understand the need which the President stressed once again today?

MR. BYRD'S DATA

Yet the nature of the President's recent comment on Senator BYRD's rearmament statistics, and speeches lately made by some of the chief defense aides, fail to support that logic. Mr. Roosevelt, finding errors in some sections of Mr. BYRD's data—not the most important—said the Senator had been "sold down the river," a remark which must have been designed to cast discredit on all that Mr. BYRD reported. And high officials, in the same period, spoke of our armament production in terms of percentages, which does not give the true account at all. For, as Mr. BYRD pointed out, "if the production of modern, effective tanks last December was zero, a production of 8 in July would be an increase of 800 percent."

The Senator, with figures he obtained from official sources, opened the way to the following opinions:

We have not by any means enough armament and other defense units to show for the $10,000,000,000 which the Government has spent since Hitler invaded Poland 2 years ago today.

We could have produced much more with better administration of manufactures and a more effective labor policy.

The statistics on hand, the continuation of strikes, and the exemption of wages from the pending price-controls bill strongly indicate that the unsatisfactory state of production, which the President again conceded today, may not be cured in time to give to Great Britain the aid that nation requires and to the United States the defenses it will need in any event.

Many perfectly sincere citizens, in full agreement with the President's war policy, hold these opinions. The administration shows willingness from time to time to admit the first conclusion drawn from Mr. BYRD's reports. But, because it is unwilling to admit the others, it has steadily quarreled with the sustaining data and by picking flaws has

sought to discredit the entire exhibits. In so doing the administration attacks its own accuracy, for, of course, no citizen could have produced Mr. BYRD's data without resort to official sources.

THE VITAL CATEGORIES

From these sources, and from industry, Mr. BYRD obtained the following statistics concerning the three articles most needed by the British and a fourth vital to our own defense:

Airplanes: The July output of combat ships was 700, or 200 less than the program requirement and 16 less than were finished in June. (Another 760 were trainers.) Of the 700 combat planes only 14 were the 4-engined heavy bombers for which the British stand in dire need, 95 were mediums, somewhat less essential, and 243 were the 2- and 1-motored ships which are of little present use in attack. A total of only 3,850 combat planes will be produced this year.

Tanks: Our main output is of light 12-ton tanks, about 1,500 in ——— (of which 500 have gone to Africa. The British, for larger action, desperately need the 32-ton (Chrysler) tanks, of which none had appeared by May 15 last. Not even a model of the 52-ton tanks has yet been finished.

Ships: This year's total will be 105 cargo ships and tankers, some as light as 2,000 tons, and 78 of them merchantmen.

Antiaircraft guns: We have about a dozen of the 90 mm., vital to the protection of our cities and the Panama Canal, of which thousands are needed.

The Government should welcome reports of this kind as assistance to the President's call for a speed-up, or, even better, should make them unnecessary by itself issuing data regularly and with full accuracy.

Churchill's Message to Mankind

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, September 3 (legislative day of Tuesday, September 2), 1941

POEM BY HORACE C. CARLISLE

Mr. BILBO. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a poem by Mr. Carlisle entitled "Churchill's Message to Mankind," referring to the recent meeting between the President of the United States and the Prime Minister of Great Britain.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

CHURCHILL'S MESSAGE TO MANKIND

Out somewhere on the friendly Atlantic,
Hid away from the gossiping world,
President Roosevelt watched and waited,
'Neath the Stars and Stripes meekly unfurled,
For his guest, the Prime Minister Churchill,
Of the British Empire, from afar,
That they might, face to face, plan together
To stop tyranny, and end the war.

The United States speaks the same language
That Great Britain speaks, and they both think
The same thoughts, touching freedom and justice,
Whose defeat has brought peace to the brink
Of extinction in every free country,
And is threat'ning with danger and dearth
Every government now in existence
Throughout all of the civilized earth.

This planned meeting was, therefore, symbolic
Of the unities which underlie
These two peoples, which led them together
To resolve to denounce and defy,
And to end, yea, without fear or favor,
The worst tyrannies ever designed
For the purposely planned devastation
Of the freedoms and hopes of mankind.

These two great English-speaking defenders
Of the freedoms bequeathed to mankind
Are determined to never give over
To the dictators who have combined,
Under Hitler, to Germanize Europe,
Yes, and Asia and Africa—for
The American and English peoples
Will not stop, short of winning this war.

The Czechs, Austrians, Poles, and Norwegians,
The Danes, Belgians, Dutch, Greeks, Croats, and Serbs,
And, above all, the noble French nation,
Have been stunned by this despot who curbs
Every instinct of honor and justice
In the peoples whose rights he has trod
Under foot, and has laid waste their churches
In which they met to worship their God.

Surely, Italy—through Mussolini—
And the Balkan States bought a respite,
By becoming the most shameful jackals
Of the tiger, for fear of his might;
But they, too, like Spain, Sweden, and Turkey,
Soon will be just as greatly perplexed—
With experiences like that of Russia—
Wond'ring which one will be stricken next.

Into this pit have Europe's famed races
Been adroitly flung, one at a time,
Out from whose deathly terrors and tortures
They, unaided, cannot hope to climb—
But all this could not satiate Hitler—
Though with Russia and Turkey he'd made
Nonaggression agreements, with Russia
He's at war now, and Turkey's afraid.

Here's a devil who, in a mere spasm
Of his lust for more power will blot
From the face of the earth helpless millions
Of just people, who have harmed him not.
More than six million soldiers are fighting,
From the Atlantic to the Black Sea,
To enforce daring Russia's destruction,
And to satisfy Hitler's decree.

Ah, but this time it was not so easy—
Nay—this time it was not all one way—
For the armies and people in Russia
Are defending their homes, while we pray.
Nearly two millions of Hitler's soldiers
Have created a merciless flood
On the battlefields of dauntless Russia
With their own irreplaceable blood.

The aggressor, stunned, startled, and staggered,
In the worst of ways, retaliates,
By first torturing those in whole districts,
Whom he afterwards exterminates.
Since the Mongol invasions of Europe,
There has never been, on such a scale,
Such methodical, merciless slaughters
As in Hitler's mass murders prevail.

This is but the beginning of sorrows,
Overflowing mad tyranny's banks—
There will famine and pestilence follow
In the bloody ruts of Hitler's tanks.
We are in the unbearable presence
Of crimes that are too cruel to name—
For the Japanese rank close to Hitler
In the brutal invasions they claim.

Japanese armies now are invading
China's domain, with wicked intent,
Spreading carnage, corruption, and ruin,
Calling it the "Chinese incident."
Every effort we'll make for a peaceful
Settlement, but this has got to stop,
For the United States and Great Britain
Think the underdog should be on top.

In those talks somewhere in the Atlantic,
Where the Stars and the Stripes were unfurled,
Plans were laid with the purposed intention
To end tyranny throughout the world;
And to give to all peoples a simple
Statement of how to right what is wrong,
Tho the march for our nations and others
To the goal might be painful and long.

Not the United States nor Great Britain
Would assume that there'll be no more war,
But intend to take ample precaution
To prevent what they so much abhor,
By effectively disarming nations,
That "preparedness" rumors may cease,
But by keeping prepared to prevent them
From renewing their wars against peace.

The new order which Hitler would fasten
Upon Europe and all the whole earth
Would destroy all the national freedoms,
And enslave every child at its birth,
And enforce upon all working classes,
By devices inhumanly rude,
'Neath the lash of unmerciful masters,
Unrelenting, abject servitude.

Far and wide in his glory Napoleon
Spread his empire of conquest and blood—
Like a dream, tho, his empire has vanished,
And is drowned in oblivion's flood—
As he widened his warring horizon,
In his covetous wisdom, he saw
That, to win what he craved, he must promise
To the people a new code of law.

Naught but mania and exploitation
Has been promised by Hitler, whose theme
Is destruction to all those that hinder
The fulfillment of his bloody dream.
He has all the machin'ry and weapons
To grind down and hold down those whom he
Has subdued, who, as captives, are helping
To enforce his barbaric decree.

Hard will be the ordeals of the peoples
That this tyrant has conquered in war—
We must show them that we'll break the shackles
That now bind them—for such we abhor—
We must give them the certain conviction
That their sufferings, which we disdain,
And resistances 'gainst his atrocious
Usurpations, will not be in vain.

Altho dark and long may be the tunnel,
At the end of the tunnel is light—
That's the theme of the Atlantic meeting—
There is day at the end of the night.
Don't despair, brave, courageous Norwegians,
For your land, which the despot now rules,
Shall be cleansed from tyrannic invaders
And the Quislings, who're his filthy tools.

Czechs, be strong in your hopes and your spirits,
Your late lost independence will yet
Be restored, through the triumphs of justice,
Whose demands, in the end, must be met.
Poles, the courage of your brave defenders
Who for love's sake have crimsoned your sod,
Through the ages, will not be forgotten
By humanity's merciful God.

Lift your heads up again, gallant Frenchmen;
All the infamies at the command
Of your traitors can't stand long between you
And your birthright, your own native land.
Yugoslavians, Luxemburgers, Dutch, Belgians,
Tho endowed with the spirit of Greece,
Like the Greeks, you've been shamefully conquered
By the tyrannic hater of peace.

In the aptly called Atlantic charter
Of Great Britain and United States,
They are pledged to destroy the destroyers
Of world peace, wrecked to gratify hates.
One by one, Hitler pushes his conquests,
Always, in countries weaker than his—
That explains why his every invasion
Is the wondrous success that it is.

If the nations that Hitler has conquered
At the start all together had fought,
His succession of mass devastations
Could have not been effectively wrought.
"Let George do it" has been the sad slogan
When weak nations were pleading for aid,
And today the whole world is endangered
By a world war that Hitler has made.

Now, in heart, all the peace-loving nations
Are united 'gainst one deadly foe,
And the United States and Great Britain,
Under God, from whom all blessings flow,
Are resolved to destroy the war tyrants,
And regain all their ill-gotten pelf,
And restore every country that Hitler
Has subdued back to its former self.

—*Horace C. Carlisle.*

Young Democratic Clubs of America

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

LETTER FROM THE PRESIDENT TO HOMER MAT ADAMS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the letter addressed by the President on the 18th of August, 1941, to Hon. Homer Mat Adams, President of the Young Democratic Clubs of America, which were in session at Louisville, Ky.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, August 18, 1941.

HON. HOMER MAT ADAMS,
President, Young Democratic Clubs of America, Louisville, Ky.

MY DEAR HOMER MAT ADAMS: Democracy has a new significance these days, for the word, whether spelled with a capital or a small "d" has merged the meaning of both.

In its world-wide application it means the defense of the great freedoms against the encroachments and attacks of the dark forces of despotism which would reenslave the globe by turning back the clock of progress half a thousand years. Domestically, democracy represents the effort to continue and improve the condition of the individual, to protect the gains for liberty—social and economic—that we have attained through the century and a half of the life of our Republic. Though the definitions differ in phrase, the objectives in the two fields are identical.

Across both oceans, on the oceans, and above the oceans the struggle is one of armed forces with the ghastly results of destruction and slaughter on a scale not paralleled in modern history. It had to be so. Against naked force the only possible defense is naked force. The aggressor makes the rules for such a war; the defenders have not alternative but matching destruction with more destruction, slaughter with greater slaughter.

At home, for a time we cherished the vain hope that the war would let us alone; inexorable events abroad taught us that there could be no safety in passivity, no sanctuary in isolation. So we were forced to disrupt our industrial fabric, not only to arm ourselves to the teeth but to become the armory of the democracies, for it soon became evident that only by the defeat of the sinister powers of cynical conquest, before they reached our shores, could we even have the slightest chance of staying out of actual war.

Unfortunately here as abroad there were and are appeasers and compromisers who contend for treaties with forces that make a mock of treaties, for agreements with forces that foreswear promises and pledges at their convenience. Granted that there are some who are making the progress of our national defense difficult, who are sincere in their belief that in some mysterious way peace may come of inaction, or inadequate action, what they advocate is nonetheless perilous to our national security. Their horror of war is not more intense than that of those of us who are convinced that only by having the brigand nations stopped abroad is there safety for the Americas.

As to what steps are required to stop the Nazis, I certainly am more inclined to accept the judgment of our Army and Navy experts who have devoted a lifetime to the study of defending America than I am to consider the judgment of even the most sincere exponent of the idea that we can occupy a war-tight compartment in a world flooded with war.

I, like the rest of you, hoped that domestic politics would play no part in our defense measures. To some extent our hopes are realized—a multitude of the opposition party is serving the cause zealously and efficiently—but, on the other hand, the votes in Congress on the various steps in our preparedness, show that partisan politics is still rampant. True, there are a very few who still wear a Democratic label who have joined the obstructionists. I think these are in the wrong party.

I would be the last person to dispute or limit the right of every citizen to have his own opinion and to express it, and I know you are with me as to the preservation of that most important freedom. But whether an individual who campaigns against the principles and policies of a political party retains the right of membership in that party is a different question.

Patriotism is immensely more important than party loyalty, but when party loyalty goes hand in hand with devotion to our country, and a determination to keep that country free and safe there is no division of allegiance. I have implicit faith in the youth of this Nation; I have no doubts of where you stand. I only ask you to keep your ranks clear and clean of whatever subversive influence may add to our country's peril or make more difficult its protection.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

LETTER BY CHARLES MORRIS MILLS

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter on the St. Lawrence seaway written by Mr. Charles Morris Mills, of Jaffrey, N. H., which appeared in the New York Herald Tribune on August 17, 1941.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of August 17, 1941]

SEAWAY NOW FOR "DEFENSE"—IT IS REVIVED AS PART OF OMNIBUS BILL IN SPITE OF OPPOSITION

To the New York Herald Tribune:

A review of the records of State legislatures in session in 1941 reveals that 10 States have passed resolutions or memorials to Congress condemning the building of the St. Lawrence seaway, while no State has taken a favorable stand. A survey of Congress made a short while ago showed more than a hundred Members opposed to the project. A review of the CONGRESSIONAL RECORD for 1941 estimates that one-tenth of all material contained in the Appendix concerned the seaway and that a large proportion were composed of unfavorable resolutions adopted by leading business, commercial, and labor groups. Who, then, wants the seaway? First, sectional interests who think they would be benefited by its construction; second, a Federal Power Commission headed by a radical chairman who believes in the public ownership of all utilities; and, finally, the President of the United States, who under the guise of national defense is seeking to win out in a final victory for one of his pet projects after 10 years of defeats.

Last winter, as a member of the New Hampshire House of Representatives, I sponsored a resolution opposing the construction of the seaway. With a house almost evenly divided politically, the resolution was adopted by a vote of 173 to 73 and went through the senate without a record vote. The people of the Granite State put themselves on record against this extravagant, impractical, and unconstitutional project.

The main objection lay in the fact that the St. Lawrence seaway offers one of the most defenseless developments from a military point of view. Less than 200 miles from an unguarded Atlantic coast and open to enemy attack from the wilds of northern Canada and Labrador, the entire lock and dam system could be put out of business within a few minutes at the most. The Yankees of New Hampshire, whose boundaries lie within a few minutes' flying time of the site chosen for deep-seaway development, refused to allow the possibility of enemy planes dropping a few bombs by mistake on towns and villages that lie above the general contour of the international boundary.

They did not want another Suez Canal blocked by hulks sunk by enemy dive bombers. They did not choose to have New England made into an island. They reckoned that while ships might be built under the dream-like proposal in the Great Lakes region and steam out to sea, at the same time enemy ships through the same facilities might invade the heart of America. With their usual sense of economy, these Yankees did not want to share in the new billion-dollar outlay for the construction of the seaway, as estimated by expert engineers like Col. H. L. Cooper and E. P. Goodrich. The Granite Staters could not see where any direct benefit would come to local farmers and businessmen. They were close enough to Canada to know firsthand that the proposed agreement is being accepted across the border under pressure rather than through free will. Finally, they were shocked that an agreement, ratified by a simple majority vote of Congress, would displace a customary constitutional international treaty, approved by two-thirds vote of the representatives of the people.

A recent survey of Congress conducted by the Propeller Club of the United States revealed that the Senate and the House of Representatives were no more in favor of the St. Lawrence seaway than the State legislatures.

If the St. Lawrence is deepened to 27 feet, it would be necessary to dredge 13 American and 2 Canadian harbors from 4 to 8 feet. In addition, water-front facilities and equipment would have to be changed at large costs. The waterway would accommodate only about 5 percent of the passenger-cargo traffic, which would usually require 33 feet depth in the channel. Large warships, therefore, could not be built in the Great Lakes, contrary to the rosy dreams of the promoters. The waterway would be available only about 7 months of the year, as the average open season for the last 20 years has been from April 26 to December 9. The potential tonnage would be composed of only about 43 percent American tonnage, while the cost per bushel of wheat would be 11 cents, with an estimated net loss of 7 cents per bushel. At the same time an improved waterway would open the gates to the importation of foreign agricultural products to the midwestern market.

For 8 years the President of the United States has carried on an unremitting campaign for the Federal control of all the waterways of the Nation. With the aid of the Supreme Court, the victory was won through recent decisions, but the memory of the defeat of the flood-control compacts in 1938 has not been forgotten by New England. The result of the campaign was to hamstring public utilities from making capital investments for expansion. The Nation today is paying dearly for this guerrilla warfare in favor of the public-ownership school of the New Deal. In January 1938 Wendell Willkie submitted a comprehensive plan of expansion to the President, which was pigeonholed. Now the President wants to cap the climax with the St. Lawrence waterway under the sheep's clothing of national defense.

CHARLES MORRIS MILLS.

JAFFREY, N. H., *August 10, 1941.*

America and the Union Label

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

RADIO ADDRESS BY I. M. ORNBURN

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "America and the Union Label," delivered over the network of the Mutual Broadcasting System on Labor Day, September 1, by I. M. Ornburn, secretary-treasurer of the union label trades department of the American Federation of Labor. Mr. Ornburn is one of America's outstanding labor leaders. He was formerly a member of the United States Tariff Commission. At that time and now he stands for the protection of American industry as well as American workers. At the present time he is endeavoring to help spread defense contracts so that the little fellow in industry will have a chance to continue in business.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Each year the American labor movement adds a new page to the history of its achievements. In the rich experience of the past 60 years, the American Federation of Labor not only has recorded what it has accomplished for American workers but it has noted all pitfalls so that they can be avoided in future years. Through this careful consideration of labor's problems and the spirited action of officials and members, organized labor has been able to obtain definite results for all workers.

Time does not permit a complete review of the outstanding accomplishments of the American Federation of Labor. Among the more important achievements are higher wages, shorter hours, and better working conditions. In addition to these definite gains, labor has made great strides in political and educational fields. Labor has also placed on the statute books of both State and Nation, laws to protect toilers in all industries. Organized labor has been in the front ranks of every movement for old-age pensions, unemployment insurance, and workmen's compensation. These progressive steps have been made in peacetime. Organized labor has also had an enviable record in wartime, not only in protecting the rights of labor but also by making steady gains in membership with its accompanying patriotic influence and organized support of our defense program.

Today I wish that it were possible for me to visit the home of each organized worker in America. After gathering together all the members of his family and their friends, I should like to impress as powerfully as I am able, upon each and every one of this little group, that his future welfare is dependent upon buying union-label goods and using union services. All the benefits that have been obtained through 60 years of fighting and sacrifice will be lost if every member of each family unit does not buy collectively the things that are union. If I could talk to each labor unionist and his wife, I would ask this question: "How do you expect to maintain union-made wages if you do not buy union-made goods?" Then I would add: "It is ridiculous for a union man to bring union-earned money home and then have his wife spend it for unfair products." You cannot buy sweatshop products, made by men and women workers who receive slave wages, and at the same time continue to draw union wages. It does not add up right. Union-earned dollars form the principal support for union conditions. Failure to buy union-label goods will mean loss of jobs by union labor, and it will also mean the loss of American union-labor standards.

This is not the idle boast of some cheap politician who, through his promises and platitudes, wishes to gain your support. I am not running for office. I have been a worker at a bench, and I grew up in the American labor movement beside the illustrious Samuel Gompers. I am urging your patronage of union firms because it will help you. I desire to see definite performances rather than hear the fantastical promises of phonies and demagogs. I know from experience that members of labor unions and their friends can accomplish miraculous results. This great army of labor-union-conscious consumers can place any union-label product at the top of sales in its category. Likewise, it can cause any unfair product to be a flop on the market.

Each member of the family should learn the trade-marks and brand names of all union products. He should make up a list of business firms that employ union services. This is the best way to make progress in the organized-labor movement.

Labor Day is a good day for each individual unionist to ask himself a few questions:

First. Have I, by my lack of interest, my inaction, my neglect, retarded the labor movement of which I am a part?

Second. Have I failed to pay my dues promptly and have I neglected to attend all meetings of my union?

Third. Have I consistently patronized only union services, and have I demanded only goods which bear the union label?

When each of us fully realizes that the standards of all the toilers can be raised by individual action, the personal importance of each member as a vital part of the entire labor movement can be realized. When we take this view we may look into the future and see the tremendous possibilities which lie ahead, provided we join wholeheartedly with our fellow unionists in concerted action.

During the coming year let each one of us devote more thought, more energy, and more spirit toward the goal of making the organized labor movement a more militant and powerful American institution. If we do, each Labor Day will be a milestone of progress of the American Federation of Labor.

Our Nation is now facing most revolutionary changes in our economic system. They are caused by the conversion of our skilled workers, machinery, and industrial plants from a peacetime footing to production for war and defense purposes. Total preparedness requires the Nation to draw on all its manpower and materials. The "V" that stands for victory will be determined in the workshop, but it must be supplemented by the three "M's"—men, money, and material. These resources of democratic nations must be used in this gigantic struggle.

If labor unions had not existed in the past, many of the skilled workers who are now actually doing the work of building our ships, our airplanes, our tanks, our guns, our coastal defenses, and all other material necessary to place the Nation in a position to meet any attack from its foes would not be available to tackle this gigantic task of preparedness. It was through the protection of their labor unions that these skilled workers were able to secure their jobs and thereby obtain the necessary experience and education so important where efficient craftsmen are required. So it is upon union workers that the principal task of building up the defenses of our Republic mainly rests.

When the United States Government finds that it is short of men or materials it will draw on peacetime industries and supplies for defense purposes. These demands are known as priorities, which create a very grave situation for all workers. Defense production will displace the production on which workers are normally employed.

The American Federation of Labor, through its committee on national defense, of which I am a member, is planning in advance to safeguard the jobs and other rights of workers in this serious emergency. Just as soon as a certain industry is closed down or its production decreased on account of priorities, the local A. F. of L. defense committees should instruct the workers to get in touch with the local employment agency and report all facts to the A. F. of L. national defense committee. We must direct workers to defense jobs as soon as possible after normal industries are curtailed or closed down. The American Federation of Labor urges local defense committees to offer their services in finding substitutes for materials restricted by priorities. It offers union cooperation to union manufacturers in obtaining defense contracts and subcontracts.

A great responsibility now rests upon organized labor to guard employment, working conditions, seniority, and other rights of workers for the duration of this emergency.

Just as the present world conflict will be won in the workshop, so will victory come to the union forces in American industry. It is necessary to keep pounding away with every union-earned dollar and every union-earned penny until the great union-labor army drives into oblivion autocratic industrialists who would readily fasten the chains of industrial dictatorship upon American workers.

In the same degree that we require weapons of defense to protect the sacred principles of democracy in government, so do labor unions find it necessary to have available weapons to secure their rights and maintain the benefits gained by labor unions over a long period of years. Union-earned money when directed in union channels is the best weapon for the defense of American labor standards. Members of labor unions, their families and friends, form this union-label-conscious battalion. Like bombs in an air raid, union labels, shop cards, and service buttons are the greatest weapons to drive out unfair bosses and open-shoppers from the consumer market. Through the use of the union label, workers do not find it necessary to strike or to even throw out a picket line in front of an unfair industry. The union label, shop card, and service button are weapons that can be used in a silent and peaceable manner. They are continuous boycotts against sweatshoppers, chiselers, and unfair employess. The union label is the best guaranty that products are made in America. It is the only assurance that goods are made under humane and sanitary conditions. The union label is the highest insurance of quality.

Union labels, shop cards, and service buttons stand for industrial democracy and economic security. They are emblems on the banner of the allied forces which are combating industrial dictators in America. These trade-marks of American Federation of Labor unions are the very antithesis of the emblems of totalitarianism. This great army of union-label-conscious consumers is pitted against the Axis forces composed of sweatshop employers and low-wage chiselers. These official insignia which are displayed on union-label goods and designate union services are symbols of a mobilized consumer army which, with union-earned money, patronize only those firms that display the union label, shop card, and service button.

Union-label activities are increasing in every community. There has been a great growth in union-label committees of local unions, central labor unions, State federations, and national and international unions affiliated with the American Federation of Labor. These union-label committees, in conjunction with the State federations, central labor unions, label leagues, and women's auxiliaries, have persuaded mayors of cities or Governors of States to set aside 6-day periods to be known as union-label weeks. They have also held extensive union-label exhibits. In other cities union-label parades, concerts, dances, and banquets have been arranged by the live-wire union-label advocates in the community. Any of these methods of promoting the union labels, shop cards, and service buttons is commendable.

In closing, I can think of no more appropriate words than those of the Great Emancipator, Abraham Lincoln, who, in 1854, had this to say about labor and America: "All that serves labor serves the Nation. All that harms labor is treason to America. No line can be drawn between these two. If any man tells you he loves America, yet hates labor, he is a liar. If any man tells you he trusts America, yet fears labor, he is a fool. There is no America without labor, and to fleece the one is to rob the other."

Lincoln's advice was sound then and it is just as sound on this Labor Day in 1941.

The Road to Peace

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

ARTICLE BY WILLIAM ALLEN WHITE

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able and well-considered article written by William Allen White and published in the Emporia (Kans.) Gazette of August 21, 1941, entitled "The Road to Peace."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Emporia (Kans.) Gazette of August 21, 1941]

THE ROAD TO PEACE

That was a historic conference, probably one of the momentous gatherings of the thousand years since the Magna Carta, between the Government of Great Britain and the head of the administration of the United States. It is curious how events in the last thousand years have gradually pointed to the evolution of freedom in western Europe, in the South American countries, and in the English-speaking world. Consider the Magna Carta, the Cromwellian rebellion, the Declaration of Independence, the fall of the Bastille in Paris, Napoleon's Waterloo, the revolts of South America under Simon Bólivar, the Gettysburg speech, the League of Nations and the conference of the powers on the sea yesterday.

Common men are vastly freer than the barons were who challenged King John. It has not been a straight line, this march of freedom. It has zigged and zagged and curved. It has bent up and away from and back to freedom, but always the line of liberty has moved on.

The twentieth century is drawing to an end. The new century is about to open the third thousand years since Golgotha. Man in this epoch has climbed a long upward way. But in every struggle in this era man has been trying to free himself from toil and the fear of war. But he has gained much. He has stored up knowledge with invention of printing. He has harnessed steam, begun the use of electricity, invented the percussion engine. With each of these expressions of widening knowledge, man has broadened his liberty.

The allies of liberty are fighting this great war, this war of machines to free men from machines by breaking down high barriers which slow down machines and threaten men with idleness and starvation. To break down tariff walls will mark the next step in human evolution.

Today the conference in the Atlantic is in the stage of "what we shall do if we can do it when we are able to do it." It is written in the potential of the future. History is engraved finally only in the past indicative. But this great conference of the English-speaking powers promises freedom to lovers of freedom everywhere. It heralds the guaranty of nations to live as they will, under their own form of government and giving all—victors and vanquished alike—access to the world's raw materials.

This is a momentous occasion. This is a proclamation of a new era in the development of civilization in the twentieth century and in a new millenium of the third thousand year of our epoch. A place in human progress will be marked somewhat by this conference of the powers.

Remember it and tell your children that you lived in this day and how you heard the news.

Gradually, the foreign policy of the United States has developed. As the war went from phase to phase, it has become evident that the President is leading his country along the road to peace—the road to sure peace that follows international justice. A good neighbor cannot live safely and justly, even armed to the teeth, in a mean neighborhood. A decent nation cannot thrive even behind ships and guns and planes in a world of aggressors. Only as human relations are fair and equitable can decent men prosper happily. Only as international relations are founded upon international justice can democracy survive anywhere in the world. Justice itself is set up only after discussion and compromise—never by arbitrary force under proclamation or by ukase.

Step by step, for 4 years, beginning with his demand that the aggressors be quarantined, back in 1937, President Roosevelt has hewn his pathway to that conference in the Atlantic. In the light of that conference, his policies are clearly revealed. Look at the pathway: The repeal of the Embargo Act, the shipment of arms to Britain after Dunkerque, the swap of destroyers for island bases to protect our continent and to enforce the Monroe Doctrine, the lease-lend bill, the defense program, the occupation of Newfoundland, the establishment of naval bases in Iceland—all these, taken a step at a time, mark the straight course to permanent peace.

The President's peace aims were announced Thursday from the conference in the Atlantic. Any deviation in the past 2 years of war from the course he has kept, would have led us quickly into war. For any other policy than his would have let Great Britain go down in defeat. It would have left us facing the totalitarian tyrants alone.

President Roosevelt has remained silent with simple courage while he has walked his steadfast way to peace. His enemies, the isolationists, have abused him by clamoring with incessant indecency he was leading America to war. He has let events speak for themselves. Now his deeds, ringing down the corridor of the years, are clarion notes. Now the country knows that the President has been walking the only way to peace which America can follow. Ours is the way of peace through justice, offering liberty as the basis of peace, holding up freedom to all rulers and to all people as the way of life in a modern world.

These lines are written by one who has opposed President Roosevelt in three campaigns and felt his election for a third term would be a public calamity. Yet today we ask all American citizens to look back over the course he has charted in the last 4 years. Aren't you proud of your President? Why should partisanship cloud the glory of this day?

The tyrants were afraid to let their people read the eight peace points which President Roosevelt and Prime Minister Churchill offered to the world as the war aims of the democracies. If the tyrants were sure of their ground, they would be sure of their people. The tyrants would be sure that their people would reject these aims, or, if not reject them, doubt the sincerity of those who offered the new peace.

But fear is the tyrants' poison. He drinks it to his death. Some way, despite the censorship, despite all the barriers erected around continental Europe, the peoples there will learn the truth, and the truth will make them free. When any man, any nation, any tyrant fears the truth, he is doomed.

The clinching proof that the tyrants are scared is found today in the boasting, taunting, arrogant reply of the Hitlerite to democracy's peace aims. Getting tough is a sign of rough going.—W. A. W.

Retrenching Nonessential Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

ARTICLE BY FRANK R. KENT

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column written by a very able author, Mr. Frank R. Kent, in the Baltimore Sun, September 3, on the necessity of retrenching nonessential spending.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of September 3, 1941]

THE GREAT GAME OF POLITICS—LAST CHANCE TO RETRENCH

(By Frank R. Kent)

WASHINGTON, September 2.—There is considerable cynical comment accompanying the appearance in the Senate of a new bill by which an additional $4,000,000,000 will be extracted in taxes of one kind or another. For example, it is being said in some quarters that when, in 1942, the taxes provided in this bill are collected, most of the zest for—and most of the indifference to—this war will evaporate in America. And when, in 1943, it is added, we come to pay the even more painful taxes to be imposed by the inevitable second bill of next year, all interest in the war will disappear and our participation become vastly unpopular.

In brief, this is a prediction that, if it depends upon us, the war will not last long after the second income tax begins fully to operate, thus pinching many millions of citizens who never were pinched before. This is an exceedingly low view to take of the American people. It is equivalent to saying that they lack stamina and are devoid of character; that they are a rancid lot whose principles and protestations wither and fade when real sacrifice is involved. These thoughts emanate from the isolationist type of Washington politician. They are a libel upon the Nation and there is slight basis for the suggestion.

Nevertheless, it may as well be conceded that a vast number of men and women heretofore lightly touched—if directly touched at all—by taxes are going to be affected by these two bills far more seriously than they have any idea now. Full appreciation will not come until the collection of the new taxes actually has begun. But when that time arrives the shock will be severe and the pain much more acute, as well as more widely distributed, than ever before. And it will not be the wealthy who will be most painfully squeezed, nor from whom the loudest squeals will come.

They will be squeezed all right, and properly so. But they have become somewhat inured to that, know better what is coming and how to prepare. This time many millions who never before paid any form of direct tax will be brought in under the new bills, and at the same time the indirect taxes, which hit everybody, will be heavily increased. For these new millions, tax-conscious for the first time, the experience, coupled with the high cost of living, is going to be extremely unpleasant. There is no doubt of that.

Of course, it is wicked to suggest that by reason of the tough times ahead, our national fortitude will vanish and the people generally lose taste for the basic foreign policy to which the Nation is committed—to wit, that there shall be no peace negotiations until and unless Hitler is finally and completely crushed. If that is the kind of country this is, then civilization is indeed in a bad way. One can thoroughly disbelieve in the idea and yet appreciate that when a tax burden such as that in prospect is laid upon this peace-loving people it is not going to be easy to bear.

In such a situation, wisdom and high-mindedness upon the part of our selected rulers is the vital essential. If they fail in these qualities, if they are partisan, political, incompetent, and insincere, then the sort of cynical prophecy above-mentioned cannot be dismissed with the contempt it deserves. Those who run the Government in a crisis such as this cannot, without danger, neglect at least the effort to afford the obvious protections to which the people, called upon for sacrifices, are entitled. To fail in that is to invite disaster.

For this reason attention is once again drawn to the pregnant question of retrenchment, which, though it has seemed dead almost beyond hope of resurrection, suddenly has been revived by that indomitable champion of common sense, Senator BYRD, of Virginia. Almost single-handed he succeeded in having the Senate Finance Committee incorporate in the pending bill an amendment and a resolution which, if adopted, may prove not only the longest step we have taken in 8 years toward a restoration of financial sanity but a more effective defense move than has yet been made. The Byrd proposals not only require the Budget Director to point out to Congress how $2,000,000,000 can be cut from nondefense costs but name a committee of 14, on which for the first time the spending and taxing committees of House and Senate are brought into cooperation with the Treasury officials in an economy effort.

The importance of Congress adopting the Byrd amendment and resolution is hard to exaggerate; in all probability they present the last real chance the country will have of recovering its financial equilibrium. The effect of adoption would be salutary in a good many ways. For one thing, it would be the best means of insuring against such a popular reaction to the coming tax burdens as is above suggested. There need be no fear of such reaction, no matter how painfully pinched millions may be by these forthcoming bills, unless the conviction is driven home that their sacrifices are needlessly great and that they are being victimized by the incompetency and insincerity of their leaders. Certainly it is an outrageous, indefensible, and dangerous thing to lay upon the citizens the burden of these two enormous tax bills without at least one genuine all-out effort to retrench. Again let it be said that these Byrd proposals look like the last chance to avert a national calamity as great as war itself.

Artemus L. Gates

EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

ARTICLE FROM THE WORLD'S WORK

Mr. JACOBSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the World's Work of January 1932:

The appointment of Artemus L. Gates to the office of Assistant Secretary of the Navy for Aeronautics by President Roosevelt adds another to the roster of illustrious names of native Iowans who have contributed so much to the Navy. The new Assistant Secretary was born in Cedar Rapids, Iowa, and grew to manhood in my home town of Clinton, Iowa. That a better insight may be had of the character of this remarkable young executive, I cannot do better than to quote an article from the World's Work for January of 1932:

On a crisp November afternoon 15 years ago the Yale and Harvard football teams were fighting it out in the bowl at New Haven. It was in the heyday of the late Percy Haughton, who had put the Indian sign on the Elis for 7 long years.

Suddenly a Harvard man fumbled, and "Di" Gates, the Yale tackle, picked up the ball and beat it for the goal line. He was brought down just short of a touchdown, but in a moment Yale had pushed it over and won her first Harvard victory since 1909. After the game Gates was chosen captain for the next season.

His team never took the field, however, for long before the following fall we were at war and Artemus L. Gates was flying with the famous Yale unit founded by F. Trubee Davison.

Sent abroad as a lieutenant commander, he was put in charge of the naval air station at Dunkerque, a post closer to the enemy than any other on the North Sea. For his feat in pulling a British bomber's crew out of the sea under withering German fire he was decorated by the French and British. The deed also won from Admiral Sims a recommendation for the Congressional Medal of Honor—one of three recommendations made by Sims for his force of 80,000. A little later Gates was brought down and taken prisoner, only an instant after he had flung a cigarette into his plane's gas tank to keep it out of the enemy hands.

Trying time and again to escape, he finally succeeded in getting within exactly three paces of the Swiss border when he was caught once more "just short of a touchdown."

But this time the armistice delivered the final punch, and he came home to enter the banking field and marry Alice Davison (Trubee's sister), who had done her own bit by organizing a woman's wireless unit in 1916.

Before he was 34 Gates was president of the New York Trust Co., one of the most important of New York's all-important banks.

Who Best Serves America?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. HOFFMAN. Mr. Speaker, who best serves America is a question that the American people must soon answer intelligently and finally.

Up to this time the question of national defense and aid to Great Britain, including the sending of an A. E. F., have been so interwoven that many people have failed to think clearly, judge accurately.

On the question of national defense there is no lack of unity. As practically everyone knows, on the question of another A. E. F., the vast majority of our people are against it.

Mr. Roosevelt and his spokesmen, warmongers and profiteers, those who would harvest "fool's gold," even though it means national bankruptcy and the plowing under of millions of American lives, have seen fit to characterize those who think of America first—and I am one of them—as traitors or as lacking in patriotism.

The shoe is on the other foot. Mr. Roosevelt, in the judgment of many of us, is the one who is betraying the interests of the American people. The turn is called so accurately, so concisely, in an editorial in the Chicago Tribune of September 3 that I quote it. It is as follows:

OF BENEDICT ARNOLD AND ENEMIES

Mr. Roosevelt, in his Labor Day address, remarked that he did not intend to become a "modern Benedict Arnold." So far as we are aware, this is the first time that an American President has felt called upon to disclaim this purpose. Perhaps Mr. Roosevelt is a bit sensitive about his revolutionary ancestor, or, to put it more accurately, his ancestor, James Roosevelt, who lived in New York at the time of the American Revolution and Arnold, and took the oath of allegiance to George III rather than place his extensive properties in jeopardy. In comparison, Benedict Arnold's record, while certainly a black one, has some redeeming aspects. True, Arnold sold out in the end, but before that he fought with conspicuous gallantry and success on behalf of his country. So far as known, none of the Franklin Roosevelt line has ever borne arms for his country.

The reference to Benedict Arnold came in a passage of the speech in which Mr. Roosevelt said some Nazi sympathizers and appeasers are asking him "to negotiate with Hitler, to pray for crumbs from his victorious table." These phrases were, no doubt, intended to smear the America First Committee, but the charge is groundless. The opponents of intervention can imagine no reason for peace negotiations between Mr. Roosevelt and Herr Hitler. Congress has not declared war and neither have the Nazis. There is nothing to negotiate about.

Mr. Roosevelt assumes the contrary. He repeatedly referred to the "enemies." The phrase occurs a half dozen times in the course of the speech. "These enemies all know that we possess a strong Navy * * *." "These enemies know that our Army is increasing daily * * *." These enemies know a great many things, said Mr. Roosevelt with rhetorical repetition. It is to be hoped that the American people also know a few things, including the salient fact that this country has no enemies in the sense in which he used the word unless we are at war, and only Congress can declare war. Mr. Roosevelt is once again attempting to break down the constitutional structure of the country by usurping the power of Congress to start wars.

The man who is determined not to become a Benedict Arnold—he has said as much—has come to this use of the word "enemy" by a gradual process. Four years ago, at the dedicatory speech in Chicago, he discovered aggressors who were to be quarantined. Next we were to take action against these aggressors. It was to be nonbelligerent, but it was to be more effective than mere words. Then we were to aid the Allies, short of war. Step by step Mr. Roosevelt has pushed for war. It is only a few weeks since he and Mr. Churchill, who is at war and has enemies, agreed on a statement of war aims. And now Mr. Roosevelt talks of this country's enemies, to accustom the people to the idea that they have no choice but to send their sons to the slaughter in Europe.

In view of this record of deviousness it is gratifying to learn from the highest authority that Mr. Roosevelt does not mean to become, like Benedict Arnold, a betrayer of the confidence reposed in him.

War or Peace

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

RADIO ADDRESS BY HON. HAMILTON FISH

Mr. FISH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio speech delivered by me over the National Broadcasting Co.'s network, Monday evening, August 25, 1941:

The most important issue ever to confront the American people since the birth of the Republic is whether to become involved in foreign wars or to stay out unless attacked. This vital issue far transcends all party lines; it is greater than the Republican or Democratic Party or both combined. It is a great American issue affecting the security, safety, and destiny of America and its people and can only be decided by one yardstick, and that is what is best for America and its destiny and not what is best for Europe, Africa, and Asia.

Every American has a right to his or her views on this question of war or peace and to express them openly and freely. The 10 or 15 percent who are for participation in the war represented by the Fight for Freedom Committee have an absolute right to urge an immediate declaration of war without being called names or being denounced as placing the interests of the British Empire before that of America. By the same token, the 85 percent of the American people who want to stay out of war unless attacked and believe it to the best interest of our country to stay out have the same right to say so without having their motives attacked or impugned.

I am grateful to the National Broadcasting Co. for an opportunity to give the radio audience my reasons why I believe America must stay out of European or Asiatic wars unless attacked. I am convinced that our entry would mean bankruptcy, ruin, disaster, loss of our liberties, the creation of a dictatorship, loss of millions of lives, and at the end communism abroad and chaos, poverty, revolution, or national socialism at home.

I repeat that I am grateful to the National Broadcasting Co. for this time, as it is about the only way to reach the American people since the interventionist and pro-war press of the East and South will not carry a line if they can help it, giving the views of 85 percent of our people who want to stay out of war.

I am quite sure that such interventionist and war-propaganda newspapers as the New York Times and Herald Tribune will studiously ignore publishing any of my remarks. The American people have long since seen through the conspiracy of the eastern press, columnists and pro-war commentators, and the moving-picture industry to drive 85 percent of our people into the war against their will. This inspired and reckless propaganda is beginning to leave the American public cold, even in the summertime.

The present war in Europe, Soviet Russia, and China is entirely different from the last war in which I served for 16 months overseas in a combat infantry regiment. In that war we had 21 Allies and 4 powerful Navies—the English, French, Italian, and Japanese—to help us control the seas and transport our Army of 2,000,000 to France. At that time the German Army was war-weary and exhausted from 3 years of fighting, with heavy casualties. Today we would only have the British, Communists, and Chinese and no one knows how long the last two will be able to continue to fight.

I agree with Senator PEPPER that if we entered the war, it might last 5, 10, or maybe 20 years and cost $100,000,000,000 a year. Such a war would mean a bankrupt and impoverished America within 1 year to say nothing of 20 years. Senator PEPPER said nothing about the loss of American lives. If we go to war by a vote of Congress, I believe the American people will support a total war waged in China, Africa, Soviet Russia, and Europe. Such a war would take an army of ten or twelve million soldiers if we were eventually to be victorious and probably 3,000,000 of whom would be killed on foreign battlefields, and another 3,000,000 come back disabled, maimed, and blinded. No American household or family would escape blood, death, and tears. I do not believe that many American mothers want their sons to die in darkest Africa, in the vastness of China or fighting in Soviet Russia to make Europe safe for communism.

On the other hand, every American mother would willingly give the life of her boy in defense of the United States and the American Continent.

Every American is in favor of making America invincible on land, sea, and air so that we can meet and defeat any attack by any group of aggressor nations upon us or on South America.

Our Navy, the largest and finest in the world, and seven times greater than the German Navy, guarantees that there could be no successful attack made on us for at least 5 years. By that time our two-ocean Navy will be completed, and within a year our Army will be fully equipped with artillery, tanks, airplanes, and antitanks and antiaircraft guns sufficient to repel any possible invasion of this continent.

A modern war is down our alley, in an industrial sense. If the Germans can build modern guns, tanks, and airplanes, we can build them bigger and better and more of them. I have no patience with those Americans who tremble every time Hitler sneezes or get jittery every time he opens his mouth. I am convinced that the American youth of

today, given modern equipment and training, is just as brave and efficient as any German soldier and would be a darn sight better in defense of the United States.

America is the one country that Hitler is afraid of, as he knows our potential military, naval, and industrial power. Unless he is completely crazy, he will never attack us or attempt to invade South America because he cannot win. It just does not make sense to compare Denmark, Belgium, Poland, and France with the United States, across 3,000 miles of ocean and possessing the largest and strongest Navy in the world, an Army of 1,500,000 which is being rapidly trained, an air force of 152,000, and a marine corps of 55,000.

We are living in the midst of an inspired and gigantic campaign of hysteria and fear that seeks to break down the will of 85 percent of American people against involvement in foreign war by depicting us as being defenseless like Norway and Holland, and that in self-defense we should go to war now or become a victim of Hitler later on.

We are told that we might be attacked from Dakar in darkest Africa surrounded by jungles and deserts, and that Hitler will either fly himself or his panzer divisions to Brazil in order to invade us. In other words, he will attack us by going backward. Dakar is twice as far as Germany from the United States, and Brazil is again twice as far from Germany. Why, the panzer divisions would get lost in the impenetrable jungles of Brazil or be swallowed up by crocodiles on the Amazon. Why, even Theodore Roosevelt, that mighty hunter, got lost on a tributary of the Amazon. Let us stop this cowardly and craven talk and fear of Hitler invading the American Continent. What in the name of heaven would our Navy, our Army, and air force be doing when Hitler discovered America?

Let us have an end to this conspiracy and propaganda of hysteria, fear, and emotionalism that seeks to drag the American people into wars all over the world against their expressed and overwhelming will.

My ancestors came over here from England more than 300 years ago to get away from the religious, civil, and eternal wars of Europe, and so did the ancestors of every other American. Now it is proposed by the Fight for Freedom Committee, Field Marshal Hopkins and those other war makers, Secretaries Ickes, Wickard, and Senator Pepper, all of whom are invincible in peace but invisible in war, to send your sons back into the eternal wars of Europe and Asia. I have much more respect for Secretaries Stimson and Knox, our two leading interventionists and war makers, because they served in the armed forces of the United States in the last war.

I have no quarrel with any American who served his country in the World War who now advocates our entrance into this war; but I have nothing but contempt for those who failed to serve or those of this generation who have evaded the draft or have not volunteered and want to send other American boys to do the fighting for them.

In the past week I have made a study of the oil situation in the East and have had the benefit of the advice of some of the best-informed oil men in America, including the representatives of the American Petroleum Institute, regarded as the highest authority. I have not the time to discuss the details over the radio, but I have reached the definite conclusion that the shortage of oil in the East is phony and is being used as part of the program to create further war hysteria. I accuse the administration of deceiving the American public by the use of misleading and fantastic statements. The American Petroleum Institute's public figures state that there were more gasoline stocks on hand in the East on August 9 than there were at a comparable date for the previous 2 years. It further states that the gasoline on hand could last about 1 month. This is quite different from the 10 days recently reported by the administration. If there is to be a shortage in the future, why does not the administration insist that the oil companies use the 15,000 idle tank cars which could supply 10,000,000 gallons of gasoline a day for eastern consumption?

I voted against the extension of the draft for 18 months because I know that a soldier can be trained in less than a year. It would be a reflection upon the Army of the United States if that were not a fact. In Canada the draft is for 4 months, and only for home defense, although she has been in war for 2 years. Evidently Canada believes 4 months is sufficient to train a soldier, and so does Switzerland. The 18 months' extension of the draft was contrary to the very purpose of the law, which was to establish a reserve each year, and it also broke an implied promise to the selectees.

I recently returned from 4 weeks' military training as a Reserve colonel at Fort Bragg, N. C., a fine training center. I am convinced that the 18-month extension would have undermined and seriously impaired the morale of the selectees, and I commend the War Department for announcing that the selectees would only be kept from 2 to 6 months longer—not a year and a half. Those who voted for the extension must feel as if they have been double-crossed by the War Department. All the power, patronage, and political influence of the administration could muster only 1 majority. It is interesting to note that of the 120 Democrats from the South and Southwest, where the 2-party system does not exist, all but 3 voted for the bill.

The Republican Members of the House of Representatives recently adopted a resolution by practically a unanimous vote that "the Republican Party is firmly opposed to involving this Nation in foreign wars. We condemn all Executive acts and proceedings which might lead to war without authority of the Congress of the United States. Our national defense must be so strong that no unfriendly power shall ever set foot on American soil. The lend-lease policy was presented to the American people as a measure short of war. We insist that it be administered as a short-of-war measure." That is our emphatic declaration on foreign policy, and we will fulfill that pledge.

President Roosevelt in a letter to the Young Democratic Clubs of America, had advised and urged all isolationists to leave the Democratic Party. Thomas Jefferson, the founder of the party, would turn in his grave. Jefferson was the leading isolationist in American history. He repeatedly urged that we keep out of "the eternal wars of Europe." It can no longer be disputed that Thomas Jefferson founded the Democratic Party and Franklin D. Roosevelt dumbfounded it. Now President Roosevelt wants to purge and read out of the Democratic Party such able and courageous Senators as WHEELER, of Montana, CLARK of Missouri, CLARK of Idaho, WALSH, of Massachusetts, MCCARRAN, of Nevada, and half a dozen others for wanting to keep America out of war unless attacked.

If President Roosevelt succeeds in reading the noninterventionists out of the Democratic Party north of the Mason-Dixon Line, he would not have anything left but the officeholders and the Fight for Freedom Committee. As long as President Roosevelt has injected partisanship into the greatest single issue before the American people, that of our involvement in foreign wars, I am sure the noninterventionists in both parties will accept the challenge. We Republicans would welcome a mass migration of Democrats into our party temporarily or permanently in order to stop Field Marshal Hopkins and his war-making colleagues from sending American boys into the shambles of Africa, Soviet Russia, and China to make these countries safe for the four freedoms. Noninterventionists in both the Democratic and Republican Parties representing 85 percent of the American people are just as strong for real national defense as the interventionists. The difference is that the noninterventionists want to protect and safeguard the United States and the American Continent and not go out looking for wars all over the world. The American people will decide their own destiny and need no help from refugees from Europe, or alien Communists in doing so. If the President should send in a war declaration to the Congress, it would be defeated by a 3-to-1 vote.

America's Opposition to War

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. DAY. Mr. Speaker, I have just completed a poll of persons listed in Who's Who in America, totaling 32,000. The result reveals that those who favor "enter the war" are in the minority by the percentage of 42.8 to 57.2 percent. The Gallup poll was 45 to 55 percent from a partial sampling of the same list. Dr. George Gallup wrote me on August 19 that he covered the period of the first 2 weeks in July and that "since that time we have found a slight decline in war sentiment throughout the country." My tabulation bears out this statement.

This decline in war sentiment is doubtless due to the involvement with the Soviet Union and the vote in the House of Representatives on the draft extension. The vote in the House of 203 to 202 proved positively that the Congress would never approve a second A. E. F. Leaders in the House of Representatives realize that there are not more than 26 votes for war out of the total membership of 435.

A tabulation of the ballots returned shows that there were 4,587 persons who voted that the United States should enter the war and 6,145 who voted that the United States should stay out. There were some who returned their ballots with comments to the effect that they could not answer yes or no. An illustration, which is a fair example of the tenor of these replies, was a letter from Miss Joan Bennett, the movie actress. This is particularly cited because of the attempt of the Fight for Freedom Committee to publicize Miss Bennett's letter into war propaganda. She states:

> Any citizen of the United States must feel the full import of such a question and the responsibility of answering it. I am sure none of us—the citizens of the United States—want war, but if it is a question of our national security being menaced in any way we would not hesitate to defend this country.

That, in my opinion, is a clear-cut expression of the views of practically 90 percent—all but the pacifists and Axis sympathizers—of the American citizens

who voted against war and of every Member of Congress who is opposing the administration's march to war. No matter what our position may be now, or how strongly we are opposed to any A. E. F., all of us will be for war if America is attacked; and those who voted their convictions in this poll—that this country should stay out of war—required no specific qualification on this question; they did not have to be told that if any nation should attack America, or even Canada or South America, the situation would be immediately changed to a question of national defense, and their views were expressed subject to any such eventuality.

I received a signed ballot from Mary Pickford, "America's Sweetheart," who voted unqualifiedly against war.

Another conscientious objector to answering my clear-cut question, who unlike Miss Bennett, contended that "no intelligent person could possibly give true expressions of his opinion" as to whether the United States should enter the war, or stay out, was one John Boettiger, of Seattle, Wash., the President's son-in-law. Mr. Boettiger's classic comment was, "I am in favor of supporting the policies so ably enunciated by our Commander in Chief." How nice. That should entitle Mr. Boettiger to at least a captaincy in the Coast Guard, since there should now be a commission available in that branch of the service for those who have worked so hard to earn them and with the Roosevelt family so well represented in the other branches of the service at home and abroad.

This poll, offered to a group who have been reported to be the most vociferous interventionists—the wealthy and privileged—a chance to be counted, although acknowledged to be in a minority. If they have not been merely sounding off in their ardent support of the President's interventionist policies while clamoring equally as loud against his domestic New Deal program as fanatical and ruinous, here was their chance to go on record to back up their bluster and war propaganda-supporting policy. I want it clearly understood, however, that I believe practically all the real war makers and warmongers contacted in the poll did vote for war unequivocally and that any such person who voted his convictions has a right to his opinion as has any other free American citizen, and I provided him with that opportunity.

But there were 809 persons who evaded a direct answer and declined to meet the issue squarely by proposing some counter questions to confuse the issue or who tried to qualify their votes. My conviction is that any person who is not willing to vote in support of his warlike effusions and go on record for active participation in a shooting war is actually against America's involvement in war. Perhaps this may be conditioned on some future development—as in all probability were most of the direct ballots against war—as most of them stated that "if America is attacked," or "if necessary to preserve our free institutions and freedom," or "if it becomes necessary to stop Hitler," they would favor war, which is an admission that they are not now for war and will actually oppose war until these conditions materialize.

While these persons were not willing to vote for war, some of them did not hesitate to propagandize the war movement and add to the war hysteria by sending copies of their replies to the Fight for Freedom Committee or some other such agency for use as grist in its propaganda machine.

These hesitant and qualified replies are the direct result of confusion in the minds of the people and reflect the effect of interventionist propaganda which has that as its aim.

The only yardstick to use is what is best for America. These qualified ballots indicate some assumption on the part of the voter that we will be attacked at some future date. If such an attack is impending, the administration has failed to notify the people or their representatives in Congress, as provided under the Constitution, except by vague and hysterical allegations hinting at some such attack. The President has not even condescended to inform the Congress as to the necessity for the warlike assertions and steps he has taken, with the evident intent of alarming us into accepting his avowed program of "awakening the American people to the danger that confronts them," without in any way taking the people into his confidence. Certainly the Axis Powers are aware of any impending threat to America of their own making, and if the President knows about it, then the American people are the only ones who have been kept in the dark.

In 1940 the President promised the American people he would keep them out of war and that no A. E. F would be sent to Europe, Africa, or Asia. Until we have been furnished with concrete and conclusive proofs that the situation has so changed whereby the people themselves may be willing to change their existing opposition to war, the President should be compelled to abide by his contract with the people. Congress is still the instrument through which the people speak, and if the President has any reason for feeling that the Nation's welfare and safety is involved he must be made to abide by his oath of office and recognize that this is still a republican form of government.

The sentiment of the people was recently ascertained in several congressional districts in various sections of the country by individual Members of Congress who initiated polls of their own. In each case ballots were submitted to every enrolled voter in the respective districts, regardless of party affiliations, financial status, or the social standing of the voters. As a matter of public interest, the poll results of these districts and newspaper polls in our two largest metropolitan districts are compared as follows:

	The United States should—	
	Stay out of war	Enter the war
New York:		
26th Congressional District, poll conducted by Representative Hamilton Fish, including President Roosevelt's home county of Dutchess, June 1941	*Percent* 90.1	*Percent* 9.9
New York Daily News, July 1941 (approximate)	70.0	30.0
Michigan:		
Third Congressional District, poll by Representative Paul W. Shafer, July 1941	*Percent* 93.1	*Percent* 6.9
Wisconsin:		
Second Congressional District, poll by Representative Harry Sauthoff, August 1941	94.2	5.8
Washington:		
Fourth Congressional District, poll by Representative Knute Hill August 1941	82.5	17.5
Illinois:		
Chicago Tribune poll, July 1941 (approximate)	80.0	20.0
Who's Who poll, enumerated herewith, August 1941	57.2	42.8

As will be seen, the Who's Who poll represents the highest percentage for war, running on an average of from 15 to 25 percent above the general polls covering all elements of our population where detailed polls have been made.

The following letter from a native-born English lady, who knows all about war, speaks forcefully for those who have cast their ballots against the United States being involved in war and gives from experience a clear picture of what war would mean to America:

RHINEBECK, DUTCHESS COUNTY, N. Y.,
August 15, 1941.

HON. STEPHEN A. DAY,
House of Representatives,
Washington, D. C.

DEAR SIR: Enclosed your poll card answered. It is the first I have ever received.

May I elucidate the reasons why I am absolutely against our entry into this war:

1. Background: I am of English birth and descent. During the last war my father was assistant censor and deputy admiralty marshal, British Government. My brother was captain, Second West Yorkshire Regiment, killed on the Somme. My second brother was interned, Ruhleben, Germany. He is now mentally unbalanced. My cousin, Bertie, was aide de camp to Gen. Birdwood Saloniki, torpedoed and drowned at sea. My fiancé was colonel, Twenty-first London Regiment, killed before Amiens, March 1918. My eventual husband, wounded in France, captain Medical Corps, A. E. F., unbalanced later by wounds, etc. My two cousins, Georges Stainforth, head of Wagons Lit Transiberian, and his son, Marcel, cadet-officer Belgian Army, shot by Bolsheviks Petrograd 1919. My uncle, Lucien Roulin, railroad man, Belgian Ardennes, shot by German court-martial order, exact date unknown, charge sabotage. I served British Red Cross 1915–17, A. E. F., 1917–19. Was prisoner in Belgian Ardennes from August 4, 1914, to late December 1914. I was in Paris during most of the peace treaty, knew many French and Russian generals well, also British diplomats, also American Jewish delegation, etc.

Experience since then may in part be seen in Who's Who. Have traveled constantly in Eurcpe and was last there in 1939—Austria, Hungary, Yugoslavia, Italy. Am specialist in history, economics, and international affairs.

My brother received Military Cross for bravery under fire. My father distinguished mention and a French decoration. I received honorary commission Russian Guards, and in 1930 French decoration; in 1929 robe of honor from King Ibn Saud, Arabia.

2. I am against American entry into this war because I am certain that such involvement not only entails financial ruin, but also social and moral chaos.

3. I am against any active alliance or help to Soviet Russia because I have seen some of the deeds of Soviet Russian Kommissars, and while nazi-ism is bad enough, bolshevism is unspeakably worse.

4. Experience of war and its aftermath, and I have seen more than one war and more than one revolution at first hand, convinces me that noble as the eight points may be, they cannot be carried out and will not be carried out in practice owing to the conditions that must exist if this war is not shortly concluded.

5. I insist that not inherent wickedness but social and economic conditions resulting from the last war, the peace policies, and, above all, the Russian threat, have produced the totalitarian conditions we all deplore. I insist that not more war, but more peace is the only thing that can alter the frame of mind prevalent not only in Germany and Italy but all through Europe prior to this war.

6. I insist that neither the American people nor the American President, nor the advisers to the American President have the psychological or instinctive knowledge of Europe, and certainly not the actual knowledge to enable us to intervene successfully in European affairs.

7. I insist that the hardships caused here by such attempts at intervention will inevitably bring about disorder in this country and the final destruction of American liberties and the American system.

8. I insist that the true policy of the United States of America must be pan-Americanism, and that such a policy must demand certain sacrifices from us, in order to preserve this continent for ourselves, but that such sacrifices will be productive rather than futile whereas the reverse will be true if we intervene in Europe or in Asia.

9. I insist that the President of the United States, as Executive, has no right at all to usurp the policy-making and law-making functions of Congress. He has no right to come to agreements with the heads of foreign nations secretly, or to engage upon secret meetings with the heads of belligerent nations. I insist also upon one glaring fact:

Unless Congress takes up its burden and convinces the American people that it will not permit usurpation of its rights and duties, Congress is going to find itself abolished without resistance from the people.

Sir, thank you for desiring to consult my opinion. I know that I am in a minority as far as my class is concerned. I know that I am in a majority as far as the people are concerned. I also know that the day is coming when my class, and the rich easterners among whom I move, will be made to pay heavily by an enraged and unhappy people for their attitude. I am a loyal American citizen, and I believe that the last hope of democracy lies in the preservation of peace by this country.

Views of a Constituent

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

LETTER FROM EDWARD S. CLARK

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

BAY CITY, MICH., *August 25, 1941.*

Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR MR. WOODRUFF: Various complaints are being made of public apathy in regard to the European situation, and the administration's warnings, exhortations, and plans concerning it. The explanation seems very simple. It is the old story of "wolf, wolf."

Ever since the time when the first imaginary submarine was reported off the Florida coast, the administration has sought results by frightening the public and Congress. Each department has its publicity agents who give out propaganda, rather than information. Consistency is not regarded. Before Congress extended the period of military service, an extension of at least 3 years was essential to save the country. After the bill was passed, we were told that most of the men would be released after 14 or 16 months. Mr. Ickes' gasoline shortage may exist, but there are inconsistencies in his department's publicity releases and there is a feeling that the facts are being distorted, or only half disclosed.

The President's character and disposition intensify this feeling. He apparently enjoys secrecy and strategic indirectness and would rather accomplish any object by those means than by simple frankness. I have formed the impression that his success as a strategist in deceiving political opponents has encouraged a general policy of secrecy and insincerity, possibly more correctly described as "strategic sham."

There must, of course, be governmental and military secrets, but confidence is destroyed by the feeling that any lack of frankness and directness originates in something else than real necessity. The process of fooling the people for their own good is progressively ineffective.

I think there is a strong and widespread feeling of fear and caution—fear of undisclosed purposes and caution at accepting any statement or promise at its face value. This makes it difficult to stimulate enthusiasm. If it is necessary for us to take bitter medicine in the form of demoralized business and heavy taxation, we will take it, but with the feeling that much of it has been made necessary by the doctor's past mistakes and that we haven't much faith in what he now tells us.

The failure to demand any real sacrifice or unselfish effort on the part of labor is inconsistent with an honest belief in the overwhelming gravity of the emergency or in the necessity for unlimited armament production.

Another reason for hesitation is the feeling that some persons in high authority would like to use the war emergency to socialize industry. I am not an isolationist, but am strongly pro-British, and approve active help to the Allies. A Hitlerized world or even a Hitlerized Europe would be a horrible thing, but so would an Ickes-ized or Frankfurter-ized United States, and in view of the present drain on German resources, it looks as if we may be more likely to stop Hitler than Frankfurter. Our help to the Allies should be limited to the most that can be given without too great dislocation of our economy. It should stop short of such dislocation, and I fear it is already passing that point, because of the hysterical overemphasis on "one hundred percent armament effort" at the cost of closed factories and the socialization of our institutions. The utmost possible expansion of our defense activities is not the only thing to consider, regardless of what may be said by the President, by Mr Churchill, or by the representatives of the Army and Navy. The most important thing is to preserve our liberties and our traditional institutions. Something less than a supreme war effort which will preserve them is better than a greater effort, which would destroy them. We might better take the risk of being killed than commit suicide. Moreover, the risk of national bankruptcy must not be ignored. We are forced to take some risks in that direction, but they should not be taken lightly or for unnecessary objects. Mere administrative pride in the making of a supreme effort cannot excuse the unnecessary spending of billions of dollars. All of the present spending may be necessary, but no one appears to consider the question of necessity. It is taken for granted. After the war, we will no doubt find that much of the effort was misdirected, and much of the money wasted. Somebody high in authority ought to be thinking about that now.

Yours very truly,

EDWARD S. CLARK.

United States Foreign Policy

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 4 (legislative day of Tuesday, September 2), 1941

ARTICLE BY WILLIAM ALLEN WHITE

Mr. CONNALLY. Mr. President, I ask to have printed in the RECORD an article from the gifted pen and agile and vigorous mind of William Allen White, which appeared in the Washington Star of Sunday, August 31, 1941, entitled "U. S. Foreign Policy Held Peaceful."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star of August 31, 1941]

UNITED STATES FOREIGN POLICY HELD PEACEFUL—CONTENDING FACTIONS HAVE SAME GOAL—ROOSEVELT PROGRAM IS TRACED—WRITER UPHOLDS PRESIDENT'S METHODS

(By William Allen White)

The first week of September marks the second anniversary of World War No. 2. Also, it marks the fourth year of a definite foreign policy outlined by President Roosevelt in his Chicago speech in the early autumn of 1937, when he declared that free people should "quarantine against the aggressor."

Even then, and, indeed, since the beginning of our Republic, two definite groups or schools of thought have grown side by side, but, sadly enough, they have grown with a sort of malevolent neutrality toward each other. Yet both desire peace; the isolationist group, seeking peace by ignoring the war, and the group which holds that this country's road to peace is to support with our industrial strength the cause of any free country that is fighting a ruthless aggressor who is marching our way.

Neither group can guarantee peace for the United States in a world in flames. Only demagogues promise peace—unconditionally.

The Monroe Doctrine was the traditional expression of the so-called interventionist group in American politics. It was limited to peace in this hemisphere, but Kossuth and Kosciusko in Europe a hundred years ago, defending the rights of a free people in Europe, attracted American sympathy almost universally, but not, of course, to the point of armed intervention.

America sympathized with the German revolution of 1848 and American opinion stood

largely with France when Germany overwhelmed her in 1870. The country followed President Wilson when he led us into the first World War "to make the world safe for democracy." Right or wrong, futile or effective, that was the slogan of the interventionists after our national peace policy had failed in 1917. We could have swallowed our pride when our ships were sunk, but we could not repress our moral indignation when the Central Powers began to overwhelm and oppress the free peoples of Europe. Fools? Maybe, but still Americans.

In 1930 and 1931, President Hoover joined the interventionists when his administration demanded that civilization stop the Japanese aggressors in Manchuria. But Great Britain played politics; Germany was not interested; France turned a cold shoulder to the Hoover plea. So the League of Nations hemmed and hawed our plea off the table. When President Hoover went out of office, his foreign policy was, continued by President Roosevelt after the rise of Adolf Hitler.

By 1935 it was obvious that Hitler aimed at the domination of Europe, that he was arming for a great war. And slowly, in the 2 years that followed, American opinion again began to divide. The isolationists, who had risen to defeat the League of Nations, were beginning to cry: "Let Hitler alone!" And the international interventionists were beginning to feel that Hitler's aggression menaced free people everywhere, eventually even in the United States.

By 1937 the two ancient groups in American politics, the isolationists and the internationalists, began to line up again. When the President declared in 1937 that the "aggressors should be quarantined," a great outcry rose that he was dragging us into war. But it was evident then that President Roosevelt accepted the Hoover policy to oppose international aggression. He rallied by his "quarantine"' speech in Chicago in the autumn of 1937 the remnants of the forces which went into battle around President Wilson in his struggle for the League of Nations.

A year later, in August 1938, at Kingston, Ontario, President Roosevelt declared in a public speech: "The people of the United States will not stand idly by if the domination of Canadian soil is threatened by any other empire." That speech was made when Chamberlain and the British Tories were trying to appease Hitler. That speech, also, aroused the isolationists and cheered up the internationalists. Again it was "Roosevelt is leading us into war." Old lines were forming again. Six months later, after Chamberlain had surrendered, when Czechoslovakia had fallen, when Austria was conquered, when the Poles were threatened, again President Roosevelt declared that "our frontier is on the Rhine." The isolationist answer to that war cry was the passage of the arms embargo bill by a vote of 200 to 188 in the House, which President Roosevelt declared promoted the spirit of war in Europe.

It was evident even that long ago that he was trying to establish peace by using the force of American diplomatic power to check Hitler's aggression, while the isolationists were seeking peace by economic isolation. That Embargo Act would have tied our hands. While it was law, we could ship no implements of war to Europe, even to aid Great Britain. Yet the Embargo Act would have placed us in jeopardy when European war broke out by allowing our ships to carry to either belligerent contraband of war, the unassembled parts of guns and planes, the raw materials of war, wheat and oil. That law represented the drastic isolationist position: Let Great Britain fight alone, but let us risk actual entrance into belligerency when our ships, carrying not the implements of war but contraband of war were sunk by either belligerent in the conflict that was gathering. We were back in 1914—Wilson's bewildered days.

The second World War opened September 3, 1939. Then, under the danger of war and under the pressure to keep out of belligerency, the President's foreign policy relating to the European conflict was definitely formed and formally announced in Congress; in a thousand newspapers. The Roosevelt foreign policy frankly was to aid Great Britain short of war, to send her all the war materials she could buy and pay for, and to give her every aid and encouragement short of belligerent cooperation. That policy the President and the interventionist group felt was the only policy which would keep America at peace.

They took that position as a peace party; certainly not as a war party. The Embargo Act was repealed at the President's suggestion. In a score of ways the President and the internationalist group made it plain that we had no desire to deceive Hitler about our national antagonism to his ruthless plans to conquer Europe

As the war developed, after the fall of Poland, step by step, as the war changed the European picture, the President, as the leader of the interventionist peace party, of course had to shift the expression of our American foreign policy to meet the exigencies of the second World War. Hence the fall of Poland was answered by the repeal of the isolationist Embargo Act in the early winter of 1939, after the President proclaimed an emergency for the observance of American belligerent neutrality and after he issued orders increasing our armed forces. The President summoned Congress in special session to repeal the Embargo Act. Again his isolationist opponents instinctively reacted with an uproar that he was leading us into war. They appealed to the people in vain. Congress followed the President. The Embargo Act was repealed. In early November the President signed the Neutrality Act.

The foreign policy of the international group, which splits fairly even both the old parties, was made evident as the war opened in Norway, Holland, and Belgium in 1940. Then in the late spring, after France fell, the United States Navy Department traded back 50 of its planes to the manufacturers for reshipment to the Allies. President Roosevelt announced a national policy of trading in obsolete Army and Navy weapons to make them available for immediate resale to the Allies. His isolationist adversaries tried to rally Congress against the President. They failed. Public opinion supported him and he sent hundreds of thousands of old guns, which could not be used for training American soldiers, to Great Britain after Dunkerque; also he sold to Great Britain for cash thousands of tons of cannon and all sorts of implements and munitions of war. They were shipped on British ships. It was evident that the people were with Mr. Roosevelt. It was all a part of the foreign policy of the United States—to stop aggression and help to keep or to restore peace in the world.

On June 10, 1940, President Roosevelt delivered his "stab in the back" speech, directed at Mussolini after the Italians entered the war. It was evident then that American opinion was forming around the thesis that if we could keep England fighting while the United States armed we could maintain peace in this hemisphere. That spring Wendell Willkie, before he received the Republican nomination, announced publicly in three different speeches his belief in the policy that aid to Britain was the only policy that would maintain American peace. He was nominated with those speeches still echoing in the ears of the delegates.

He was nominated by the support of the international groups in the convention and in the country. Moreover, he was opposed by the isolationists who controlled the organization of the Republican National Committee because Willkie was an avowed interventionist. It was a public dogfight. Willkie was the only Republican candidate who took the internationalist, interventionist position boldly and unequivocally before the Republican national convention met.

During the whole campaign, time and again, vociferously, in plain words, Mr. Willkie declared that the way to peace was to keep Britain fighting while we armed. The public response to this attitude gave the Republicans the largest vote they had cast for a dozen years. The only voices raised against this policy, in the campaign of aid to Britain as a way to peace, were raised by Norman Thomas, Socialist candidate, and by Earl Browder, Communist candidate.

In June, after the two nominations were made, Senator BURKE, Democrat, of Nebraska, introduced the conscription bill in the Senate and Congressman WADSWORTH, Republican, of New York, introduced the bill into the House. The Pan American Conference opened in Habana, which lined up the governments of this hemisphere against the totalitarian powers. Secretary Stimson and Secretary Knox were called to the Cabinet in a gesture of coalition that would present a solid front of the international interventionists against the isolationist policy and line up the country against Hitler and Mussolini.

Immediately after Dunkerque, the President began negotiating to trade 50 obsolete destroyers to Britain for naval bases in the Atlantic, ranging from Newfoundland to the South American coast. The trade received the unqualified approval of the American people. Wendell Willkie, the Republican candidate, endorsed the destroyer deal, saving his party's face by grumbling because the deal was not conducted publicly—an obvious impossibility.

In September, in the midst of the campaign, again the President took our foreign policy to Congress. After full and hot debate, with Mr. Willkie supporting the measure, the Selective Service Act was passed. By passage of that act, the United States, with Congress concurring, advertised to the world that it was arming against the menace of Hitler and the totalitarian powers in Europe. We had already, for 3 years, formulated the policy that we would oppose Hitler, whose aggressions in Europe paralleled those of Japan in China, which the Hoover administration had so roundly denounced.

After the election the President, still maintaining his policy that peace could be maintained only by keeping Britain fighting, declared we would share our armaments with Britain, 50–50. Two weeks later, General Marshall, head of the Army, announced that the United States would turn over 56 flying fortresses to Great Britain.

By this time the clamor of the isolationists that we were being led into war rose to a roar. At every step of the progress of our foreign policy to maintain peace by keeping Britain fighting while we armed, the isolationists contended that the President was leading us headlong into war. That he was offending Hitler there can be no doubt. That Hitler did not dare to make the United States a belligerent also was obvious. Yet it was clear that if Hitler won and Britain was defeated, our turn was next. It was, therefore, imperative, in order to preserve the peace, that we give to Britain every possible aid. The interventionist policy was proving itself as a practical peace policy. It was keeping us out of war. It had won at the polls. Twice it had been endorsed in Congress by sound majorities.

In late December 1940, with these three victories back of him, the President, in a speech internationally broadcast, gave his country and the world a slogan defining the national policy: "We must be the arsenal of democracy. For us this is an emergency as serious as war itself." Again a cry went up that the President was heading us into war. A week later he asked Congress for authority and for funds "sufficient to manufacture additional munitions and war supplies of many kinds, to be turned over to those nations which are now in actual war with aggressor nations. Our most useful and immediate

role is to act as the arsenal for them as well as for ourselves." There the peace policy of the President found its first ringing slogan, and his peace policy was bringing us peace.

In mid-March the lend-lease bill was passed by Congress. The national foreign policy had a victory at the polls and three sustaining votes in Congress to support it. The following April we extended our bases into Greenland, and again the isolationists accused the President of leading us into war. But war did not come. We still had peace. Then came the occupation of Iceland, and another outcry followed, still wildly denouncing the President for leading us step by step into war. And, finally, came the demand of the heads of the Army that the time of the draftees and the militiamen be extended. Once more a futile isolationist indictment was drafted. Again the American foreign policy triumphed in Congress—but by a squeak.

It had been four times submitted to Congress and four times it had won. It had gone to the people and it had been endorsed by a tremendous majority of the voters. It has been established as the settled peace policy of the United States.

It has guaranteed peace for 2 terrible years in a time of war. Without that policy no one can deny that Britain would have been defeated before now. The peace policy of intervention and international alliance with those who are fighting Hitler has been tried and tested.

The meeting on the cruiser *Augusta* in the Atlantic, when Prime Minister Churchill and President Roosevelt outlined the democratic objectives of the war, furnished again a new slogan around which free men could rally. But again the whoop of impotent wrath arose from the defeated isolationists. Again it died in vain reverberations. As a peace policy, international intervention for the United States has won. It has proved its worth. More than that, the isolationists, enemies of that policy, would not today denounce the eight-point program. They would not go back and withdraw our soldiers from Iceland. They would not pull out of Newfoundland. They would not, if they could, take back the destroyers, the planes, and the guns that we have sold to the British for Atlantic island bases. Certainly they would not take away those tons of armament that rearmed Britain after Dunkerque and kept Britain fighting.

The step-by-step policy by which his enemies have claimed Roosevelt is leading us into war has been proved a step-by-step policy that has preserved peace. If ever this country needed the proof of the value of its peace policy, the foreign policy of the country for the last 4 years has proved itself. It is still not strong enough to guarantee peace. No foreign policy will insure peace, and yet if the proof of the pudding is the eating thereof and not the chewing of the rag, the foreign policy of our country, after 2 years of World War, is a pudding of peace.

Presidential Declaration of War

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, it is becoming increasingly clear to the Members of Congress and other Washington observers that President Roosevelt, in his Labor Day speech, made a personal declaration of war against the Axis Powers when he hurled his personal defiance at Germany's Adolf Hitler, and called upon his fellow Americans to "do everything in our power to crush Hitler and his Nazi forces."

In his Labor Day world-wide broadcast, President Roosevelt tossed overboard the Nation's last shred of technical neutrality and declared that "there has never been a moment in our history when Americans were not ready to stand up as free men and fight for their rights." It appears clear that this belligerent address by the President will bring about one of the most violent clashes between the White House and the Congress in the Nation's history.

No one can read President Roosevelt's address, remembering that it was a carefully prepared and considered utterance, without realizing that not only was Mr. Roosevelt declaring war against the Axis Powers—or attempting to do so—without the sanction of the Congress, but that he was endeavoring, by sarcasm and satire, to discourage any opposition to his course of action.

Meanwhile, after 2 years of war, and after a year of so-called intensive national-defense activities, the Nation has awakened to the fact that confusion, chaos, clashes between petty bureaucrats, and bottlenecks in the White House have practically paralyzed the national preparedness effort. Officials of the various bureaus, including Army and Navy Departments, are busily accusing each other of the short-sightedness, lack of energy, mistaken estimates, and lack of foresight which have resulted in charges by Senator HARRY F. BYRD, of Virginia, that the administration has failed miserably to meet the issue properly and to carry out its functions in providing a national preparedness.

Senator BYRD produces figures which are not denied by the administration. The spectacle of buck-passing between the various officials and departments, however, is a disgrace to the Nation. What has been needed all along, and what is still needed, is the appointment by the President of some individual equipped by knowledge and experience to have full control over the national preparedness activities. Such an individual should not be a Harry Hopkins, or a Sidney Hillman, or a Leon Henderson. He should be a man whose experience, talents, energies, and policies are Nation-wide in their breadth, and who can divorce himself from class prejudices, sectional suspicions, petty politics, and lust for power, and devote himself single-mindedly and wholeheartedly to the now vital task of building up the national preparedness.

It has been the favorite cover-up of the administration to charge that Congress has not cooperated with appropriations. The administration cannot make any such assertions now after having asked for and received from Congress more than fifty-three billions in appropriations and contract authorizations in the past year.

Another favorite stunt of the New Deal is to accuse business and industry of not ccoperating. The administration can make no such excuse now. The President has had ample power and control through the power of commandeer of priorities, and in other ways, to compel cooperation on the part of business. The fact is there has never been a case in which the administration has been able to prove that business or industry has been recalcitrant or unwilling to cooperate. The responsibility for this perilous state of affairs, in which the President is declaring a personal war against a group of foreign nations at a time when our own national preparedness is far from satisfactory, lies squarely on President Roosevelt's doorstep. He has had the money; he has had the power; he has had the authority; he has had the advice of experts; he has had every conceivable advantage, and he can no longer dodge the responsibility for the failure of the administration properly to coordinate and man the national-preparedness organization and to produce results.

Everybody has recognized that if labor and industry did not settle on a common ground of endeavor in the interest of the national safety and security that dire disaster would overtake the Nation. Everybody has realized that if labor organizations did not make peace among themselves the national-preparedness program must suffer tragically for such failure.

In his defiance of the Axis Powers, and in his warnings to labor that labor unions do not exist any more in Germany and Italy, Mr. Roosevelt carefully avoided any reference to Russia. In fact, throughout the whole Labor Day program, there was a careful avoidance of any reference to the Stalin dictatorship in Russia. The fact remains, nevertheless, that there are no more labor unions in Russia than there are in Germany or Italy. The workers in Russia do what the dictator and his henchmen tell them—or else.

There is no question but that the President's Labor Day address may produce repercussions which may involve the United States in a shooting war. It is not too much to say that that is what is hoped for by a good many of the President's advisers. This in the face of the tragic fact that the United States is far from adequately prepared for any kind of a shooting war, either offensive or defensive. It is sheer foolhardiness for this Nation to court a shooting war before it is even partially ready. Nevertheless, the conclusion is now inescapable that the Nation is headed that way fast, and that the President has declared that he personally and his administration now consider themselves at war with the Axis Powers. Under such circumstances and conditions as these it would appear that it is up to the people to realize the danger into which the Nation has been plunged, and to bring influence to bear on their representatives in the Congress to do something about it.

If America's preparedness fails, as France's preparedness failed, the tragic part of the business will be that no punishment of the few men responsible could possibly be adequate for the destruction of our form of government and

the loss of our American liberties and way of life.

This Nation must not go the way France went. The American people must wake up and demand of their representatives in Congress that the Congress fulfill its constitutional function and responsibilities in seeing that the national preparedness is adequate before those yearning for world adventures and world power do succeed in plunging us into a shooting conflict.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

HISTORY

Mr. DIRKSEN. Mr. Speaker, "History," said Napoleon, "is a fable agreed upon." Perhaps he was correct. Perhaps the record of the past becomes so ornamented with the dust and the interpretations of time that it takes on the quality of fable. When this happens, the stark and brutal facts of history lose their severity and potency as instructors to the present. They are not dished up often enough, free from all comment, to carry the lesson which only stubborn facts can convey. Cold facts of the past in authentic form, standing naked and alone, can be so brutal and disturbing. Let us take a look.

THE SOURCE

In the year of our Lord 1930, the American Legion rendered a constructive service to the Nation and mankind when it officially presented through the National Source Record Commission, a seven-volume history of the World War which is titled "Source Records of the Great War." Skilled historians set themselves to the task of examining accurate data of the war and putting it in readable form. They began with causes, carried the narrative through the Treaty of Versailles. In the last volume were included a chronology of the war, a bibliography, a statistical summary, diagrams, maps, and international comparisons. The statistical summary was prepared by Col. Leonard P. Ayres, a colonel on the general staff whose title was chief of the statistics branch of the general staff. He is the same Colonel Ayres who today occupies an office in the War Department and twice monthly, presents to Members of Congress a statistical picture of defense progress.

DURATION

For the little country of Serbia, the World War raged for 1,564 days. Austria declared war on Serbia on July 28, 1914. Thereafter in rapid succession came similar declarations until both sides to the conflict had made 32 separate declarations of war between July 28, 1914, and July 19, 1918. Query: How long may the present conflict endure?

THE HUMAN EQUATION

Total population of the nations involved was 1,031,502,000, of which 60,339,106 were mobilized for war. Of this number 8,163,518 were killed, 20,203,653 were wounded, and 6,383,757 were taken prisoners. Civilian deaths totaled 8,000,000 and permanent human wrecks were set at 6,000,000, making a total human loss of 22,000,000. This factual account describes this as the total human loss chiefly of vigorous males. Twenty-two million vigorous males. That is really something.

PROPERTY AND MONEY COST

The total direct property loss consisting of ships, cargoes, factories, farms, churches, dwellings, public works, and so forth, was $56,000,000,000. The total direct money loss through expenditure, relief, and bankruptcy was set at two hundred and two billion. The indirect loss because of lack of peacetime production was set at one hundred and fifty billion. The money loss of human life on the basis of life-insurance figures was set at seventy billion. Final total estimated cost of that war, $478,000,000,000. The estimated wealth of the United States in 1916 in the form of money, securities, farms, home, factories, machines, farm products, personal property, and everything was two hundred and twenty billion. The cost of the World War was therefore the equivalent of the destruction of every dollar of wealth in two nations the size of the United States.

SHIPS SUNK

Total loss of merchant ships was 14,710,000 tons. This is the equivalent of 1471 vessels with a displacement of 10,000 tons. Total number of warships lost or sunk was 1,218,000 tons. This is the equal of 34 of the largest battleships afloat.

IRONIES OF HISTORY

The ironies and vagaries of a quarter century of history are many and varied.

Back in 1914–17

Germany declares war on Russia.
Germany declares war on France.
Turkey declares war on Russia.
Britain declares war on Turkey.
Japan declares war on Germany.
Italy declares war on Turkey.
Italy declares war on Austria.
Rumania declares war on Austria.
Germany declares war on Portugal.
Italy declares war on Germany.
China declares war on Germany.

In 1940–41

Nazis war on Communists.
Vichy France aids Nazis.
Turkey under pressure from both sides.
Britain wooing Turkey.
Japan and Nazis in alliance.
Italy wooing Turkey.
Fascists, Nazis, and Austria together.
Austria, Rumania, and Nazis allied.
Portugal sympathetic to Nazis.
Fascists and Nazis allied.
Japan, allied with Nazis, invading China.

COMMENT

Such are the brutal facts of history.

The Townsend Clubs of America Are Blazing the Trail for Adequate Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. VAN ZANDT. Mr. Speaker, the recent action taken by the Special Senate Committee on Old-Age pensions in recommending to the Senate Finance Committee that minimum pensions of $30 monthly be given to all citizens is a heartening sign to those of us who have repeatedly tried to convince Congress of the crying need for a system of adequate pensions for the deserving senior citizens of this great Republic. Although the recommendation was not given favorable consideration and while $30 monthly is recognized as being below the amount necessary, the fact still remains that after extensive hearings the special Senate committee found a definite need for pension legislation affecting persons reaching the age of 60 years.

Then, too, it is significant that the nationally known Gallup poll discloses that 91 percent of the men and women interviewed favored Government old-age pensions, while 7 percent were recorded as being opposed, and the remaining 2 percent were undecided on the question. The poll was taken from a cross section of the American public, 47 percent of which felt that age 60 was the most feasible age to begin the pension benefits; 36 percent favored pensions after age 60, and 17 percent before the age of 60.

The survey reveals that an average of $42 monthly for single persons and $73 monthly for married couples was decided upon as the minimum figures. Care was taken in recording the voting to ascertain the age of those polled, and it is interesting to note that persons under 45 years of age were more liberal in the amount regarded as an average pension benefit, while those 60 years or over preferred a more modest pension sum.

The action of the special Senate Committee on Old Age Pensions, and the result of the Gallup poll is conclusive evidence that the country is pension-minded and realizes the great need for a system of adequate old-age pensions. This national sentiment is attributed to the persistent efforts of the Townsend national recovery plan through its thousands of Townsend Clubs to arouse the Nation to the consciousness that an adequate old-age pension system is the salvation of America.

Throughout the length and breadth of America—in hamlets, towns, and cities—the gospel of the Townsend plan has been preached the past several years in an effort to rescue thousands of our elderly citizens from the gaunt spectre of want and privation. Driving miles through all kinds of weather to organize clubs and

conduct meetings, and faced with lack of financial assistance because their membership to a great extent is comprised of elderly citizens with little or no income, Townsend members refused to accept defeat and have persevered to such a degree that even the most bitter critic must salute their sincerity of purpose and their avowed determination that the appalling situation confronting the elderly citizens of the Nation presents as vital a problem to the country as any other issue involving the welfare and security of our people.

To those of us who are carrying the torch for the Townsend organization in Congress, the sincerity and loyalty to country of the thousands of Townsend members has never been questioned. As a result, during the Seventy-sixth Congress 101 Members of the House voted for the Townsend bill despite ridicule and criticism from those who were skeptical of the plan. Today many of the most bitter opponents have joined forces with us in recognizing the plight of those men and women who are approaching the twilight of life and who, after years of productive effort in building this great Nation, now face old age with fear and trembling. For many of them the coming of winter is a cruel hardship as they journey toward the setting sun desolate and alone after a lifetime of work and sacrifice.

Among the vast number of persons over 60 years of age there are thousands of men and women with children who are unable to properly support their aging parents, yet do so, depriving their own children of the bare necessities of life. And this distressing condition exists in America—the land of plenty.

Mr. Speaker, our aged citizens are not asking charity. They have raised families, paid taxes, built our schools, and provided the brawn and brains that have been instrumental in molding this great Nation. Are we going to be so ungrateful as to abandon our elderly neighbors in their declining years?

The Townsend plan shines forth as a beacon light guiding this Nation to the shores of safety from the storm of economic upheaval. Critics are continually harping that the Townsend plan will bankrupt the United States Treasury by its proposal to pay every person 60 years of age $200 a month. Such criticism is lacking in truth, because those who utter such idle talk are grossly misinformed. The $200 figure is merely the ceiling and is used as a maximum amount. In truth, the Townsend plan is expected to make possible at the beginning a monthly pension of approximately $50 monthly with the possibility of a greater increase depending upon the revenue produced. Therefore, the erroneous idea that the Townsend plan guarantees $200 monthly to every person attaining the age of 60 years is too absurd an assertion to warrant correction. However, in fairness to the thousands of Townsend members in the United States, such an explanation is deemed necessary if for no other reason than to keep the record straight.

During the next few weeks, while Congress is observing a series of 3-day recesses, many of the Members will have an opportunity to return to their respective districts. It is my fervent hope that each and every one of us will take the time to acquaint ourselves with the crying need for old-age-pension legislation. The present old-age-pension system is inadequate and injust and is putting the United States Government in the real-estate business in asking deserving American citizens who are approaching the sunset of life to take a pauper's oath and if they have a home of their own to sign it over in return for a paltry monthly pension that is not sufficient to keep body and soul together.

This practice of heaping ridicule and abuse on our deserving senior citizens by robbing them of their self-respect is a colossal insult and an act of base ingratitude. So repugnant have conditions become that thousands of fraternal and civic organizations, notably various chambers of commerce in the United States, have petitioned Congress, urging that the Townsend Plan be enacted into law and the present barbaric system discarded. In addition, thousands of borough councils have adopted like resolutions praying Congress to alleviate such a disagreeable and distressing condition.

At the present time we have 156 signatures on the discharge petition now being circulated in behalf of the Townsend Club.

Mr. Speaker, I repeat that it is earnestly hoped that each Member of this House will seriously consider the immediate need for an adequate old-age-pension system, using his own congressional district as a sounding board. I am certain that if a survey is made of every congressional district in the United States conditions will reveal the intense suffering of our elderly citizens and will likewise serve to convince every Member of Congress of the pressing need for immediate passage of the Townsend bill.

The Honorable Albert G. Rutherford

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. VAN ZANDT. Mr. Speaker—

Leaves have their time to fall,
And flowers to wither
At the north wind's breath, and
Stars to set; but all
Thou hast all seasons for thine own,
O Death!

The passing from this earthly scene of our beloved colleague, the Honorable ALBERT G. RUTHERFORD, has given me a keen sense of personal loss. My association with our departed friend gave me a deep insight and a grateful appreciation of the many splendid qualities of his richly gifted soul.

As a freshman Member of Congress during the seventy-sixth session, I found it necessary on several occasions to seek his counsel. His willingness to assist at all times with his kindly admonitions was of immeasurable aid to me.

Colonel RUTHERFORD was an able legislator and a fine statesman, serving the Fifteenth District of Pennsylvania with honor and distinction. His military record bespeaks his intense love of country and devotion to its flag.

Honorable and upright, to use the oft-repeated phrase, Colonel RUTHERFORD was in truth "one of God's noblemen." His unfailing truthfulness, his rugged honesty and integrity, his courage, and with all of these his gentleness, bound us to him with bands of steel. By his death the State of Pennsylvania has lost a noble son, this House of Representatives one of its most manly Members, and we a valued friend.

Colonel RUTHERFORD'S noble character may be summed up in the words of Byron:

He had kept
The whiteness of his soul, and thus, men over him wept.

We shall miss our departed colleague more than tongue can tell; yet his sterling character and lovable traits have enshrined him in our memory. He has been bidden by the Master to pass through the gates of death and they have been closed upon him as he embarked on his journey home. Our last wish, our fond hope, our enduring trust, and our fervent prayer is that a radiant celestial light may be his beacon and may illumine his way to everlasting and never-ending glory, peace, and repose.

Lead kindly light, 'mid the encircling gloom.
Lead Thou me on;
The night is dark, and I am far from home;
Lead Thou me on.
Keep Thou my feet, I do not ask to see
The distant scene—one step enough for me.

So long Thy power hath blest me,
Sure it still will lead me on
O'er moor and fen, o'er crag and torrent till
The night is gone;
And with the morn those angel faces smile
Which I have loved long since, and lost awhile.

Fourth Armored Division

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. VREELAND. Mr. Speaker, through the cooperation of my colleagues in granting me a leave of absence, I have had the opportunity of serving in my capacity as a Reserve officer with the Fourth Armored Division, United States Army, at Pine Camp, N. Y.

I had many reasons for desiring to serve a tour of duty. Foremost, however, was the desire to further qualify myself in the military, so that I might be in a position to do my small part in the defense of this great country of ours,

and, secondly, through actual service with the armored troops, our first and fast-striking force, to familiarize myself with the functions, equipment, and objective of that unit, so that I might better represent my people and my country when questions of national defense come before the House.

The Fourth Armored Division is the youngest of the four divisions of this type we have in the Army as against 20 such divisions in the German Army. At the outset I want to commend Maj. Gen. Henry Baird, his staff, the officers, and men of the Fourth Armored Division for the energetic, enthusiastic, and determined effort each and everyone has made to organize a unified fighting machine in spite of many obstacles in the terrain and sand of Pine Camp, and the disappointments caused by slow construction and lack of equipment for training. Their spirit and cooperation are an example to the rest of the armed forces of what can be done in spite of seemingly insurmountable obstacles. The men are being well fed, well clothed, and well housed, and in spite of a critical shortage in weapons, vehicles, and ammunition, well trained. A homogeneous, hard-hitting, hard-fighting team America can be well proud of.

Upon arrival at Pine Camp, N. Y., I was allocated to the office of the Division G–2, and then at my request, to familiarize myself with the organization and equipment, was assigned to the Division Officers' Training Corps, and there joined the class of 90 newly assigned officers, remaining with them for 3 weeks, while in the fourth week, I was reassigned to the G–2 office to learn the operation of the higher headquarters. During the Division Officers' Training Corps it was my privilege to operate every type of vehicle assigned to the armored forces, from the motorcycle, "Jeep," half-ton reconnaissance car, 2½-ton half-track and scout car, to the new M–3 light tank. The operation of these vehicles was not only on the road but over rough terrain of scrub oak, pine trees, and deep ravines with sand over the hubs, both in daylight and at night, with and without lights. In every case the vehicles stood up and performed without apparent difficulty or strain. The American manufacturers have met the need of the new type of mechanized warfare in an admirable manner. The vehicles are fine—all we need now is production.

On the range I fired every weapon of the armored force excepting the 37-millimeter antitank gun, which we lacked, and the 75-millimeter gun, because we had no ammunition. In my humble judgment and based on some years experience as a collector of firearms, the American weapons are as fine, if not superior, to any in the world.

With the engineers, I helped construct a 10-ton steel bridge, an 8-ton suspension bridge, and a pontoon bridge—a dangerous job under any circumstances, in peace or war. The engineers deserve a lot of credit. While there is always room for improvement, the equipment is very fine and should prove most efficient in the transporting of troops and material across any unfordable stream.

There were many things which I was impressed with. Foremost among these was the deplorable lack of equipment, although the quality of the equipment given to the Army by our manufacturers was superb. The division—and bear in mind this is the fourth as against Germany's 20—should have 274 M–3 light tanks, it has 50; it should have 108 medium tanks, it has none. The percentage of other equipment on hand for the unit, as compared with the requirements, is about the same, namely 20 percent of full complement.

Let us consider for example a tank crew. Each man must be trained and must possess the ability to operate the tank under all circumstances and must, with limited or no vision, react instantly to every order of the commander. Each must be able to make minor repairs to the tank, operate and make minor repairs to the radio and the guns. They must be a trained, coordinated team that act together with confidence in one another. This takes time and equipment. One cannot stand without the other.

So it is throughout the Army, in all its branches, and, considering the tenseness of the foreign situation and nearness of this country to actual war, it is well for our own protection and safety that we keep our varsity team made up of first-string men until the new substitutes can be trained. It is also vital that the varsity and scrub teams be given the equipment to train with, else when the time arrives for their test, they may be found lacking through no fault of their own. Wars today are not fought with bare hands or swords. The mechanized monsters are not dealt a fatal blow merely from a spear. War is a science. The Army is your team for which you desire victory. If it loses, you lose and if it wins, you win. Let us get behind our team, the Army, and give it all the encouragement, cooperation, and matériel possible so that it may obtain the training and spirit to accomplish the victory.

I want to publicly thank Maj. Gen. Henry Baird, the commanding general of the Fourth Armored Division; Lt. Col. Y. D. Vesely, the G–2, and the many officers I came in contact with for their kindness, patience, and consideration extended to me.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. LAMBERTSON. Mr. Speaker, the war will start when the rank and file have been won over.

All the belligerent speeches at the Legion meet came from the East.

What the patriots from Washington want is unity for a foreign war.

There was one consolation at the Legion convention—no British Jack was in sight.

There will be a final show-down before Christmas on whether or not Congress is a jellyfish.

Little was said on Labor Day of the wicked waste of defense funds caused by un-American labor leadership.

The President's plea for national safety from road accidents should have included our staying on this side.

The greatest applause Governor Ratner received at the convention was when he condemned the recent intolerance at Oklahoma City.

Our full part to beat Hitler means another American Army to Europe, and do not be fooled. This column is agin' it. Are you for it?

The most amazing thing we find at picnics is that some few smart and conscientious people believe the President will not lead us into war.

My friend and double, Judge C. W. Ryan, would give little attention in his court to a plea of self-defense of a farmer who went across the river to whip a Dutchman.

Just 2 years ago this week we told Rotary at Marysville, Kans., there were two things we knew for sure—that F. D. R. wanted a third term and that he wanted us in this war.

In grasshopper years the East sent their old clothes to our pioneers in their emergency; in the English emergency they want our old clothes, the clothes we are wearing, and the hide and bone that are inside of them.

Mr. Marshall's Address

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

RADIO ADDRESS OF S. L. A. MARSHALL

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by S. L. A. Marshall over station WWJ:

This morning I was reading an interview given by Lt. Gen. Ben Lear in which the commander of the Second Army said: "Perhaps there is something wrong with the military system of this Nation but that isn't all that's wrong. Many of our people have become soft and weak-minded. They are not willing to put out. They are willing to get but not to give."

It was at about the moment I had finished the reading of that statement that my colleague, W. K. Kelsey, pointed to it and said: "The trouble with that bird is that he is absolutely right but he shouldn't have said it." That took the words right out of my mouth. I had been reflecting on how General Lear had probably set himself once again to receive a first-class boot from certain classes of citizens—politicians and publicists particularly—who think that any time an

Army man speaks his mind even on such a matter, as directly related to national defense as is the popular morale, he should be condemned to 10 days in the electric chair.

But I second the motion. There is something wrong with the spirit of a very considerable portion of this country. If it were not so, the tenor of popular criticism would not swing so heedlessly and recklessly from all-out praise of the Army to the most incompetent and snivelling condemnation of it. The Army in its best moments was never as good nor as militarily robust as it was made to appear last winter when the country at large had a new cramp of apprehension about Britain's hold on the future, and the great majority in this country became suddenly strong for defense. It was never so bad as it has been made to appear during the last few weeks, when giving the Army a black eye became the popular thing to do in some quarters because of the reaction here to the Russian defense, and an accompanying dissatisfaction over the extension of the draft.

Every nitwit who deludes himself that he has some special insight into the military mind is now engaged in writing about morale in the Army camps. It matters not if he is so ignorant about Army matters that he doesn't know a Pelham bit from a general's mustache. He visits a few Army camps. He hears soldiers grouse and cuss out the Army and he returns to his typewriter and carries this message to Garcia: "The morale is terribly, terribly bad." To prove his point, he interpolates a few cuss words, which seems to give his review an air of authenticity.

I hardly need call your attention to the currency of this kind of flap-doodle reporting. It bobs up every time you turn a page. There must be an appetite for it or it would be stopped at its source. But the appalling thing about it is the very stress placed upon it can have only the effect of making malignant this core of unrest.

Once soldiers come to take their grievances seriously, once they become persuaded that they can strike out in any direction and the public will give them a sympathetic hearing, all discipline goes and the habits instilled by months of training are cast off. I tell you that it can happen. The greater the degree of freedom that a soldiery has experienced in civil life, the more unruly it becomes when confronted by a real or a fancied injustice in military life.

The Army will have enough of a problem with morale without agencies from the outside taking a course which is designed only to aggravate the problem. If we do these things and make the excuse that we have the right of free speech, we simply make point of the fact that we have enjoyed our freedoms only to learn how to abuse them and to contrive toward their undoing.

There has never been a time when grousing and "cussing out" the service was not an accepted part of the business of soldiering. In my years I have had some association with the troops of Britain, France, Italy, Canada, Spain, Portugal, Mexico, Cuba, and the United States, and I have yet to find an army which was contented with its lot and in which the voices of the malcontents did not echo from the guardhouse to the rear. That is true in war or in peace. But what of it? Currently I hear people say that all would be different if war were to come; that, then, every man would do his duty quietly and efficiently.

That is another great delusion. Soldiers will kick back any time. During the World War I went from a Regular Army outfit to a National Army regiment and was at first dismayed by the fierce spirit of resentment against the service in many of these men. Later I saw them in battle, and they fought like lions—still "cussing" the Army. In that kind of mill, one comes to realize that simple protest or the nursing of a grouse has nothing to do with the basic loyalty of the individual.

All armies reflect the spirits of the peoples from which they come. Turn the spotlight on civil America today—on the very business organization with which you work, for that matter—and ask if the majority of individuals would candidly say that life is a sweet dream and work a bed of roses, and they are perfectly contented with what they have. If you can answer that question in the affirmative, then your experience is not like mine.

It is not my task to appear as a special pleader for the Army, and what is said here is not any blanket endorsement of its policies. Nothing of the kind is called for, and it would be presumptuous to take such an attitude. Mistakes have occurred and others will be made, for that is the nature of the problem.

But unless we can begin to weigh our defense situation according to a sensible scale of values, and cut out this namby-pamby treatment of everything pertaining to the fighting services, we won't have to worry about our Military Establishment for very long, because we won't have any. The men are in for another 18 months. That's the way it is. It's the law. The terms of that law work a hardship on a great number of people. Many of them have to make a disproportionate sacrifice.

As regrettable as that is, it could only be made more so if the end of it should be that these men are deprived of their civil privileges only to become second-rate soldiers because the spirit of the Army is wilted by an unhealthy climate of opinion over the country.

It is quite possible for us to spend billions of dollars for defense and come up with a defensive machinery that is about as useful as a sieve. Certainly no thinking American—whether he be an isolationist or an interventionist—wants anything of the kind.

Why I Voted for the Extension of the Draft

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

RADIO ADDRESS OF HON. SAMUEL DICKSTEIN, OF NEW YORK

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the National Broadcasting Co. hook-up on August 27, 1941:

The responsibility of extending the Selective Service Act was one of the gravest problems which confronted Congress in the history of the United States.

I found it very difficult, as a Member of the House of Representatives, to determine the course which I was to pursue with reference to this proposed legislation. I spent many days and weeks in deliberating about this question, and when my vote was finally cast it was the result of mature and considered opinion.

Congress is a coordinate branch of the Government. It has its duties and responsibilities, and under our Constitution it is completely independent from the Executive. Every Member of Congress has the right and the duty to vote in accordance with his convictions. If his judgment does not agree with yours or with mine, well, it is his judgment and should be respected. I therefore feel that those of my colleagues, both Democrats and Republicans, who voted against the extension of the draft, voted in accordance with their own convictions and their own conscience.

There is no question that the sentiment of the public in this country does not favor long military service for the sons of the Nation. We are not a warlike people, and we have no aggressive desires to attack any country or to fight anyone in the world.

Many years ago, Woodrow Wilson proclaimed the principle that America seeks no new territory, and that we do not wish to add 1 inch to our national domains. The aim of our Government has always been peace, and we have proclaimed peace to the world by the many treaties which were made during the 20 years following the end of the last World War. In all of these treaties and conferences we have aimed at an organization of the world where wars will be unknown, and where all disputes among nations would be settled by peaceful methods.

The Bryan treaties, the Kellogg treaties, the treaties between the various powers composing the Washington Conference of 1922, and all the other international agreements to which the United States was a party, proclaimed the theory of peaceful settlement of all international disputes.

It seemed for a rather long period that the peace of the world was secure, but then the bolt came in 1939 when Germany invaded Poland. Our peace-loving country, in its earnest desire to avoid an expansion of the German-Polish conflict, was not immediately concerned with the course of events at that time, and thus refrained from becoming immediately involved. In fact, as evidence of President Roosevelt's desire to end the European conflict, you will recall the tour of European countries by the Under Secretary of State, Sumner H. Welles, in the fall of 1939. Unfortunately, the world at large had an entirely new type of war lord to contend with, and when Germany's rulers embarked on a campaign to enslave the whole world, it became an unavoidable American problem as well as a European problem.

Because of 7 years of preparedness the German war power was able to gain control over Central Europe, and the only way left to combat those evil powers, whose sole aim is the destruction of democracy, was by our national preparedness.

In consequence to these unusual circumstances, Congress, for the first time in our history, in times of peace, found it necessary to enact a Selective Service Training Act, calling for a draft of 900,000 young men to train in the cause of justice and freedom. These young men were to be trained, not for an offensive program, not to fight wars outside of the United States, but to be prepared to meet the challenge of aggressors and dictators in order to protect and preserve the liberties of the people of the United States. It was an army which was to serve only 1 year, since it was believed that training such soldiers for 1 year's service would be sufficient to enable them to become an army for defense, and the basis for our military preparedness.

So the matter rested a year ago, and it was the belief of the Members of Congress, that by following the recommendation of the War Department, and by providing for selective-service training, we had advanced the cause of national preparedness, and adequately provided for the defense of the United States. But the events of the world have a tendency to disrupt "the best-laid plans of mice and men." In spite of the fact that a year ago it was deemed that 1 year's training would be sufficient to create a defensive army for this country, experience has shown that the men who were called into service required more than a

year's training in order to become effective soldiers and guardians of our liberty.

The Chief of Staff of the United States Army appeared before Congress and told us that the national defense required an extension of the period of service; that if these men were released at the end of 1 year, we would have but a poorly trained and an inadequately prepared Army and would be unable to organize our military forces for true national defense.

A modern army differs a great deal from the type of military service for which previous armies have been trained. The new armies are completely mechanized and new methods must be taught the young recruits, in order to prepare them adequately to become modern soldiers. Experience has shown in the opinion of the Chief of Staff of the Army, that a much longer training period will be necessary than the 1 year provided for by the Selective Service Act.

Following this recommendation of the Chief of Staff, bills were introduced in both Houses of Congress to extend the service and training period and it was to carry out this recommendation of the Chief of Staff, that I saw fit to vote in favor of the extension of the draft. In doing so, I was well aware of the fact that many fathers and mothers, members of my constituency, and throughout the country, would have to make a real sacrifice by having their sons remain in training for a longer period than originally intended. I know, and feel deeply the extent of this great demand made on our people, but I am sure that the patriotic men and women of America, who love their country and are eager to preserve it for the present and future generations, will gladly make this sacrifice if they know, as I am convinced, that by doing so, they are promoting the well-being of this country.

We are at peace, and this additional period of training is a protection and a measure to safeguard this peace, and in the great words of the father of our country, George Washington, "To be prepared for war is one of the most effectual means of preserving peace." Thus, by the additional training which our young men will receive under the act of Congress, they will not only become more adequately prepared to meet any challenge to our way of life, but will become trained for peace-time pursuits, and better enabled to earn a living when their term of service is over.

The Army trains its men for many peace-time occupations, and a good many of the men will have had for the first time in their lives the opportunity of becoming experts in new methods of industrial activities, useful in peacetime, for which the Army will have provided the training. These men will also have learned the value of discipline, and will have acquired the ability of adapting themselves to the changes which are unavoidable after a war. With full appreciation for the disappointment felt by some of our boys in the service, I am sure that the discharged soldiers will feel that the time they spent in the Army was well spent, and will in fact become an asset to them when they resume the normal routine of their daily lives upon returning to civilian pursuits. And for those who were previously unoccupied this training will be very helpful to them in obtaining private employment.

In voting as I did for the extension of the draft, I did so with the full conviction that I was furthering the interests of this country above any personal ambitions, and above any desire to please any particular individual or individuals, who by this extension of the draft would be called upon to make a further sacrifice. These are times when all of us should realize our duty to make some sacrifice, some in money, some in time, some in being torn from our ordinary pursuits, and giving of ourselves to the cause of national defense. There is no greater gift to man than democracy and the four freedoms. The cause is sacred, and anyone who contributes to the preservation of our great form of government will find full reward in the knowledge that his sacrifice will not have been in vain.

My vote is in line with my 20 years of public service, in which I have always considered the interests of the community against any personal wishes. This is another instance of a national effort which should bring about national unity. The cause of national unity is sacred to my heart, and in working against dictatorship and all the alien philosophies which have crept into the American public life we are fighting for the maintenance of our national unity. National unity is particularly important in times of stress and in times of a world upheaval, and in the words of the great emancipator, Abraham Lincoln, "United we stand, divided we fall." By preserving and protecting the American commonwealth we will be able to help restore to those countries whose liberties have been taken away from them by brutal force their sovereign rights to which all mankind is justly entitled.

Our American democracy, fortified and strengthened by military preparedness, and hardened by the splendid young men who are preparing to become good soldiers, will gain in importance, and will exhibit to a doubting world that democracy still lives, and will live as long as there are men and women who are willing to make sacrifices for its defense.

This is our only hope for the preservation of our peace and of our great international integrity. We must live not for today but for a better tomorrow, and, my friends, there will be better days ahead—wars never last forever, and neither will Hitler and his evil followers.

I thank you.

Inland Waterways and Harbors Improved By England For Military Preparedness

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. MANSFIELD. Mr. Speaker, at my request the Chief of Engineers has furnished me with information on the waterway improvements by England for military preparedness.

Ever conscious of both the strategic importance of inland waterways and their valuable function in the national economic sphere, the Governments of England, Scotland, and Wales have criss-crossed their island empire, from the rock-bound firths of northern Scotland to the chalk coasts of the English Channel, with waterways that are an essential element in the military preparedness of the nation. The British Isles, exclusive of Ireland, have a total area of only 68,000 square miles, about equal to the six New England States, or less than the single State of Missouri, yet they have a 2,500-mile network of improved waterways and canals. The burdens which the railways are called upon to bear in time of war, and the handicaps imposed upon highway transport by gasoline rationing, tend to focus attention upon this waterway system as a means of supplementing overtaxed land transportation in the general pursuit of the nation's war aims.

Early in this war the British Government gave recognition to the importance of inland waterways in the national transport system by forming a canal—defense—advisory committee upon which are represented the canal association and the national association of canal carriers. Full benefits are thus derived from the experience gained during the World War, when costly mistakes were made due to the lack of effective coordination of railway, road, and water transportation. Compared with the conditions obtaining in 1916, the English harbors and waterways of today are generally recognized to be operating with increased efficiency. Improvements in warehousing facilities, in handling equipment as well as in watercourses, made in peacetime, have eliminated unnecessary delays and accidents. Large sums have been spent on dredging, restoration, and modernization of locks. And through old canals, retired modestly behind concealing hedgerows, runs a quickened new life, stimulated by the armament program. Every day long, narrow canal boats are being feverishly loaded at Limehouse and other docks with scrap iron, steel, and copper destined for the mills and foundries of the Midlands.

The important inland waterways of Britain radiate from the Midlands like spokes of a wheel to four great ocean ports. Canals have been constructed northwest to Liverpool, the Trent River flows northeast to Hull on the Humber River, the Thames River flows southeast to London, and the Severn River flows southwest to Bristol. By means of artificial connections water-borne traffic may be moved from one to another of these principal waterways and thus the four great import and export harbors are connected with each other and with the industrial Midlands. Direct navigable connections also cross the island from Bristol to London and from Liverpool to Hull. Farther north in Scotland the island is again crossed by navigable channels from Glasgow to Leith and from the Firth of Lorne on the Atlantic Ocean to Moray Firth on the North Sea.

The British canals include many unusual features such as tunnels, bridge-aqueducts, and elevators, both vertical and inclined. There are 45 canal tunnels in England and Wales, each having a length exceeding 300 feet. Of these, the longest is over 16,000 feet. The first and most famous canal tunnel, the Harecastle Tunnel, constructed in 1776 on the summit level of the Trent and Mercy Canal, is over a mile and a half long. Canal bridge-aqueducts of masonry or steel are commonly used to cross railways, highways, rivers, and other canals. Near Manchester the Bridgewater Canal is carried over the Manchester Canal by a swing aqueduct.

The waterways and particularly their termini at coastal ports have become centers of great activity. British rearmament skyrocketed the demand for transporting metals and bulk freight for which waterways are excellently suited and now the all-out war production spurs this activity. Foreign barkentines, schooners, steel freighters, Thames barges, and heavy canal boats, crowded

together like ice floes, move to moorings under large electric cranes which handle cargoes promptly and efficiently. With Yankee emphasis on speed, Diesel engines propel the reloaded canal boats known as "quick boats" or "fly boats" from London ports to Birmingham in 60 hours, a trip that once took 7 days.

It has been so long since the British Isles have contemplated any defense other than at her coast lines that plans have probably never been formulated for using her interior waterways as lines of defense. The primary use of England's waterways in military preparedness is therefore to alleviate the transportation demands upon the railways and highways that invariably become overloaded. Mr. Ernest Bevin, Britain's powerful Minister of Labor and Transport, who heads the transport and general workers' unions, stressed the importance of this use of waterways in a speech on transport in wartime. He indicated the advisability of distributing the enormous reserves of raw materials and nonperishable foods at numerous points throughout the country rather than to permit these reserves to accumulate to such an extent that one air raid might cause irreparable damage. The inland waterways which traverse regions of the interior country are the logical means of accomplishing this objective. Numerous boats can take imports as they are received and distribute them to local reserve depots located in the open country adjacent to canal routes. In this manner supplies can be removed in large quantities from ports, subject to frequent air attacks, and cached at so many separated locations that a bombing attack will be unable to deliver a knock-out blow to supply.

The two-century-old waterway system of the British Isles has been steadily improved and modernized at a tremendous cost, but now, in Britain's time of need, the waterways are more capable of bearing the burden placed upon them. Coordinated transport may mean the difference between success and failure in a grave national crisis. During the World War we in the United States found it expedient to make use of everything that would float, from a bateau to a battleship. Britain is finding the same to be true today, and she appreciates that the inland waterways, now so indispensable to her cause, are ready only because her statesmen had the vision to prepare them in times of peace.

What We Defend

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

ADDRESS BY HON PAUL V. McNUTT

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by the Honorable Paul V. McNutt:

In 1939, at Omaha, Nebr., I was privileged to address your order at a testimonial dinner given in honor of a great humanitarian and a great American, Supreme Knight Francis P. Matthews.

In the 2 years that have elapsed since that happy occasion fateful things have come to pass.

The world has turned into chaos. Not for generations have the values and the ideals for which men live been subjected to such devastating attack. From a cloud, at first no larger than a man's hand, has broken a storm so furious as to shake the very foundations of Christian civilization.

From the evil forces thus loosened upon the world no nation and no people are safe. And woe unto the nation and people who fail to prepare adequate defenses against this rushing flood of pagan violence.

Rudely were the American people awakened to the danger. Heroically are they responding to it.

They are determined to build a citadel where the principles of decency and humanity may be forever secure. Without fear or panic they are throwing their energies into a mighty effort to strengthen the Nation on every hand. With quiet courage and a firm will they are arming it physically against attack from without and morally against deterioration from within.

They are preparing defenses against the threat of an invading army. But they also seek to avoid that spiritual corrosion and internal decay which is the invariable prelude to national disaster. They are improving their democracy as well as extending their military defenses.

The Nation hopes to avoid war, but if war comes, our instruments for defense will be stronger and the things defended will be more worthy of our efforts.

We know full well that ours is not the most perfect of possible nations.

There are black spots in our past—blots on the pages of our history.

There are still bottlenecks to our democracy. There are bottlenecks to production; to consumer distribution; to individual opportunity. We know that for some great minorities there are bottlenecks to liberty; people among us who are too poor for their own health and for the health of the Nation. Others who become rich to a point which is not in proportion to their contribution to the public welfare or their concern for the common interest.

But we know, too, the kind of society we want to build and the kind we can build.

The blueprint is clear. The foundation already laid.

How firm that foundation is will be measured by the courage and unselfishness of us all in fortifying it against the stresses and strains of a world gone mad with fear and confusion.

Without our choosing it, we are caught in a death struggle between two conflicting ideologies—two totally different and mutually exclusive ways of life.

In such a struggle we dare not rely alone upon the weakness of the opposing philosophy or our hatred for that way of life. We must rely as well upon the validity of our own.

A reconsecration to the tenets of democracy and a better understanding of its significance for mankind is as necessary as the will to repel an invader from our shores.

We have seen how fatal is the neglect of this phase of a nation's life. We have seen it in the fall of France.

Here was a great nation with the best-trained army in the world. Only a few short years ago it was one of the richest in the world. It had great industrial resources and a vast colonial empire. It had a great tradition for courage and resourcefulness, both in peace and in war.

But France fell, within the incredible period of a few short days.

A nation so strong and so confident could not have been destroyed in so brief a moment had it not been weakened down to the very foundation of its national life. The war, for France, was lost before it had begun.

History is a stern teacher but her lessons cannot be ignored.

Disquieting and revealing facts are gradually throwing light upon this tragic mystery.

When the Nazi legions were rolling close to Paris and the diving Stukas were roaring overhead, it is reported that the French Government issued an official order to all young men from 18 to 20 years of age to leave the city at once. They were literally told by their government to run away. A once mighty and glorious nation, the cradle of liberalism, where flourished a fierce and noble patriotism, had prepared its youth for nothing but flight when the enemy reached its gates.

In a democracy untouched by dry rot and decay, the flower of young manhood could never be compelled to flee when the nation was caught in deadly peril.

We see, too, the manner of men who have come to leadership since the bleeding nation has been beaten to its knees. Men who can tolerate and collaborate with fascism, repudiating the spirit of the Bastille and the traditions of liberty, embracing the evil forces which have dismembered the land of their nativity. Men with craven souls, who for the sake of personal power and gain, sell their nation's honor and their own.

France, indeed, was stabbed in the back.

And history will some day record that the assassin was the enemy within that struck the fatal thrust.

It is noteworthy that the France which could produce the men of Vichy almost completely repudiated those great social reforms which made the nation the outstanding democracy of Europe. Its warm concern for the common man had vanished. The drive for greater social and economic liberty had been abandoned. The social conscience was dead. The nation had become hard and callous. Liberty, equality, fraternity, the cry that once inspired the world, had become a faint and hollow sound, heard but dimly down the long corridors of time.

The Bastille was once more locked, and the spirit of French democracy imprisoned.

On the other hand, look at Britain.

Even under the impact of total war, England has rededicated herself to the democratic way of life.

Here, too, an historic tragedy was barely averted. The liberal England of the twenties had given away to a selfish, hardboiled land of appeasement. Men who thought little of national honor but much of self brought their country to the very brink of disaster.

But when catastrophe was imminent, the reaction was immediate. Unlike unhappy France, altogether paralyzed by the death grip of reaction, English liberalism and English patriotism rallied nobly, and England once more began to look after her democracy and put it into action.

Democracy is concerned with people—with what they eat and how they are housed and whether they are sick or well, miserable or happy.

England is looking after her housing problem, her food problem, and her health problem. Doing it right now, even as merciless death rains from the skies.

Here are some specific results.

A Personal Injuries Act has been passed which pays benefits to civilian defense volunteers and to all gainfully employed injured by enemy action. After 10 months of experiment, Britain has recently revised the scale of these benefits upward.

Disablement pensions are provided. Survivorship benefits not unlike those in our own social-security program are paid to widows, children, dependent parents, and even to dependent brothers and sisters.

Unemployment and workmen's compensation benefits have been increased. Health insurance has been extended and the Government has assumed an additional responsibility for that program. The machinery of British health protection is an effective organization through which to administer protection both for the families of men mobilized in the military and in the civilian services.

It is not only the international relations of the Baldwin-Chamberlain gang that the war has forced overboard. Their reactionary home policies have also been abandoned.

That is what Britain has found necessary to her defense. There is no talk of cutting social services in Britain. And as we watch British resistance, the thing we mark most carefully is the miracle of British morale, the adequacy of her food supply, the continued ability of British men and women to "take it."

Men do not fight by guns alone. They fight by faith. That is why those who serve the needs of soldiers or civilians cannot limit themselves to an interest in what goes on inside the boundaries of a military reservation or a munitions works.

Food must be good. Recreation must be available to every soldier. The chaplain who ministers to the spiritual needs, is an integral part of the staff of the Army itself.

But the soldier must also find that the community which he visits on leave is worth defending. The industrial workers must live in a community that is really worth working for.

This is a part of my own work as Coordinator of Health, Welfare, and Recreation. And it is a part of the work of your order. In contemplating our problems I have been vastly encouraged by the naming of your supreme knight as the executive of the National Catholic Community Service. There could be no greater guaranty that the job will be well done.

With other groups you led the way a quarter of a century ago. The torch of fellowship is now the responsibility of many. In the United Service Organizations we all join in our efforts to promote the spirit and comfort of those who defend America.

We will have tough problems. Many American communities are having tough problems. It is not easy for a community to expand its social services to accommodate thousands of additional workers and transients overnight. It is not easy to create new community services in churches and schools. It is not easy for families to adjust their circle of hospitality to include new neighbors and visitors from distant States.

But it must be done, and it will be done. In this achievement your organization will play an important role as it did a quarter of a century ago in a similar crisis.

The future is obscure. We can see through the glass but darkly.

Many black days are undoubtedly ahead, many severe tests.

But I believe the American people will meet squarely and without flinching every test to which they may be put in this pitiless world, steadfast in their faith that the principles of righteousness and justice and decency will prevail. Resolutely determined that whatever happens in other lands, the flame of liberty and the light of truth will remain here for all to see. One place, at least, in all the world where men are free, where their families are secure, where each may sit beneath his own vine and fig tree.

And there shall be none to make him afraid.

Friendly association, mutual aid and mutual protection, charity, and human sympathy—these are experiences which have enobled mankind and afforded to him deep-rooted satisfaction as far as the eye can penetrate into the misty past. They were valued experiences, whether man was organized in primitive agricultural communities, in nomad shepherd tribes, in clans, or in the city states of ancient Greece.

Methods of promoting these values must have been discussed long before the dawn of history. By the flickering fires of Mediterranean caves when hairy men rested after the hunt; under the stars of central Asia when the flocks were bedded down for the night; on the slopes of Mount Olympus; in the halls of the Saxon and the Viking—wherever men gathered together, drawn by the common bond, the principles of sacrifice for the common good emerged as the only basis upon which they could build a society which would satisfy the profoundest instincts of the human soul.

God indeed made man in his own image.

We recognize it when we observe the long but steady assent from barbarism until the emergence of a society which, in truth, is founded upon justice and Christian love.

We recognize it, too, when we see the highest achievement of these centuries of effort—an orderly system of institutions and a philosophy of government vesting power in the ranks of the governed and dedicated to the dignity and worth of the individual.

We have, through work and hardship, built in this land the greatest cooperative society that has ever existed. It is a society in which there is neither master nor slave; neither tyrant nor victim. Where members of every race on earth are gathered into one great fellowship, each sharing in the pleasure and the pain. A society in which there is some realization in fact of the ideal of equality and freedom. A society where the meek have indeed inherited the earth. One which, for all its defects, is man's crowning glory on this planet.

But the path has been long and the travail great.

Great masses of people have been bound by the shackles of despotism. From the Babylonians laboring in slavery for kings, and the Egyptians for Pharaohs, tyranny has survived side by side with liberty and democracy. Sometimes it has almost seemed to have crushed out the spark of freedom from the human soul.

Democracy is not a law of nature, notwithstanding its divine origin.

And no benign mystic force will protect it.

It must be defended by those who love and cherish it—by men and women who are stirred deeply when it is in peril and who will sacrifice all to preserve it.

It is this inner strength which must be expanded, for it is here that we find the measure of our ability to resist the forces that would destroy us.

And if, despite the efforts of all, the Nation is drawn into the clash of arms, if we are compelled to fight for this way of life which we have built for ourselves, it is this spirit in the hearts of the men behind the guns and in the hearts of the men and women behind them that will, in the end, bring victory.

With a full understanding of the perils ahead, let us face the future with calm courage and quiet confidence in the right, as God has given us to see it.

Generoso Pope

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

Mr. DICKSTEIN. Mr. Speaker, as evidence of the fact that Generoso Pope, editor and publisher of Il Progresso Italo-Americano, a newspaper circulated very largely throughout the city of New York and other places among Italian-speaking Americans, is truly a devoted and loyal citizen of the United States, I wish to publish the translation of an article which appeared in Il Grido Della Stirpe under date of August 23, 1941, an Italian newspaper sponsored by official Italian sources.

This article criticizes Mr. Pope for the stand he had taken on the question of the internment of Italian sailors. Incidentally, the New York Times of August 14 published an editorial in which Mr. Pope's stand is praised and exalted. The two articles are as follows:

[From Il Grido Della Stirpe, New York, of August 23, 1941]

LET'S PUT THINGS IN PLACE—THE ITALIAN SAILORS IN THE CONCENTRATION CAMP ARE PRISONERS AND NOT GUESTS—THE INTERNEES OF MISSOULA DESIRE THAT THEIR SUFFERING BE TREATED WITH SILENCE RATHER THAN THEIR SITUATION BE ALTERED OR MYSTIFIED

We also ask to be concentrated.

This idea seems to be crazy, but if one reads the articles which have been published in the nawspapers of Mr. Pope during these days on the life at Fort Missoula, in the heavenly concentration camp, it becomes, instead very much justified. Isn't it a natural desire to abandon bad for good? Good exists, according to the description of Il Progresso and the Corriere, in this concentration camp.

We get, therefore, a crazy desire to ask the Government at Washington to hurry the day in which we also can reach this camp of marvels and insuperable vacation.

In a place where one works little or not at all, where one eats well and three times a day, where the food is rich with necessary vitamins necessary for good health, where hygiene and culture are not lacking, where recreation of every sort is at the disposition of anyone who wants to profit by it, where no material preoccupation (because the spiritual cannot be controlled) disturbs the good life of the detainees, where everything is rosy—in fact, who would not want to go? If this is so, then we also ask for the pleasure of being able to enjoy these many privileges in a concentration camp, instead of being so worried daily, of preoccupying ourselves by hard work and sacrifices with our miserable existence.

But is all this that the correspondent of Mr. Pope writes true? The answer to this question is given by the prisoners of the above-mentioned camp which we herewith publish voluntarily.

Herewith is reproduced the document of the detainees in the camp at Fort Missoula, with their respective autographed signatures which repudiates all the fantastic exaggerations of the author of the articles in the Progresso and the Corriere.

We do not like to start polemics with the author of the above-mentioned writings which exalt the comfortable life of the interned, such polemics would be antipathy, and would serve to greatly harm the material and moral interest of the Italians of America, but certain falsities, published for some hidden purpose, should be repudiated and the most eloquent repudiation is that which has been sent by those interested, and which we publish faithfully in this same page. From this documents one can get the exact version of the moral and material suffering which torment the interned Italian seamen, who do not find themselves on a vacation, nor are they guests who enjoy the heavenly beauty of prison. If we wanted to publish all the letters that have reached us from these prisoners, we would have greatly clarified the lies

and the fantastic exaggerations of the special correspondent sent by Il Progresso to Fort Missoula, but charity of pacifism prohibits us.

Certain exaggerations, fantastic inexactness, which have the facility of passing for happiness the suffering, are really deplorable and can be explained only by the increasing war hysteria.

This is a sickness that has not reached and cannot reach us, because we enjoy complete immunity.

DOMENICO TROMBETTA.

[From the New York Times of August 14, 1941]

"BELLA VISTA"

A little more than a week ago the Tribuna, published in Italy, printed an interview with Armando Tosi, manager of the Italian Restaurant at the world's fair, in which Signor Tosi charged that panicky fears entertained here over the "fifth column" menace had resulted in "bestial treatment" of Italian nationals detained in the United States. They had been rounded up and jailed with "thieves and robbers," Signor Tosi said, charging that several hundred in the camp at Fort Missoula, Mont., were watched over by policemen, the "majority of whom were Jews."

Such balderdash may have been dished out to the Tribuna's readers to increase their animosity toward this country. There is nothing that can be done about that for in Mussolini's corporative state the press publishes only what the Government thinks it is good for the people to know. Cabled back and published here, as this one was in the Times of August 6, such stories make little if any impression on most Americans. Among the Italian community, however, tales of mistreatment might, if unanswered, cause misgivings.

Realizing this, Il Progresso, the Italian language newspaper published in this city, sent reporters to interview 50 Italians being held at Ellis Island and to investigate the conditions at Fort Missoula. As was to be expected, the survey showed that Signor Tosi's statement was baseless. Those detained at Ellis Island are persons who entered the United States illegally and who are being held pending determination of their legal status. There are no criminals there.

At Fort Missoula, where 993 Italian seamen and world-fair employees who overstayed and cannot be deported under war conditions, are detained, Il Progresso's reporter found neither criminals nor a prison atmosphere, but 10,000 acres of land with "all the characteristics of a summer resort." Only a handful of immigration officials patrol the camp, he said, and there were no machine guns to be seen. So beautiful is the setting, he reported, that the Italians themselves have named the camp "Bella Vista."

The articles now appearing in Il Progresso provide an excellent example of the way in which a newspaper can perform a service to its readers by refuting the fanciful tales of propagandists with facts gathered by competent reporters. Il Progresso is to be congratulated on its enterprise.

Any unprejudiced observer will, therefore reach the same conclusion which all true Americans have reached, and that is, that Generoso Pope is a loyal and true citizen of the United States, and any criticism of Mr. Pope can only be traced to sources which are un-American, or not devoted to the best interest of this country.

Labor Faces Real Responsibility—Loyal Workers Will Not Fail in Their Duty

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. RANDOLPH. Mr. Speaker, it was my privilege Labor Day to address West Virginians gathered at Morgantown. United States Senators KILGORE and ROSIER were speakers also, as well as active mine union leaders in that section. Prior to the program we listened to the solemn words of President Roosevelt, as he spoke by radio. Hearing his words, I was increasingly conscious of the solemn obligation which all loyal Americans face during the defense efforts.

In this connection I include at this point newspaper editorials especially pertinent to this year's observance of Labor Day:

[From the Pittsburgh Press of September 1, 1941]

A SOLEMN DAY FOR LABOR

Labor Day is the traditional occasion for union men and women to parade, congregate, and otherwise show their strength.

They have never before had so much strength to demonstrate as today.

More Americans are organized into unions of all kinds than ever before, the best estimate being about 16,000,000. With their families and dependents that makes a sizable chunk of the whole people.

Organized labor has always fought to win from society the things to which it felt entitled. Often it was a bitter and discouraging battle.

But on this Labor Day the unions must realize that they also owe a great deal to society. The high state of organization which is being achieved is due in large measure to the favoring climate established by the Federal Government. The Government—which means the people—has actively helped labor to attain its present position.

Labor is undeniably powerful today. Therefore lack of strength is no longer its biggest problem.

Its biggest problem now is that of recognizing and carrying out the obligations which go with power. Many sincere friends of collective bargaining are deeply concerned today because too many labor leaders have not recognized those obligations—have talked only about labor's gains and have forgotten that society is entitled to gains also.

And unless society—which paved the way for labor's present strength—also makes gains as a result of the help it has given, labor will not long keep the power it possesses.

It is a significant fact that while unionism stands at an all-time high in the United States on this Labor Day, it has sunk to the lowest depths across the ocean. Workers of all Europe are either bound to the iron wheel of nazi-ism, without freedom to organize or have a voice in their own conditions, or else have had to make great sacrifices in a desperate battle to prevent the further spread of industrial slavery.

Yet, here in the United States, labor stands widely accused of hampering the defense industries upon which its own self-preservation depends, and without which Europe cannot be freed from its shackles.

In previous war crises, popular clamor has been directed chiefly against business profiteering. Today this clamor is mostly directed at union profiteering.

Polls of public opinion show increasing bitterness over the actions of some labor leaders. They show that labor is being held chiefly responsible for the failure of our defense machinery to function up to expectations, and that there is relatively little blame of business.

The Government which gave unionism its present strength can take that strength away. The power which comes from the people can be taken back by the people.

We fear that the unions may not be as strong next Labor Day as they are this Labor Day unless there is a recognition of their social obligations and an acceptance of the responsibilities and duties that go with power.

The unions must clean their ranks of false leaders, of those who have seized office for selfish gain, for political advancement, and, in some cases, for outright criminal objectives. Union men and women are, we believe, as patriotic as any other Americans. And many of them are disgusted when they see our boys deprived of the weapons with which to train, and our Allies crying for the tools to carry on the fight against Hitlerism—deprived of this essential equipment by an epidemic of strikes caused by all sorts of reasons, including violations of contracts, jurisdictional disputes, and warfare between rival unions.

On this Labor Day there is a solemn obligation confronting the unions—the obligation of realizing social obligations, of living up to contracts, and of providing the national defenses without which labor in America may suffer the fate of unionism in Europe.

The following editorial in part is from the Baltimore Sun:

Although labor's material blessings have multiplied and although its position before official agencies is still highly advantageous, its standing in the court of public opinion is more and more challenged. There is discontent over the attitude of labor in the defense industries. There is dissatisfaction over the complacency with which official boards, particularly the Defense Mediation Board, subordinate the public welfare to labor's demands. All can see that labor has power and is reaping the fruits of power, but there is a growing question as to whether labor is disposed to use its power in responsible fashion in a period of national emergency. Labor's leaders need to address themselves to this problem during the next few months. Labor's political friends ought to address themselves to this problem, especially the President, whose tolerance of partisanship in the Defense Mediation Board is in sharp contrast with the call for an all-out national effort.

Developments affecting labor in the next 12 months will hinge in no small measure on the way in which the leaders and friends of the unions react to this challenge.

The Washington Post had the following to say:

LABOR DAY

President Roosevelt's Labor Day message is not addressed exclusively to the Nation's

wage earners. It is rather an appeal to all Americans of every class and calling to make sacrifices in the cause of democracy. Optimistically the President affirms his belief that labor and management realize "that there must be full and uninterrupted production of the weapons and materials needed for our protection and needed also by the nations engaged in opposing those who would do away with the liberty and happiness of free peoples all over the world." The plague of strikes and other labor disturbances that have held up and continue to hold up production introduces a jarring note to Mr. Roosevelt's confidence in the national unity of purpose. However, his words express sentiments that thoughtful and patriotic men and women will heartily endorse and obstructionists cannot afford to ignore.

A year ago we were just embarking upon the preparedness program, and very few people appreciated the magnitude of the undertaking ahead. The experiences of the past 12 months have given the public a better understanding of the challenging and exacting character of the task to which this country is dedicated. Viewed in retrospect, it seemed likely that Labor Day, 1941, will be seen to mark our entry upon a grimmer phase of our defense program. During the past year the gains to labor of the defense spending program have greatly outweighed the losses. Several million persons have been added to industrial pay rolls, while earnings have risen even faster than employment. Furthermore, wage increases have outstripped rising living costs. As was to be expected under such conditions, labor troubles have multiplied and have become a serious drag upon defense work.

The New York Herald Tribune comments as follows:

LABOR DAY, 1941

Labor Day has become so integral a part of American life that it is too often taken for granted; considered only as part of a 3-day week end, a climax to the summer. To be sure, this holiday mood is significant in itself. Labor Day is not May Day; it is not a day for muttering mobs, red flags, and portents of revolution. It is a day to celebrate, to take joyful cognizance of the fact that American labor has greater freedom, a happier way of life, more reason to look hopefully to the future, than the workers of any other nation in the world. This position labor enjoys because it is part of a free society in a land of great natural wealth; because, under the Constitution of the Republic, it is entitled to shape its own destiny, a voluntary partner in a great community enterprise; because it shares with all members of that community in the fundamental freedoms that enable men to speak their minds, to worship God, each after his own fashion, to know the truth and to use that truth to guide the policy of the Nation.

These are inestimable privileges, and it is well, in dark days, to proclaim them to the world, for they are the hope of the world, the antithesis of that brute system which Hitler and his gang would enforce to turn men into soulless cogs of a soulless state. But privileges won must be maintained, and that can only be done by remembering the responsibilities of privilege—responsibilities which were never greater than today. If labor is to rule itself, that rule must be wise. If labor permits itself to be exploited by scoundrelly leaders, labor is to blame and labor will suffer. If labor permits itself to be ruled by greed, the national interest will suffer, and that cannot be permitted. Already the errors of self-seeking leaders have cost labor much, and cost the country much. The narrow view that rates some slight advantage gained for a few thousand workers higher than the safety of the community at large—that view must go. If not, at best, labor will suffer curtailment of its privileges and the whole structure of freedom in this Nation may be fatally impaired if that curtailment is pressed to excess. At worst, these United States may become another slave colony of the Herrenvolk; then the light of human liberty will indeed be extinguished.

The word lies with the workers of America. They have it within their power to make such a convincing demonstration of their productive strength that no one will be able to question the health and vigor of the American way; that no barbarian force may dare measure its power against that of an aroused free people.

Mr. Speaker, these comments which I have placed in the Appendix give a cross-section of what our people are thinking during this critical period. It is noteworthy that President Roosevelt in his Labor Day statement said that management and labor "realize now, and I am sure will continue to realize, that there must be full and uninterrupted production" of defense materials.

While we are aware of the obligation facing labor we must readily recognize that the preparedness program can be hampered by selfish management and greedy employer action. We must courageously determine that no group, however small, is to cripple defense production and the national effort.

Financing Our Defense Program

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 5 (legislative day of Tuesday, September 2), 1941

RADIO ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the able senior Senator from Kansas [Mr. CAPPER] over stations of the National Broadcasting Co. on the National Grange Hour from Washington, D. C., on August 16, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate very much the invitation of Mr. Fred Brenckman, Washington representative of the National Grange, to talk to you over the National Grange Hour. I have known Mr. Brenckman for many years, though not quite as many years as I have been a Granger myself. I want to say for him that he represents the Grange in Washington very ably and very conscientiously; he has the respect and liking, I think, of practically every member of the Senate and the House of Representatives.

In the few minutes we have this morning, I intend to discuss, very briefly, some of the problems connected with the national-defense program. I am very much afraid that it is only in the past few months that the great majority of Americans have begun to realize that sacrifices are going to be demanded of all, and made by all, and not just by that comparatively small segment of our population drafted for service in the armed forces of the United States.

The United States today is now almost on a war footing; we are fast approaching what might be termed an "all out" war economy. Whether that means a "shooting war" will be determined in the near future; I regret to say it seems to me we have been edging, then stepping, now striding, and soon may be marching into another World War, though I am still hoping we can keep out of it.

I am not going to discuss the pros or cons of United States intervention with you today. I do not profess to know where we are going in the realm of international politics; what we are going to do when we get there; or what we are going to have when we get back—if we do get back.

I am interested and strongly in favor of an adequate national defense. I believe in a strong and impregnable defense not only against possible or prospective enemies from across the seas but also in constructing an adequate defense against those things which threaten the peace and security of our own people, our American way of life, and even our American form of government.

My friends, I happen to be serving in the Senate on three committees dealing, I might say, at first hand, with the most important problems connected with this all-out national-defense program—or war program, if you prefer to call it that. I have been a member of the Senate Committee on Agriculture for more than 22 years; on the Foreign Relations Committee nearly 20 years; on the Finance Committee for 7 years. So I believe I have some idea of the magnitude and multiplicity of the problems incident to this stupendous undertaking in which we are engaged at the present time.

CONGRESS APPROPRIATES HUGE SUMS

In less than 2 years the Congress of the United States has appropriated and authorized the expenditure of some $52,000,000,000 for national-defense purposes, including $7,000,000,000 for Britain, through the Lease Lend (really the lease-give) Act. And in Washington it is expected that another $7,000,000,000—perhaps ten billions—will be appropriated in a few weeks for Britain, Russia, China, and other nations opposing the Axis Powers.

I don't know whether any of us have a real idea as to what the appropriation of $52,000,000,000 from the Federal Treasury means. Well, here is one thing it means that perhaps we can grasp: It means that the Congress has assessed $400 annually against every man, woman, and child in the United States—$2,000 for a family of five—for national defense and for the defense of Britain, Russia, and other nations, all this in less than 2 years' time. And it may be the effort has just started.

Let me state that again. The cost of national defense contracted to date amounts to $400 per capita, or $2,000 per family of five persons. If Senator PEPPER, of Florida is correct in his prediction that the ultimate war cost to the United States will be over $300,000,000,000, that will be $12,000 per family of five. The national debt before the program started was about $375 per capita, or around $1,800 per family of five.

How much of this $52,000,000,000 will be raised by taxes, and how much of it will be borrowed, is one of the problems for the Finance Committee to attack in the coming months. Of course, every dollar borrowed is about the same as a $2 charge against the

taxpayer, as the interest in the course of a generation or so will be as large as the principal charge.

Total governmental expenditures this year will, in my judgment, pass the $25,000,000,000 mark; how much it exceeds $25,000,000,000 will depend upon two things: (1) How far we get into a shooting war ourselves, and (2) how many billions Britain and Russia and smaller nations require from the United States Treasury to finance their war efforts.

THE NEW REVENUE BILL

The Senate will be working this month and next on a tax bill sent from the House which increases taxes some $3,200,000,000 a year. The most enthusiastic of the war crowd in Washington hope to be spending for defense at the rate of $3,000,000,000 a month by the end of 1944. So you can see the present tax proposal is entirely inadequate, which means taxes will increase.

Very few of us, I fear, have a real conception of what is ahead, in the way of taxes alone, to say nothing of the waste of lives, the suffering, and the stark human misery that accompanies and follows in the wake of war.

The burden surely will be great. I believe it will be more readily accepted, and more cheerfully borne, if the Federal Government will show a real desire and purpose to cut down on nondefense spending during these times. I wish I could be more hopeful along this line, but the fact the administration in this time of emergency has insisted upon including a half-billion dollar St. Lawrence seaways project and the thoroughly discredited Florida ship canal project—which will cost at least $400,000,000—as defense projects in a rivers and harbors bill, does not give much encouragement to the hope that this administration will begin practicing economy after its 9 years of reckless spending. I like the fine stand the Grange has always taken for economy in spending of public funds.

I say we must keep a tight rein on the fiscal policy of the Government, and see that every dollar appropriated for national defense goes for that purpose. I wish I could tell you that is being done. Candor compels me to say I cannot give you that assurance.

Most of you will pay from three to four times as much income tax next year as you did this year. Congress will not enact a general sales tax this year; but I regret to say it is very likely to come next year, under the dire need for raising revenue.

THE MENACE OF INFLATION

The bill is going to be large. And as has been wisely said, "There is no way by which we can skip out on the bill." I say to you now, unless we are bold in our defense financing program, unless we levy higher and much higher taxes now, we will have a mountain-high inflation followed by a depression the like of which we have never known.

The hard way, but the safest way, to meet the fiscal problem of these huge national-defense expenditures is to levy heavy taxes. Not only to protect the credit of the Government, but also to protect the people of the Nation against terrifically high prices for all commodities.

The cash income of the American people will be some $20,000,000,000 more this fiscal year than last. Because the Government will be taking products of industry to the tune of twenty to twenty-five billion dollars, there will be at least $15,000,000,000 worth less of goods for civilians to buy. Twenty billions more purchasing power, fifteen billions less in goods to be purchased—inflation is inevitable. The more is collected in taxes and the more people put into savings, the more nearly will there be a balance between supply and demand in the market and the less steep the rise in prices. That is one reason I am advocating and working for a pay-as-you-go policy as nearly as possible.

Price-fixing legislation is in sight. In my judgment, it will be passed in some form. I am going to insist that price fixing of farm products—of which there will be surpluses rather than shortages, with few exceptions—be prohibited until farm prices are well above parity. Agriculture needs a floor, not a ceiling, on prices for farm products at the farm.

PROTECTING OUR WAY OF LIFE

I say we must protect our own way of life, our own domestic economy, our own people and their rights under the Constitution. I say these things are as much a part of any real national-defense program as are the defense of the British Empire and the Russian Soviet. I want to keep the four freedoms for our own people before we start on a crusade to carry them to everyone everywhere in the world

The meeting of President Roosevelt and Prime Minister Churchill at sea was dramatic; the joint statement they issued was a masterpiece—though I am a little bit vague in my mind as to exactly what it said. By implication I could deduce that by its terms President Roosevelt, without consulting or advising with Congress or the Senate, committed the United States to destroy the Nazi power in Germany; to disarm Germany; then to help Britain police the world under a new order with highly idealistic objectives. That is a pretty large order. Before any such program is made effective by the armed forces as well as the arsenal resources of the United States, I think the chosen representatives of the people, the Congress of the United States, ought to be consulted, as the Constitution provides.

After the decision is made in the American way and in a constitutional way, I say then it will be the duty—and there will be no quibbling about it—it will be the duty of every American to support the foreign policy so decided. We must, we will, have national unity, but I do not believe we will get it by Executive order or Executive proclamations that ignore the Congress.

I make this statement as one who has great respect for President Roosevelt, as one who has supported many of the President's policies, and will continue to do so every time I believe he is right. But I shall also continue to do everything in my power to keep us out of foreign wars.

PRESERVING AMERICAN INSTITUTIONS

I sincerely hope that in the near future the President, the Congress, and the people will all get together for the defense of America and for the preservation of American institutions, for American traditions, stand by the Constitution of the United States and the welfare of the American people. I am for America first. I say the essence of good Americanism is to stand for America first. I am today appealing to you to let it be known that the people of this Nation are against going into a shooting war in Europe—or Asia, or Africa, or in the seven seas—that will be the greatest service you can render our country today, if you insist on America's interests being considered first.

All my life I have been fighting against war. And, beyond that, I am opposed to allowing one man to decide whether or not, and when, the United States goes to war.

I maintain it is the duty of Congress to see that no one but Congress takes us into war.

I am doing my best to stop any program which aims to send American boys 3,000 miles across the seas to fight and die on foreign battlefields.

I am opposed to any program which sends our Kansas boys to fight alongside Stalin's Communists in Russia or any other foreign group.

I say the blood of American boys belongs to America and should not be spilled on the battlefields of Europe.

Entry Into the War

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, September 5 (legislative day of Tuesday, September 2), 1941

ADDRESS BY L. B. ALEXANDER

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Hon. L. B. Alexander, president of the Kentucky State Bar Association, in Los Angeles, Calif., and carried in the edition of the Los Angeles Daily Journal of August 18, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Daily Journal of August 18, 1941]

UNITED STATES ENTRY INTO WAR IS FORESEEN BY PRESIDENT OF KENTUCKY BAR—SOUTHERN LEADER OF LEGAL PROFESSION SAYS NATION MAY BE FORCED INTO STRUGGLE, IN BROADCAST OVER LAWYERS' CLUB PROGRAM

Entry of the United States into the present war was foreseen by Attorney L. B. Alexander, president of the Kentucky bar, in an address Friday night on the radio Bill of Rights program of the Los Angeles Lawyers' Club. The program was heard over station KMTR. Alexander was interviewed by Attorney Jay Moidel, chairman of the lawyers' club committee.

Alexander declared that the national-defense program must be supported, regardless of personal feelings, and that we must continue all-out aid to Britain.

"It now looks as though we may be forced into the war, notwithstanding the efforts of our officials to keep us out of the world conflict," he declared. "I believe that England is our first line of defense, and I am reasonably sure she cannot succeed without the aid of the United States, and the fall of England would mean that we must fight alone."

AID KENTUCKY DRAFTEES

The Kentucky bar president revealed that the legal profession of his State is taking a major hand in the national-defense effort. He said he had appointed a State-wide committee of 400 lawyers to assist the Government in national defense. This step was disclosed to be similar to that taken by President Loyd Wright of the California bar.

"We propose to look after the problems of the men in service whether they be legal or otherwise free of cost to them," Alexander told Moidel. "We believe that the men in service and their families as well should be afforded every possible protection. In many Kentucky counties, enlistments are so high that few draftees are called."

LAWYERS ASSIST GOVERNMENT

"It is only natural for the legal profession to take the leadership in supporting our national-defense program because they realize that individual liberty and personal freedom will exist in this country only so long as the Bill of Rights and the Constitution survive," Alexander continued. "A strong national-defense program is our best guaranty of the survival of the Constitution which contains our Bill of Rights.

"The welfare and safety of our Nation requires national unity in times of national emergency. Without national unity our Government may collapse and our Nation fall. It is necessary, therefore," Alexander told Moidel, "that each person surrender, temporarily or for the duration of the crisis, the exercise of such individual rights as will interfere with the rights of the people as a whole. Patriotism necessitates that each person do his share in the interest of our country, and there is no place in our country for the man who doesn't believe in our form of government. The bar associations will exert every effort possible to have our liberties restored immediately after the emergency is passed, if any of them are temporarily suspended.

LAWYERS' CONTRIBUTION

"It is more important that we preserve our national liberties than we have the full, uninterrupted enjoyment of our individual rights, because individual rights are products of national liberties, and if national liberties are destroyed, our personal rights will likewise be destroyed," Alexander added.

"Lawyers, being students of government, unhesitatingly approve our form of government, largely because of the many rights which are guaranteed to the people. Under no other form of government are the people secure in the enjoyment of these liberties. Since the President declared that an unlimited national emergency exists, the lawyers, as a profession, will continue to support the national-defense program.

WELFARE OF NATION

"The Bill of Rights became a part of the law of the land to insure the right to life, liberty, and the pursuit of happiness to every person living in this country. We must not permit these rights to be exercised to the detriment of the welfare of our Nation, nor should we tolerate any subversive activities under the guise of the enjoyment of any one of these same rights.

"No one has a right to advocate the overthrow of our form of government by force, violence, or otherwise. No American has any right to associate himself with any movement which would bring about the destruction of our Constitution and Bill of Rights. With these thoughts in mind, I urge every loyal American to stand by our Government in this crisis, and do his full share in support of our national-defense program."

The Cradle of Liberty and Arsenal of Democracy

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 5 (legislative day of Tuesday, September 2), 1941

ADDRESS BY HON. CLYDE L. HERRING, OF IOWA

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Iowa [Mr. HERRING] before the League of Iowa Municipalities on August 20, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Members of the Iowa League of Municipalities and friends: You are gathered in convention this year under more trying conditions than have probably ever surrounded a similar meeting of your league. As the municipal executives in your various communities you are beset with unusual problems.

My purpose in speaking to you on this occasion is to endeavor to make as clear as possible the unique position into which we have been forced by the tyranny of Hitler, in spite of our most earnest desire to remain aloof from the conflict.

Although we are thousands of miles distant from the scene of war and a world torn by violence and revolution, there is, nevertheless, not a town, hamlet, or farm that is not directly feeling the effects of this "world upside down."

From cradle of liberty to arsenal of democracy the United States of America has moved in the course of 165 years of national destiny.

The founding fathers chose to establish upon these shores that cradle of liberty.

Forces from outside the United States have compelled this generation to assume the responsibility for making this Nation an arsenal of democracy.

The adoption of the Declaration of Independence and the establishment of this Nation as the cradle of liberty in 1776 was a voluntary as well as an inspired act.

The conversion of this Nation into a vast production machine and a supplier of the sinews of deadly war is a regretful and an involuntary process.

The 23 years of peace, which we have enjoyed since the last great war, were purchased by the sacrifices of those courageous Americans, who gave up their lives that this Nation might preserve the priceless heritage of freedom. Their brilliant and unselfish display of patriotism made secure for that brief period not alone the rights of American citizens, but the rights of all humanity.

Nor was this all that humanity had gained as a result of the World War.

Out of the crucible of that titanic struggle had emerged a new morality and a new social consciousness.

The people of every nation, more particularly our own, extended sympathy and material aid to the very people, whose ambitious scheme for world domination had visited the awful consequence of war upon the whole of mankind.

We undertook to promote and maintain peace by every possible means.

Billions of American dollars found their way to Central Europe, especially Germany, to be invested in social and economic rehabilitation. Hundreds of millions more were outright gifts, distributed through the Red Cross and other charitable agencies.

In 1921 in pursuance of our peace policy, the United States of America, under the leadership of Charles Evans Hughes, called the Washington Disarmament Conference. As a result, the United States voluntarily surrendered the position which it had won as a first-rate naval power.

Out of that conference came an agreement whereby we voluntarily, and as viewed today foolishly, scrapped not only our biggest and best battleship, the *Washington*, but we sunk 16 other vessels, among them the *Virginia* and the *Alabama*.

In 1932, we joined with 29 other nations in a conference for the further reduction and limitation of armament and reaffirmed an agreement not to resort to force.

We joined with these nations in condemning aerial bombardment as inhuman. The use of chemical, incendiary or bacterial weapons was prohibited. A permanent disarmament commission was to be set up, on which each government was to have one representative.

On May 16, 1933, President Roosevelt cabled to the Sovereigns and Presidents of 54 nations the following earnest appeal for world peace:

"If all nations will agree wholly to eliminate from possession and use the weapons which make possible a successful attack, defenses automatically will become impregnable, and the frontiers and independence of every nation will become secure."

Hitler countered with a request for "defensive weapons forbidden to Germany by the Treaty of Versailles—tanks, heavy field artillery, and tank guns, heavy machine guns, and observationn airplanes," when his demands were rejected as unreasonable, he announced his withdrawal from the disarmament conference and the resignation of Germany from the League of Nations and the World Court.

That action put the world on notice that Adolf Hitler was the enemy of world peace. Thenceforward, in complete violation of existing covenants, he began the building of the diabolical war machine, which has already conquered Europe and much of Asia, and which, with the passing of each day, becomes an increasingly greater threat to the safety of this nation.

While Hitler was building his war machine in defiance of numerous covenants and treaty obligations, the Congress of the United States passed the Neutrality Act of 1935 which prevented our selling to a belligerent nation, materials essential to the conduct of a war.

We believed that the establishment of a restrictive policy, relinquishing our right to sell to belligerents the arms, ammunition, and supplies necessary to wage war, would inspire other nations to take similar action, a part of the new morality concept we hoped the world was ready to accept.

We now know that the certain knowledge that the Neutrality Act would prevent the United States from selling arms and munitions to unprepared and peace-loving nations put a potent weapon in Hitler's hands.

The date upon which Hitler became Chancellor—January 30, 1933—marked the death knell of justice, liberty, and morality in human relations within the confines of Germany. The immorality incubated in the home of the Nazi infiltrated itself by devious means throughout the whole of Europe, undermining the morale of the people and reducing to ineffectiveness their respective governments.

There was not a single country which did not sense that mischief was afoot. But the leadership in the various chancelleries of the world divided themselves between those who were opposed to the Hitler regime, those who were sympathetic, and those who, while opposed, believed that they must necessarily appease and work with it.

Unfortunately for all of us, the latter group was the larger and had many powerful advocates.

Who knows the price which humanity will have to pay for this policy of appeasement.

This much is certain. Once more within the lifetime of hundreds of millions of us the peace-loving peoples of the earth must undertake a world-wide mobilization of physical, moral, and spiritual resources in a courageous and determined effort to get the wild beast, marauding through Europe and Asia, back into his cage with a lock on the door.

Distasteful as is this mobilization, we are compelled to realize we no longer have any choice in the matter.

The people of the United States of America are required to face the facts and prepare to defend themselves.

We can no longer delay. It is with extreme reluctance that we recognize the complete failure of our peace efforts, under the Neutrality Act and otherwise, to secure the peace of the world. We agreed to give up many vital and important interests, the carrying out of which involved chiefly a moral commitment to do nothing. The time is definitely over when we can pursue with any degree of safety or impunity a "do-nothing" policy.

We hear much about interventionists and isolationists.

If by "intervention" is meant to intervene by providing all material aid to the nations now resisting aggression, I believe there are many interventionists.

If by "isolation" is meant those who desire to retain our historic policy of aloofness from the purely internal wrangles of foreign countries, I believe most of us are isolantionists.

But bear in mind, the greatest isolationist in the world today is Adolf Hitler. He has, one by one, isolated 12 neutral, peace-loving countries, and one by one, he has destroyed them by the most inhuman, and uncivilized methods of war ever employed. He is continuing his systematic isolation. Russia is now isolated, and slated for annihilation, and on the Hitler timetable she is long past due.

When, and if, this is finally accomplished and the possible threat from the east is thereby removed, it will again be all-out for the destruction of Britain. If Hitler then succeeds, the conquest of Africa and India will follow.

The Vichy Government has turned toward new and greater collaboration with Nazi Germany, perhaps not so much through desire, or by its own will, as because it is too weak to resist further aggression and fears the possibility of wholesale murders within the territory of France, now occupied by Nazi soldiers.

Soon, unless prevented, the Nazi will have a force similar to that which has crushed France and a dozen other countries, poised for action, directly opposite the eastern coast of South America, and with the further possibility that efforts will be made to occupy other French possessions.

His ambition will then be to cross to South America, where numerous "fifth columnists," most of whom are trained soldiers, are already working.

This is not merely my personal opinion. Read Mein Kampf wherein Hitler himself declares for world domination and Nordic racial supremacy, and compare his boastings in his book with his program so far executed.

As much as anyone, I wish to stay out of this war. And I firmly believe the only way we can stay out is by assisting in every way possible, short of actual participation, those resisting the aggressions of Hitler. I am for stopping Hitler before we may be required to face him single-handed and alone.

And, I may add, my sentiments and beliefs are shared by the vast majority of men and women with whom I come in contact. We are far better off rendering "all out" aid to Britain, and thus enabling her to stand, than we would be in a world wherein she is reduced to impotency, and her Navy taken over by Hitler and his war machine to jeopardize our safety and independence.

We now know that Hitler's ultimate objective is not the golden grain fields of the Ukraine for the starving millions of Germany, or even oil for fuel and power. His scheme is complete Nazi domination of the world and the enslavement of the free peoples of the earth.

With the appalling proof which we have before us as to Hitler's real designs, there is, nevertheless, an articulate minority within our great country which tend to destroy our national unity, and to thwart our Government's policy with respect to preparation for complete and adequate defense against this menace.

The Congress has been loath to believe that the conflict now raging in Europe would assume world-wide proportions, and that it is, in reality, not war alone but more, a tremendous globe-encircling social revolution, wherein the institutions and ideals in which we believe are endangered and but for our courage and strength and that of Britain might be destroyed.

In the consideration of every measure providing for national defense, I have been motivated by but one purpose.

Can we protect the institutions of free government which are ours?

Can we keep war away from these shores?

Can we guarantee to our children and posterity the benefits of free government and the fruits of free enterprise which have been our inheritance and our privilege to enjoy?

Thyssen, the great German industrialist, whose wealth and influence made Hitler Chancelor, wrote him in December 1939, as follows:

"Your new policy, Herr Hitler, is pushing Germany into the abyss and the German people into ruin. Reverse the machine while there is still time. Give the Reich a free parliament, give the German people freedom of conscience, thought, and speech. Provide the necessary guaranties for the reinstatement of law and order, so that treaties and pacts can once again be built up in faith and confidence."

With a price upon his head, his property confiscated, and members of his family cruelly murdered in concentration camps, Thyssen dared plead with Hitler himself to restore to the German people that of which Hitler had robbed them—the same free institutions and individual rights which we possess and will defend.

There is no prophet so wise and so farseeing as to be able to tell what the future holds. We may be required to make the most tremendous sacrifices in the ensuing months and years. We may be obliged to convert this Nation not only into an arsenal of democracy but into an armed camp wherein every citizen will be required to listen for the "alert" and to perform physical labors and duties not yet contemplated.

We look with anxious eyes, fearful that Great Britain may not be able to hold the line long enough for us to become prepared.

The picture is changing so rapidly that no one knows from one day to the next what may be required of this Government. This much seems clear: The situation will continue to be grave for a considerable period of time to come.

If Hitler should be successful in liquidating Great Britain, there may be a temporary cessation of hostilities, while he consolidates his gains and inventories his plunder. In such event, the people of the United States of America will be faced by an even greater problem than that with which we are now confronted.

With the invasion of Poland on September 1, 1939, many of us realized that there could be no peace in the world until the force which had unleased itself against humanity was spent or was reduced to impotency.

We have been reluctant to assume the obligation of forging the weapons and supplying the materials necessary to that end, but we have been compelled to recognize there is no other course open to us, and while we deplore the necessity, grim-faced we have set about the task of accomplishing it.

The time has come when we must abandon all thought of "business as usual." We cannot complete the building of this vast arsenal of material supply and spiritual and moral strength without the reorganization of our daily lives, and a rededication of ourselves to liberty and all that it means.

When I decided it was necessary to repeal the arms embargo, the die was cast so far as my attitude and judgment were concerned. With each succeeding event I have become more and more certain that I was right.

I have supported each and every one of the appropriations for defense, with the complete conviction that the very life of this Nation is at stake.

Under the terms of the Lend-Lease Act, we undertook to supply Great Britain and her Allies with every weapon possible and necessary to the prosecution of the war, not because we wish to fight Great Britain's battles, but because we are defending our own shores by enabling Great Britain and her Allies to stand.

The call for "all-out defense" has sounded.

The Congress has appropriated and authorized the stupendous sum of $50,000,000,000.

Some conception of the immensity of these appropriations and the burden which they entail is gained from considering the deliberations now in the Senate Finance Committee, wherein we are exploring every possible form of taxation, including excise taxes on almost everything our citizens will wish to buy, and still, with all these burdensome levies, it appears that only three and one-half billion dollars of additional revenue will be obtained thereby.

There is no question as to the prior right of the defense program to strategic and critical defense materials as well as labor. Business cannot be as usual; nevertheless, there are in each community private demands which must be met.

Priorities for defense are essential, but it is also essential that they be imposed in an orderly, systematic way, so as not to disrupt and dislocate the industries whose success is vital to the sustaining of the defense program.

Despite our boasted "planned" economy, we find ourselves now in this emergency curtailing, if not completely stopping, the use in private industry of various metals and other basic materials which we had a right to believe our immense industries would be prepared to supply in abundance.

I know the appeals which must come to you as mayors of your cities from employers and owners of industries which have been built up through long years of hard work and struggle. They ask your help in securing supplies to keep your citizens employed and their bank accounts adequate for the immense tax levies which are certain to come.

Somehow I have a feeling that the reported shortages are more apparent than real, and that when order is once brought into the handling of priorities, our private industry will not be penalized to the extent recently forecast.

As you know, priorities are now regulated by fiat, not by legislation. My hope is that when legislation now pending is enacted and a more accurate inventory of supplies and sources of supply is provided the dislocation in private industry will be materially relieved.

It is a tremendous undertaking to divert this Nation from the paths of normal industry into a program of defense preparation. But in spite of all the difficulties encountered in making this transformation, we are encouraged by the progress we have made, and we are justly proud of our accomplishments.

By January 1 next we will be building 2,000 planes per month (1,500 last month, 500 a month a year ago), and by July 1 we will meet the full program of 3,000 per month. We are just finishing the tooling-up stage and are entering the production state of this immense program. We are now manufacturing 1,000,000 pounds of powder per day. This is more than we were producing at the end of the last World War. Tanks are beginning to rumble out of plants that were without even foundations last October. A $20,000,000 plant now in operation will deliver its first 70 tanks this month.

Down at Burlington, Iowa, the first conveyor one-half mile long is carrying shells, thousands per day, to the point where they are loaded. The production of small arms has been trebled.

The first ship came off the ways yesterday from an immense shipbuilding yard in San Francisco in which construction was started but 6 months ago. Another will follow next week. And from our combined shipbuilding facilities a ship is being launched almost daily. By January 1 one-half of our program objective will be met, and by July 1 we will have met every item upon the program.

In Washington there are hundreds of the ablest industrialists of the Nation giving their time without one penny of compensation, and at the head of this immense activity and more responsible for the marvelous performance already a matter of record is a Danish immigrant, who proudly states: "This country has been good to me. I want to do something for it." And William S. Knudsen is doing just that and in a big way.

When will we become involved in a shooting war? is the question most often asked of all of us in Washington.

Never, I hope, and never I believe, provided we can supply those now resisting Hitler with the necessary tools.

Our desire for peace is no less ardent today than when we declared a policy of neutrality.

We search for peace, but we find increasing dangers threatening us from all sides.

Should Japan continue as a member of the Axis, as now appears certain, and persevere in her aggression in the Far East, the situation will become even worse.

If a recently defeated Germany could do to Europe what Germany has done in the past 2 years, what would a victorious Hitler impose and be able to impose upon the other countries of the earth?

Can you picture a world today without the United States of America?

Would life be worth living, not only for ourselves but for those unfortunates in other lands who live on the hope that some day they may be welcomed here?

We must not permit the same errors, neglect, and lack of realistic thinking which caused the fall of France and other nations.

In 165 years of our national existence, we have built here a nation which has never been equaled, and largely because of the courage and sacrifices of our forefathers, who gave us a charter of human freedom securing to each life, liberty, and the pursuit of happiness; freedom of conscience, freedom to study and to pursue a career of one's own choosing; and, above and beyond all else, the right to be freemen, with civil, political, and religious rights which cannot be abridged.

As I looked today upon the tranquil Iowa landscape with its fields rich with the promise of harvest and saw the industrious farmers moving back and forth in the performance of their peaceful tasks, I felt an increased appreciation of all that it means to me to be a citizen of this great Republic and to reside in Iowa. How benevolent has been the Providence which has cared for us—how much we owe to God, whose watchful care has attended with worthiness and success our constant progress as a nation.

I feel better for having returned here at this season. I appreciate very much the opportunity to meet with you. I believe I understand the sentiments in the hearts of the fathers and mothers of this country a little more clearly for having renewed my personal contact with the people of this great producing section. It restores one's faith and brings peace to one's soul.

The solemn obligation rests with each and every one of us that this Republic shall survive.

As gallant defenders of the cradle of liberty, as guardians of the arsenal of democracy, every citizen must be prepared to do his part.

You, as mayors of our cities and towns, great and small, are charged with the mobilization of our Nation's courage for the mighty task which we have barely begun.

With singleness of purpose we unite. With faith, honor, and courage we march forward.

And with a prayer in our hearts we raise our eyes to the Stars and Stripes, symbol of equality and freedom. May it remain forever unfurled.

To this Republic we pledge our lives and fortunes—one haven, one refuge, one sanctuary—whole and undefiled.

Outing of Democratic State Committee of Rhode Island

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ADDRESS OF HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the very able junior Senator from Pennsylvania [Mr. GUFFEY] at a meeting of the Young Democrats of Rhode Island at Providence, R. I., September 7, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a privilege to have this opportunity to pay tribute to Rhode Island's distinguished son, my colleague, Senator THEODORE FRANCIS GREEN.

Only those who have worked side by side with him, as I have done, can appreciate the magnificent work he is doing in Washington, not only for his State but also for his country.

Since those early days when he and I worked together for the nomination of Woodrow Wilson at the Baltimore convention of 1912, through the years when both of us labored in behalf of President Wilson and the noble idealism of his administration; then again in the thick of the battle for President Roosevelt's New Deal, I have known Senator GREEN as one of the truly great Democratic leaders of our Nation.

You know him best for his labor here at home, as Governor of Rhode Island. You are even now reaping the benefits of his program of labor legislation, which established this State as one of the most progressive and enlightened in the Nation. You know what that has meant, because for generations a socially backward Republican rule hamstrung the efforts of your great industrial population to obtain justice for labor.

It would be well to recall those achievements of Governor GREEN, lest in the enjoyment of them we forget that they would not have existed but for his labors. I think of your unified department of labor, your minimum-wage and maximum-hour laws, your model child labor act, your prevailing-wage law for public works, your special women's and children's division in the department of labor, your liberalized workmen's compensation law, and, not least of all, your unemployment compensation and old-age benefit laws.

These benefits are only in part a measure of the advantages gained by the people of Rhode Island during THEODORE FRANCIS GREEN'S term as Governor. They are the outward and lasting symbols of an administration guided by the historic precept of the Democratic Party, first enunciated by Thomas Jefferson himself—"equal rights for all, special privileges for none."

You have reason to be proud that this great work is now being carried forward brilliantly by America's youngest Democratic chief executive, your own Gov. J. Howard McGrath, who has so fully justified the confidence President Roosevelt placed in him, as far back as 1933, when he named him United States attorney for Rhode Island. His notable record in the prosecutor's office—I believe all of you recall his exposure of Governor Vanderbilt's famous wire-tapping affair—made him the logical man for the post he now holds. Senator GREEN could have found no better Democratic successor anywhere.

I need not speak at length of the gains Rhode Island has made under Democratic administration, for they are even today contributing to the enrichment of the lives of people who live and work here. But I feel it appropriate to point out that it was the fighting spirit, the courage, the determination, and the unfailing liberalism of THEODORE FRANCIS GREEN which made all that possible. When the cause was hopeless, when a triumphant Republican machine again and again hurled his forces back, when it seemed that Rhode Island would never obtain deliverance from the special privileged interests which exploited its people, he kept on fighting, and never stopped fighting short of ultimate victory. He knew what it was to be defeated, but he never knew what it was to be licked. He lost battle after battle in the dark days, when only the will to win and devotion to Democratic ideals kept his forces together, but he won his war.

We in Washington who have been fighting all these years for the Roosevelt program—first the domestic, social, and labor reforms of the New Deal, now the program of national defense and aid to the democracies—have found good reason to feel thankful to Rhode Island for giving us Senator GREEN. His great abilities and his sincere liberalism have been a tower of strength in many a pitched battle on the Senate floor, in many a heated debate behind the closed doors of committee rooms. With Senator GREEN as one of its representatives, the State of Rhode Island speaks with a strong, clear, potent voice in the deliberations of the United States Senate and the councils of the national administration.

He has been particularly active and influential as a member of the Committee on Navy Department Appropriations, and it is through his efforts that naval defense activity in Rhode Island has reached its present unprecedented proportions.

Senator Green has brought vast benefits to the people of this State in the face of the bitterest opposition from small privileged groups which have attempted to block him at every turn. For many years this group has looked upon Rhode Island as its own special preserve, clinging to the Hamiltonian theory that only the aristocracy should govern. If they could, they would forget momentarily their professed devotion to the Constitution of the United States, at least insofar as the rights of the people were concerned. I have this on no less an authority than your Republican National Committeewoman from this State, the eastern vice president of the Republican Party, Mrs. Paul Fitzsimons, mother of your former Governor Vanderbilt. I refer specifically to her statement in the United States News of November 29, 1940, in which she was asked the question, Does your experience in the recent campaign indicate to you that the Hatch Act should be revised? I quote her answer:

"My personal opinion is that the Hatch Act should most definitely be revised. Its objectives may have been sincere, but under existing circumstances it is a farce. No one on the Federal pay roll should be allowed to vote. The beneficiaries of a lavish administration have now reached the staggering total of many millions; quite sufficient to perpetuate any administration indefinitely—naturally these beneficiaries vote to retain Santa Claus. Any election today is consequently playing a game with loaded dice."

I have been very careful to quote this statement in full, so that no one may say I distorted it by taking it from its context. I call your particular attention to

the one sentence which gives the game away. "No one on the Federal pay roll should be allowed to vote."

This would mean the thousands of trained mechanics employed in defending America at the naval torpedo station in Newport, the other thousands who are rushing America's defenses in the construction of the new North Atlantic air base at Wickford, the many thousands in the Federal work relief agencies, the entire Rhode Island representation in the armed forces of the United States, Army, Navy, and Marines; and in addition to all these the entire staffs of post offices, customs houses, Federal courts, State and local offices of all Federal departments, not to mention public officials and servants paid partially from Federal funds.

With one stroke of the pen this Republican spokesman for Rhode Island's Republican machine would deny the greatest privilege and most sacred right of citizenship to the loyal American men and women who are in the forefront of America's defense. Our soldiers and sailors, upon whose courage and devotion we depend for the safety of our democratic institutions, would be told, in effect—you may die for your country, but you may not have a vote in its Government. I wonder if she would include her own son, the former governor, who is now serving as a Reserve officer in the Navy? Possibly, she would make an exception for Republicans in their Government's service.

This spokesman undoubtedly represents the sentiment of the small group which controls the Republican machine in Rhode Island. I cannot believe, and I do not believe, that she speaks the sentiment of a people whose heroes died in the Revolution that America might have liberty, democracy, self-government.

Such cynical disregard of fundamental American principles by Republican spokesmen is not restricted to Rhode Island. I assure you that in my own State of Pennsylvania we have our share. I recall that during last year's campaign one of our most prominent reactionary lawyers told a Republican audience that only paupers would vote for Roosevelt. The result on election day seemed to indicate that my State was one vast poorhouse, because the President carried it by an overwhelming majority.

That kind of talk is popular at the "best" clubs and over the cocktails in select circles, but it is only occasionally that it slips out in public meetings. We should be glad that it does, because it indicates better than anything else the bitter opposition to rule by the people which lies at the basis of the Republican philosophy. It is a dangerous attitude at any time; it is particularly dangerous now, when the principles of democracy are under fire in all parts of the world. Democracy today is fighting for its life with its back to the wall on the battlefields abroad. Enslaved peoples in once free nations, bearing the yoke of a tyrannical conqueror, are only now beginning to appreciate, too late, the benefits and blessings of democracy and human liberty. And, to my mind, the most dangerous "fifth column" in our own country is not the paid agents of foreign powers but those people who have so far strayed from the true principles of Americanism that they would deny the constitutional right of suffrage to loyal American citizens engaged in the service and defense of their country.

I shall not discuss this Republican spokesman's comments on the Hatch Act, except to say that one of the principal reasons for its failure at its first test last year was the widespread evasion by the Republican leadership of its prohibition against vast campaign contributions by special interests. It is true, as the statement says, that the "dice were loaded" last year—loaded with millions of dollars in Republican slush funds, but there just wasn't enough money in America to buy the election away from President Roosevelt. There were too many honorable citizens who could not be bought. That was true last year, it is true this year, and it will be true next year.

I am fully confident that the Democratic Party in Rhode Island will demonstrate that fact at the polls. I am confident that you are going forward to victory. I assure you it means a great deal, not only to all the citizens of Rhode Island, but also in upholding the hand of the President in a time of grave crisis, and in turning back those forces which, lacking faith in American democracy, represent the real danger to our democracy. And I can assure you, from what I have seen of him in Washington, that wherever the fighting is thickest you will find my friend and colleague, one of the real leaders of our American democracy today—Theodore Francis Green.

National Unity

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ADDRESS OF HON. ROBERT A. TAFT OF OHIO

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address entitled "National Unity," delivered by the Senator from Ohio [Mr. TAFT] over the Columbia Broadcasting System on Friday evening, September 5.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The American Nation today is not united. Lack of unity would be a serious danger if the Nation is forced into war. It may be a partial cause of delay in the defense program, although the failures of that program up to date have resulted far more from lack of organization and lack of administrative ability than from lack of unity. Congress has been united in appropriating all the money asked for and in giving the President the free hand which he demanded to carry out his program.

The country is disunited for the reason that the majority of the people disagree with the President's foreign policy insofar as it implies—and it does now imply—an active intervention in war, and because the President has made no effort to secure the support of those who disagree with him in either foreign or domestic matters.

The interventionist newspapers are horrified at the vote of 203 to 202 in the House of Representatives on the question of the extension of the draft. They attribute it to politics, to the Republicans, and even to German propaganda, but they deliberately ignore the obvious reason that a majority of the people were opposed to this extension, and the Congressmen voted as their constituents wished them to vote, except where they were subjected to heavy pressure from the administration. Without that pressure the bill would have been overwhelmingly defeated. Last Friday a congressional bielection was held in Wisconsin. The Republican running on the issue of opposition to the President's foreign policy defeated Mr. Amlie by 29,000 votes to 16,000. Mr. Amlie was running as a Democrat, and ran on the issue of 100 percent support of the President's foreign policy, but had formerly been a Progressive and presumably got all the Progressive votes which were not actively opposed to war. The position of those shouting loudest for unity is that the majority must give up their views and blindly approve any measure, any power, that the President or any subordinate of the President says is necessary for defense. It makes no difference to them that the reasons may be wholly inadequate and the power demanded dangerous to the safety of American democracy.

The disunity in the United States springs from the policies of Franklin D. Roosevelt himself. In the first place his methods and his policies have become secretive and dictatorial. He no longer takes the people or the press into his confidence, and the result is that even his own followers disagree as to what his real intentions are. In the second place, the defense policies are being used to advance New Deal economic theories under the guise of defense necessities, and only New Dealers are appointed to positions of economic power. Thirdly, the President is utterly intolerant of those who disagree with him and encourages intolerance from his supporters. Above all, he insists on pursuing a policy of active intervention in the European war without any apparent intention of consulting Congress or the people until we are hopelessly involved. In short, the President has no desire to secure unity unless it is 100 percent unity with his individual views. While he persists in these policies there is no hope for national unity.

These are serious charges, but I believe that every well-informed man in Washington will privately agree with them in substance.

FIRST. THE PRESIDENT NO LONGER TAKES THE PEOPLE OR THE PRESS INTO HIS CONFIDENCE

The most striking incident illustrating this secretiveness is the Roosevelt-Churchill conference at sea. The American press rightly resented the treatment which it received. Mr. Roosevelt slipped away from the entire American press. Mr. Churchill took British writers along. So the American public has been dependent upon British writers for news about its own President. When he returned, he set up a complete gag on the press about the conference; frankly told American newspapermen that they should write what he wanted written, and if he was displeased, he would go on the radio himself. Inexperienced British newsmen took moving pictures, and they were so poor that most of them had to be thrown away when they arrived in this country. The first word of the conference came from a British broadcast. I know of no instance in which an American President has disappeared for a week to engage in a secret conference with another ruler. We have gone a long way since the day of "open covenants openly arrived at."

The President did not consult Congress, perhaps did not even consult his Cabinet, before signing the joint declaration. Winston Churchill submitted the statement back to his War Council before he signed, but as far as we know, Mr. Roosevelt consulted no one but Mr. Harry Hopkins and perhaps Elliott Roosevelt and Franklin, Jr. The joint declaration itself refers to Churchill as representing His Majesty's Government, but the President speaks for himself alone to make known certain principles in the national policy of his country. Mr. Churchill must himself have been impressed by the President's attitude, for in his speech interpreting the agreement he said:

"President Roosevelt is the thrice chosen head of the most powerful state and community in the world. I am the servant of the King and Parliament, at present charged with the principal direction of our affairs in these fateful times."

Evidently the President made it clear to Mr. Churchill that he was not even consulting Congress, and he couldn't have said much about being the servant of the people.

No American newsmen went to Iceland, although the British were already there and able to report the facts. The claim that the expedition had to be kept secret to protect it from the Germans is completely disputed by the fact that only a very small proportion of the total American forces had been landed when publicity was given to the fact that 80,000 others were to traverse the Atlantic. No; it was the people of America and Congress from whom the occupation of Iceland had to be kept secret. In a nation of 130,000,000 people, the press is the day to day representative of those people in dealing with the President. If he is not frank with the press, if he enjoys fooling the correspondents and springing surprises on them, then he is treating the people as no President has the right to treat them. The American press has been a free press. It is the principal characteristic of Americanism. Its great power has been used with discretion and judgment. It cannot be whittled down by Presidential restrictions and pressure without endangering democracy itself.

Mr. Roosevelt continually denies that he seeks censorship, but he repeatedly shows his irritation with the free press, originally with the editors, and now more and more with the correspondents. Without rebuke he permits Mr. Ickes to blackguard the press and constant proposals from inner New Deal circles indicate a desire to find some means of bringing pressure to bear on newspaper editors to make them behave. The eight-point declaration significantly omitted any reference to that particular freedom known as freedom of the press.

The eight-point declaration itself is ambiguous and uncertain, because it was conceived in secret and handed to the American people without discussion. It means different things to different people. Mr. Roosevelt says that it brings us no closer to war. William Allen White says it is all intended for peace. Senator BARKLEY stated in the Senate that, in his judgment, it was a general statement of policy and not the assumption of an obligation. On the other hand, Mr. Churchill says in so many words:

"The President of the United States and the British representative, in what is aptly called the Atlantic Charter, have jointly pledged their countries to the final destruction of the Nazi tyranny. That is a solemn and grave undertaking. It must be made good. It will be made good."

According to Mr. Churchill, the United States has pledged itself to destroy the Nazi tyranny and to disarm Germany, Italy, and Japan. Of course, if he is right—and he was at the conference—then the President has pledged the United States to go to war.

This view is borne out by the President's Labor Day speech. He said:

"I know that I speak the conscience and determination of the American people when I say that we shall do everything in our power to crush Hitler and his Nazi forces."

How can we crush Hitler except by sending our soldiers to Berlin? Yet the President must know that a vote for war today would be overwhelmingly defeated, and the President's supporters still talk peace. The President promised the American people before election:

"We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas except in case of attack."

If he is intending to violate that promise and change that policy, why not frankly state it? How can we hope to secure unity for a foreign policy absolutely contrary to the promises of both parties last November without at least frankly stating that the policy has been abandoned? Certainly no one is going to disarm Japan except the United States.

Others of the eight points mean different things to different people. Thus the fourth clause reads:

"They will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victors or vanquished, on access of equal terms to the trade and to the raw materials of the world."

To the Germans and to the European nations this probably sounds as if we were going to reduce our tariffs and give access to all of them on equal terms to the rich domestic trade of the United States. On the other hand, our people certainly have not the slightest intention of opening our domestic trade to the products of the world in competition with our own higher costs and wages.

The policies declared by the President mean different things to different people. They are not frank. Maybe Russian peasants will follow a leader without understanding him, but Americans want to know where they are going.

Take the defense and lease-lend program itself. The President talks constantly of the tremendous assistance which is being sent abroad. He attacked Senator BYRD when the Senator gave figures to show the complete inadequacy of accomplishments to date. When the President talks of the program, he talks largely of tanks and planes on order and to be delivered in the future. He has not kept the public constantly informed of the real result. The best way to get results in the future is to know accurately how you have failed to accomplish your present goal, and why.

Take the whole story of the extension of the term of the draftees. We were told first in dramatic tones that the country was in infinitely greater peril than it had been a year ago when 12 months' training was considered enough. Any fool could see that on the surface we were infinitely better off than a year ago, with a much stronger Army and Navy and airplane capacity, and Hitler entangled in Russia instead of threatening England with invasion as he was in July 1940. But it was implied that there were great dangers of which we knew nothing and which were so secret that they could not be revealed. Then it was said that if the term was not extended indefinitely, the Army would immediately disintegrate, although only a few thousand draftees had to be released before 1942, and the power to draft as many others as might be needed to replace them was in the President's hands.

Early in the hearings I presented a definite plan showing that a total term of 18 months for the draftees and 2 years for the National Guard would permit the Army to be maintained at full strength with completely adequate training and the creation of a reserve. My plan was summarily rejected and the bill forced through with an extension to 2½ years. Why were there 202 votes against the bill? Simply because no sound reasons were given for making it longer than 18 months.

Later developments showed that again the administration had not been frank with Congress or the people. No sooner had the bill passed than Mr. Stimson announced that even those draftees who had no special claims of age or dependency would be released from active duty after an average of about 18 months' service, some as early as 14 months. His announcement made it clear that there was no immediate emergency such as had been testified to, but only the possibility of one arising in the future. On August 29 it was announced that 200,000 men would be released before the 1st of January, far more than were to be released under my plan. Had the War Department's announcements been made before the passage of the bill by Congress, there could have been substantial unity on that program. Those who voted with the President are naturally indignant that they were deceived. You can't get national unity unless you lay the cards on the table and tell the people the truth.

Take the tremendous excitement about the shortage of gasoline. No one has been able to find out until the investigation of the Senate committee what the actual facts are about the supply of gas. No one could understand why if there was a shortage something was not done about it months ago. No one has any confidence in Mr. Ickes and now the Senate committee investigation shows that there is no shortage whatever which cannot be met by the use of idle tank cars. So most people have come to the conclusion that the whole excitement was merely for the purpose of stirring the people up to a warlike frame of mind.

Those of us who are in Congress are told no more about the real facts of the situation than the people back home. There is no more frankness with us than there is with the press, rather less of it. If Mr. Roosevelt wants unity, he will have to give up the "hush hush" policy and take the people into his confidence. They have reached the point that when no reasons are given, they suspect there are no reasons to give.

SECOND. THE DEFENSE PROGRAM IS BEING USED TO PROMOTE NEW DEAL POLICY AND CONTROL

When the defense program began, I had some hope that it would not be used as a means to advance the New Deal. Mr. Stimson and Mr. Knox were appointed to the heads of the War Department and Navy Department. There has been no politics in those Departments. But gradually the New Dealers are securing more and more power over the economic problems arising out of the defense program, and are looking forward to even more power in the emergency after the war. From the beginning I and many others have urged that the Government create a War Resources Administration with a single head to boss the job of producing war materials. Such a recommendation was contained in the mobilization plan approved for years by the War and Navy Departments. It has met with general approval, but the President and his New Deal advisers are determined that no considerable power shall be delegated to any one man, particularly a man who has had experience in business. All the lines of power must be retained in the President's own hands so that every act of the Government is subject to his veto at the suggestion of the New Deal coterie. These advisers are still imbued with antagonism to the business system and to the business man, big or little, who does not adopt with them a policy of appeasement, or turn himself into a New Dealer.

First, we had the National Advisory Council, seven independent advisers without a chairman, each reporting direct to the President. Then we had the O. P. M., with Mr. Knudsen and Mr. Hillman as joint heads. But their power has been steadily curtailed by the creation of one bureau after another directly under the President, often overlapping, as in the case of Mr. Hopkins' lease-lend administration and Mr. Henderson's O. P. A. C. S.

The last reorganization has simply created another board, the Supply Priorities and Allocations Board of seven men. The set-up is even more confused than it was before, and the power is more divided. In some respects the O. P. M. is under this Board, in other respects it is independent. But the key to the whole plan is that out of the new Board of seven, four are confirmed New Dealers, Messrs. Wallace, Henderson, Hopkins, and Hillman. No one of them is a businessman and no one of them knows anything about the problems of the production of war materials. Knox, Stimson, and Knudson are in the minority. Henderson occupies three positions, one on the Board, one on the O. P. M., and a third as Price Administrator, independent of anybody except the President. According to gloating New Deal columnists, it has been found desirable to get Mr. Stettinius and Mr. Biggers out of all positions of importance and reduce Mr. Knudsen to a job where he has nothing to say about policy. For months the New Dealers have been sniping at every important businessman in the defense set-up, and now they have their way. In production policies, wage policies, price policies, profit policies, in the regula-

tions of all the business transactions of the ordinary man, the New Deal has all the power which it has long sought in time of peace.

Every industry must have a boss, and when it comes to appointing that boss, he must be a New Dealer. Mr. Ickes and the Federal Power Commission are trying to be czars over electricity. Mr. Ickes has been made czar over oil and gas. Mr. Henderson controls prices. Mayor LaGuardia is head of home defense. Mr. Tugwell is sent to represent American ideals in Puerto Rico.

The truth is that of all the apostles of disunity, Roosevelt is the chief. Unity to him means agreeing with his opinions. There are Democratic Senators who differed with him on some policy in the past who have never been invited to consult with him again, and have never seen him for the last 4 years. Contrast the situation with that in Great Britain. There is a coalition Cabinet with men of all parties and radically different views on many nondefense matters really representing the majority of their parties, but willing to postpone all activities on domestic matters until after the war. The President only coalesces with those who already agree with him

Look at the Supreme Court. Most Presidents have appointed judges of the opposition party as well as those of their own, but the President has appointed seven men, every one of them in intimate agreement with his views. Only the elevation of Chief Justice Stone departed from this rule, and of course, since he was already on the Court, the New Deal votes were not reduced.

The President is still insisting on the St. Lawrence waterway and the Florida ship canal, and has tied them up together in a great pork barrel with a defense label on it, though every well-informed man in Washington knows that neither of them have the slightest value for defense today.

It would be completely possible today to turn back W. P. A. to the States and combine the Civilian Conservation Corps and the National Youth Administration in one organization to train men for defense work. But the officials of all three of these organizations are busy trying to find some work for their organizations so they may keep their jobs, though the need for relieef agencies has largely disappeared, and the President will not recommend their abolition. All out for defense does not mean to him the giving up of things that are unnecessary for defense, if they are Presidential favorites or New Deal agencies.

The labor policy is the same story. In the World War there was a National War Labor Board with a representative of labor and a representative of employers, who suspended all labor strife, froze the open- and closed-shop situation, and agreed on wage increases when they were justified. But one of the policies of the present administration in the past has been a deliberate encouragement of strikes to secure a complete unionization of all businesses even if the employees didn't want to be unionized. That policy has not been radically changed. The National Mediation Board has insisted on strike settlements which grant a check-off system, even in industries where it did not exist, leading inevitably to a closed shop.

Hardly a bill is requested from Congress which does not seek twice as much power for the President as is necessary for the particular task. Power is sought for power's sake. A new theory of emergency has been adopted and Congress is asked to pass laws granting indefinite powers for the emergency period. Everyone knows that during the present administration that emergency will never be permitted to come to an end.

Vast unnecessary powers were sought in the Lease-Lend Act. I have referred to the unnecessary demand for indefinite extension of the draftees' terms. Power was demanded to authorize the requisition of every kind of property, railroads, utilities, manufacturing plants, even homes, furniture, and clothing. Congress modified the bill to cover only materials really needed for defense. The present demand for price-fixing legislation is an example. Price-fixing may be necessary, but the bill submitted by the President gives all power to the President, individually, to be delegated to the favorite of the moment, certainly some New Dealer. The power is to extend for an indefinite period. It covers not only commodities but every kind of service. If the bill were passed in this form, it would result in giving to Mr Leon Henderson complete and arbitrary power over the entire business of the Nation—retail, wholesale, manufacturing, repair shops, utilities, warehouses, even doctors and lawyers.

In short, there is every evidence today that the President has not abated one iota his interest in imposing on the United States a complete planned economy similar to the state socialism of Europe. There are plenty of New Dealers in Washington who are far more interested in putting across their policies within the United States than they are in crushing Hitler, and the President is appointing many of these men to key positions in the Government. He cannot secure national unity by any such policy.

THIRD. INTOLERANCE DESTROYS UNITY

The President himself is utterly intolerant of those who disagree with him. It is a fact well known in Washington. It can be easily confirmed by an examination of his own writings. Any who disagree with him are designated by him as either corrupt knaves or complete fools. Those who oppose his foreign policy are copperheads or tools of Hitler. In his most recent message he says that the joint declaration with Churchill is so clear-cut that it cannot be opposed by anybody in any major particular without automatically admitting a willingness to accept a compromise with nazi-ism. In his Labor Day speech he refers to those who differ with his foreign policies as appeasers and Nazi sympathizers.

Of course, his attack has encouraged the intolerance of his supporters, like the Committee to Defend America by Aiding the Allies. Only last week a full-page ad appeared in the eastern papers proclaiming in effect that every man who is not for an Atlantic war ought to be in a German uniform. The view that America should not intervene in Europe is perfectly consistent with the most intense love of America and an intense desire that Hitler be defeated. It is a reasonable view which can be just as patriotic as the President's own views. While the President encourages this kind of attack, there is no necessity to find any other cause for national disunity. You cannot secure unity by name-calling and intolerance.

FINALLY, THE PRESIDENT PURSUES POLICIES OF WHICH THE MAJORITY OF THE PEOPLE DISAPPROVE

If unity is to be achieved in a truly democratic nation, there must be unity on that policy with which the majority of the people agree. No leader who insists on going his own way in opposing the wishes of the people can reasonably ask for unity in support of his policies. He can persuade the people if they will be persuaded. He can put the problem up to their Representatives in Congress and secure their approval, but he cannot go his own way against them unless he imposes an effective dictatorship on the people.

The people today are opposed to intervention in Europe. Yet it is difficult to interpret the joint declaration with Churchill except as a definite policy to enter the war. How else can Nazi tyranny be destroyed? How else can Germany, Italy, and Japan be disarmed? Certainly Mr. Churchill regarded this declaration as a pledge on the part of the United States. It is impossible to perform that pledge except by war. The President has no constitutional right under our form of government to commit the United States to war, and, therefore, Mr. Churchill was probably deceived.

It is frequently said that Congress in the Lease-Lend Act has committed the United States to war, and that the President is merely carrying out that policy. This is utterly unfounded. The Lease-Lend Act expressly negatives the idea of convoys and of sending troops to Europe.

The policy of intervention in the war has never been approved by Congress, and to it this country is not committed. Under the Constitution the President has no right so to commit it. If he desires to carry out such a policy, he should submit it to Congress, as the representatives of the people, who alone can declare war. He can do that even without asking for a declaration of war by asking Congress for authority to authorize the sending of troops to Europe and Africa. He does not dare do so because the majority of the people are opposed to any such action. Once Congress has acted, I certainly shall cooperate 100 percent in an all-out war policy. But until Congress has acted I do not propose to surrender my own carefully considered opinions.

To me, a policy of intervention in Europe seems futile and utterly dangerous. It leads inevitably to tremendous losses of men; to tremendous outpouring of money. Assuming it to be successful, it leads to joint control of the world by England and ourselves. If we are going to disarm Germany, we are going to have to see that Germany will remain disarmed. We are going to have to police the world and determine the territory and the powers which other nations shall have. If we admit that our interests require an intervention in Europe, then our interest requires a perpetual control of Europe. I do not believe it can be done without wrecking and impoverishing the United States. It implies an imperialism which is absolutely contrary to democratic principles, and to the nature of the American people. They could not and would not make the success of imperialism which the British have made in the last two centuries. It is not their manifest destiny. Above all, it is impossible to proceed with such a policy, probably under any government, certainly under the present administration, without imposing on this country a complete system of state socialism. The point of view opposed to intervention in Europe is reasonable. It is held by a majority of the people. No national unity can be secured until Mr. Roosevelt accepts their view or persuades them to accept his.

I believe it is desirable when all the world is in flames that there should be a unified opinion in America as to its own course. I am certain that it can be secured if Mr. Roosevelt is really interested in securing it. Here is the eight-point program I suggest:

First, let Mr. Roosevelt and his administration take the country into their confidence and state in clear terms what policy he wishes the country to adopt. Treat us like Americans and not like Russian peasants. Second, encourage the press to perform its traditional job of keeping the public informed and checking the abuses of Government. Third, let all legislation dealing with national defense be limited solely to the definite purposes of national defense and not include all kinds of power which may easily be used to carry out New Deal economic objectives. Fourth, let the President turn from the Hopkinses and the Hendersons and the Ickes in whom Congress and the public have no confidence, to administrators chosen for their ability, regardless of their politics, ideologies, or devotion to New Dealism. Fifth, let the President consult with those who disagree with him instead of denouncing them and discourage intolerance against those who disagree with his policies, as well as against those who support them. Sixth, let Mr. Roosevelt publicly assure the country that he has made no secret commitments with Churchill or Stalin and that he will follow the letter of the Constitution by submitting any proposed understanding immediately to Congress for approval. Seventh, let Mr. Roosevelt again restate for the mothers and fathers and draftees of America his preelection pledge that no American boys will be

sent to fight in foreign lands outside of the Americas. Eighth, let Mr. Roosevelt unite the country on a policy agreed to by both political parties and 80 percent of the people on impregnable defense and all material aid to England—short of war unless this continent is attacked.

Along these eight points lies America's road to unity and peace and the permanence of our democracy.

Tribute to the Late Representative Edward T. Taylor

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, September 5 (legislative day of Tuesday, September 2), 1941

POEM BY HORACE C. CARLISLE

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a beautiful tribute to the late Representative from Colorado, Hon. EDWARD T. TAYLOR, penned by his devoted friend Mr. Horace C. Carlisle.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Mark the perfect man, and behold the upright; for the end of that man is peace.—Psalms 37: 37.

A GOOD MAN GONE

E-very man that ever knew him,
D-own unto the day he died,
W-ould ascribe most freely to him
A-ll the virtues, which abide
R-ichly in the noblest life
D-welling in this age of strife.

T-ime alone will tell, in story,
H-ow he ranked among his peers—
O-n his noble life a glory,
M-ellowed by the breath of years,
A-ged him—few will live to be
S-o much missed so long as he.

T-actful in pursuit of duty,
A-s he daily did his part—
Y-es, life was "a thing of beauty,"
L-ong enjoyed, with all his heart.
O-ver, past the Great Divide,
R-ests he, on the other side.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ARTICLE BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article prepared by me on the St. Lawrence waterway.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Littell Digest of April 1941]

ST. LAWRENCE WATERWAY

(By United States Senator STYLES BRIDGES, of New Hampshire)

The proposal to build the St. Lawrence waterway will undoubtedly be one of the outstanding issues before this Congress. The St. Lawrence waterway is no new issue. It has been up before with Presidential recommendation by Mr. Roosevelt and has been defeated. It is a project international in character which will cost, according to preliminary estimates, over $550,000,000, and based upon the experience of previous projects, particularly if a deeper channel is built, the cost might run to over $1,000,000,000. As a project, it is a sort of combination of the Florida ship canal and T. V. A.

The country and Congress have over the years heard all the arguments pro and con and have decided decisively against it. Now it is being dragged forth under the guise of national defense. I have consistently supported all sound defense measures before the American Congress, and I shall continue, but I do not want to see this ruse used and an unsound and unjustifiable project put through. The President recently took $1,000,000 from the national-defense fund, without the authorization of Congress and with this is having an engineering survey made of the project.

The St. Lawrence waterway is not in the interests of national defense, in my judgment; it is the reverse. If this continent is ever invaded, the valley of the St. Lawrence is one of the easiest routes. By building the seaway we would be building an aggressive nation a highway to the heart of America.

The building of this project would be a serious blow to the coastal cities and towns of the Northeast and would greatly injure the principal ports. It would greatly damage the railroads of the country that are having a real struggle to get by today. It would throw thousands of persons employed by the railroads out of employment. The project always has been and is today opposed by railroad labor. It would be hundreds of millions more of Government money spent for the development of electric power when we have a surplus of electric power in this area at present and unlimited possibilities wholly within our country for future development.

Among the arguments heard by its proponents in the interests of national defense is that by having this seaway we could develop shipyards and navy yards in the Great Lakes. Of course, this would be a blow to the States on the Atlantic and the Pacific coast where the navy yards and the shipyards are now located. Such a seaway would be vulnerable for attack, and it is easily conceivable that a few well-placed bombs might so destroy the seaway that such vessels as were being built inland would be bottled up in the Great Lakes.

It would take a period of years to build the seaway, and by that time certainly the present national emergency will be over.

The seaway, by the admission of experts, would be frozen up several months of the year and not navigable, which would make it unattractive from a year-round commercial viewpoint.

Most of the people of Canada view the project suspiciously even though the United States would pay most of the bills and Canada would get most of the benefits.

The Montreal Gazette recently said: "The Canadian people are not interested in any seaway development whether for navigation or for power purposes. They are concerned mostly with the war, upon which depends their survival as a nation. Canada has no money for such a project now, nor will she have for many years to come."

The world is in a critical situation today, and our defense program is lagging. To adequately defend this country, large sums of money must be raised. We need the money we have available to spend for planes, for tanks, for antiaircraft guns, for battleships; and we cannot, with our finances already strained, as a nation afford to dump money into a dubious project with no assured advantages merely because it will serve as a vehicle for further New Deal spending.

Plight of Small Industries

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ARTICLE FROM WASHINGTON TIMES-HERALD

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD an article appearing in the Washington Times-Herald of Sunday, September 7, and written by John M. Fisher.

This article points to the great danger to a great number of the country's small industrialists because of the fact that they may be unable to obtain raw materials and equipment, and, in part, because they are not able to obtain defense work.

I offer this article for the RECORD, partially in connection with Senate Resolution 157, which I introduced on August 19 and which would provide for a committee to investigate priorities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of September 7, 1941]

NON-DEFENSE PLANTS FEAR WIDE CLOSING—90 PERCENT COMPLAIN TO UNITED STATES CHAMBER THEY LACK MATERIAL

(By John M. Fisher)

Ninety percent of the Nation's small nonarmament manufactureers feel they will soon be forced to reduce operations drastically, or even shut down, because of raw material or equipment shortages caused by the arms program.

This is the major conclusion drawn from a survey of 6,000 manufacturers, just completed by the Chamber of Commerce of the United States, the results of which were announced yesterday.

MATERIALS DIVERTED

The Roosevelt administration has been diverting materials and commodities to the armament industries almost to the exclusion of civilian industries, many of which have been overlooked in the award of arms contracts.

This situation brought such protests that the President was forced last week to establish a new division within the Office of Production Management—the division of contract distribution—to farm out contracts to small businesses and help convert them to arms production.

There was no assurance in the move, however, that purely civilian industries would be maintained.

FEAR FOR NEAR FUTURE

The chamber reported that fear for the immediate future seems to be the chief concern of the average small manufacturer and that curtailment of production, disemployment, even complete shut-downs are inevitable unless the situation is changed.

While aware of the Government's problems under the stress of rearmament, the little manufacturers (really the backbone of the Nation's industry) generally said they should have received more advance warning of material shortages for their industries.

DIFFICULTIES MOUNTING

Typical of the replies received in the chamber's survey is this from a Chicago manufacturer of screw-machine products:

"While we are presently running along with reasonable satisfaction, considering the times, we anticipate ever-increasing difficulties in obtaining our necessary raw materials. In the case of raw materials required for nondefense items, it seems to us that the near future will bring about an almost complete cessation of deliveries."

This Chicago manufacturer's armament work now represents, approximately, 60 percent of his total business.

SOME SHUT-DOWNS ALREADY

Shut-downs have occurred already here and there, and in many instances production has been halved. Many manufacturers are dubious about their ability to convert facilities to arms production. Their specialized machinery is designed only for the fabrication of a specialized product.

A letter from a Pennsylvania manufacturer of radio tubes illustrates this point. He writes, in part:

"Our problem, basically, is that our equipment for the manufacture of any of our products—radio receiving tubes, incandescent lamp bulbs, and fluorescent lamps—is very highly specialized. We probably have received our proportionate share of defense business in orders for those items we are equipped to produce. But defense business will not come close to making up for our loss of normal business."

SUBSTITUTES SCARCE, TOO

Although a relatively few manufacturers have achieved notable success in the development of substitutes, the great majority are discovering that substitutes are as difficult to obtain as the original material. Production experts who think they have the answer in substitutes are swiftly disillusioned when they find that the new material is also on O. P. M.'s priorities critical list.

From New York comes a report from a manufacturer of bracelets for wrist watches. He has successfully developed several substitute materials, but stainless steel wire is essential to the manufacture of his product. In order to continue operations, he must have 20 pounds of this wire. Its value is about $40.

Coordinator of Inter-American Affairs

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. BRIDGES. Mr. President, one of the departments of the Government which I believe is worthy of commendation for the very excellent job it is doing is the office of the Coordinator of Inter-American Affairs, supervised by Mr. Nelson Rockefeller. There appeared in the Christian Science Monitor of September 5 last an article entitled "Good Neighborliness Without Fanfare," written by Mr. Joseph G. Harrison. I ask unanimous consent to have the article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of September 5, 1941]

GOOD NEIGHBORLINESS WITHOUT FANFARE

(By Joseph G. Harrison)

Among the emergency defense measures fully deserving to be carried on and expanded after the crisis is over is the work being done by Nelson A. Rockefeller as Coordinator of Inter-American Affairs. Simply put, Mr. Rockefeller's office is giving the good-neighbor policy a practical twist which no amount of speeches and resolutions have succeeded in doing.

Designed to draw the United States and Latin America closer together culturally, politically, and economically, and to strengthen common pan-American defense efforts against totalitarian aggression, the Coordinator's office has, so far, accomplished a great deal with a minimum of publicity.

One wouldn't be far wrong in saying that Mr. Rockefeller was appointed to keep the United States from repeating past and making new mistakes in regard to Latin America. There are few precedents for such a job in the history of this or any other country, although the time may well come when such a position will be one of the most important posts in the Government.

In the face of all that has been said about good neighbors, pan-Americanism and the community of interests between Anglo Saxons and Latin America, it is encouraging to find someone in Washington actually doing something about them. Since fact rather than fancy usually lies at the bottom of friendship between two nations, Mr. Rockefeller intends to see to it that good relations between this country and its neighbors to the south have a tangible and mutually beneficial basis.

FULL COOPERATION REQUIRED

The past decade has shown that if the United States doesn't make a substantial effort to woo and win Latin America, a number of other nations—some of which Washington has no desire to see become too strong in the New World—are more than eager to do so. Since the war cannot be reasonably expected to put an end to the attempts of certain Old World nations to gain undue influence south of the Rio Grande, it seems imperative that the work of the Coordinator's Office be expanded and that it receive full cooperation from all American agencies and officials.

If the United States is farsighted enough, there is little reason why this country should not maintain the distinct improvement in its relations with Latin America which the war has made possible. A little wisdom and tolerance, solidified by good, sound commercial considerations, could open a new era in inter-American relations.

The Office's work can be divided roughly into two sections. One is to aid the economic development of such Latin American countries as ask for it, thereby adding to their political and social security, which, in turn, will aid trade relations with the United States. The other is to gear Latin American production of raw materials to the immediate defense needs of this country.

At the same time, the Rockefeller group has successfully waged a quiet campaign to weaken German and Italian influence in Latin America. The recent blacklisting of a large number of firms and individuals in Latin America wh'h were suspected of aiding the Axis war effort is an example of this effort.

The Rockefeller task has been facilitated by the extent to which it has attempted to explain the Americas to each other. It has lent immediate and strong support to all cultural projects helping to bridge the very ignorance which exists in both the United States and Latin America regarding the other's life, intellectual achievements, and civilization.

FACTS AND FIGURES READY

The particular success of the Inter-American Office stems from the fact that it has been willing to work on preliminaries and to lay the groundwork for a substantial bettering of inter-American commercial relations. If an American businessman wants to operate in Latin America, or if a Latin American wants to trade with this country, the Coordinator's Office not only has the facts and figures around which to build such trade, but it is also ready to throw its considerable influence behind any legitimate commercial scheme.

Of unusual significance is that fact that Mr. Rockefeller is expected to conduct his work in such a way as "to represent the interests of the other American Republics," according to an official summary of the Office's activities.

This is a very far cry from the days when the principal concern of Washington, so far as Latin America went, was to protect the interests of American enterprises—some of which were only too frequently engaged in a ruthless exploitation of Latin American resources and population.

It is common knowledge that most of America's troubles south of the Rio Grande are an outgrowth of a not entirely unfounded suspicion of "Yankee imperialism." When such a feeling has once grown up, unusually strong measures are needed to counteract it, and the Rockefeller committee is apparently aware of this. For that reason it has subordinated promises and after-dinner eulogies to concrete action with the result that Latin America is giving this country an unwonted measure of cooperation.

Having proved what is possible in war, it would be doubly tragic if even greater advances in inter-American harmony are not made in the peaceful days to follow. The Rockefeller groups give promise that such advances will be made. The result will be well worth the patient effort.

Testimony of Carl H. Mote on Bill to Authorize President to Requisition Property

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 1, 1941

STATEMENT BY CARL H. MOTE

Mr. LUDLOW. Mr. Speaker, on June 30, 1941, Mr. Carl H. Mote, a citizen of Indianapolis, widely known throughout the country as an attorney, businessman, and publicist, gave interesting testimony before the Committee on Military Affairs of the Senate in the hearing conducted

on S. 1579, the bill to authorize the President of the United States to requisition certain property for the use of, or disposition by, the United States. Mr. Mote, who is president of the Northern Indiana Telephone Co. and the Commonwealth Telephone Corporation, testified as follows:

STATEMENT OF CARL H. MOTE, PRESIDENT, NORTHERN INDIANA TELEPHONE CO.; PRESIDENT, COMMONWEALTH TELEPHONE CORPORATION

The CHAIRMAN. I believe, Mr. Mote, that you are the president of the Northern Indiana Telephone Co. What is your residence?

Mr. MOTE. 5685 Central Avenue, Indianapolis.

After coming to Washington, I have been able over the week end to read a bit of the testimony that was given here. I read the examination of Judge Patterson.

I may say that I was struck in reading his testimony by the emphasis that was placed upon the details—with which, of course, this committee is concerned—the details of this bill, of this bill or a similar measure, if enacted and recommended for passage, such as machine tools in southern California, in which Senator DOWNEY was deeply interested, and rightly interested. I have read a bit of the evidence and have heard the last two witnesses on the subject of patents.

It has seemed to me that there is involved in this proposed legislation issues that far transcend the matters which the committee has considered heretofore.

As a citizen, as a taxpayer, as a corporation executive and manager, I ask, What were the reasons for urging Congress to enact S. 1579?

Such a measure has never been necessary in the history of this country during any war it has ever fought. In our last war "to make the world safe for democracy" and "to end all wars," the President was empowered during the war to operate certain privately owned property, especially transportation and communication; but that, I believe, is as far as his power went. He did take over the railroads and communication facilities; and it was years after the war before these properties recovered from the disasters inflicted upon them during the period of Government management. Moreover, in 1941 we are not yet in war.

What, I ask, are the special circumstances or conditions today which make such a measure as S. 1579 necessary?

I understand the original bill was introduced June 2 at the instance of the War Department with the approval of the Navy Department, the Office of Production Management, and the President. I understand a substitute bill has come from the War Department since these hearings began.

Just why is it believed in 1941 by anybody in America that the confiscation of privately owned property is necessary or proper? Is it because the ruling oligarchy wants to engage in a foreign war that is known to be unpopular and that this ruling oligarchy believes it necessary first to strip our citizens of all their property in order to crush their resistance and eliminate their opposition? Or, is it because the prospect of a foreign war offers the ruling oligarchy a mask behind which this oligarchy can accomplish the collectivization of all privately owned property and introduce America to the Marxian state?

I suspect both these reasons are motivating our bureaucrats in Washington. I have been told that bureaucrats already have told your committee that this measure is necessary for defense and necessary to obtain the proper response from labor. These are reasons stated in such general terms that they are difficult to analyze or answer, and it ought to be obvious that they are quite insincere and hypocritical, else there would be more particularity, more revealing facts given to the members of this committee.

I don't believe the confiscation of any privately owned property is necessary for the defense of the country and I do not believe labor demands any such un-American measure. I don't believe labor is wholly without knowledge of what happens finally to labor when the state undertakes to stamp out the rights of private property. At the beginning of the French Revolution there were new dealers who wanted to confiscate all privately owned property and change everything, including human nature. The French trade-unionists who cheered such proposals lived to see their unions dissolved, after which they were compelled to walk the streets without work and in deep despair.

Certainly, the Government has the right to use all our property in times of common peril but there are methods by which the use of such property can be acquired without giving the President any more arbitrary power over the lives of our citizens.

I have long been amazed at the lack of courage exhibited in America by its foremost business executives and managers to resist the aggressions of political bureaucrats and revolutionists in Washington. I think the foremost business executives and managers of America have betrayed their stockholders, their bondholders, and their employees and that individually and collectively they ought to be discharged for their indifference. I say this partially because of the allegation which I understand has been made to this committee that the President already has the power which this bill in its original form undertook to give him. I say it also because such a measure as this ought to have brought every business executive in America to Washington with monkey wrenches and lead pipe, and it would if they were worth their pay as trustees for their stockholders, their bondholders, and their employees.

The only defeatism in America which I consider important is the defeatism of the American businessman who has seemed to be resigned to the oblivion which has been prepared for us if we engage in a shooting foreign war and if we do not soon begin to wrest the political controls from Washington bureaucrats.

This measure, or any measure now a law, if applied and administered by the President, marks the end of the world so far as I am concerned and, I believe, so far as the members of this committee are concerned. None of us will live to see a return of the America we have so deeply loved.

A week ago I spent 2 hours in New York City with the president of the National Industrial Conference Board, Dr. Virgil Jordan. I consider him not only the foremost American economist but, above all, a citizen of great patriotism and courage. I had talked with him a little more than a year ago. A speech which he made at Philadelphia on February 24, 1940, had given me goose pimples when I read it. On September 1, 1940, Dr. Jordan wrote a foreword to the Twenty-fourth Annual Report of the National Industrial Conference Board. I never heard it referred to in the Presidential campaign when we had the candidates of the two major political parties running in tandem. But this is what Dr. Jordan wrote on September 1, 1940:

"To many men of insight and integrity in the American community it seems that after 7 years of persistent dissipation and demoralization of its resources by a subtle, comprehensive, and carefully planned political conspiracy, the American Republic, like the French, has been destroyed and replaced by military dictatorship, and after little more than five generations the great American experiment in free, creative community life has been ended for an indefinite period.

"To many such men, however, hopeful that they may prove mistaken, the application of 'emergency' legislation of conscription and confiscation of the community resources by the State immediately preceding a national election sounds ominously like the death rattle of the American Republic. They must see in it the symptoms of advanced political degeneration and social disintegration, signifying the collapse of personal independence, self-discipline, and capacity for voluntary cooperation in the American community."

Dr. Jordan used a label. He labeled the Government in Washington, D. C., as a "comprehensive and carefully planned political conspiracy."

With the candidates of the two major political parties in America running in tandem in 1940, it is apparent now why the Republican National Committee did not use Dr. Jordan's penetrating language as a deciding weapon against the New Deal. With a thousand-ton tank available for a blitzkrieg on the New Deal, the Republican National Committee used popguns instead, and these popguns annoyed Mr. Willkie more than Mr. Roosevelt, because Mr. Willkie was right behind Mr. Roosevelt and on the same bicycle.

I cannot improve upon the language Dr. Jordan has used—"comprehensive and carefully planned political conspiracy." This language explains what I think and explains why I am opposed to such legislation as S. 1579, both the original bill and the substitute. What, I ask, has become of security? What has become of the "due process of law" in America?

As long ago as September 1, 1940, "many men of insight and integrity," according to Dr. Jordan, believed the American Republic had been destroyed and replaced by "military dictatorship."

I respect and honor the soldiers, sailors, and air force of America, but I object to a "military dictatorship" as much as I object to any other, if we are to be robbed of our property and shorn of our liberty. There is not now, and there never has been, any necessity in America to compel our citizens to defend themselves. What we are threatened with, however, is force that seeks to compel our citizens to engage in the wars of other countries. In such wars force would not be necessary if this country were united on the wisdom of such a course. But the facts are that a large majority of our citizens are being driven by a small but persistent and powerful minority of our citizens into war. That is why S. 1579 was sent to Congress for enactment. That is why more money and more power is being continually demanded. Shades of "democracy"! I should think the word would choke the Pharisees who misuse it.

Their pretense that these foreign wars are our wars is equally insolent.

Of course, it is not really important whether we become an impoverished people and a collectivist state by the process of outright confiscation, which is quick and certain, or through the process of extortionate taxation. By the latter process we will shortly reach the point where privately owned property is unable to bear the increasing burden of a public debt that is approaching the magnitude of our total national wealth.

Early in 1941 Dr. Harold G. Moulton, president of the Brookings Institution, in a pamphlet which he wrote, said the country would be able to carry the public debt and escape inflation if defense appropriations for the period of 1941–43 were limited to $20,000,000,000, which he believed would be the maximum. I am advised that Congress already has appropriated $42,000,000,000.

I am against a foreign war, of course, but I am in favor of reasonable appropriations for defense. I am opposed to any hoax inflicted on a long-suffering people in the name of and behind the cruel mask of "defense." As an American, I renounce any share in the "comprehensive and carefully planned political conspiracy" which is preparing America for a bloody revolution. As an American, I denounce the conspirators—all of them—and wherever they are—in the White House, in the Congress of the United States, or in any

of the departments and bureaus of the Federal Government.

In the New York Times Magazine of Sunday, June 22, Mr. Morgenthau, who was called "Treasurer to the democracies," was quoted regarding American objectives in the immediate future.

"There is just one job that faces the world today. That job is to lick Hitler," he said. To this I say, as a realist, if Hitler smashes Stalin and his cutthroats of Red Russia, the job of licking Hitler is going to be rather difficult.

After Hitler is licked, according to Mr. Morgenthau, we are going to have "complete disarmament," an "international police force," and "redistribute our gold * * * to help rebuild the world."

If these are our peacetime objectives, after we have licked Hitler, then I say candidly, I am without enthusiasm for licking Hitler. I did not like the treaty Hitler made with Stalin, just before Hitler invaded Poland, though I was realist enough to recognize the military purpose of the treaty from Hitler's standpoint. I am glad that treaty has been scrapped and I hope Germany will be able to destroy the last vestige of communism in Europe. I have always mistrusted the coddling of Communists and communism here in America and I still do.

I don't believe in disarmament, because disarmament always necessitates and leads to rearmament on an increasing and ever vaster scale. I don't believe in an "international police force" because that would result inevitably in more wars rather than fewer wars. I am opposed to "union now" with Britain, or with the bloody Stalin, or with Nazi Germany, or with anybody else.

To redistribute the gold we own, as Mr. Morgenthau advocates, means that we would return to gold as a national and international monetary standard and to that I am bitterly opposed. It is to the manipulation of money, and I include bank-deposit money, and especially gold, that this country is indebted, in the main, for every industrial depression in our history from 1837 to this moment. Naturally, I am opposed to the gold standard because I am opposed to every racket which enables a few to prey on the many. No one who is without an understanding of money and banking can have the slightest knowledge of what this European war is about, and why this administration is itching, or was itching, to get into it.

In a preface to the second edition of The Servile State, written in 1913, Hilaire Belloc defined "socialism" as "vesting in trust with politicians what is now private property." This, he said, could be accomplished only by "confiscation." It makes no difference whether it is the lust for power or the pretense of promoting "defense," or the two combined, that motivate the bureaucrats who ask you to enact this legislation. The result is socialism.

It is beside the point to argue that the power to confiscate private property will not be used, or that it will be used sparingly. The history of this administration for 9 long years is a history of continuous pressure on Congress for greater executive power. This is always true when a nation is being catapulted into Caesarism. Most of the power surrendered to the executive department by Congres in the last 9 years has been used, and there is no reason to believe any of it will be unused in due course.

If the patriotism of the country is questionable, if the voluntary behavior of American citizens is doubtful, Congress had better inquire into this state of affairs.

Of course, this bill is not lacking in timeliness. In the past 2 years the administration in Washington has made this country the virtual ally of England, which has lately committed itself, and so has Mr. Roosevelt, to aid "red" Russia. It is certainly significant that Congress is asked to provide for the confiscation of private property in America at a time when the President is promising to aid Stalinism in Russia.

Such an alliance is in complete harmony with everything charged against this administration as early as 1934 by the late Dr. William A. Wirt, of Gary, Ind.; namely, the socialization of all privately owned property. Finally, we have from the administration itself a measure which undertakes to accomplish what Dr. Wirt said was its objective 7 years ago.

If we are permitted to hold an election next year, it is my opinion a Congress will be chosen that will undertake to recover some of the power heretofore abjectly surrendered. I don't believe Mr. Willkie and his secret sponsors can prevent it. I am sure this is true of Indiana.

The CHAIRMAN. Senator GURNEY, have you any questions?

Senator GURNEY. No questions.

Anniversary of Birth of Jane Addams

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ARTICLE FROM THE WASHINGTON POST

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Washington Post of August 31 entitled "Jane Addams' Anniversary Is on Saturday." It contains in some measure a summary of the life of one of Illinois' great women, whose life was dedicated to the betterment of mankind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of August 31, 1941]

JANE ADDAMS' ANNIVERSARY IS ON SATURDAY

The birthday anniversary of Jane Addams, humanitarian, founder of Hull House, and leader in the movement for world peace will be observed throughout the United States next Saturday.

Groups of women of wide social interests, many of whom knew Miss Addams and worked in close cooperation with her, will unite in paying honor to her memory and her service to humanity. Prominent among these groups is the People's Mandate Committee, which was the last project Miss Addams approved. At the headquarters of the committee in the Hay-Adams House yesterday, Miss Mabel Vernon, director of the mandate, told something of the story of this great American whose unselfish work for social betterment won praise and admiration throughout the world.

Jane Addams was born in the little town of Cedarville, Ill., in 1860. Her lineage was entirely American and her ancestry was Quaker. It is interesting to know that as a child Abraham Lincoln was her ideal. He was a friend of her father and used to address him in his letters as "My dear double-D Addams."

After she was graduated from Rockford College she went to England, where she discovered Toynbee Hall, the great settlement in the heart of London's slums. She determined to fight poverty in this country in a similar way and returned to Chicago to found Hull House, the first social settlement in this country. Miss Addams had the conviction that people, however unlike in habits and traditions, could live in peace and social intercourse. At Hull House she worked out on a small scale what she hoped for in a world community.

In 1915, when Europe was torn with war, representatives of 11 nations held an International Congress of Women at The Hague to protest against the futility of the conflict. Miss Addams led the group from the United States and was chosen as the president of the congress. She headed the delegation which was sent to the warring nations to urge the submission of the issues to a conference of neutrals.

Later the platform adopted by the congress was taken to President Wilson. Some of its principles are to be found in the famous 14 points. It is interesting to note that the eight issues set forth by President Roosevelt and Prime Minister Churchill as the result of their recent conference are all contained in the platform adopted by the Women's Congress at The Hague.

In the midst of the ever-expanding work of Hull House which Miss Addams developed into a social settlement known throughout the world, she never ceased her efforts to "substitute law for war and political processes for brute force."

In 1931 she was one of the recipients of the Nobel Peace Prize, the only woman to whom that honor has been given. When the twentieth anniversary of the Women's International League, of which she was international president, was celebrated in Washington in 1935, she received tributes from leaders of all the great nations.

As a part of the observance of Miss Addams' birthday, the following letter from Dr. Mary E. Woolley, president emerita of Mount Holyoke, who is the chairman of the People's Mandate, is being sent to all members of the committee:

"It was my good fortune to know Jane Addams for many years, and as I have thought of our meetings have been impressed by the vividness with which I recall them.

"The first was at Wellesley College in the late nineties, when Miss Addams came to speak for the College Settlement Association and I, a young instructor, was asked by the student officers to help entertain her at an informal tea. One of the lasting impressions of that first meeting was that simplicity and sincerity are the hallmarks of the great.

"I recall breakfasting with Jane Addams at a Washington hotel early in the first World War and her deep concern over the situation then. As I look upon the world tragedy of today I am profoundly grateful that she is spared the anguish of this experience.

"I recall vividly her all too few visits and talks at Mount Holyoke College; her address on peace at a great gathering at Carnegie Hall after she had been in Europe; above all, an unforgettable visit with her at Hull House.

"One form of immortality is the immortality of influence. We know that Jane Addams 'yet speaketh.'"

In the Nation

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1941

ARTICLE BY ARTHUR KROCK

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the

following article by Arthur Krock in the New York Times:

[From the New York Times of September 4, 1941]

IN THE NATION

MR. WILLKIE, MR. LANDON, AND THE REPUBLICANS

(By Arthur Krock)

WASHINGTON, September 3.—An important and challenging radio speech by ex-Governor Landon at Sparks, Kans., last Saturday, and reprinted in today's CONGRESSIONAL RECORD, failed to attract the attention in the East which its subject matter and treatment merited. The address dealt with two topics of moment and deep interest—the attitude of the Republican Party toward the President's foreign policy and the degree to which critical free speech should continue to be exercised in this country.

Governor Landon, who preceded Mr. Willkie as the Presidential candidate of the Republican Party, is a noninterventionist; and it is agreed that he expresses the views of the sincere, moderate group of that persuasion which is not influenced by like or dislike of any of the belligerents in the present war. His reasons for his position seem, among others, to be these. A conviction that this country is unready to run the risk, with its present and prospective military equipment, of war on two-ocean fronts, and a belief that the United States has not the power, inclination, or obligation "to make all the world safe from want and fear" and to impress the four freedoms upon the world.

But, like some of the radical isolationists who insist that the United States regardless of the outcome of the war in Europe, will face no dangers to its independence and security, Mr. Landon is a strong backer of American rearmament. This has ranged him among the critics of the rate and efficiency of defense production, and it was the right and duty of such citizens to criticize that he was in part discussing last Saturday Because of his character and sincerity and the unquestioned fact that Mr. Landon speaks for many Americans concerning wartime policy, the speech is worth the consideration of those who take the other view.

Benefit of criticism

He said that:

He welcomes the President's concession that "business as usual" is out, that "the fight ahead will be long and tough"; also Mr. Roosevelt's endorsement of a reduction in normal expenditures of government. But no attempt has been made by the Executive to do this. Also, the charges of agging armament production made by "responsible men" should not be "answered with wisecracks." "The situation is not a joke."

He said further that a demand is arising from "half-baked liberals that the time has come to suppress free speech and the Bill of Rights. We have witnessed the attempt to discourage the nonpartisan minority to question and interpret the claims of the national administration, not only as to the dangers of its war policies but also its claim of satisfactory progress in national defense." A government to be healthy requires the benefit of minority criticism, and he for one (said Mr. Landon) would urge Republicans as well as others so minded to continue this criticism, which goes on in Great Britain "even in the midst of the stress and strain of war."

Mr. Landon then discussed a determination attributed to Mr. Willkie "to support [in the 1942 elections] anti-isolationist candidates regardless of their party affiliation or economic views. If they are right on the foreign issue [the reputed Willkie quotation continued], then I will be for them and will take the stump for them."

Mr. Willkie's position

The Republican standard bearer of 1936 interpreted these words, ascribed to the Republican standard bearer of 1940, to mean that the President and Mr. Willkie will have a bipartisan slate in the congressional primaries on a platform of foreign affairs. He attacked this as an attempt to impose the one-party system of Germany and Russia, and dictated thought among the representatives of the people in Congress—a misuse by Mr. Willkie of his titular leadership of the Republican Party with which, thought Mr. Landon, his successor should labor from within or altogether leave. He predicted a referendum in the 1942 elections, both as to foreign policy and the management of the defense program. But he said that the requirement of the "new firm of Roosevelt & Willkie" was merely personal loyalty to the President.

This correspondent today asked Mr. Willkie if he has determined on any such position; if, for instance, he would simultaneously urge the nomination of a Senator PEPPER over a Senator GEORGE by Democrats, and of a Treasury-raiding Republican who supported the President's foreign policy over such a Republican as Minority Leader MARTIN. "Of course not," he replied. "The foreign policy issue should definitely be fought out in both parties, but it should be fought within the parties. Independents, if so minded, can make the fight all along the line and across it. But party leaders must first labor with their own."

Thus, the "new firm of Roosevelt & Willkie," on the terms reported to Mr. Landon, appears not to have been formed and not to be in process of formation. That each will pursue a parallel course on foreign policy—war not intervening—seems certain. But Mr. Landon, it appears, can meet Mr. Willkie in intramural debate in the 1942 primaries.

War Department Building

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

EDITORIAL FROM THE ILLINOIS STATE JOURNAL

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the August 19 issue of the Illinois State Journal of Springfield, Ill.:

[From the Illinois State Journal, Springfield, Ill.]

WAR DEPARTMENT BUILDING

The War Department has upset Washington by a proposal to build a $35,000,000, 35-acre structure across the Potomac in Virginia. Objectors say it would spoil a fine vista, would not conform to the city plan, and would require new roads, new utilities, and new housing across the river.

From reports of crowded conditions in Washington, it would probably be wiser to build the new Army headquarters somewhere in the Middle West. Major L'Enfant laid out a city on a broad scale, but Washington has grown beyond what was planned for it. Today it is too large for itself; it does not have the facilities to move traffic speedily.

But perhaps the most important consideration is that of national defense. If there is any danger of air attack from Europe, Washington is as vulnerable as an Atlantic coast city. A raid on the Capitol could paralyze the machinery of National Government, which is already badly twisted up with red tape.

Decision of the War Department to transfer many of its activities inland would insure that this vital section of the Government would not be caught in whatever might happen to Washington. It would insure that the defense of the Nation would go forward unhampered, and even in times of peace and preparation, as at present, the War Department might find it could accomplish more away from Washington.

At present, all that our Government has moved to the interior is the principal portion of its stock of gold bullion, which is safeguarded at Fort Knox, Ky. If it is considered the part of wisdom to move the gold, which is imperishable, to a safe place, why not move the important personnel of vital departments? The War Department could do far worse than transfer many of its divisions, now in Washington, to such a place as Fort Knox.

Byrd Plan To Reduce Nondefense Spending

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 8, 1941

ARTICLE FROM UNITED STATES NEWS

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the United States News of September 12, 1941, entitled "Byrd Plan to Reduce Nondefense Spending by Government Generally Favored by Press."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the United States News of September 12, 1941]

BYRD PLAN TO REDUCE NONDEFENSE SPENDING BY GOVERNMENT GENERALLY FAVORED BY PRESS

The commenting press generally favors the proposal for creation of a joint congressional committee to seek reduction in governmental nondefense expenditures. The proposal is embodied in an amendment to the tax bill now before Congress offered by Senator BYRD (Democrat), of Virginia. Many of the editors, however, feel that nondefense expenditures are still a long way from actually being cut, and urge Congress to follow up the amendment's recommendations vigorously.

"Last spring," reports the Pittsburgh Post-Gazette (Independent Republican), "Secretary Morgenthau told Congress he thought a billion dollars should be cut from nondefense expenditures. Asked where these cuts should be made, the Secretary indignantly responded that this was the duty of Congress. And President Roosevelt also said that it was the responsibility of Senate and House to decide where reductions should be made. Senator BYRD agrees the job of cutting the Budget is that of Congress, but adds that it can be done 'only when there is sympathetic cooperation by the executive branch of the Government.' Congress, of course, holds the purse strings, but the executive branch, which has used all sorts of pressure in the past to loosen them, should not be permitted to dodge the respon-

sibility when the need arises for pulling them a little tighter."

"Nobody was surprised," says the Knoxville (Tenn.) Journal (Independent), "that the tax bill under discussion the past few weeks developed into the biggest one in history, but it will make increased taxes much easier to take if our statesmen will evidence on their part an effective desire to reduce unessential expenses at the same time they are hiking our taxes. Senator BYRD and his bloc of economy-minded colleagues in both Houses represent the only hope the Nation has of avoiding, at the end of the present spending orgy, a depression that will make the 7 lean years of Joseph seem like a dream of plenty."

"All other lines of business," remarks the Williamsport (Pa.) Sun (Independent), "are being forced to forget about 'business as usual' during the emergency period. Yet in matters of Government, departments not concerned with defense are going ahead on an 'as usual' basis, without reduced funds, as though there were no emergency Why shouldn't the Government set a national example in adjustment of affairs to an emergency schedule?"

In the same spirit, the Syracuse (N. Y.) Herald-Journal (Independent) comments: "Once more the word 'saving' is being heard in the halls of Congress. It is about time. But between the word and the reality a long wait may supervene. It takes courage and backbone to cut budgets, but men who assume to govern a nation are presumed to have those qualities. Evidence of a sense of financial responsibility would be as refreshing a relief amid today's hectic financing as a cooling breeze in the Sahara Desert."

As pointed out by the Youngstown (Ohio) Vindicator (Independent Democrat), "Under this proposal Congress or the first time would have a Senate-House, spending-taxing committee which could make a comprehensive survey of all phases of Government finance, with particular attention to methods of saving money."

Approving the same feature of the amendment, the Washington (D. C.) Post (Independent) holds: "If congressional committees appropriating funds were brought into closer touch with those that have to find revenue, there would be much less excuse for failure to cut out nonessential expenditures. Senator Byrd's proposal would not only make for more systematic procedure; it would enable Congressmen to point to the record as a reason for refusing to yield to spending pressure."

"The great majority of Americans," contends the Long Beach (Calif.) Press-Telegram (Republican), "recognize the vital necessity of providing huge sums for national defense, and to that end they are reconciled to payment of greatly increased taxes. However, it is axiomatic that economy in nondefense spending is as effective a method of financing defense activity as raising additional revenue."

The American Majority

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

RADIO ADDRESS OF HON. STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over station WWDC, Washington, D. C.:

I speak tonight in answer to Senator BARKLEY, of Kentucky, spokesman for the administration, who recently addressed the Veterans of Foreign Wars in front of Independence Hall in Philadelphia, and especially to that part of his address in which he characterized 80 percent of the American people as "a little coterie of American ostriches." Senator BARKLEY also referred to the vast majority of the American people as "serpents in our garden of Eden." These intemperate and intolerant statements clearly demonstrate one of the main reasons why the morale of the American people is at such a low point that one of the leading commentators for the administration is forced to admit:

"The most perplexing problem before the American high command is how to make the American people as a whole feel the urgency needed both to speed up arms production and to enable the President to take further steps in aid of the British and their allies. That there has been a let-down during the last 3 months is generally conceded. * * * A declaration of war, admittedly, is at present politically impracticable The best substitute, in the view of those who are eager to take advantage of the opportunity, would be such specific steps as sending a small expeditionary force to the West Coast of Africa and protecting the North Atlantic sea lane all the way to the tip of Scotland, or perhaps all the way into British ports."

What has caused Senator BARKLEY to characterize the American people as ostriches and serpents? The answer is plain. It is due to the close alliance of the administration with the Soviet Union. The American people are unalterably opposed to having their sons fight and die to perpetuate the cruel dictatorship of Stalin. They know that in the last few years 30,000,000 innocent victims have been murdered in cold blood in Soviet Russia and that today 10 percent hold in subjection the other 90 percent in furtherance of a program designed and administered to utterly destroy human personality and to kill all religion in the hearts and breasts of the Russian people. Senator BARKLEY in his address at Philadelphia takes pains to state:

"Neither the United States nor Great Britain thereby espouses the internal policies or the political philosophy which since the World War has guided the Soviet Republic."

Senator BARKLEY knows that he cannot control the mad forces which are now let loose upon the world. He must recognize the change in events that have taken place since he addressed the Senate in February 1941, when the Lend-Lease Act was up for consideration by the Senate. He stated then—

"The importance of the subject, the consequences which may flow from its enactment and administration, the anxiety and suspense with which the American people are today tiptoeing to catch the latest word concerning events over which they now have no control, but which may for generations and centuries determine the fate of America and the world, require of us the utmost sincerity, calmness, frankness, and courage in our approach to and our discussion of this tremendous subject."

Exercising this type of sincerity and frankness, I state with confidence that when the permanent record of history is written of the period through which we are now passing, it will be stated that Hitler misjudged the strength of the Soviet armed forces, and the world underestimated the power of communism. It is now 11 weeks since Hitler invaded the land of the Soviets, and it will be many long months before he can expect anything approaching a victory. The siege of Leningrad resembles the siege of Madrid. With winter months approaching, his panzer units must be supplanted by heavy artillery to lay siege to what was once the mighty city of St. Petersburg. The front is 1,800 miles in length, and no part of this vast line dare be unprotected against a counterattack from the Soviet forces. This means that the whole stage of the war has been altered. The threat of an invasion by Hitler of our own soil or any part of the Western Hemisphere has vanished into thin air. When the vast majority of the American people recognize this and say it, they are not "ostriches" or "serpents." I can appreciate the disappointment of the learned Senator when he realizes that Hitler is not coming, but he need not lose his temper. He need not join in the general abuse heaped upon all those who are opposed to war. He gains nothing by indicting his own people. It is cruel to charge such a lack of patriotism and loyalty to the American people who have been long suffering during the many disappointments of that era which was ushered in on March 4, 1933.

The old arguments—the ones we heard at the time of the passage of the Lend-Lease Act—are badly shopworn and obviously threadbare. New arguments must be contrived. But where to find them? The administration is nettled and peevish because the people have become too complacent. The big question at the White House and among the "brain trust" is, Who has a good scare which can really get results?

Senator BARKLEY is embarrassed. He knows that the American people have no enthusiasm for a triumph of communism. He knows that there is not a veteran of the World War in the whole United States that does not despise Stalin and all his works. He knows that he cannot control Stalin if victory shall come to his standards. He holds a brief for a cause which has failed, but, loyal to the President, he must continue on. At Philadelphia, in his recent address, he stated:

"I would rather surrender a few of our liberties for a short time in the preservation of our defense than to surrender them permanently to Hitler and his crew of nation wreckers."

What liberties, Senator, would you surrender? How do you know, Senator, that the American people would ever get them back?

Speaking in the United States Senate on February 17, 1941, of the Lend-Lease Act, Senator BARKLEY said:

"This measure does not surrender the right of Congress to declare war. It not only preserves that constitutional right, which cannot be abrogated, but it requires the President to come to Congress for the appropriations necessary to administer it, and also the authority to make contracts for future execution.

"This measure does not confer upon the President the right to convoy ships across the ocean.

"It does not confer upon him the right to send American troops to Europe.

"It does not confer upon him the authority to send American ships into war zones.

"It does not confer upon him the power to sieze foreign ships in the ports of the United States.

"It does not confer upon him the power to impose a censorship, or to restrict the freedom of speech or of the press or of worship or of assembly. These rights have been abolished in the dictator nations, but they have not been restricted in any respect in the United States, and will not be under the terms of this measure."

May I ask you, Senator BARKLEY, under what authority did the President send American troops to Iceland where they are now brigaded with British troops? Under what authority have we built strategic defenses in Freetown, Africa? Under what authority did the American Navy drop depth bombs on German submarines? Under what authority did Secretary Knox on September 4, 1941, stop two press boats at Sand Point Naval Station for approaching nearer than 100 yards of two Russian flying boats bringing 47

Soviet technicians to this country and fire four shots at a reporter and photographer of the Seattle Times carrying American citizens exercising their constitutional right of freedom of the press in one boat and another boat carrying a Post-Intelligencer reporter and photographer was stopped, although no shots were fired? Under what authority did Secretary Knox on June 30, 1941, state:

"An all-out offensive that will destroy Hitlerism can only be undertaken if the products of the huge war industry which we are completing find their destination on the British Isles promptly and safely. * * * The time to use our Navy to clear the Atlantic of the German menace is at hand."

Senator BARKLEY, in the same remarks in the Senate of the United States stated:

"We do not want war. We hate war. Most of us here have seen the ravages of war, and we have seen the devastation and the suffering which it has always entailed. We do not want these ravages and this suffering to come to our shores. We believe that this measure (the Lend Lease Act) offers the surest method by which we can avoid participation actively in this war and at the same time help those nations which are heroically grappling with a universal enemy to preserve the doctrines of our fathers and the aspirations of our own hearts."

I ask you, Senator BARKLEY, Are we actively in this war? You may answer that Congress has not declared war, but you cannot deny that the President is waging war, claiming authority from the Lend-Lease Act which you sponsored in the United States Senate. Knowing these facts and disillusioned as you must be, Senator BARKLEY, would you "surrender a few of our liberties for a short time"?

We must face ugly facts. Nothing can be gained by name calling. I charge here tonight that President Roosevelt and Secretary Knox are usurping constitutional powers that belong only to the Congress and the American people. What security have we if we surrender our liberties to them that we will ever get them back? Senator BARKLEY was sincere when he stated in the Senate what the Lend-Lease Act provided. His views were shared by other Senators who supported that measure. But look at the result. That law has been violated both in spirit and in letter.

The President is coming to the Congress in the near future for additional lend-lease moneys. In the name of God, after this record, is it asking too much to urge that the Congress be on guard? Is it asking too much that the Congress have a full accounting of what has been done under the first authorization of $7,000,000,000? Is it asking too much that the President and Secretary Knox take the American people into their confidence and make known their real intentions?

In response to the urgent prayers of the people from all over the Nation, on August 5, 1941, I introduced in the House of Representatives, Concurrent Resolution No. 51 revoking the powers of the President under the Lend-Lease Act to give any of our moneys to the Soviet Union. No real American desires the triumph of Stalin. No real American would like to see the cruel Communist dictatorship spread over the small nations of Europe. I know of no better way to prevent such a triumph and no better way by which the American people can express their repudiation of communism than the passage of this concurrent resolution. Under the terms of the Lend-Lease Act, merely a majority vote of both Houses of Congress is required to this end. The signature of the President is not required. No one can foretell or control what will happen in Europe. We have in our command the power to state emphatically that we assume no responsibility for the triumph of communism.

The declaration of principles announced by President Roosevelt as the result of his agreement with Winston Churchill furnishes the foundation for black discouragement. The President has pledged this Nation to the triumph of the Soviet Union. He is so intent upon this object that he is compelled to state in his message to the Congress of August 21, 1941, in speaking of this declaration of principles:

"It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazi-ism; or to agree to a world peace which would give to nazi-ism domination over large numbers of conquered nations."

Dare we admit that there is no hope of peace? Must the United States be engaged for long years to come, following the leadership of President Roosevelt of "matching destruction with more destruction, slaughter with greater slaughter"? What will be left of the United States? How can we meet the demands of the people for economic security and constitutional freedom?

The conclusion is irresistible that the President and Secretary Knox are waging war, but the Congress is not. The war today in America is a war between the Congress and the President. Supporting the Congress are 83 percent of the American people. The President is opposed by the American majority. I proclaim here and now that it is impossible to redeem a world sunk in the blood-soaked fields of battle except we follow the Prince of Peace.

I stated at the outset that it was generally recognized that there is a marked let-down in the morale of the American people. This is putting it mildly. In the last few months I have appeared before many thousands of our American citizens and have received letters from countless other thousands. The message which they confide has always been the same. Those in authority have usurped constitutional authority and there is fear in the hearts of the American people that this great Republic is being undermined and destroyed by those whom they trusted and placed in power. Symptomatic of this is the recent article of President Roosevelt in Collier's weekly in which he exults over the change that has come to our Supreme Court. Under the Constitution, the judicial department is one of the three great coordinate branches of the Government. In former times, it was possible to go to the courts to obtain an interpretation of legislation and to ask for a check upon illegal measures and actions. Today, there is no great independent tribunal of justice. It is packed with New Deal sympathizers.

Little did we think that when we heard President Roosevelt say (March 9, 1937):

"Last Thursday I described the American form of government as a three-horse team provided by the Constitution to the American people so that their field might be plowed. The three horses are, of course, the three branches of Government—the Congress, the Executive, and the courts. Two of the horses are pulling in unison today; the third is not"; that within a few short years the third horse would exist in form only. Less did we think that the President would pat himself on the back for the destruction which he has inflicted on the courts.

We are in grave danger. Our form of government is gradually being taken apart. Each day presents new evidences of this process, whether it be price fixing, seizure of private industry, elimination of small business, smearing and purging of opponents, disregard of constitutional limitations, and even waging war with no authority.

The Congress voted 203 to 202 on the issue of the extension of the draft. It must still pass on price fixing. It must still pass on additional lend-lease moneys. The American people must make known their emphatic determination to prevent the undermining of this Republic. This is not a partisan appeal. I know that the great patriotic Veterans of Foreign Wars will do their utmost to preserve the Constitution of the United States which they love and for which they were willing to give the full measure of devotion.

A Message to Labor

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

LABOR DAY ADDRESS BY HON. ROBERT L. RAMSAY, OF WEST VIRGINIA

Mr. RAMSAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I made on Labor Day:

Mr. Chairman, today the uppermost questions in the mind of the average laboring man is, "Will we be able to keep out of the World War" and "Will the laboring man be able to hold fast to the great gains labor has made since 1933?"

The first question can only be answered by Hitler and his Axis companions. The second can only be answered by labor itself—by its patriotism and determination to fight for its rights, by sending men to Congress and public office who have proven true to the interests of labor, and who have shown that they are interested and concerned about the general welfare of the whole people.

Isolationists tell us we can whip Hitler unaided and alone, and then argue we should do nothing to prepare ourselves to do the job, even if it should become necessary. Where would these two different positions get us?

When we get to the point where we talk of war in hushed tones, we are close to the point of losing our freedom forever.

The most fortunate man in the world today is the American.

He hears an airplane overhead, and—if he looks up at all—does so in curiosity, neither in fear nor in the hope of seeing a protector.

His wife goes marketing, and her purchases are limited by her needs, her tastes, her budgets, but not by decree.

He comes home of an evening through streets which are well lighted, not dimly in blue.

He reads his newspaper and knows what it says is not concocted by a bureau, but an honest, untrammeled effort to present the truth. He has never had on a gas mask. Has never been in a bombproof shelter. His military training, an R. O. T. C. course in college, he took because it excused him from the gym course, and it was not compulsory.

He belongs to such fraternal organizations and clubs as he wishes.

He adheres to a political party to the extent that he desires—the dominant one, if that be his choice, but with the distinct reservation that he may criticize any of its policies with all the vigor which to him seems proper—any other as his convictions dictate, even, if it be his decision, one which holds that the theory of government of the country is wrong and should be scrapped.

He does not believe, if his party is out of power, that the only way in which it can come into power is through a bloody revolution.

He converses with friends, even with chance acquaintances, expressing freely his opinion on any subject, without fear.

He does not expect his mail to be opened between posting and receipt, nor his telephone to be tapped.

He changes his place of dwelling and does not report so doing to the police. He has not registered with the police. He carries an identification card only in case he should be the victim of a traffic accident.

He thinks of his neighbors across international borders—of those to the north, as though they were across a State line, rather than as foreigners; of those to the south more as strangers since they speak a language different from him, and with the knowledge that there are now matters of difference between his government and theirs, but of neither with an expectancy of war.

He worships God in the fashion of his choice.

His children are with him in his home, neither removed to a place of greater safety, if young, nor, if older, ordered ready to serve the State with sacrifices of limb or life.

He has his problems, his troubles, his uncertainties, but all others are not overshadowed by the imminence of battle and sudden death.

He should struggle to preserve his Americanism with its priceless privileges. He is a fortunate man. He is an American.

But America must awake to the dangers that confront us; and, as Burns said of America:

"But come, ye sons of liberty
Columbia's offspring, brave and free,
In danger's hour still flaming in the van
Ye know and dare maintain the royalty of man."

It seems to be the fashion nowadays to characterize as stooges and tools of John L. Lewis and William L. Green all those who oppose legislative attacks upon the N. L. R. A. and the Wage and Hour Act.

Speaking for myself, I can say that during the last campaign I did not have the endorsement by resolution of any labor union, either national or State. However, I did have the support of thousands of loyal union men who believed I could and would legislate fairly, so far as their interests were concerned.

Therefore, in approaching legislation that will affect every workingman Congress must consider all such legislation with great care and caution, so as not to bring loss to the American workmen who have fought so valiently for a better standard of living and the extension of liberty and freedom to the American workmen in their efforts to secure these rights for themselves.

After listening to those who attempt to amend labor laws declare they are only seeking to promote the interests of the poor, deluded workingman who has been so foolish as to join either the A. F of L. or the C. I. O., I am reminded of a Mose Jordan, an old Ohio River darkey who spent most of his time fishing. One day Mose was fortunate enough to catch a large channel catfish, and if there is anything an Ohio River darky loves more than a channel cat no one has ever heard of it. Upon landing his fish, Mose proceeded at once to prepare it for the griddle. Of course, the catfish objected and tried to horn him.

Mose held the fish, as only an expert can, and exclaimed, "What's the matter with you all catfish; what's yuh tryin' to hawn me foah? I'se not gwine to do nothin' to you, only cut off your haid, skin yuh, and eat yuh."

I believe the most important principle in the maintenance of free government is free enterprise and free labor. Therefore legislation looking toward the restriction of labor and industry in making agreements for the so-called closed shops can only prevent the freedom of contract and upset the general good labor relations that now exist in this country between labor and industry.

The labor bills now pending before Congress seeking to prevent labor from exercising its rights to strike—as a last resort against what it believes to be unjust burdens—is only aimed at labor's one safeguard against unjust and intolerable conditions that have in our Nation's history, cropped up from time to time.

The right to organize, bargain collectively, and strike is a fundamental bulwark of American democracy. Long before there were any Federal statutes guaranteeing the right of labor organizations to exist, or a roof and floor protecting the hours of labor and wages received therefor, our highest Court in 1911, by Justice Lamar, in the case of *Gompers* v. *Bucks Stove & R. Co. said*, "Society itself is an organization and does not object to organization for social, religious, business, and legal purposes. The law therefore recognizes the right of the workingmen to unite and invite others to join their ranks, thereby making available the strength, influence, and power that comes from such association."

Recently our court, again discussing the subject, said, "It is recognized now that satisfactory hours and wages, and working conditions in industry, and bargaining position which makes these possible, have an importance which is not less than the interests of those in business or industry directly concerned. Free discussion concerning the conditions in industry of the causes of labor disputes appears to us indispensable to the effective and intelligent use of the process of popular government to shape the destiny of modern industrial society."

Union labor readily grants the right to strike should be used sparingly and as a last resort to settle labor disputes, but without it labor organizations, recognized by our laws passed by Congress itself, would be an idle gesture, and would soon become obsolete, and as a result, chaos, strikes, lock-outs, and sweatshops would again paralyze American industry, as in the days when injunctions and yellow-dog contracts reigned in the American labor world.

Is anyone in America so unsophisticated as to believe that American labor will submit tamely to the loss of all restraints against the turning back of the pages of American history to the open shop in times of peace?

In response to all these efforts to cripple the right to strike or organize, let me mention that in the democratic countries it is impossible to prevent strikes simply by legislation. Both peacetime and wartime experience in Canada and Australia show that strikes actually increased under compulsory arbitration laws. An increase likewise occurred during the World War, when Great Britain attempted to outlaw as illegal all strikes and lock-outs. Even the slightest study of this subject will convince the open-minded student that great bodies of organized labor cannot be forced to work against their will. Industrial peace is most often found in unionized industries that have had a long experience at collective bargaining, while strikes and labor troubles occur most frequently among the disorganized rather than among those who are under the leadership and advice of their own class.

The latest report from the Department of Labor bears out this statement. It states that "Strike activities in 1940 were lower than each of the 3 previous years and below the national emergency period of 1916 and 1917. The total number of strikes in 1940 was 6.6 percent less than 1919. The number of workers involved dropped more than one-half."

Year	Strikes	Workers involved
1916	3,799	1,599,917
1917	4,450	1,227,254
1937	4,470	1,860,621
1938	2,772	688,376
1939	2,611	1,170,962
1940	2,450	575,000

Only the other day, Sidney Hillman, Director General of the Office of Production Management, said: "None of the handful of work stoppages have been of a serious nature," adding, "there is no need now for additional legislation covering labor problems in defense." Commenting further, Mr. Hillman states, "When a situation is in good condition, don't meddle with it."

This is certainly sage advice, and Congress should be more careful than ever, lest they may by precipitated action, bring down upon us the resentment of labor that will surely cost us vastly more trouble than now exists in the labor world.

Not only do the friends of labor view with alarm the efforts of those whose sole purpose is to restrict labor, but just recently the Committee on Manufacture of the Chamber of Commerce of the United States—who certainly cannot be charged with playing politics to secure votes—voiced opposition to the enactment of Federal antistrike legislation, on the grounds it would "prove ineffective and deny fundamental rights to our citizens." And continuing further, "The chamber believes public interest will be best served by voluntary cooperation."

In the face of these strong statements, from both capital and labor, how can any statesman—without becoming liable to the charge of prejudice against labor—seek to prevent them from the exercise of rights that are not only legal and constitutional, but are inherent in every workingman; the right to live; the right to work; the right to contract; and the right to better his condition in life, not only for himself, but for his family and future generations.

Gasoline Shortage

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, once again the administration has so bungled what was originally an inept and ill-advised effort to regiment the people a little more and in a new direction as to arouse the country.

The whole Nation has resounded with the dire predictions of the Secretary of the Interior, Mr. Ickes, about the alleged gasoline shortage and the pretended necessity for rationing the eastern seaboard in its gasoline consumption. Mr. Ickes went so far as to brand as unpatriotic, if not active aides of Hitler, any Americans, Members of Congress or otherwise, who dared to criticize Ickes' sudden and startling effort to ration the East in its gasoline consumption.

It now develops that the rumors of the last 3 weeks concerning a supply of idle oil-tank cars were correct. Despite the administration's most intense efforts to hush the rumor, the report persisted that there are plenty of tank cars to carry an adequate supply of gasoline to the East. J. J. Pelley, president of the Association of American Railroads, last week testified before a Senate committee investigating the alleged gasoline shortage that there are 20,000 railroad tank cars available to carry 200,000 barrels of gasoline and fuel oil from the west coast to the east coast, which is some 25,000 barrels a day more than the shortage alleged to exist. Mr. Pelley assured the Senate committee that the

railroads could, without any trouble, transport this 200,000 barrels of gasoline and oil each day to the eastern seaboard without interfering with any other phase of the national-preparedness program.

Later the officials of the railway companies and the oil companies got together to arrange for a reduced rate on gasoline transportation and the alleged shortage blew up in Harold Ickes' face.

Even Mr. Ickes never had the temerity to allege that there was any shortage in gasoline production. It was, he said, a shortage of transportation facilities, due to the fact that the United States had given to England and Russia so many oil tankers which formerly had been used to bring oil from the Pacific coast to the eastern seaboard.

It has been stated by some English source that Britain had enough surplus tankers to relieve our need, but this was beside the question in view of the fact that at the very time Mr. Ickes, with the approval of the administration, was gravely upsetting the whole economic balance in the East by these threats of gasoline rationing, there was an ample supply of railroad tank cars and locomotives to transport all the gasoline needed in the East to the Eastern States. Further than that the railroads need this business.

This spectacular attempt on the part of the Secretary of the Interior to impose a dictatorial restriction on the people of the East was so inept, ill-considered and unnecessary as to cause a good deal of speculation in Washington as to whether or not the thing was sprung in order to condition American thinking to more dictatorial and stringent methods of regimentation than the country has been accustomed to in the last 8 years even under the New Deal Administration. The suspicion that this is so is heightened by the fact that instead of welcoming the information that these tank cars are available, some high administration officials seem to resent the fact that the information was made public. Apparently for some reason that cannot now be fathomed, the administration wanted the people of the eastern seaboard to accustom themselves to being summarily deprived of the irregular supply of an essential of American everyday life. The only possible reason anybody in the administration should want to so condition the American mind seems to be to prepare it for some kind of dictatorship. If this is not the case, then this sudden furor about a gasoline shortage and the threat to ration citizens must have been the act of an official who was so wholly irresponsible in his thinking on the subject as to make him unfit to be the petroleum administrator of this Nation.

Michigan has a special interest in this matter because we produce a great deal of oil in our own State. If we are coming to the point where some bureaucrat can summarily set in motion plans to restrict the people of a great section of the country in their use of an everyday essential commodity merely because that bureaucrat thinks it might help to create a more pronounced war psychology on the part of the people, it is time the Congress took some action to curb these bureaucrats.

Unfortunately there are always those who, when clothed with such powers as have been given the President for redelegation to his subordinates, will abuse them and attempt to regiment the people merely because the bureaucracts love to exercise power. Also all of these regulations tend to give the bureaucrats more power to achieve such political ends as they desire, or to be able to punish those who criticize them.

The gasoline shortage bugaboo is a glaring example of irresponsible administration gone wild.

The Pending Federal Revenue Bill

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

LETTER FROM DR. NICHOLAS MURRAY BUTLER

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by Dr. Nicholas Murray Butler, president of the Columbia University in the city of New York, to Mr. John G. Jackson, of 15 Broad Street, New York City, president of the New York State Bar Association, on the subject of the pending Federal revenue bill.

The letter follows:

SOUTHAMPTON, N. Y., *July 25, 1941.*

JOHN G. JACKSON, Esq.,
15 Broad Street, New York.

MY DEAR MR. JACKSON: Following our conversation of yesterday, I am glad to respond to your suggestion that I write you the statement which I then made relative to the revenue bill which the Committee on Ways and Means is reporting today to the House of Representatives.

The provision which this bill contains for a mandatory joint income-tax return on the part of husbands and wive is not only indefensible in itself but it is in flat contradiction to our fundamental principles of public law and of social order. That the women of the country will permit the enactment of such a law, which would strike a severe blow at those women's rights which have been established with so much difficulty and delay, is to me unbelievable.

It is plain to me that the reasons for drafting and reporting this provision, with all its dangers, are not primarily financial, but they are distinctly political. The advisers of the Ways and Means Committee have apparently told them that a huge sum—perhaps as much as $300,000,000—would be raised by this form of tax, and that only about 160,000 tax returns would be affected. Put into coldly practical language, this means that they believe that not more than some 300,000 votes for Senators and Congressmen would be alienated.

The statement that no alternative form of tax is available is ridiculous. We are administering our income-tax system not in the democratic spirit but as a class tax. This can only lead to one end, and that a disastrous one. It would do grave damage to our political as well as to our economic system.

As a matter of fact, it is estimated that we are now exempting from the Federal income tax some 65 or 70 percent of the whole national income received in small amounts by some 90 percent of our population. Despite the many votes which these very small taxpayers would have, they should be required to pay something, however little, toward the cost of maintaining the Federal Government and its program of national defense. If they paid but $5 a year each, our income-tax system would be put upon a democratic basis and almost every household in the land would come to know how colossal the cost of our Government now is.

There is a fantastic notion abroad that the Government has money of its own and that it is this money which Congress appropriates. It does not appear to enter the heads of many of our fellow citizens that the Government has no money whatsoever, and can have none, and can appropriate none which it does not take from our citizens now or later, directly or indirectly.

The Government of Great Britain has pursued a more democratic policy than has the Congress of the United States. In that country more than 12,000,000 persons are qualifying this year as payers of income tax. This is about one-fourth of the whole population of Great Britain, including men, women, and children.

Under no circumstances should this dangerous provision be enacted into law.

There remains, of course, the question of economy, in which the Congress appears to take no interest whatsoever. It is nearly 35 years since Senator Aldrich, of Rhode Island, then chairman of the Senate Committee on Finance, stated in debate that if he had authority to revise the administration of the Federal Government, he could reduce its cost by at least $200,000,000 a year and greatly increase its efficiency. Today that sum could be multiplied several times. It is more than 20 years since, in the hearings on the bill to provide a National Budget before the Senate Committee of which Senator McCormick, of Illinois, was chairman, Senator Smoot interrupted my argument in support of the budget bill to point out that there were then 37 engineering organizations in the Government where there should be only 1, and that there were 46 administrative agencies in the Public Health Service all "doing exactly the same work."

How much worse present-day conditions may be, I do not know.

Faithfully yours,

NICHOLAS MURRAY BUTLER.

Arkansas Valley Authority Project

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

PETITION OF CITIZENS OF SPRINGFIELD, MO.

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

Hon. CLARENCE CANNON,
Member of the United States House of Representatives, Member of Appropriations Committee, Washington, D. C.

DEAR SIR: We, the undersigned citizens of Springfield, Greene County, Mo., and members

of the Junior Chamber of Commerce of Springfield, Mo., are opposed to the Arkansas Valley Authority project in the proposed construction of Table Rock Dam and Bull Shoals Dam and would appreciate your presenting this petition to the Appropriations Committee of the United States Congress so that it will be on record of our opposition to this project.

A. W. Brasse, Medley Motor Co.; D. S. Forts, Sedgwick Form Co.; John Owen, Campbell 60 Express, Inc.; J. L. Sierk, Machinery Service Co.; J. A. Stewart General Motors Acceptance Corporation; P. H. Anderson, Anderson Used Car Market; Ira C. Hentschel, Hentschel Construction Co.; L. E. Coffman, Jr., insurance manager, Sears, Roebuck; R. H. Green, Green Finance Co.; M. O. Ruluceh, dairy industry; Glenn Thomason, Plimmer's D. G. Co.; John Kirby, Springfield High School faculty; F. M Latem, collector; H. L Palodna, Smith Hotel.

Views of a Constituent

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

LETTER FROM EDWARD S. CLARK, BAY CITY, MICH.

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CLARK & HENRY,
Bay City, Mich., September 3, 1941.

Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR MR. WOODRUFF: I would like to amplify some of the points made in our recent correspondence.

The matter has been in my mind for a long time, but, so far as I know, has never been emphasized by anyone until a statement was made yesterday by Senator ADAMS, of Colorado.

I can clarify my ideas by a series of propositions. In respect to those numbered 1 to 4, I agree with the administration. Those numbered 5, 6, and 7 represent points of difference or dissent, and those numbered 8 to 11 involve some new suggestions.

1. A Hitlerized world, or even a Hitlerized Europe, would be intolerable.

2. Britain is therefore fighting our battle as well as her own.

3. We should therefore give her all the help that we can reasonably spare.

4. We should also increase our own Army and armament to a reasonable degree.

5. Germany has no reasonable chance of defeating the British Empire, even without our help.

6. Even a stalemate would not be necessarily disastrous to us. In that case, Hitlerism would probably go to pieces internally. Hitler could make us very little trouble without a complete victory.

7. It therefore is not absolutely essential for our own safety that we make the utmost possible war effort, at the expense of all of our peacetime standards.

8. There can be no unselfishness in international relations. No government has a right to sacrifice the interests of its citizens to satisfy the noble impulses of its executive officers. Self-sacrifice is a personal virtue. What Britain is doing is being done selfishly and is only incidentally for our benefit.

9. Our intense rearmament drive involves serious dangers, especially those growing out of—

(a) The dislocation of normal and wholesome business;

(b) The curtailment of personal liberty;

(c) The gradual increase of governmental control approaching socialism;

(d) The risk of national bankruptcy.

10. There must obviously be some point at which 9 outweighs 8. To build the strongest defense possible we would be compelled to live and work as the Germans do, and to surrender our liberties to the same extent.

11. Unless I am right with respect to 5, 6, 7, and 9, we ought to be in the war now with our Army and Navy.

If I am right with regard to 7 and 9, the latter—No. 9—is the most important of all of the considerations involved. Nothing else can be so important to all of us as the unnecessary destruction of our so-called American way of life, involving the destruction of hundreds of peacetime industries and thousands of useful corporations, the virtual confiscation of their stockholders' investments, and the exaggeration of governmental control over our liberty and property to a degree which approaches national socialism. Mr. Wallace's new board is apparently seizing broad powers without any congressional authority. This approaches dictatorship.

Why should Germany and Central Europe, more or less disorganized, and subject to the heavy drains of the Russian campaign, be able to manufacture war material more rapidly than the entire British Empire, plus so much of American productive capacity as can be applied without the complete dislocation of our domestic economy? The Germans may have superhuman industry and organizing ability, but the great British Empire is not idle, and even a part of our total capacity ought to more than make up any difference. Those who say that they must turn America upside down in order to make up for the difference between the productive capacity of Central Europe and that of the British Empire must be consciously or unconsciously exaggerating, and in some cases, the exaggeration may be deliberately used for the purpose of bringing about Government control of American life and industry, to an extent that ought not to be tolerated. If the situation is as bad as is claimed, and if there is to be no limit to our industrial effort, regardless of its effect upon our traditional institutions, then our Army and Navy should also be in the war. If it is important enough to turn the country upside down industrially, it is certainly important enough to fight for. It seems to me that those who take the other view are those who would rather enjoy accomplishing the result which I so much fear, viz, the destruction of our traditional rights and liberties.

There is some point in the defense program at which we should stop for the purpose of retaining what used to be considered our reasonable constitutional rights, and I believe that we have already reached that point. We should transform our peace economy into a war economy, not recklessly and emotionally, but grudgingly, and only so far as is plainly necessary to supplement the production of the British Empire, and to provide reasonable insurance against the very unlikely chance of future war on this continent. We should not pay too high a price, even for this insurance, because the danger is far from imminent. It is not our war yet. If it is, our Army and Navy should be in it now.

Yours very truly,

EDWARD S. CLARK.

P. S.—I might very well add that the first step in increasing our defense production ought to be in the direction of eliminating governmental inefficiency and confusion. If that were done, the output might be greatly increased without economic dislocation. A farmer-politician and a social worker-politician should not have high positions of authority in an organization controlling industrial production.

The Vital Importance of Our Civilian National Defense Program

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

RADIO ADDRESS BY HON. MARTIN F. SMITH OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the radio address which I delivered over local station WWDC, under the auspices of the Veterans of Foreign Wars, on the subject The Vital Importance of Our Civilian National Defense Program.

The address reads as follows:

Comrade E. R. Burton and friends of the radio audience, I am glad to have this privilege of speaking on the subject of The Vital Importance of Our Civilian National Defense Program, under the auspices of the Veterans of Foreign Wars, an organization devoted to our national defense against all enemies, foreign and domestic, and also appreciate the courtesy of station WWDC in making this broadcast possible.

Spontaneous offers of voluntary assistance for the protection of the civil population from all sections of the country have been received by Mayor Fiorello H. LaGuardia since he assumed his new office as Director of the Office of Civilian Defense. The offers to help have come from private citizens and public officials of all ranks, from organizations of every kind, including men and women in all walks of life.

Mayor LaGuardia has taken over his new duties after receiving his commission from President Roosevelt at the White House. He has stated that his administrative organization will be small and that the Office of Civilian Defense will depend at least 80 percent upon volunteers. The indications, he said, are that this is a conservative estimate. In these days of total war and total defense, civilians as well as soldiers must employ all the resources at their command to avert disaster or to prepare to overcome a common enemy.

Preparation for our national defense requires cooperative effort with unity of purpose throughout the country. The Nation must have strong military and naval forces, adequately trained and equipped; it must assure the economic, physical, and social fitness of the people as a whole; it must refresh and make more firm their loyalty to the national interest by affording opportunity for officials and citizens alike to gain a clear understanding of programs and objectives and give fruitful expression to their desire to serve. Fortunately, a vast network of organized effort, both public and private, may be enlisted to achieve these ends.

Public agencies exercise constitutional and legal powers vital to total defense. These

powers are distributed among Federal, State, and local governments. Each jurisdiction has its own policies, programs, and administrative machinery. In addition, certain national programs are executed cooperatively by Federal, State, and local jurisdictions. In some the Federal Government exercises substantial administrative control. In others its participation is limited to the prescription of minimum standards and administrative guidance. In still others, only cooperative working relationships exist.

In the interests of national defense new national programs are being devised and existing programs are undergoing changes in scope or emphasis. These new or changed streams of activity flow out from the Federal Government into State and local communities. Furthermore, governmental programs are being initiated at State and local levels, which supplement or buttress Federal activities at many points.

Although defense is primarily the responsibility of government, quasi-public organizations of governmental units and of public officials for cooperative effort and improvement of administrative methods and private agencies which direct or influence the voluntary action of individuals also have important potentialities for useful service. These private agencies are organized in labor, trade, industrial, scientific, professional, civic, religious, or fraternal bodies, many of which have programs and administrative machinery operating on a National, State, and local basis. Some of them maintain a close liaison with various governmental jurisdictions and agencies. Others foster activities which affect the social, physical, and economic well-being of their members. Many of these quasi-public and private agencies have both a desire to cooperate and an ability to contribute. Together they constitute a pool of knowledge, skill, power, and influence flowing through organized machinery into group action. This may be drawn upon advantageously to facilitate and supplement governmental activity and to promote that common understanding of defense measures and objectives which is essential to self-disciplined unity of effort.

Widespread interest is already being manifested in the defense program. Evidence of an active desire to participate is abundant. Forty-six States have set up councils or committees of defense and the governors of the other States have similar action under consideration but are awaiting suggestions from the Council of National Defense and its Advisory Commission. Private organizations and over 1,000 local committees are undertaking various types of activity—some meritorious, some ill-conceived, some untimely—and many groups and individuals are proffering facilities, services, and ideas of varying degrees of usefulness.

The problem, then, is to provide means for full utilization of the powers and administrative organizations of Federal, State, and local governments and for adjusting and coordinating programs and procedures in order that closely integrated administrative machinery may function with the maximum speed and effectiveness. At the same time, private agencies should be afforded opportunity to put their knowledge, skill, and organized facilities at the service of the Nation, and individual offers of aid should be properly appraised and their constructive values assimilated. Through such blending of powers and harmonious collaboration, public and private organizations, groups and individuals may participate effectively in preparation for our mutual protection against any threat of danger from within or without.

Thomas Paine's stirring words, written at Valley Forge to instill hope and confidence in Washington's despairing soldiers, are just as true today as when he first penned them. Liberty is now being hunted around the world as it was when Paine first wrote his Common Sense. The United States of America should not only "prepare an asylum for her," but also an arsenal for her deliverance from the brutality of a fanatical tyrant. Paine's immortal words:

"These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that serves it now, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly; it is dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed if so celestial an article as freedom should not be highly rated * * *."

These immortal words should be the clarion call for all liberty-loving people today as they were during the crisis for American independence.

Civilian Defense

EXTENSION OF REMARKS

OF

HON. J. BAYARD CLARK

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

ADDRESS BY REAR ADMIRAL CLARK H. WOODWARD

Mr. CLARK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Rear Admiral Clark H. Woodward, at a meeting of the Robeson County Club, Lumberton, N. C.:

Mr. Chairman, members of the Robeson County Club, ladies, and gentlemen, it is with great pleasure that I am with you this evening, as representative of the Office of Civilian Defense, to give you an outline of the duties and purposes of our organization.

In the light of world conditions, it is well to remind ourselves that one of the strongest guaranties of a democracy against war is adequate preparedness on land, on sea, in the air, and on the home front.

Our national leaders are now exerting every effort to meet these objectives, including the recent provision for civilian defense. The importance of this latter cannot be overestimated, for unless the home front is a pulsating, effective, life-giving organization, the efforts of our military services may fail.

As in every other activity, particularly one of national scope, sound organization is an essential element of success. This is of outstanding importance when an organization for harnessing mass effort—such as we are now building up—is based upon the principle of cordial cooperation and mutual assistance in order to avoid confusion and overduplication.

The President of the United States established the Office of Civilian Defense by Executive order on May 20, 1941. Its duties and responsibilities include:

First. Coordination of Federal, State, and local civilian-defense relationships.

Second. Plan and carry out programs designed to protect civilian life and property in event of emergency.

Third. Promote activities designed to sustain the national morale and to create opportunities for constructive civilian participation in the defense program.

Thus the Office of Civilian Defense provides the means for a nationally organized effort, working through the structure of government, by which citizens and organizations of citizens, State and municipal governments, and organizations both national and local in scope, together with corporations, manufacturers, and public-utility companies may aid the national-defense effort in a systematically organized manner.

To help in the performance of the manifold duties and responsibilities of the Office of Civilian Defense, two advisory bodies were created. A Board of Civilian Protection was established to advise on methods of providing physical protection for the civilian population. This consists of the Director (Mayor LaGuardia), as Chairman, and representatives of interested Federal and other agencies—War and Navy Departments, Federal Security Agency, Council of State Governments, American Municipal Association, the United States Conference of Mayors, American Red Cross, and such others as the President may appoint. In addition, the Volunteer Participation Committee, composed of 45 persons appointed by the President (5 from each regional area), was established to help with the civilian participation program.

The purpose of the Office of Civilian Defense is not to supplant the work of State or local defense commissions but to coordinate their efforts and bring about uniformity and standards of training throughout the country and provide such assistance as the Federal Government can provide. The responsibility, however, remains with the State and municipal offices.

The work of the Office of Civilian Defense has been decentralized among nine regional offices, similar in character to that of the National Office. Their boundaries are coterminous with those of the Army corps areas. A regional director, in charge in each area, is in direct contact with the State and local governments, and is the coordinating influence as between States and adjacent regional defense areas. The location of each regional office is in the vicinity of the headquarters of the appropriate corps areas—Boston, New York, Baltimore, Atlanta, Columbus, Chicago, Omaha, San Antonio, and San Francisco.

It is necessary fully to visualize the basic requirement that national defense is the ultimate aim. This connotes that the Office of Civilian Defense supports the national effort of the Army and the Navy, and therefore requires the closest liaison with them in order not to run counter to national-defense needs.

The total aspect of modern warfare and the danger to morale that results from long-drawn-out conflict make the task of the Office of Civilian Defense a basic necessity in the national-defense effort. It is necessary to visualize the vulnerability of our towns and communities to hostile air attack with consequent conflagration, and also the possibilities of subversive activity under such conditions, in order properly to appreciate the amount of civilian defense effort to be made. Equally important is the task of not permitting the situation to be overdeveloped.

It is realized that because of our geographical position an air attack may never be launched against us, and hence, according to Mayor LaGuardia, "there is probably a 94-percent chance that the preparations for protection on which we shall be spending so much effort may never be needed. But," he adds, "We cannot afford to take even the 6-percent chance in view of the experiences of European cities and the proven capacity of modern bombers to fly great distances and to penetrate any defense."

It is also realized that all parts of the Nation are not equally vulnerable to such an attack. However, these are not valid reasons to adopt a do-nothing policy. Moreover, the suggested organization, when perfected, may prove highly useful for meeting other types

of emergency where unity of effort, perfectly coordinated, will prove to be a protective shield to the citizens of our State and local communities.

This plan provides for protective measures involving fire prevention, fire fighting, police protection, rescue, first aid, temporary housing, warden service, emergency feeding, building repairs, demolition of unsafe buildings, clearance of debris in highways, streets, etc., repair of such utilities as water and gas mains and wire conduits, decontamination of gas areas, evacuation, etc. Most of these activities require the organization and training of personnel—the greater number of whom will be volunteers—and all must be covered by instructional data, brief as possible but sufficiently comprehensive for intelligent development and coordinated application by State and local governments.

The psychological effects of the British air-raid precautions set-up in 1938 are important. There is no question that this movement contributed greatly to the "we can take it" attitude of the British people. It also tended to prepare their mentalities for visualizing a war situation involving air attacks which did come a year later.

The people of this country must be made to know that the entire technique of war has changed. There is no such thing as holding an enemy at a given point or even in a particular zone. War is no longer localized and distance is no longer a protection, as the plane and the submarine, each with increased radius of action and improved maneuvering ability, makes every city—particularly those along the coast—and every industrial community a target for sudden surprise attack

Civilians are now subjected to the dangers of war which heretofore were limited to the Army and Navy, and must be protected. This is due to the German strategy of terrorization of enemy territory in an effort to break down civilian morale. That is where the Office of Civilian Defense comes into the picture—protection against the dangers to which civilian populations are exposed by taking certain precautions and seeing that the necessary training and campaign of education of the people are undertaken without delay.

Since the civilian-defense program must be varied greatly to meet the needs of the various parts of the country, every program must be thought of in terms of its usefulness in a given community. The local government, acting through its local defense council and in consultation with State agencies and the Office of Civilian Defense, must determine the program for each community.

Our task on the coasts, for instance, is greater than west of the Alleghenies or east of the Rockies. It is not necessary for interior towns to train and prepare their citizens with the same speed or in as much detail as coastal communities or congested centers of population and industrial centers where all the sinews of war are manufactured.

We know that many hundreds of thousands of bombs have been dropped in similar towns in England which spread and set fire to buildings covering large areas—frequently as many as 200 to 530 fires started in different places in London, for instance, at the same time. One can see how impossible it would be for the regular permanent fire department to handle such a situation, and how necessary it was to train large auxiliary forces to assist the fire departments, and even to get aid from adjoining unscathed areas always ready to help in the realization that they might be the next victim and look for the same cooperation

Detailed plans and instructional data on these and other important points in connection with protective features, based on the experience of English cities, are now being formulated by the Office of Civilian Defense. They will be brief, clear, concise, and specific, and will be issued as soon as ready.

Let us now take a brief look at the world situation. What do we find beyond our two-ocean frontiers? Across the Atlantic, during the past 2 years, 14 sovereign nations have been ground under the iron heel of ruthless dictators who brazenly assert they are defending themselves against the malicious assaults of their weaker neighbors. Another nation is now engaged in a life and death struggle. Across the Pacific we find one ambitious nation tyranically engaged for the past 4 years in what we call war, but which they rhetorically call "cooperative attempt to maintain order and spread peace" in the Orient.

History, even in the Dark Ages, cannot produce a more tragic demonstration of how quickly unprepared nations can be subjected to the will of unscrupulous force—in total disregard of written treaties, law, justice, and morality—than the startling and rapidly moving events of the past 2 years.

The United States cannot be accused of being militaristic today, under existing world conditions, just because we are making preparation to defend our country and our children from another war, such as is now overrunning Europe, Asia, and Africa, and headed toward the Western Hemisphere. On the contrary, we are sentinels of peace, simply making ourselves ready to ward off any prospective aggression.

We are living today as interested spectators in a chaotic world seething with international strife; a world in which the law of the jungle takes precedence over solemn diplomatic agreements; a world in which totalitarian war supplants ideas of peace; a world in which despotic and greedy dictators marshal their legions for unwarranted aggression and unlimited destruction; a world in which conquered peoples are governed by tyranny, savagery, and barbarism.

In such a world we, in this country, must have for our own security an adequate and properly equipped army, and a navy of such strength and efficiency that no nation or combination of nations dare attack us, remembering that a nation's independence is secure only as long as its defense power is strong.

Moreover, we must have absolute unity among our people. "A nation divided against itself cannot survive." It is our duty to throw all our efforts and resources into the struggle to defend our freedom and fight every destructive effort to sabotage our American democracy—that theory of government so magnificent in design, built up through the supreme sacrifice of our immortal forefathers, and developed and maintained through succeeding generations by the indefatigable labor of love of our patriots. With an all-out effort and ever-increasing production for defense, a successful resistance to the present totalitarian movement can and will be made.

This is not a war between rival imperialisms but a fight to the finish between Hitlerism and democracy. The real issue is whether we are going to live in the future as freemen under our present form of government or as slaves under a tyrannical despot. If Hitler wins, he means to enslave this country economically, politically, and culturally. He has plainly told us so.

Therefore we must not wait for Hitler to strike, but be prepared to act swiftly and suddenly to prevent him from waging war on us. This is not seeking to make war as the isolationists, misled pacifists, and pro-Nazi propagandists charge, but a sensible and patriotic measure in preparation for the day we may have to defend our freedom and independence by fighting. As loyal Americans we are determined to help win this battle against the doctrines of evil and build a peace forever repudiating brute force, a peace based on justice, equality, and freedom for mankind.

Let us not lose faith in our destinies nor forget that we must fight to preserve our democratic form of government and the rights and privileges it embraces with that same intrepid and inexorable resolution by which they were won by our forefathers, pledging our physical powers, our moral strength, or material resources, and, if need be, our lives.

Our heritage is a glory that has never yet been tarnished and a national honor that has never yet been stained. In order to pass these along unsullied to future generations we must keep faith with the living and with the dead by keeping our country from Hitlerism and other similar corrosive alien theories.

One of our most effective weapons against this challenge to the golden rule of democracy is to instill into the younger generation that brand of Americanism which was kindled by Washington at Valley Forge, reproclaimed by Lincoln at Gettysburg and followed conscientiously by each succeeding generation.

What we need today is more of that good, old-fashioned, honest-to-goodness patriotism—the kind that gives a tug at the heartstrings and makes a person feel proud to be a citizen of these United States the greatest country on earth; the kind that gives us an internal glow when we see our flag waving on high; the kind that inspires us when we hear the national anthem.

Our glorious Stars and Stripes—that beloved flag which floats over our country—is the symbol of our liberty and freedom from tyranny; a symbol of that for which patriots, holding it most dear, freely gave their lives. We cannot break faith with them. We must keep those Stars and Stripes flying high in the sky—emblematic of true Americanism—by swearing renewed allegiance to all those imponderables the flag implies. He who does not reverence that flag and the principles for which it stands is a traitor to his country and it were better that he go to a country whose flag he can respect.

With the Stars and Stripes at our head 100-percent Americanism in our hearts, and the love of God in our souls let us as patriotic American citizens, pledge ourselves to work, militantly and aggressively 365 days in every year in order that we may look to the future with faith and confidence in the preservation of our American heritage.

The Gasoline Shortage on our Eastern Seaboard Can Be Eliminated Without Increasing the Price by Using the Intracoastal Waterway

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

Mr. MANSFIELD. Mr. Speaker, the Washington newspapers have been giving much publicity to the shortage of gasoline on the eastern seaboard of the United States and the railroads appear to be proposing to eliminate this shortage by using 20,000 tank cars to deliver 200,000 barrels of gasoline per day. The proposal is said to involve an increase in the cost of the transportation of gasoline and oil which has formerly been carried by seagoing tankers. It is assumed that the hauling of tank cars will result in an increased retail price for gasoline.

The problem could be solved without increasing the price of gasoline by transporting oil or gasoline from the Gulf coast by way of the intracoastal waterway. I quote below a letter that I have written to Rear Admiral Emory S. Land, Chairman of the Maritime Commission:

SEPTEMBER 3, 1941.

Rear Admiral EMORY S. LAND,
Chairman, Maritime Commission,
Commerce Department Building,
Washington, D. C.

DEAR ADMIRAL LAND: I have been much interested in the newspaper accounts of your testimony with reference to transporting gasoline to the eastern seaboard of the country given before the Senate Special Committee Investigating Shortage of Gasoline.

Apparently you advocate transporting oil in seagoing concrete barges towed by tankers, this in order to conserve for defense purposes the steel that would be required for a pipe line from the Oklahoma oil fields to Greensboro, N. C. Have you given consideration to moving gasoline from the Texas Gulf coast and from Baton Rouge, La., via the intracoastal canal?

There are gasoline refineries at Brownsville, Corpus Christi, Beaumont, Port Arthur, and Houston, Tex. The oil reserves stored in Texas, aggregating 52 percent of the oil reserves of the entire country, feed oil by pipe lines into the refineries on the coast of Texas. A pipe line from Oklahoma feeds oil into the refineries of the Standard Oil Co. of New Jersey at Baton Rouge, La.

There is now an intracoastal waterway with depths from 9 to 12 feet from Corpus Christi, Tex., to Apalachicola, Fla., and from Jacksonville, Fla., up our eastern coast to Trenton, N. J. From Philadelphia and the Delaware River barge traffic can go outside up to New York and Boston. Baton Rouge, La., is, of course, connected to the Gulf and to the Intracoastal Waterway by the Mississippi River. Gasoline could be transported in canal barges from Texas and Baton Rouge to the eastern end of the Gulf Coast Intracoastal Canal near Apalachicola, Fla., transferred there to a new pipe line or to railroad tank cars for transportation to Jacksonville, Fla., and be carried in canal barges from Jacksonville north up the eastern seaboard of the United States. There is a railroad from the terminus of the Gulf Coast Waterway to Jacksonville, or a relatively short pipe line could be constructed. The cities along the intracoastal canals are Galveston, New Orleans, Mobile, Jacksonville, Savannah, Charleston, Wilmington (N. C.), Norfolk, Washington, Baltimore, Philadelphia, and Trenton.

Cities in the Mississippi Valley that can now be supplied by means of its waterways are Vicksburg, Memphis, St. Louis, Rock Island, Minneapolis, Chicago, Cairo, Nashville, Chattanooga, Louisville, Cincinnati, and Pittsburgh.

The inland waterways referred to above with a depth of 9 feet or more have an almost unlimited capacity for carrying barges. A considerable quantity of gasoline is now carried north from Baton Rouge by barges on the Mississippi River, but a great deal more could be carried on this river, on its tributaries, and on the intracoastal waterways mentioned. I suggest that you consider building barges and towboats for our inland waterways. In many respects inland-waterway transportation has advantages over seagoing transportation for defense purposes, and an almost unlimited number of depots could be located along our inland waterways.

I enclose herewith a map showing the principal inland waterways of the eastern half of the United States.

Yours sincerely,

J. J. MANSFIELD, *Chairman.*

President Delays Filling 12 Judicial Vacancies

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

ARTICLE AND EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief news article and an editorial from the St. Louis Post-Dispatch:

[From the St. Louis Post-Dispatch of September 6, 1941]

PRESIDENT DELAYS FILLING 12 JUDICIAL VACANCIES—FAILURE TO COMPLETE EIGHTH CIRCUIT BENCH APPARENTLY DUE TO EXECUTIVE'S INSISTENCE ON NAMING S. E. C. MEMBER FOR PLACE

(By Marquis W. Childs)

WASHINGTON, September 5.—President Roosevelt, who, 4 years ago, stirred a political tempest over his charge of delay in the Federal courts, has allowed 12 Federal judgeships to be vacant, 2 of them since 1939, 5 of them since 1940

The President's failure to fill the judicial vacancies has caused criticism not only here but among lawyers everywhere.

Since April 12, 1939, a United States district judgeship in Connecticut has been vacant. Since November 3, 1939, a similar judgeship in the western district of the State of Washington has been unfilled.

The President has on his desk two judicial nominations, which presumably he will send to the Senate within a few days. But neither of these is to fill the judgeships that have been vacant so many months.

On May 24, 1940, Congress authorized the creation of two additional judgeships for the Eighth Circuit Court of Appeals in St. Louis. One of them was filled just before the election with the appointment last fall of Harvey M. Johnson, of Nebraska.

PETITION FROM JUDGE STONE

The other vacancy has been unfilled despite the petition of Judge Kimbrough Stone, senior judge of the circuit, that the addition was greatly needed because of the press of business before the court.

The petition was sent to Senator BENNETT CHAMP CLARK, who filed it with the Senate Judiciary Committee.

There have been reports that CLARK and Senator HARRY S. TRUMAN, his colleague, have been unable to agree on a candidate, which has held up the appointment. Senator CLARK said this was untrue. He added that he believed he and TRUMAN could agree rather easily on a candidate if it were not for President Roosevelt's insistence on naming Edward S. Eicher, of the Securities and Exchange Commission, to the vacancy.

The President told TRUMAN he was determined to appoint Eicher. Presumably this is as a reward for Eicher's loyalty in supporting Otha Wearin, whom the new dealers put up in Iowa to defeat Senator GUY C. GILLETTE. But GILLETTE and his Iowa colleague, Senator CLYDE L. HERRING, have let the President know that they would oppose Eicher on the floor of the Senate.

CLARK said he had been informed of a report on Eicher's legal capacity, made by the Department of Justice when the Iowan was under consideration for a district judgeship. It was his understanding, CLARK said, that the report was adverse.

Apparently it is Roosevelt's determination to reward Eicher that has held up the appointment to the vacancy in the eighth circuit, which has gone unfilled now for more than a year and a half. Protests have come to the two Missouri Senators from judges, lawyers, and others interested because of delay in litigation.

CLARK FOR ANOTHER JUDGESHIP

As soon as the tax bill and other pressing legislation is out of the way, CLARK said he intends to seek passage of a measure he introduced some time ago creating another judgeship for the eastern district of Missouri. Judge Charles B. Davis, in that district, is opposed to the creation of an additional judgeship and has informed Representative PHILIP A. BENNETT (Republican), Springfield, of his opposition. CLARK said this would make no difference in his plan to seek another judge for the district, as he was convinced of the need for such an addition.

Possibly in other States, too, it is a political impasse similar to that in the eighth circuit that has delayed judicial appointments. In the western district of Oklahoma a district judgeship was created at the same time as the two judges were added to the Eighth Circuit Court of Appeals, May 24, 1940. It has not yet been filled.

A district judgeship has been vacant in the eastern district of South Carolina since August 2, 1940, and in the southern district of California since September 1, 1940. There has been a vacancy on the Supreme Court of Puerto Rico since November 15, 1940. In Puerto Rico, Secretary of the Interior Ickes, who has jurisdiction over the island, wants the right to exercise the veto power on suggested candidates.

[From the St. Louis Post-Dispatch of September 7, 1941]

MR. ROOSEVELT RAKES OLD COALS

The President's first of a series of five articles for Collier's Weekly is an astounding and a very unfortunate thing. At a time when the country needs to be united above all else, Mr. Roosevelt has chosen to rake over the old coals of one of the bitterest controversies in the Nation's century and a half.

In this defense emergency he takes for his subject—of all themes—the fight over reorganizing the United States Supreme Court 4 years ago. Now, when democracy is under assault by war-mad dictators, the President goes back to that unhappy battle which put Americans at one another's throats.

It is true, as the President recalls, that a series of measures introduced by the administration to achieve economic recovery were rejected as unconstitutional. It is also true that, in the midst of the fight over the Court bill, the Supreme Bench altered its direction and that from then on no major act of Congress has been declared unconstitutional.

But Mr. Roosevelt claims too much when he says, in effect, that the court bill, even though it failed to pass, eliminated the possible adoption by the United States of "an alien form of government." It is going pretty far to say that our system was saved by a measure which was designed to break down the historic plan of democratic checks and balances with three separate branches of the Federal Government—the executive, the legislative, and the judicial. In fact, it is going so far that the statement is little more than mere balderdash.

If the President is concerned about the United States judiciary today, let him address himself to a most disturbing condition, de-

scribed by one of our Washington correspondents Friday. For although one of Mr. Roosevelt's arguments for the court bill was that justice often was too long delayed, Mr. Roosevelt is allowing 12 Federal judgeships to remain vacant. Two of these vacancies date back to 1939, 5 to 1940.

It soon will be a year and half since Congress, responding to the needs of the Eighth Circuit Court of Appeals, which includes Missouri, created two new seats on that court. Yet because the President apparently is determined to appoint Edward C. Eicher, Chairman of the Securities and Exchange Commission, as a personal reward for his support in the New Deal-Gillette primary fight in Iowa, one of these seats remains unfilled. The Iowa Senators oppose Mr. Eicher. The Missouri Senators, CLARK and TRUMAN, who, because of the predominance of Missouri litigation, should be working together for an outstanding Missourian, are reputedly at loggerheads. So a needed appointment, asked for by Presiding Judge Kimbrough Stone, waits while the work of the court piles up.

Mr. Roosevelt might have written an important article on the judiciary. He might have announced his intention to abandon his policy of personal appointments. He might have said that more attention would be paid to lower court Federal judges who merit promotion. Instead, he deliberately made the mistake of trotting out something which had better be left in the past—the court-packing fight.

That is no way to achieve unity.

An Independent Destiny for America

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

ADDRESS BY HON. STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following address I delivered at Case Technical High School, Detroit, Mich.:

On August 17, 1858, Abraham Lincoln, speaking at Lewistown, Ill., chose as his subject Back to the Declaration and said, in part, as follows:

"These communities by their representatives in old Independence Hall, said to the whole world of men: 'We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.' This was their majestic interpretation of the economy of the universe. This was their lofty and wise and noble understanding of the justice of the Creator to his creatures. Yes, gentlemen, to all His creatures, to the whole great family of man. In their enlightened belief, nothing stamped with the Divine Image and likeness was sent into the world to be trodden on and degraded and imbruted by its fellows. They grasped not only the whole race of men then living, but they reached forward and seized upon the furthest posterity. They erected a beacon to guide their children, and children's children, and the countless myriads who should inhabit the earth in other ages. Wise statesmen as they were, they knew the tendency of prosperity to breed tyrants, and so they established these great self-evident truths, that when in the distant future some man, some faction, some interest, should set up the doctrine that none but rich men, or none but white men, or none but Anglo-Saxon white men were entitled to life, liberty, and the pursuit of happiness, their posterity might look up again to the Declaration of Independence and take courage to renew the battle which their fathers began, so that truth and justice and mercy and all the humane and Christian virtues might not be extinguished from the land; so that no man would hereafter dare to limit and circumscribe the great principles on which the temple of liberty was being built. * * * Think nothing of me—take no thought for the political fate of any man whomsoever—but come back to the truths that are in the Declaration of Independence. You may do anything with me you choose if you will but heed these sacred principles. You may not only defeat me for the Senate, but you may take me and put me to death. While pretending no indifference to earthly honors, I do claim to be actuated in this contest by something higher than an anxiety for office. I charge you to drop every paltry and insignificant thought for any man's success. It is nothing; I am nothing; Judge Douglas is nothing. But do not destroy that immortal emblem of humanity—the Declaration of American Independence."

I am here tonight in Detroit to keep faith with Abraham Lincoln. The great declaration is in grave danger of being overthrown by a movement known as Union Now With Britain. This movement would ask us to surrender a part of our sovereignty to join in a permanent federation with the British Empire. It would take down the Stars and Stripes and run up in its place a mongrel flag, emblem of a citizenship common to all of the subjects of the British Empire and ourselves with good Americans forsaking that citizenship which for over 150 years has made us proud to be called Americans.

The purpose of the scheme was stated by the late Lord Lothian, former Ambassador to the United States from Great Britain. Lamenting the failure of the League of Nations and desirous of forming an actual union with his own Britain, he stated:

"But the reason why cooperation failed after 1918, as all earlier attempts to create an international cooperative system have failed, is precisely because they have left national sovereignty intact and because that element operates continuously and inexorably against the success of cooperation itself. That is why Federal Unionists are convinced that only by going a step beyond the covenant and pooling some part of the national sovereignty in a common organism which represents, not the national units or the governments, but the people of all the member nations as a whole, can the true ends of the League be attained."

In my recent debate with Clarence Streit, author of Union Now With Britain, and the leader of Federal Union, Inc., on the American Forum of the Air, I stated:

"At the outset I want to make it perfectly clear that Mr. Streit is not advocating merely aid to Britain. Mr. Streit is not advocating an alliance with Britain. He is advocating a union of the people now living under the British flag and the people living under the American flag into one permanent government, supreme over all, with a common flag. Furthermore, this union of the two peoples is to take place now—not after the war—no matter what may be the outcome of the war."

In that debate, I informed Mr. Streit that the people of the United States are not all of British origin. We have here a great melting pot made up of people from all the nations of the world. American citizens have forgotten the nations of the Old World and have given their allegiance to America first, last, and always. They have not asked for union now with Britain any more than they have asked for union now with Germany, France, Italy, or Russia. They are content to remain all American. I called his attention to the fact that his union now would split America asunder into groups and factions who, at first heartbroken, would then become sullen.

True to the immortal words of Thomas Jefferson and true to the glorious example of Abraham Lincoln, I turned to Mr. Streit and said to him in words that I repeat here tonight and shall repeat so long as there shall be breath in my body:

"If you want to see another 1776 and a war for independence, just succeed in fastening the chains of your Union Now upon the wrists and ankles of the American people! No, Mr. Streit, we do not want Union Now with Britain and you shall not impose it upon us!"

The success of the United States has been due to the triumph of two factors both intensely American—and nothing else. These two factors are: 1. American independence; 2. absence of class domination. Keeping these two great factors vital and paramount, this Nation under God has grown to be the most prosperous and the most powerful.

Internationalism has become bolder and bolder. Like a serpent it has crawled into our midst. By the recent actions of our President, we have been brought face to face with the most dangerous attack that has ever been made upon the welfare of the American people and their continued right to live under the blessings of our American Constitution. This serpent of internationalism is known as communism. It is the established political and economic philosophy of the Soviet Union—that same Soviet Union which has recently formed an active alliance with Britain. We shall be asked to extend that alliance to include the United States of America, at least to the extent of providing billions of dollars of the money of American taxpayers to make gifts to this same Soviet Union. Appreciating the grave danger that confronts us at this hour, I want to explain to you in a few words just what communism really means.

Before I left Washington I consulted the Dies committee for authentic information as to the aims and objects of the Communists in the United States and was handed an official report wherein the manifesto of the Communist Party states:

"The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas. * * * These measures will, of course, be different in different countries. Nevertheless, in the most advanced countries the following will be pretty generally applicable:

"1. Abolition of property in land and application of all rents of land to public purposes.

"2. A heavy progressive or graduated income tax.

"3. Abolition of all right of inheritance.

"4. Confiscation of the property of all emigrants and rebels.

"5. Centralization of credit in the hands of the state by means of a national bank with state capital and an exclusive monopoly.

"6. Centralization of the means of communication and transport in the hands of the state.

"7. Extension of factories and instruments of production owned by the state; the bringing into cultivation of waste lands and the improvement of the soil generally in accordance with a common plan.

"8. Equal obligation of all to work. Establishment of industrial armies, especially for agriculture."

Bear in mind, my friends, I am reading from the official book of the Communists in America and not from the New Deal program. Can you see any difference?

There are those who have said that Stalin has softened up and is becoming a great democrat; that he will accept the "four freedoms" enunciated by President Roosevelt. Let us see. Again I read from the official book of the Communists in America and in Moscow, for there is no difference:

"The following is now clear to the workers and peasants: The party of the Communists not only allows no freedom (such as liberty of the press, speech, meetings, unions, etc.) for the bourgeois enemies of the people, but goes still further and demands of the Government to be always ready to close the bourgeois press, to break up gatherings of the enemies of the people to forbid their lying and libeling, and sowing panic; the party must mercilessly suppress all attempts of the bourgeoisie to return to power. And this is what is meant by dictatorship of the proletariat."

When the Communist uses the word "bourgeois" he means the middle class. That is the big idea. What they want to do is to destroy our American middle class, which includes most of us. Coming, now, to another of the "four freedoms," let us see what the official Communist book says of religion. I quote again as follows:

"If we analyze these ideas and try to understand the origin of religion and why it is so strongly supported by the bourgeoisie, it will become clear that the real significance of religion is that it is a poison which is still being instilled into the people. It will also become clear why the party of the Communists is a strong antagonist of religion. * * * There is a poison called opium; when that is smoked, sweet visions appear; you feel as if you were in paradise. But its action tells on the health of the smoker. His health is gradually ruined, and little by little he becomes a meek idiot. The same applies to religion."

What are the objects of the Communists in the United States? This is their great desire, and I quote again from the official book:

"A Soviet government in the United States, following the example of the first Soviet Republic, would make it clear to the whole world that it breaks fundamentally and forever with the imperialist policies and territorial aggrandizements of the overthrown bourgeoisie, abrogating all imperialist privileges enjoyed now by this bourgeoisie. At the same time the Soviet government of the United States would organize all the forces of the country for the defense of the Soviet power against imperialist intervention. For then, and only then, for the first time in the history of this country, will the United States have become a fatherland for the proletariat and all toilers."

In this great center of the automobile industry I want to speak plainly. Plans are under way in Washington which would cripple the great manufacturing industries built up by William S. Knudsen and Henry Ford. There are big men connected with the New Deal war machine in Washington but recent efforts have been exerted to make capable industrial leaders merely window dressing for a group of radicals who exercise the real power. Mr. Stettinius has been made an understudy for Lease-Lend Administrator Harry Hopkins. Your own William S. Knudsen will hereafter find himself surrounded and perhaps overwhelmed by such men as Leon Henderson, Secretary Stimson, Secretary Knox, and Vice President Wallace, none of whom ever ran a manufacturing industry or had the responsibility of meeting an industrial pay roll. You need not take my word for this; I quote from an article by Mr. David Lawrence in the Washington Evening Star of August 20, in which he stated:

"The administration must be prepared to look at unpleasant factors if it expects to carry through successfully a grave international emergency that affects the United States. It must recognize that many of its arguments about the danger that faces America have fallen on deaf ears in the Middle West, and this is largely because there exists a deep-seated distrust of the President and his advisers. * * * The distrust springs largely from the fear that the war situation is being used as a camouflage to put over a scheme of State socialism and there are millions of citizens in America who do not believe in either fascism or communism or State socialism or New Dealism."

Every day I receive letters from men who will be taken from their jobs by the orders of the New Deal machine. Plans are being considered to cut automobile production by 50 percent. There will be millions walking the streets if this thing is no better administered than other activities of the New Deal. There is pending before the Congress a bill to give autocratic powers to Leon Henderson to fix all prices. If he gets this power, he must also fix wages. What will become of organized labor? Who is this man Henderson? What is his record? Congressman MARTIN DIES called attention to his affiliations with "red" organizations. Henderson replied that DIES is not a reliable Member of Congress. I shall never vote to give to this man autocratic power to control American industry and American labor by fixing prices. The bill exempts labor organizations and farmers from the operation of the act, but that is just more camouflage. No one can fix prices without also fixing wages and the prices the farmers will receive for their food products, which determine the cost of living. The great automobile industry is the backbone of American prosperity, and I for one will never consent to the hamstringing of that great industry.

In a national broadcast on June 15, 1941, I charged that our form of government under the Constitution and our American independence would be overthrown not by a foreign invasion using military force but by a treasonable betrayal which was already in the making. As a part of that betrayal, all laws protecting the wages of American labor and the great social gains which have been made were to be scrapped for a system of free trade. This means that the products manufactured in the British Empire, where wages are notoriously low, would be brought into the United States without paying any tariff or duty, to compete with the manufactured products made by American labor receiving the high standard of American wages. If this happens there will be unrest and labor strife all over the Nation, and I call upon American labor to do their utmost to prevent this sellout of great free America to Great Britain. On Labor Day, President Roosevelt called upon American labor to do its utmost to overthrow Hitler, but he said nothing about this scheme of "union now" with Britain. What will it profit American labor to do its utmost to defeat Hitler if the result will be the low wages of European and Asiatic countries? Suppose Stalin defeats Hitler and spreads his slave labor of communism all over Europe. The Soviet Union is in alliance with Britain. In the near future we will be urged to join in an alliance with Churchill and Stalin. What assurance has American labor that they will ever again receive good American wages when we have forfeited our citizenship and entered this new world order?

No narrow or circumscribed ideology can ever receive the sanction and approval of the Declaration of Independence. This of necessity excludes communism, nazi-ism, fascism, and British imperialism. The Declaration of Independence was proclaimed by Americans for Americans and can have no meaning, force, or virtue beyond its native soil. Clarence Streit and his Union Now with Britain asks for a "declaration of interdependence"; Hitler demands only Aryan superiority; Stalin commands only class superiority; Mussolini decrees only Italian superiority. Only in free America do we proclaim the equal rights of all men and guarantee it in the permanent covenants of a written Constitution. Our Bill of Rights is like tablets of stone, placed far beyond the contaminating influence of the Executive, the changing currents of legislative procedures, and the decisions of our courts. For these are the covenants of the people made for their protection and are charged upon the integrity and the conscience of all public officers before they can enter into the administration of their various functions. The task of this hour is to preserve the purity of the well springs of our national existence. We must keep faith with our American institutions and traditions. This faith must become the living word and serve to enkindle in the hearts and minds of the youth of this generation the same loyalty and enthusiasm as fired the very souls of those great patriots that gave us the Declaration of Independence and the Constitution of the United States.

Surrounded with great secrecy recently there was a meeting at sea between two leaders. Why was the conference at sea between Winston Churchill and President Roosevelt veiled in such secrecy? Why could not Harry Hopkins carry the word to Winston Churchill? Here is the answer:

Under section 4 of the Lend Lease Act, Great Britain had to pledge that it would not transfer title or possession of the defense articles or defense information by gift, sale, or otherwise, or permit the use of such defense articles and defense information by anyone not an officer, employee, or agent of Great Britain. But there was an exception inserted in the Lend Lease Act. Those transfers could be made only on one condition, and that condition is this, the consent of the President. This means that Winston Churchill had to see the President of the United States face to face to get his consent in order to transfer our American defense articles to Stalin. Was that consent given?

In the 8 points of the declaration of principles contained in the message which the President sent to the Congress on August 21, it is stated that the Nazi tyranny must be destroyed. By whom? Did he mean that the Nazi Government can be overthrown on land without an American expeditionary force? No matter what he told Churchill, I say to you here and now that the Congress of the United States will never vote to send the son of an American father or American mother to fight and die on foreign soil in any war to preserve the British Empire or the Soviet Union. I made that pledge to the American people and I intend to keep it. The leaders in Congress know that there are not over 26 Members in the House of Representatives who would vote for war unless the United States is attacked. Why continue to strike fear into the hearts of our American people by the threat of war when it is known that the Congress will never vote for war and that under the Constitution there is no other lawful way to get us into war?

I insist upon a defense for the United States second to none and have voted favorably in the Congress for every appropriation for national defense. We must make this Nation so strong that no foreign foe can ever gain a foothold on American soil. We are united in our defense program and our production for our own protection must be stepped up with our best loyalty and devotion to duty. This does not mean that we should forfeit our independence, our American destiny, by becoming embroiled in the age-old wars of Europe, Asia, or Africa. It is conceded that we must yield some part of our own national sovereignty if we enter into an alliance or union with foreign nations

to enforce submission to the eight points proclaimed by Winston Churchill and President Roosevelt. The great test of American loyalty is in the offing. Thwarted by the failure of the League of Nations, the internationalists are now determined to go beyond a league and demand a permanent federation directly binding upon the people so that the world superstate will be in a position to demand first, obedience and loyalty from its citizens irrespective of where they live. We already witness the counterpart of this new superstate in the British Commonwealth of the World and the Union of Socialist Soviet Republics of the World. The United States is being groomed for world participation. There is no hope for fulfillment of this scheme until the devotion of the American people to their Declaration of Independence and their Constitution has been broken down. We are in the midst of that campaign and all leaders who speak of an independent American destiny must be discredited.

That accounts for the "smear" inflicted upon Charles A. Lindbergh, Senator BURTON K. WHEELER, Senator GERALD NYE, and myself who are upholding the American position against great odds. May I assure you that the price we Americans would have to pay for the surrender of our standard of living would be so severe that the American people would never tolerate this surrender. It cannot be accomplished without the approval of the Congress under our present form of government. This makes it of first importance that we elect the right kind of representatives in the Senate and the House of Representatives. The voters in 1942 will be asked to make a choice and it is the part of wisdom and foresight for all those who love America to demand a clear expression from those seeking office that they will be true to the Declaration of Independence and the Constitution of the United States and will refuse to support any dilution of 100-percent loyalty to fundamental American institutions. We must prepare now for the fight that is coming next year. The opposition is strong and powerfully financed. If the opposition can succeed in defeating those who have stood for America first, the way will be open to take away from us not only our American independence but all private enterprise and the guaranties of our Bill of Rights, including the priceless possession of American citizenship itself. Can those advocating such a base surrender accuse us of being disloyal and subversive?

This brings me to the discussion of the greatest issue that now confronts the American people.

The Congress of the United States must soon face the responsibility of providing additional lend-lease moneys, running into billions of dollars, to be given away to Britain, China, and Soviet Russia. I want to have a clear-cut vote on the question of providing any lend-lease moneys as a gift to the Soviet Union and to that end I have introduced in the Congress my Concurrent Resolution No. 51, submitted on August 5, and referred to the Committee on Foreign Affairs, where it is now pending. Under that resolution the power of the President would be revoked with respect to the Soviet Union. If that resolution passes, then the President would not dare to consent to the transfer of defense articles or defense information given to Britain or China so that such articles could ultimately be given to the Soviet Union. The passage of my resolution will be a second Declaration of Independence. It will furnish an expression of the unalterable opposition of the American people to any union with godless Russia. Is this asking too much?

Recalling the words of Abraham Lincoln, I say: "Think nothing of me—take no thought for the political fate of any man whomsoever—but come back to the truths that are in the Declaration of Independence." We have reached a critical stage in the affairs of the Republic. We must emphatically insist that the Constitution of the United States is above the ambitions or the schemes of any man. The issue is now clearly drawn as between the New Deal and the Constitution and there can be but one outcome. The centuries have witnessed similar conflicts and the answer has always been the same. We want no other union in America than the Union for which we fought and died and the Union which Daniel Webster saw with his clear vision when he proclaimed "Liberty and union, now and forever, one and inseparable."

Unless we act immediately and a vigorous protest from all loyal citizens reaches Washington at once, our form of government under the Constitution and our American independence will be overthrown. I said this on June 15, and the American people heard me. Over 300,000 copies of this message have been published or reprinted already and requests were still coming in as I left Washington to come here.

Men and women of Detroit, we have been waiting for the time to arrive when we could rally in support of a great issue. I give it to you tonight. It is American independence. Washington said it, Jefferson wrote it, and Abraham Lincoln died for it. It was good enough for them and it is good enough for us. This great organization represented here tonight is fearless. We have no need for any apologists or appeasers. We want 100 percent loyalty to the Declaration of Independence and the Constitution of the United States. We are entitled to that kind of leadership and we shall gain it when the American people rise up in their strength and might and insist upon it. What did Britain ever do for the United States? What did the Soviet Union ever do for the United States? What did China ever do for the United States? We are losing our patience with those who would bring false creeds into our midst and I know that you will agree with me that the serpent of internationalism must be destroyed before its poison destroys the beauty and integrity of the greatest free government which has ever existed on the face of the globe.

In closing, may I read to you the following words from a great American, James Russell Lowell:

"Oft to every man and nation
Comes the moment to decide,
In the strife of Truth with falsehood,
For the good or evil side,
A great cause, God's new Messiah,
Shows to each the bloom or blight,
So can choice be made by all men
'Twixt the darkness and the light.

"New occasions teach new duties,
Time makes ancient creeds uncouth;
They must upward still and onward
Who would keep abreast of Truth,
And serenely down the future
See the thought of men incline
To the side of perfect justice
And to God's supreme design.

"Though the cause of evil prosper,
Yet 'tis Truth alone is strong;
Though her portion be the scaffold,
And upon the throne be wrong,
Yet that scaffold sways the future,
And behind the dim unknown
Standeth God within the shadow
Keeping watch above His own."

National Unity

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Saturday, September 6, 1941:

[From the Washington Post of September 6, 1941]

FORGETTING UNIT

Thousands of citizens must have blinked and looked again when they first saw the announcement of President Roosevelt's article in Collier's Weekly, which rehashes the famous Supreme Court fight of 1937. For it is difficult to imagine a more untimely moment to rekindle the antagonisms which grew out of that contest. With the country facing an international crisis, national unity is no less important than the speedy production of weapons for defense. The people must pull together in a singleness of purpose to accomplish the truly gigantic task which has been undertaken through the President's leadership. Yet he has interjected into this situation an extremely controversial defense of his efforts to reorganize the Supreme Court.

Mr. Roosevelt accuses the old Court of erecting "athwart the path of progress" a barrier "which it was impossible to climb over, under, or around." He ignores the fact that several pieces of legislation invalidated by the Court were later upheld when their unconstitutional elements had been eliminated. He skips over the failure of the administration to propose constitutional amendments when it wished to exercise powers the Court believed it did not possess. In declaring that the road to solution of economic and social problems seemed to be "completely blocked" he goes so far as to write: "For a dead hand was being laid upon this whole program of progress—to stay it all. It was the hand of the Supreme Court of the United States."

In general, the President's barbs are aimed at the "old Court," but not all the present jurists escape unscathed. The President complains with special emphasis about the decision which invalidated the N. R. A. But that unanimous opinion, along with several others which the President condemns, was sustained by Justice Stone, whom the President recently elevated to the Chief Justiceship. Many jurists, as well as laymen interested in genuine court reforms, keenly regret such reflections upon judges who consistently take a broad view of the Constitution but are not willing to abandon completely its restraining influence.

Mr. Roosevelt's article, which is part of his introduction to forthcoming volumes of his state papers, bristles with arguments and statements that scholars and historians will some day challenge. But for the moment its unfortunate timing overshadows all other considerations. At a time when vast powers

must be concentrated in the Presidency for the safety of the Nation he has unnecessarily reopened old wounds and referred back to a controversy which, more than any other, weakened his leadership. Surely the President was not thinking in terms of national unity to meet the problem at hand when he permitted this injudicious article to go out under his name.

Iowa State Barkers Association

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY

Mr. HERRING. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the speech delivered by the senior Senator from Kentucky [Mr. BARKLEY] at the Iowa State Bankers Association convention at Des Moines, Iowa, on September 9, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies and gentlemen, I deeply appreciate the honor of being invited to address the annual convention of the Iowa Bankers Association. I appreciate it because it gives me an opportunity to visit briefly the State which is the home of the Vice President of the United States, HENRY A. WALLACE, and of the two distinguished Senators GUY M. GILLETTE and CLYDE L. HERRING, with all three of whom I enjoy a strong personal friendship.

I appreciate this opportunity because it brings me into one of the typical States of the Middle West and it gives me an opportunity to discuss some of our pressing problems before a group of men and women who enjoy intimate contacts and confidential relationships with most all of the people in your State.

You have asked me to speak on the subject What the United States Faces Today.

In discussing this subject, I assume you expect me to deal with the problems that face our people growing out of the present international situation.

Time prohibits any detailed discussion of all the problems which have arisen out of world conditions.

Some of these problems are military and naval. Some of them are social. Some of them are moral. Some of them are economic.

Any one of these phases of our present situation would be an ample foundation for an address of some length.

I shall, therefore, be able only to deal with them in a broad way, touching upon all of them to such extent as time and the proprieties may permit.

Let me say in the outset that these problems are not primarily of our making or of our choosing.

We have for 150 years been content to engage in the development of our part of the American continent and the development of a genuine friendship for all the nations of the world.

In that 150 years we have grown from a population of 3,000,000 people fringing the Atlantic seaboard to 130,000,000 people. We have expanded from 13 weak, disjointed colonies to 48 great States, which, in my judgment, are more firmly united today under the flag and Constitution of our country than they have ever been before.

We have taken in the body of the midcontinent between the two oceans and between the Dominion of Canada and the Republic of Mexico, and we have added to our territory and jurisdiction islands of the sea where our interests or our destiny have seemed to require it.

We have grown from a pauper nation, without credit in the markets of the world and without financial standing, to the richest nation that now exists or has ever existed in the history of mankind.

We have grown in the enjoyment of individual and collective liberty more rapidly and more completely than any other nation in the history of the world; and, notwithstanding the restrictions which a complex society have required for the orderly development of our people, we enjoy a greater degree of liberty today than is enjoyed by any other nation. We have grown from a small nation, without influence among the nations of the world, to an outstanding position of influence and power among the nations of the world. We have cultivated and enjoyed the respect of every self-governing nation in all the earth and we enjoy the fear of every dictator who has sought and is seeking to destroy the liberties and the conceptions of society to which we have dedicated ourselves.

All these things have made us a peace-loving nation and, in the minds of many of our people, a self-sufficient nation.

We had no part in the causes which produced the World War of 1914–18. We had not been a party to nor contributed to the fears or jealousies or selfish interests which produced that war, but we were drawn into it against our will and against our desires because it was necessary for us to enter it to defend our rights and the welfare of our people in a world of conflicting and antagonistic forces.

We did not contribute to the causes which produced the present World War. I describe it as a "world war" because it is essentially and in every sense a world war.

We did not contribute to the causes which have produced it. Unless, indeed, it may be said that we stopped fighting too soon in 1918 at the conclusion of the first World War.

When that war had been concluded billions of people throughout the earth rejoiced. The President of the United States, Woodrow Wilson, pushed forward a great program, conceived in the mind of a great humanitarian and great statesman, which, if adopted at Versailles, might have guaranteed a long era of peace and might have made this terrible contest utterly impossible.

For a brief period people of the world believed that a long era of peace had been ushered in. Billions of people thought they saw a new light arise above the horizon, and for the first time in generations they stood erect and got a glimpse of that light, believing it to be permanent and benign.

In the light of that hope peace treaties were sacredly contracted. Disarmament conferences were held. Navies were reduced—some of them were sunk—construction of others was suspended, and it looked for a time as if those who had been lifted to positions of power and authority in all the nations of the world had set their feet upon the pathway of a long and constructive peace among the peoples of the earth.

Nine-power pacts were entered into; and these various treaties, from Versailles on, culminated in the Briand-Kellogg Pact, by which practically every nation of the world, including Germany and Russia and all the nations of Europe and of Asia and America, solemnly bound themselves to forego war as an instrument of national policy.

On January 30, 1933, Adolf Hitler came into power in the German Reich. From that day until this he has made international honor and good faith a byword and a hiss among the nations of the world, and today no self-respecting nation can enter upon any contract or agreement with him on any subject with any justifiable hope that he would keep his word. The vilest and most despicable petty thief among the most criminal and irresponsible elements in any nation, civilized or uncivilized, has a higher conception of honor than he possesses.

And the tragedy of it all is that he now enjoys the temporary power to bring upon all mankind the most diabolical catastrophe ever conceived by a satanic mind or executed by a demon's prowess.

I am not required to give you a bill of particulars in order to demonstrate that what America faces today and what the whole world faces is traceable to Adolf Hitler and his Nazi juggernaut. It is always difficult to know what might have happened in the world if something else had happened that did not occur. But I have believed that if his course had been barricaded at the very beginning of his marauding career, the world would not now be faced with a titanic struggle to preserve democracy or civilization or a decent way of living.

It has been my reliable information that when Hitler sent his troops into the Ruhr Valley he sent them substantially with a round-trip ticket and with instructions that if there was opposition they should return from the venture. There was no opposition, and he construed this lack of opposition into supine cowardice on the part of those with whom his country had entered into solemn agreements. From the Ruhr Valley it was but a short step to Austria, and then to Czechoslovakia, and then to Poland, and then to Denmark and Norway and Holland and Belgium and France and Bulgaria and Rumania and Yugoslavia and Greece.

From these conquests, some of which were made in spite of desperate opposition on the part of England and France and some of the other nations, it was easy for him to conceive of a final domination by him and his organized international bandits of the entire world.

In fact, no one could read his book Mein Kampf without reaching the undeniable conclusion that before he had made even the initial conquest among those I have mentioned he was dreaming of world conquest. Although he found in most of these nations helpless victims upon which he has superimposed a brutality more malignant than that imposed by any other conqueror since the dawn of history, we yet rejoice that the light of human liberty still burns in millions of hearts whose voices are made silent and whose souls are being crushed by the iron heel of the ruthless conqueror.

We yet rejoice that the people of the British Commonwealth of Nations are imposing their militant resources, human and material, across the pathway of Hitler.

And, notwithstanding the fact that we disagree with the policies of the Soviet Republic in the solution of its domestic problems as well as its outlook and methods in some phases of our international relation-

ships, we rejoice that the people of Russia have displayed the courage and fortitude to defend their homes and their native land against this base caricature of a man.

Although we do not endorse nor approve nor remotely accept the theories which have been adopted by the Russian people, we recognize their right to their own Government according to their own will, and we recognize their right to defend themselves against the same menace that we ourselves are facing and that is being faced by every civilized nation of the world.

It is because of these things that the sympathies of the American people and their gigantic material assistance are being mobilized to help these nations defend themselves.

And we are doing this not primarily because we desire to take part in conflicts in other parts of the world; not because we desire to participate in disputes arising out of boundaries or minorities in Europe or Asia or Africa, but we are mobilizing our resources and making them available to the victims of aggression because we know, if we know anything, that the greater Hitler's success may be in dominating the rest of the world the greater will be the menace to our institutions and to our commitments, and the more certain it will be that ultimately we shall have to meet this dragon without assistance from any other nation that may become a victim of his military machine.

There was a time when the two oceans may have been regarded as a protection to our Nation and our continent against aggression, but even then an army of a nation with which we were at war landed upon our shores, burned our Capitol, and charred the Executive Mansion.

Even then it was necessary for James Monroe to announce the Monroe Doctrine, which is essentially a doctrine of self-defense, by proclaiming that the effort of any European nation to gain a foothold anywhere in America would be regarded by the United States as an unfriendly act, by which he meant an act justifying war.

At the time that doctrine was announced Japan was a hermit. It was not until the middle of the last century that an American naval officer lifted the screen from the Japanese islands and introduced them to the civilized world. If James Monroe could have foreseen the history of Asia during the last century, he would have announced that any effort on the part of a European or Asiatic nation to gain a foothold in America would be regarded as an unfriendly act.

So for 118 years the United States has been committed to the defense of all the Americas from foreign aggression, and we have modified the doctrine to the extent that we will oppose the effort on the part of any non-American nation to take over, secure title to, or invade any part of the Western Hemisphere.

During the period when the world was seeking peace, and thought it had secured it, and in the belief that we would aid in perpetuating that peace, the Congress of the United States enacted what was known as the Embargo Act. This act was based upon the deluded belief that we were curbing the munition makers and that by prohibiting them from selling arms to any nation of the world we would make it more difficult for wars to begin or to spread.

We did not realize then, as we have come to realize since, that that law gave an additional weapon to every military dictator who concentrated the energies of his own people in the manufacture of implements of war while his neighbors were pursuing innocently the reconstruction of their social, economic, and industrial life.

When we realized the real effect of this shortsighted enactment, we repealed it. But even in its repeal we acted with hesitation and equivocation. We passed what is known as the Neutrality Act, by which we made it impossible for American citizens and American ships and American cargoes to go into any belligerent waters during the existence of war. We withdrew our flag from the high seas to that extent and made a greater sacrifice to avoid American involvement in war than was ever made before by any great nation in the history of the world. This is still the law, and we are scrupulously observing and enforcing it. But we are coming more and more to realize that no nation can completely insulate itself from the shock of electric currents that are flashing in all the heavens that surround the world. We are rapidly coming to the knowledge that we cannot completely or substantially or effectively barricade ourselves against the conflagration that is sweeping the world before it merely because we are surrounded by water.

The inventive mind of man has brought about the effacement of barriers, natural or artificial. Neither high mountains nor deep waters can any longer protect innocent and peace-loving nations from the physical devastation of war, nor even from its effects, which are today complicating and paralyzing the normal energies and aspirations of mankind in every civilized nation.

This incredible holocaust, these incredible events, have colored and now color every thought that we entertain. They fashion and mold our obligations and our requirements; and they will affect for good or ill the life and welfare of every man, woman, and child in America, as well as throughout the world, for generations if not for centuries to come.

It is because of these things that we have been compelled temporarily to step aside from the reconstruction of our own domestic fabric, which had not yet recovered from the first World War, and concentrate our efforts in a huge and unaccustomed preparation to defend ourselves and everything we cherish.

It is because of these things that we have been compelled and are now compelled to train millions of our young men to fight and, if necessary, to suffer and even to die to preserve the heritage of our democracy. We found no pleasure in reaching the strong arm of the Government into the peaceful homes of our land to take from the fireside and the hearthstone the strong and the vigorous and put them through a course of training in the military arts. But, looking across the narrow seas into other peaceful homes and peaceful lands, we could not afford to take any chance. So we are training an army.

It is because of these things that we have been compelled to levy taxes almost unheard of and unbelievable upon the American people during a time of theoretical peace in order that we may pay in part for the enormous expenses Hitler is compelling us to undertake.

We find no pleasure in the levying of burdensome taxes. We are not unconscious of the reactions the average man may have toward the increased taxes which his Government exacts of him. But we realize that we cannot pass this burden entirely on to future generations and that we must raise a very substantial portion of these expenses through new taxes. I am happy to believe—yea, I know, from my contacts with the people—that they are willing and ready to undergo any burden or endure any sacrifice that may be required of them in order that we may preserve this Nation, free and strong and independent, for those of us who live today and pass it on to the generations yet unborn in all of its strength, pride, and glory.

It is because of these things that we have been compelled to appropriate between forty and fifty billions of dollars to strengthen our land and naval forces and guard our Nation and our continent against the evil designs of any world conqueror.

It is because of these things that we have been compelled to double the debt of the National Treasury and even to authorize that it be trebled, if necessary, to accomplish the purposes of our defense.

We find no pleasure in increasing the expenses of our Government or in the multiplication of our national debt. We cannot but view with some apprehension the prospect of its further increase in order that our Nation may not be completely under the domination of an alien foe. But we have been compelled to increase our appropriations, our debt, and our taxes in order that we may be prepared to repel every effort from whatever quarter it might emanate to dominate or influence or restrain people of this continent in the evolution of their social, economic, and moral welfare to the point where every citizen may feel that within the confines of his abilities and his opportunities he may enjoy to the fullest extent the bounties with which God has blessed him and his country.

These are some of the things which we face in the United States. These are some of the reasons why we face them. And I am sure that I am not overstating it when I express the feeling that, without regard to geographical location, financial or social standing, without regard to politics or religion, without regard to race or color, without regard to origin or ancestry, the American people overwhelmingly support their Government and their representatives in that Government in their efforts to fortify our Nation from every standpoint against the things which have made it necessary for us to converge all our energies in this program of national defense.

The things which we face as a Nation are even more far-reaching than our effort now to prepare for national defense. We cannot overlook anything necessary to our defense. We cannot tolerate inefficiency or indifference among those charged with this responsibility. It is not an easy thing to transform a peaceful, law-abiding, Christian people, who love to pursue the ways of civilization and Christianity, into a people bent upon military preparation. It has never heretofore been necessary for us to do it. It has never been desired. But we are doing it and we must continue to do it until those nations now defying despotism can, with our aid banish the danger, the imminence and the threat from the doors and the shrines and the farms and the homes and the business of men, women, and children everywhere.

In the accomplishment of these ends, military preparation alone will not be sufficient. We must make additional sacrifices. We must conform our lives temporarily to the new duty which faces us as a nation. Not only must we tax ourselves, build up our armed and naval forces; not only must we endure increased debt and appropriations, but we must make personal sacrifices which as yet we have not known. We must submit to regulations and restrictions which we would prefer not to incur, but this is our part of the program. We must do without some things which ordinarily we would like to have. We must divert insofar as is necessary the materials at our disposal to the uses of defense, keeping in mind always a fair and equitable distribution of these materials to the industries which are the life of many of our communities.

We must put a curb upon unjustifiable increases in the cost of living to millions of our people who depend upon meager wages and salaries to support their families.

We must put a barrier in the highway of unregulated and unjustifiable inflation, not only for the welfare of men, women, and children during the emergency, but in order to avoid a perpendicular collapse and reaction when the emergency is over.

We must learn something from our previous experience in a similar though not as extensive a world situation. At the end of the World War in 1918 millions of men throughout the nations engaged in war were returned to civil life. The readjustments which followed the peace of November 11, 1918, brought calamity and suffering to millions of our own people and the people of the world, whether they were farmers, merchants, manufacturers, or laborers. We recall that in the years following the Treaty of Versailles many of our great financial geniuses advocated a rather sudden deflation of the values and the prices which had been pyramided during the World War. I recall that, operating under the hypnotic influence of the mirage of perpetual high prices and perpetual prosperity, whether genuine or spurious, many a well-to-do farmer traded in an old farm upon which he had been reasonably satisfied in exchange for a larger and more expensive farm, which he later lost to his creditors.

Following the World War these reactions of various kinds in various parts of the world are said to have made a substantial contribution to the terrific depression which overtook this Natior in 1928, 1929, and 1930, and has continued in some measure from that time until now.

Therefore, while we are feverishly preparing to defend ourselves from a military, naval, and political standpoint, we will be foolish indeed if we are not foresighted enough to prepare against the reactions and readjustments that must inevitably follow the termination of this great emergency.

To that end we must ask the support of all our people, and especially of the banking world, in attempting to curb avarice and cupidity and selfishness during the emergency. We have the right to call upon our great financial interests as well as every class of our people to help see to it that no one grows unjustly rich out of the sacrifices made by the American people, or, as for that, any people.

We have the right to call upon those who are expert in the handling of financial matters which affect all of us to help see to it that as men prosper under the stimulus of a great emergency, they shall contribute in paying the expenses incident to that emergency.

The total income of the American people in 1940 was about $72,000,000,000. It is estimated that the total income of the American people for 1941 will be in the neighborhood of $95,000,000,000.

This is an increase in 1 year of more than $20,000,000,000. We have just passed a tax bill through the Senate and it will soon be signed by the President, which will raise between three and one-half and four billion dollars per annum.

This seems to be a burdensome amount added to our present taxes, but, in all seriousness, may I not ask you and the American people whether we ought not out of the increased total income of $23,000,000,000 per year to take more than three and one-half billions to help pay for the program which, at least in part, has made this increase in income possible?

Therefore, if I may answer concretely what the United States faces today, I would epitomize by saying it faces a world whose domination is sought by a brutal and ruthless conqueror, who has exceeded every other conqueror in the form and method of cruelty. We face the possibility of encirclement by every continent outside of America. For if Hitler wins in Europe, he wins in Africa and in Asia, and already he is seeking to undermine the independence of South American republics, to say nothing of his diabolical undercover efforts in the United States.

We face the possibility in that event of a continuous and perpetual Military Establishment as a part of our regular program in the United States in order that we may never be caught unprepared for a possible hostile world. In this event we are faced with complete change in the methods of our life and the objectives which have made our Nation glorious. We will face burdens never dreamed of and restraints never conceived in the development of our national life. We will face the possibility that our own free institutions, under which we have enjoyed freedom of speech, freedom of the press, freedom of religion, freedom of thought, and freedom of lawful pursuit of happiness shall be crushed, and that we shall be compelled to indulge in physical, moral, and mental regimentation.

We face now, in view of all these things, the responsibility of giving all the aid that we can give to those nations fighting desperately to preserve human liberty. We hope we may do this without entering into the war now raging throughout the world. We love peace and we abhor war. But, while we abhor war and love peace and while we have done everything humanly possible as a nation to avoid the necessity of actual war, and while the great President of the United States in all his efforts has sought to avoid the necessity for our entrance into the war, in which program Congress and the people have supported him, I am not afraid to assert that in any commonwealth of this Nation or in any community of it, if the time arrives when we must lay aside temporarily the peaceful habits which we love, we shall not be afraid to assume the responsibility which our forefathers assumed when they established, and for 150 years have defended, our liberty, our rights, our homes, and our institutions.

They were not afraid in 1776; they were not afraid in 1812; they were not afraid in 1848; they were not afraid in 1861; they were not afraid in 1898; they were not afraid in 1917; they are not afraid today.

God grant that we may not be compelled to unsheathe our sword; God grant that we may not be compelled to use this Army that we are training; God grant that we may not be compelled to use the Navy which we are building for the defense of two oceans; God grant that all of our liberties and our rights and our concepts that our belief in democracy and our belief in the freedoms we enjoy may be preserved without our entering into actual warfare. But if it cannot be done otherwise than by actual conflict, if all the prayers of millions of our people should prove futile in the face of the satanic onslaught inspired by the devil and conducted by his outstanding agent on this earth, Adolf Hitler, then we shall be ready to accept our responsibility and do our duty as God may give us the light to see it and the courage to perform it.

In facing these difficulties, in the solution of these problems, in the unification of our people under the impact of a great obligation, we know we shall receive the full cooperation of the groups which you represent here today and all the groups which make up the citizenship of this Republic.

Should the United States Give Lend-Lease Aid to Russia?

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1941

RADIO ADDRESS BY HON. ROBERT F. JONES, OF OHIO

Mr. JONES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on August 29, 1941, over station WHIO, the Columbia Broadcasting System:

Ladies and gentlemen, the subject of my discussion is Should the United States Give Lease-Lend Aid to Russia? At the time I proposed to discuss this question, Lease-Lend Administrator Harry Hopkins was breaking bread with bloody-fingered Joe Stalin in Moscow. President Wilson had his Colonel House. President Roosevelt has his Harry Hopkins. Both have been star boarders at the White House. Colonel House and Harry Hopkins both have had a curious influence on Presidents of the United States. Both have had their private rendezvous with the rulers of war-torn Europe. Colonel House delivered the A. E. F. to the Allies in World War No. 1. I point to the similarity of these two international figures, House and Hopkins, because their roles in international intrigue have a deadly parallel.

You people, especially in the Middle West and on the great western plains have been quick to detect this similarity. Your letters to the newspapers, your speeches, your letters to the President, and your Senators and Representatives express your resentment against another American Expeditionary Force. The President knows you demand that no secret alliance be made with foreign powers.

Your letters, your influence and yours alone, made the President announce that the United States would not give guns, ships, planes, oil, and tanks to Russia under the lease-lend law. You remember he did not make this decision until pictures of Hopkins and Comrade Joe had been circulated through the Nation. If Roosevelt did not intend to give lease-lend aid to Russia, why did he send Hopkins, the Lease Lend Administrator? The giant propaganda agencies of our own Government made no explanation to the American people that Hopkins was not promising gifts to Russia. You could not embrace communism, and your voices were picked up by Lowell Mellett's million-and-a-half-dollar press-clipping service. Your overwhelming disapproval was reported to the President. Then, and no sooner, your President and mine gave us assurance that Hopkins bore no gifts of our toil and sweat for Russia.

You may rightly ask then, why I discuss the question, "Should the United States Give Lease-Lend Aid to Russia?" My answer to you is that the question is not settled.

In the first place, President Roosevelt says Russia has credits in the United States. That is not a valid reason. Last February England

had $14,000,000,000 worth of credits in the Western Hemisphere which she should have liquidated before we passed a lease-lend give-away bill. Since $7,000,000,000 was appropriated by your Congress there has not been the least effort on the part of our President, Harry Hopkins or any other official of the White House to determine England's ability to pay. I charge now that England's position and ability to pay is the same as Russia's.

I tell you now that Secretary Morgenthau has purchased $4,000,000,000 worth of gold directly and indirectly from Russia. Russia produced this gold at $7 an ounce with slave labor and sold it to your country at $35 per ounce. This is the Roosevelt folly or "gold brick" policy. England has benefited similarly with our gold-buying program, but we gave her a $7,000,000,000 lease-lend give-away bill. Congress in September will consider another $5,000,000,000 give-away for her. I repeat, credits of Russia is not the real reason President Roosevelt promises you Russia will not get lease-lend give-away funds or material.

When you discuss British credits with blind supporters of the President's Anglophile foreign policy, they tell you we must not think of such things now. In February they said we must give England morale. Should the President want to give Comrade Joe a little morale between now and September, let's look at the record of morale in America and in England. The morning after the lease-lend was enacted, your papers and radio commentators headlined the news with startling generalities of tankers and ocean liners full of material for all-out aid to England. They made you believe goods and guns were molding and rusting on the docks until the instant President Roosevelt signed the lease-lend appropriation. I gained the impression $7,000,000,000 worth of guns, tanks, ammunition, and supplies were on their way to England within 48 hours. You heard President Roosevelt, Ickes, Stimson, and Knox call lease-lend opponents "obstructionists." The opponents were not vindicated until the President revealed only $85,000,000 worth of this material went to England in the first 90 days.

Some part of this $85,000,000 worth of material went in the form of raw steel. We had expected every ounce to go into guns, tanks, jeeps, and ordnance; but Americans learned that parts of it were manufactured for South American British orders. Big business and little business in England—thanks to lease-lend—have no rationing system of materials and no priorities. A British statesman admits they are filling commercial contracts with South American countries.

What is the morale of our people before the full impact of lease-lend had hit us? The raw material of small factories is running low. Many factories can't get any priority. Their doors are about to close. Some have already shut down. In defense industries businessmen frantically write the O. P. M., the President, and any bureau they can think of to get a priority rating. Their letters are buried. Two weeks, 6 weeks, and 12 weeks pass without reply. They go to Washington only to be pushed from one office to another. If they don't happen to find the right man out of the thousands of offices, they go home disillusioned and disheartened.

Factory buildings and machine tools lie idle because no one has comprehensive knowledge of what might be used.

Our Government transfers 50 tankers to Great Britain for give-away Columbian and Venezuelan oil. Secretary Ickes claims a shortage of oil in the seaboard States and closes filling stations as far west as Pittsburgh from 7 p. m. to 7 a. m. Along the road, after Icke's curfew tolled, I stopped at several of these filling stations. I saw some pathetic cases and extreme hardship. One widow just a few miles from Pittsburgh, where there is no actual shortage, with tears streaming down her face, reported her business ruined by the order.

All along the eastern seaboard gas prices are rising. Ickes' oil administration is headed by a consistent violator of the antitrust laws. Thurman Arnold's antitrust cases and files are in Ickes' hands. I have no doubt that the small independent oil producer will be squeezed out by the Oil Coordinator.

All of this time Comrade Joseph Stalin sat in Moscow with his German nonaggression pact in one hand and a report from his American Communists in the other. He must have laughed as he read the New Deal Supreme Court decision that an employer could not fire a man if he knew he was a Communist. Can't you hear him giggle when Communists delayed our two-ocean Navy? Can't you see him predicting bloodshed in the defense plants of America if our President attempted to keep ships, planes, tanks, and guns on the assembly line after his fellow travelers put lids over the smokestack? Yes; Joe Stalin laughed at American morale.

One day Communists stopped picketing the White House. Five hours later Russia was in the war against Germany. The Communist Daily Worker turned a flip-flop over night—Churchill accepted ruthless and murderous Joe Stalin, dictator of godless Russia, as a partner.

British statesmen in America said to us that British partnership with Russia had solved our defense strikes and sabotage of defense industries.

What all of this has done to American morale you know as well as I. You have seen and you recognize that the 1941 war crowd has rattled all of the bones of the 1916 war crowd. First, we changed the neutrality law so England could buy supplies. Next we gave it to her.

Now our relation to Russia is in the paying status. Before Russian credits are exhausted you may be asked to give lease-lend aid to Russia or some Attorney General of the United States may give one of those historic destroyer-deal opinions proving that dictatorship Russia is a democracy. Or the appeal may be made for the American people to give Comrade Joe a morale builder with a lease-lend law for Russian dictatorship.

I warn you now that the United States has been building Joe Stalin's morale.

1. Everyone knows that Communists are on the Federal pay roll even in the heart of national defense.

2. As Harry Hopkins sat in the Kremlin with Comrade Joe Stalin I remembered my inquiry about Commerce Department employees on the Dies list. Hopkins was recently Secretary of Commerce. One after another as I read the names to the present Commerce Department I was told Harry Hopkins had hired them.

3. Some of your Federal employees attended meetings of these Communist front organizations and listened to speakers who have sought public office on the Communist ticket. Money collected for the relief of China in one of these organizations was later appropriated for the use of other Communist front organizations in America. Before the deadline for shipments of scrap iron to Japan there was a marathon among eastern junk dealers to get the last shipment of available scrap for the rape of China. As late as February export licenses were issued by the administration in Washington for four-fifths as much oil and gasoline for Japan as we gave to Britain under the lease-lend law. Only after Russia was in the war did the administration admit that it had been appeasing Japan. Since Russia came into the war, war clouds hang over the Far East. If we war with Japan, the boys who bare their breasts for our country will meet bullets made with our own scrap, and our ships will be bombed by Japanese airplanes burning our own gasoline.

I would have more confidence in the administration in Washington if men were placed in high positions of authority who had a fundamental love for the American way of life, steeped in the traditions of liberty of our people and the freedoms we cherish, instead of men who are constantly reported to have leanings to the left.

If we gain the whole world and lose our own soul for the freedoms guaranteed by the Constitution, we will have paid a dear price.

Throwing millions of men out of work in the small factories that can't get defense contracts or priorities for material is dangerous to our morale.

Forcing A. A. A land use for wheat upon States where the majority of the farmers reject it endangers the morale of farmers in those States. In its ultimate end the philosophy will reach every crop and the farmers in America will have to get a license to sell a cow as peasants in France did before that Government fell. I think such a program is born in communistic philosophy and nurtured in totalitarianism. Continued to its end, it will break the backbone of America.

In '39 we were told America cannot build a Chinese wall around itself without complete regimentation of our people. Now, while we are still at peace, we are faced with proclamations, Executive orders, and a legislative program which regiments Americans faster than that which the administration pledged the country had escaped.

Power and more power for a power-mad administration is the watchword of the day. Behind a false cloak of patriotism they clip the wings of the American eagle to feather their own nests.

Ladies and gentlemen, I hope you will keep eternally vigilant for the way of life you know. Let the President know you want our morale builded to higher and loftier planes of freedom.

Each of you can do a little. Write to your editors. Speak on the radio. Talk to your clubs. We must not follow our British pattern: First sell to Russia, then give to Russia.

Let the administration in Washington know there can be no compromise with the godless. The best defense against dictatorship 3,000 miles away is to escape dictatorship in America.

Address to Soldiers of Second Army in the Field

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ADDRESS BY LT. GEN. BEN LEAR

Mr. BARKLEY. Mr. President, at the request of the senior Senator from Illinois [Mr. LUCAS], who is unavoidably absent, I ask that there be printed in the RECORD an address delivered by Lt. Gen. Ben Lear, commanding general, Second Army, to the soldiers of the Second Army in the field on August 28, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Army phase of maneuvers is about to begin. There will be plenty of work for

everybody in this command. By perseverance, by work, by correction of mistakes, by learning team-play, we will make progress.

After that phase is completed, we will enter the maneuvers between the Second Army and the Third Army. This will be the biggest and most important Army undertaking in our peacetime history. It will be a test of our training up to this point. Again every man will do his best, learn by his mistakes one day so that he may do better the next. That is what we are here for. That is why in rain or in heat, under forced marches and long nights on the road, every man will put out his best effort. Remember, each soldier is important, each squad is important. The individual contribution of the soldier, the collective contribution of squads, platoons, companies, regiments, and divisions will make this Army more fit to fight, more fit to serve the Republic. To do less than that would be to deny our country our best services.

I am confident that you will do well—each and every one of you. I am confident that you will answer those critics who have belittled the American Army.

Just like you, I read the newspapers and magazines and take note of what they say about the Army. Like you, I read and discussed with my associates articles that are critical. There have been some I haven't liked at all. I don't like it when it is said or inferred that the American soldier is afraid of his weapons, that he is a potential quitter, that he is too selfish to give his time and efforts ungrudgingly to his country when his national leaders tell him solemnly and gravely that the Nation faces a crisis.

We aren't that kind of men. We are not represented by the disgusting quotations that reflect on the spirit, the manhood, the character, and the patriotism of the young American. We are not the kind of men that any foreign dictator would prefer to have as enemy troops. I resent all such inferences and allusions. I am confident that you join me in that resentment.

I am being very frank with you. We are all on the same team. A general officer's job is a combination job of player and coach. But we are all in playing the game—the most honorable game in life—service to our country. That calls on us to put out—unstintingly.

We will never get paid for that service what it is worth. We will make sacrifices and have hardships that others will not share. We will know labor and sweat and fatigue at a time when we know there are plenty of others who are taking it easy.

But that's the soldier's life in a time of emergency. And if war is brought to this Nation, you will suffer hardships and deprivations that will make your period of training and of field work look like child's play. And that, too, is the life of the soldier when his country is threatened. It is a real man's life.

Well, young men of the Second Army, can you take it?

I'll answer for you, from my most profound conviction: You can; and if called upon on the battlefield, you will.

That's what I think.

Now I don't feel a bit sorry for the American soldier.

He is treated as no other soldier in the world is treated. He eats the best and most nourishing food. He wears the best clothes. He is given the best medical attention. And while his pay is small by some standards, it is the biggest pay received by any soldier under the sun. And the hospitality of America toward the soldier is unrivaled anywhere.

I am not sorry for you, either, because you are giving your time for the period of the emergency to your country—even this additional time about which there has been so much talk. I know that most of you have left jobs. I know most of you would be home earning high wages if you were not in the Army. I know you would like to be back in the affectionate atmosphere of your family, in the company of your wives and sweethearts. A soldier always thinks of home. That is perfectly natural. It was natural in 1776, in 1861, in 1917.

I know from long experience how a soldier will growl and grumble and enjoy having an audience to hear his hard-luck stories. I've done it myself, and I've listened to it for more than 40 years. It is an American trait, and as old as the Army. But it is too bad that so many civilians don't understand it. It is too bad, too, that there are those who are trying to provoke this grumbling. There are forces at work constantly, day and night, that are trying to destroy the fitness and preparation of the American Army. That is one way the dictator nations have made war—to undermine the spirit and confidence of those they would strike. They did it to France. You saw it.

We know there are agents of enemy forces and enemy powers within our country, trying to spread dissatisfaction and suspicion, trying to bewilder us, trying to fill us full of confusion.

That also is an old game of those that fear us. They have done it in other countries. In the armies of other countries they have succeeded. Great armies have been destroyed and the will of peoples has been shattered by this war from within to kill the spirits of men.

Watch out for these activities. You may suspect some of those persons who cry on your shoulders and ask you to cry on theirs. Your best friends are men who expect the most of you—that demand of you your utmost efforts.

There are a great number of people that think of their Government only as an institution that will give them a hand-out. The soldier can entertain no such thought. It is he that must give to his country—his time, his labor, his endurance, and perhaps even his life. His reward? To have served his country. There is no other reward.

The soldiers that established this Nation and won freedom for all of us knew but few victories but experienced much of defeat, disaster, destitution, hunger, and rags. They were 8 long years doing the work that created for you this Republic that you, in your turn, may be called upon to defend. You have inherited this land and its blessings because of the blood and sacrifice of men of preceding generations. Because it is your turn now, because your generation may have to carry its load and be called to make its sacrifices, would you fail? I think not. I know you would not fail.

By act of Congress, on the recommendation of the President of the United States and the Chief of Staff of the United States Army, your term of service has been extended. It was a grave and thoughtful decision of the leaders of the Nation, that your services are needed for a longer period, that you are named to give that much more to your country. You are not 1-year patriots. Nor can we afford in this crisis to have a 1-year Army. If we were at war, you would not hesitate, no matter how much you longed for home. If you held back then, the days of this Republic as a proud and free nation would be numbered.

I agree with my superiors that we are in a period of grave national emergency. That emergency has been declared by our Commander in Chief, the President of the United States. Its seriousness has been pointed out by the Secretary of War and by the Chief of Staff of the United States Army. The Congress has acted to prevent the disintegration of this new American Army, of which you are a part.

Those are our leaders and we are soldiers. It is our place and solemn duty to make good; it is our obligation to stand in unbreakable unity behind our leaders; it is our place to trust and believe in them. They will be judged, not by one generation but by posterity, and so will we be judged—by the America we make safe for our children and children's children. Whatever happens to us, we must make sure that our country goes on—greater and more secure in the liberties and pride of our people.

I am concerned about everything affecting your welfare and your fitness; I am concerned about all influences that are brought to bear upon you; I am responsible to my superiors for the Second Army, and, in turn, every one of you is responsible to his superiors in rank.

I have held a high ideal for the soldiers of the Second Army. I hold that each and every one of you should improve in character, courage, and ability as a result of his Army service, and return to his home a better citizen. I am interested in your moral behavior, your mental improvement, your physical hardening, and the progress of your instruction.

But no matter what I order or your officers instruct, you soldiers, as individuals, can and should do much for yourselves. You can help yourselves make progress as soldiers and as men; you can train your powers of observation and your understanding of character and human nature; you can hold, individually, the highest standards of personal conduct before yourselves; you can make that pride of country, of uniform, of the unit to which you belong, a vital, living thing in your lives; and you can always learn. All of us have much to learn. That is what I expect of you—never less, always the most.

And now we have our work to do. We move into another phase of our combat exercises in order to improve our skill.

You have done well. Perhaps you have done better than you think.

Those of you who were in the Tennessee maneuvers conducted yourselves with credit and learned, I am sure, a great deal. Every day seek to learn more, until you have a passion for perfecting yourself as a soldier.

I want all of you to know what every movement, exercise, and tactical disposition means. I want the chain of command to work from the top down to every squad. I want the soldier to ask questions and seek the answer. We have an army of highly intelligent men. I want that intelligence put to use.

And now—if anyone is to ask you what your objective is—what our objective is—tell him this: An army fit to fight—an army fit to meet veterans in the field and take the field away from them, and suffer the least losses.

That's our objective; and individually and collectively let everyone put out his greatest effort to attain it.

And now, soldiers of the Second Army, I call on you for an all-out effort, day by day and month by month, to make this Army fulfill that objective—to make the men and commands of the Second Army fit to fight. And I wish you good luck.

Post-Office Cancelations

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ARTICLE BY LEO F. RAHILL

Mr. DOWNEY. Mr. President, I ask unanimous consent to have inserted in

the Appendix of the RECORD an article headed "Post-Office Cancelations," written by Mr. Leo F. Rahill and published in the Dispatch, Camp Roberts, Calif., of August 15, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Dispatch, Camp Roberts, Calif., of August 15, 1941]

POST-OFFICE CANCELATIONS

(By Leo F. Rahill, post-office clerk)

The biggest problem confronting the post office is the attempted delivery of improperly addressed mail. The primary aim of your post office is to deliver all classes of mail matter into your hands. However, there seems to be some misunderstanding regarding the validity of the above statement.

This mail problem is one which has been annoying to your parents and friends, as well as your respective Senator, Congressman, company commander, and the mail orderlies. Yet, all have tried desperately to cooperate in your behalf. The question, "Who is at fault?" naturally arises to challenge the Army and the post office.

The answer, "Neither the Army nor the post office is definitely at fault and, therefore, cannot accept direct responsibility," is an answer which may stir up a controversy but we feel that the interested parties who will study the problem will give us a vote of confidence. Basically, the problem seems to be "just one of those things," which happen in spite of all precautions. However, we offer the following as a means by which we may be able to lessen the number of complaints.

Each one of you is acquainted with a boy at home who may be drafted. Write this boy, your friends, and your relations, and advise them against writing to a draftee while he is in transit. Advise them further to wait until you write your definite Army address, viz, Pvt. John Doe, Company A, Eighty-second Infantry, Camp Roberts, Calif. This is your correct address—not John Doe, Camp Roberts, Calif.

The primary mistake is made where one's friends and relatives try to pile up mail for a soldier in advance of his arrival in camp. This is the outstanding cause of undeliverable mail. When such mail arrives it is run through the locator system by the Army. If the man's name is not found, the mail is filed for a period of 10 days; then search is again made in an attempt to deliver the mail. If the man's name is not found, the mail is then returned to the sender with a statement as to why it was not delivered.

Hence the best advice we can offer is: Tell your friends at home to spread the word, "Do not write Joe until you get his company address and the correct camp name."

Thank you.

Hitler and Propaganda

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

EDITORIALS FROM THE WASHINGTON POST AND THE ATLANTIC CITY PRESS

Mr. SMATHERS. Mr. President, in the Washington Post of yesterday morning there is a very interesting and pleasing editorial written under the subject, Where McFarland Is. The editorial that precedes it, under the heading "Next moves," also deals with the same subject matter—Hitler and propaganda. I also have before me an editorial on the same subject, taken from my home-town newspaper, the Atlantic City Press, under the heading "Of wasting time."

I ask unanimous consent to have all three editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of September 10, 1941]

WHERE M'FARLAND IS—

When Senator WHEELER, as chairman of the Interstate Commerce Committee, appointed a five-man subcommittee to hold hearings on a resolution calling for an investigation of war propaganda in films, he was careful not to lay himself open to the charge of making the subcommittee 100-percent isolationist. To be sure, four of the members, Senators CLARK, BONE, TOBEY, and BROOKS, voted against the Lend-Lease Act and for reduction of draftees' service. But the fifth, Senator MCFARLAND, who is serving his first term, was on the other side of the fence on both those issues. Presumably his weight was expected to have little influence on the direction or conduct of the hearings.

If this was the assumption on the part of the isolationists, it was a serious tactical error. For, as the hearings began yesterday, Senator MCFARLAND was in there pitching for all he was worth—much to the discomfort of Senator NYE. Hardly had Senator NYE begun his attack on "four or five" moving picture executives than Senator MCFARLAND interrupted: "I should like to ask Senator NYE what he expects to accomplish through this resolution."

To this, of course, there was no clearcut answer. Again and again the gentleman from Arizona cut short Senator NYE's statement of "the case against the movie industry" with pointed and extremely embarrassing questions. Did Senator NYE want legislation against propaganda? Did he want legislation to control propaganda? Did he contend that pictures showing conditions abroad are untrue? Throughout his own little inquisition Senator MCFARLAND made it quite clear that he was after facts and straight answers, but for the most part he got neither.

In short, it was—and will doubtless remain—an unequal battle. When Senator MCFARLAND asked that Mr. Willkie, the counsel for the movie industry, be permitted to ask questions, he was suavely complimented by Chairman CLARK—and overruled. As the proceedings continue, the isolationists may be depended on to trot out formidable charges of warmongering which Mr. Willkie will have to deal with as best he can. It will be a good bet that if the hearings go on in the present vein, it looks as if the isolationists responsible for the resolution will wish they had never thought of it.

[From the Washington Post of September 10, 1941]

NEXT MOVES

That Hitler must soon seek a diversion from the campaign in Russia seems to be the opinion of many military experts. The season is so far advanced that even those who are convinced that the conquest of Russia is inevitable have postponed the final clean-up till spring. Thus the Nazi time schedule will be thrown completely awry. It was doubtless the aim, as Winston Churchill said in the House of Commons yesterday, to finish off Russia in quick order and then to turn on Britain and the United States. The vigor of the British air offensive and the knowledge that our arsenal is constantly growing may now compel Hitler to leave his Russian job half finished while he devotes some of his attention to new adventures.

Premier Churchill forecasts an effort to halt United States supplies to Britain. He spoke on the heels of the sinking of the American freighter, the *Steel Seafarer*, in the Red Sea, and the speech itself was succeeded by the report of the sinking in the North Atlantic of a freighter operated by an American company under Panama registry. Certainly the news seems to bear out the British Premier's forecast. For over 3 weeks now the losses on the Atlantic are said to have been infinitesimal. This is due less to the combined patrol work of the British and American Navies than to Hitler's concentration on the job in Russia and Hitler's fear of inciting America into sterner anti-Hitler measures. But the sands are running out of the hourglass. And the spectacle may at any time persuade the Nazi leaders to make the same desperate gamble that was made in 1916 in the hope that they can win the war before the industrial and military might of America sends all their chances of victory glimmering.

Thus the United States may be called upon to succeed Soviet Russia in bearing the brunt of the Hitler assault. It would be altogether a different test. Russia had to meet Hitler on its own territory; we must deal with Hitler on the sea lanes of the broad Atlantic. The issue is transcendentally important to our destinies. If Hitler should succeed in sweeping the Anglo-American commerce off the high seas, he would be the titan of the modern world. Britain would be strangled into submission. And with her shipping and shipbuilding facilities at his disposal Hitler could then dictate the submission of half our continent and reduce our own great Nation to industrial and military subordination.

That Hitler in a position astride two continents and the mighty Atlantic would allow the United States any equality in the world is absurd on its face. He himself has said that there is no room for our sort of world in his cosmogony. He did not mean Britain or the British Empire. He referred to the "capitalistic-liberal" system, or our American way of life. To this system he would oppose a world tyranny managed by his Nazi lieutenants, and "one of the two must succumb." In the face of this bold assumption Senator NYE, in his statement before the movie inquiry, says that those who want to see the downfall of this cosmic menace must have a financial stake in the downfall. He is right. The entire United States, let alone the movie producers, have a vested interest in the obliteration of Hitlerism. If Hitler wins, we shall all be the poorer, but we shall be the poorer in political independence as well as in material power.

On Thursday the President will make a companion talk to Premier Churchill's on the newest developments in the world conflict. He would be untrue to his record if he did not meet the latest challenge on the high seas with vigor and forthrightness. Our Navy owes its origin to our insistence on freedom of the seas. Now we must give our Navy, which is at its magnificent best in both equipment and morale, the fullest opportunity to insure our freedom against the marauder who has never disguised his ambition to establish himself at the head of the historical list of would-be world conquerors. The job is safe in its hands. Hitler will live to regret his contempt for the United States as "degenerate Yankeedom" only if we meet force with force and beat him to all the approaches to our great ocean which, till he interrupted, was our insurance of independence.

[From the Atlantic City Press]

OF WASTING TIME

Senatorial inquiry into the motion picture industry looks like utter nonsense. Might as well have an investigation to discover if newspapers or radio or magazines are in a conspiracy for or against the Administration's foreign policy. Common sense dictates that motion picture men, like newspapermen and others, run their business to satisfy the customer for a profit. This cannot be done by satisfying somebody else—some propagandist or other special leader. The movie business could not have reached the prosperous heights it enjoys if it had been so dumb as to ignore popular intelligence and regard for fair dealing and honesty. Occasionally one studio or one producer may go astray, just as one newspaper or one magazine may fall for the propagandist's allurements. But you don't find it as a group or an industry or calling. Business isn't so clubby as to conspire to ruin itself. However, the inquiry in Washington will serve one purpose: it will keep burning slightly fading limelight on a handful of isolationists and return the spotlight to Wendell Willkie. Both seemed in need of this treatment if they were not to fade out of the political picture altogether and very soon.

Importation of Cuban Tomatoes and Other Vegetables

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

LETTER FROM S. J. SLIGH, OF ORLANDO, FLA.

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from S. J. Sligh, of Orlando, Fla., giving a very precise analysis of the interest which the tomato growers in Florida have in the hearing held this week on the reciprocal trade agreement with Cuba. The letter deals with the importation of Cuban tomatoes and other vegetables. It is a very serious matter. We know that tomatoes form a part of our daily diet. I ask that Mr. Sligh's letter, together with the accompanying table, be printed in the RECORD.

There being no objection, the letter and table were ordered to be printed in the RECORD, as follows:

S. J. SLIGH & CO.,
Orlando, Fla., September 9, 1941.

Hon. C. O. ANDREWS,
United States Senator,
Washington, D. C.

DEAR SENATOR ANDREWS: It is my understanding a determined effort will be made by importers of Cuban tomatoes and other vegetables, with the assistance of the Cuban Government, to extend the period during which these products can come into this country under the lower rate of duty, and also to try to get the Tariff Commission to lower existing tariffs. Believe a formal hearing was held in Washington yesterday to consider the tariff on lima beans and possibly on tomatoes. The concession period on tomatoes now is from December 1 through February when Cuba pays a duty of 1.8 cents per pound, and during the remainder of the year the duty is 2.4 cents. It is being requested that the concession period start in November and continue through April, and it was also requested that the duty be reduced to 1.2 cents per pound all year, or less if possible. One of the arguments to be used will be the need in this country during the months mentioned when very few vegetables are produced in this country. You well know this argument has no foundation, for it is during these months Florida produces her vegetable crops. We will admit during the past 2 years, due to weather conditions Florida production was light, particularly February and March 1940, due to the freeze, and March and April 1941 due to the excessive rains. For your information, we are attaching memo showing the number of cars of tomatoes shipped each month from the various producing sections during the years 1937 through 1941, and from this you will readily see if conditions are normal Florida can produce and needs the present tariff protection. No doubt if the tariff is reduced on Cuban tomatoes, it would also be reduced on Mexican produce, and you will note from the attached memo just what that would mean to Florida.

No one knows better than you what the produce business means to our State, under what handicaps the grower of this State has worked, the cost of raising produce here compared to Cuba and Mexico, and I am confident you will use your efforts to protect our interests.

I know these are trying days, and sometimes action must be taken which works a hardship on some of the people but is beneficial to the country as a whole, and I would be glad to hear from you fully as soon as you can give this matter your attention.

With kindest personal regards.

Yours very truly,

S. J. SLIGH.

NOTE.—Florida shipments 1938 and 1939 which clearly shows Florida can produce adequate supplies.

Former Senator Burke, of Nebraska

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ARTICLE FROM OMAHA WORLD-HERALD

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Omaha World-Herald of September 4, relating to a former colleague of ours in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Morning World-Herald of September 4, 1941]

BURKE SENATE RACE UNLIKELY—WON'T RUN UNLESS THE "OFFICE SEEKS ME"

(By Marr McGaffin)

This may or may not be comforting news to Nebraska Republicans who have been doing considerable jockeying around lately for positions at the gate in next year's senatorial election.

First, Former Senator Edward R. Burke is not pulling any strings, building any fences, or laying any plans to become a candidate for the Republican nomination.

Secondly, he frankly admits that if he should ever again hold public office, a seat in the United States Senate is the only one that would really entice him into abandoning the practice of law.

Months ago, when Burke carried through on his statement that if President Roosevelt were nominated for a third term he would quit the Democratic Party and become a Republican, it was more or less taken for granted that he would seek the Republican nomination in 1942.

DIDN'T JIBE

Then, instead of hiking right back to Nebraska, resuming his law practice there, and taking advantage of every opportunity to get such a campaign under way, Burke set up a branch office here in Washington and settled down to practicing law. That didn't jibe with the assumption that he had switched parties for the sole purpose of seeking reelection to the Senate.

He's noted for being probably the poorest politician who ever went out after votes in Nebraska, but even the rankest of amateurs would hardly pass up 8 months of casual handshaking and speech making if he had any serious intentions of facing the voters at an approaching election.

That's why I put the question up to him point-blank today.

"What about it? Are you through with politics? Have you given any thought to being a candidate for the Senate in 1942?"

ANSWER IS FRANK

The answer was frank and straight to the point.

"Of ourse," Burke replied. "It would be ridiculous to say I have no desire to return to the Senate.

"My experience in the Senate was intensely interesting. I feel I am well qualified by reason of that experience to represent the people of Nebraska. But I have no intention whatever of asking the voters to send me

back to the Senate simply because I might personally welcome having that opportunity again."

Burke said he recognizes that as a "newcomer" he has no claim to the support of Republicans who have been lifelong party members and have carried water for the party organization for years.

BACKS TWO-PARTY SYSTEM

"I believe in the two-party system of government. I believe those parties must be strong and made up of men and women who are sincere in their beliefs, rather than opportunists who may be seeking public office to satisfy their own personal desires," he said.

"If I had not believed that, I would not have severed my affiliation with the Democratic Party and registered as a member of the Republican Party."

In very blunt language, Burke's attitude toward next year's senatorial race might be interpreted like this:

If by any turn of fate he should get an encouraging nod from Republican leaders, or an overwhelming majority of the rank and file voters, he wouldn't turn a cold, unappreciative shoulder.

On the other hand, he's not butting into party affairs and has no intention of seeking the Republican nomination. Neither has he any thought of back tracking and renewing his former Democratic Party ties.

As things stand today, I'd say the odds are pretty much onesided that Burke's name will not be on the 1942 ballot

Resolutions of Representatives of Iowa A. A. A. Farmers, Committeemen, and Corn Growers

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

LETTER TO HON. CLAUDE R. WICKARD, SECRETARY OF AGRICULTURE, AND HON. HENRY A. WALLACE, VICE PRESIDENT, AND CHAIRMAN, ECONOMIC DEFENSE BOARD

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a set of resolutions adopted by representatives of farm interests in my State, and embodied in a letter addressed by them to Hon. Claude R. Wickard, Secretary of Agriculture, and Hon. Henry A. Wallace, Vice President, and Chairman, Economic Defense Board.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

We, the A. A. A. farmers, committeemen, and corn growers of Iowa, are seriously disturbed by the attacks on our ever-normal granary by economists and officials high in the administration of the farm program.

After studying the questions involved in the proposal to establish corn-loan rates based on location differentials and learning of the various arguments and questionable conclusions presented to justify them, we are reminded of the statement of Thomas Edison, "There is no expedient that man will not resort to in order to avoid the real labor of thinking."

We are fearful that it will destroy the soundness of our ever-normal granary, destroy the morale of the farmers, build area class consciousness, and undermine the unity and solidarity of agricultural thinking.

Farmers generally are not favorable to an inflated parity and seriously object to loan rates for agricultural commodities based on unsound, inflated prices. We are desirous of stability of price levels over a long period; for only through such stability can we hope to permanently rehabilitate the rank and file of agriculturalists.

We object to any differential in the 1941 or any future corn-loan rate for the commercial corn area as being unsound, discriminatory, and calculated to favor and encourage marginal corn production areas to the disadvantage of the surplus producing areas.

Inasmuch as Congress has provided that our loan be 85 percent of parity, we insist that this rate be uniform throughout the commercial corn area.

We, therefore, present our plea, based on the following premises, to Claude R. Wickard, Secretary of Agriculture, and the Honorable Henry A. Wallace, Vice President of these United States of America, through whose untiring effort and vision the foundation for an effective ever-normal granary was established.

1. Has livestock production shifted to the east part of the commercial corn area and decreased in the west part because of the uniform corn loan rate during this needed accumulation?

It is so contended by economists from some Midwest land-grant colleges. In order to establish evidence that such changes were being effected they used 1927, 1928, and 1929 in comparison with 1937, 1938, and 1939. This was a premeditated comparison; using three high hog-production years against 3 years, one of which followed the drought of 1936. Yet, 1939 taken alone was the second highest Iowa hog production year of record.

Here are the facts on hog production according to Agricultural Marketing Service figures. Instead of hog production in the western Corn Belt decreasing and shifting eastward, we find that practically the reverse is true. During the period when greatest stocks of corn accumulated, for example, from January 1, 1937, to January 1, 1940, the eastern Corn Belt increased hog production 32 percent. The western Corn Belt increased 52 percent, the United States average increase was 36 percent, Ohio increased only 25 percent, Iowa increased 47 percent, and South Dakota increased 100 percent.

Taken home to a typical Corn Belt county in Iowa, Pocahontas, with a 10-year (1927–36) average hog production of 56,000 head, produced 68,000 head in 1937, 77,000 head in 1938, and 78,000 head in 1939. This same ratio holds throughout the cash corn counties in the north half of Iowa. Even Story County, seat of Iowa State College at Ames, home of learned economists, increased from 62,000 hogs in 1935 to 85,000 head for 1939, an increase of 37 percent.

2. Is the flat corn loan rate more attractive to corn growers in the west half of the commercial corn area than in the east half?

We find that the widest spread between market price and loan rate was in Kansas, Nebraska, and the Dakotas, but these States do not have excessive supplies of corn. The large supplies of corn are located in Iowa, Illinois, and Minnesota, and according to A. M. S figures the average farm price of corn during 1938 and 1939 was higher than in the three eastern Corn Belt States, and the situation was changed only by the drought in these States during 1940.

It should be quite clear that the accumulation of large reserves of corn is due to continuous high yields for 4 years and not due to the flat corn loan rate. If we are to change the loan rate because of current droughts or crop failure every year to fit crop yields, we will always be in a mess.

It is well to remember that the west half of the commercial corn area is a high-risk area which needs large reserves in the ever-normal granary to make safe and practical maintenance of livestock production.

One other point that should be made in answering the criticism of piling up corn in the western Corn Belt is that this is partially due t- the fact that farmers in the five Western States accepted the resealing program and complied with the request of the Government to hold their corn on the farms. In the summer of 1939, when high corn supplies threatened to ruin both corn prices and livestock prices, you, Claude, as director of the north central region, came to the heart of the Corn Belt at Fort Dodge, Iowa, and issued your "challenge to the Corn Belt." You urged farmers to reseal their corn in order to keep it off the market, and thereby avoid low corn prices and lower hog prices the following year.

The five Western States responded by resealing from 70 to 80 percent of their corn. The eastern Corn Belt did not accept the resealing program, although they had the same opportunity.

These five eastern States resealed less than one-third of their corn. We have, therefore, some reason to believe that eastern Corn Belt farmers would have done the same thing with the 1940 resealing program if it had not been for a short crop for 1940.

We insist that an ever-normal granary committee be appointed of representative farmers in the affected corn area to make further study and discuss in the field the future corn loans, as was recommended by the National A. A. A. Conference.

We are now prepared and anxious to respond to your call for increased livestock production for defense and future peace. This increased production is under way, with the prospect of an all-time high production of hogs in Iowa and cattle on feed in Iowa at the present time being 135 percent of 1940.

These resolutions being adopted by 600 representatives from 64 counties in Iowa of farmers, businessmen, and others interested in the welfare of agriculture assembled at Storm Lake, Iowa, this 5th day of September 1941, are respectfully submitted for your serious consideration.

Townsend Pension Plan

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ARTICLE BY GEORGE MURRAY

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Federation News of July 5, 1941, written by George Murray, relating to certain views held by Thomas Paine on pensions. Mr. Murray is an authority on Thomas Paine and has developed some very interesting data relating to the subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Federation News of July 5, 1941]

TOWNSEND PENSION PLAN—ILLUSTRATIVE OF THE TRUTH OF THE ANCIENT PROVERB, "THERE IS NOTHING NEW UNDER THE SUN"

(By George Murray)

Basic principles of the Townsend plan had been advocated by an early patriot and American thinker more than a century and a half before Dr. Francis E. Townsend's program caught the Nation's eye in 1933, it was discovered in Washington, D. C., through perusal of rare pamphlets at the Congressional Library.

Thomas Paine, literary father and spark plug of the American War for Independence, who served as secretary for foreign Affairs to the Congress of the United States during that war, proposed the Townsend plan in a pamphlet entitled "Agrarian Justice as Opposed to Agrarian Law and to Agrarian Monopoly."

In this pamphlet he proposed:

"A plan for ameliorating the condition of man by creating in every nation a national fund to pay to every person, when arrived at the age of 21 years, the sum of 15 pounds sterling (about $75) to enable him or her to begin the world; and also 10 pounds sterling per annum during life to every person now living of the age of 50 years, and to all others when they shall arrive at that age, to enable them to live in old age without wretchedness, and go decently out of the world."

TAX FOR FUNDS

Paine proposed to raise funds for such a pension through an inheritance tax of 10 percent. It was his contention that in the course of 30 years—1 generation—the bulk of the real and personal property of the entire Nation would have become subject to the tax. In discussing eligibility for such a pension, he wrote:

"It is a right, and not a charity, that I am pleading for. It is proposed that the payments, as already stated, be made to every person, rich or poor. Such persons as do not choose to receive it can throw it into the common fund."

Paine estimated that at the time his pamphlet was written, in 1795, only one-eighteenth of America's population was past the age of 50. Experts today estimate that 10 percent of the Nation's population is past 60 and eligible for pensions under the Townsend bill. Paine set forth the reasons for his proposal:

"The contrast of affluence and wretchedness continually meeting the eye is like dead and living bodies chained together. Though I care as little about riches as any man, I am a friend to riches because they are capable of good. I care not how affluent some may be, provided that none is miserable in consequence of it."

MULTIPLY RESOURCES

Prosperity through spending had been envisioned by this great thinker even in a day when most of his contemporaries were thinking in terms of scarcity, Paine reveals in declaring his program "would multiply also the national resources; for property, like vegetation, increases by off-sets."

In justification of his proposed tax, Paine wrote that all land, in the beginning, had been common property but that, in enhancing its value through cultivation, certain industrious men had acquired what society recognized as a claim upon it. But that such landowners were indebted to society, Paine insisted in a passage:

"Property is the effect of society; and it is as impossible for an individual to acquire personal property without the aid of society as it is for him to make land originally. Separate an individual from society and give him an island or a continent to possess, and he cannot acquire personal property. He cannot become rich.

"All accumulation of personal property, beyond what a man's own hands produce, is derived to him by living in society."

This unusual treatise, written so long ago, was uncovered during research for a drama on Tom Paine, the American patriot who authored Common Sense, The Rights of Man, and The American Crisis, pamphlets which Gen. George Washington credited, in great part, with aiding in the birth of America.

What Farm Power Means to Food and Defense

EXTENSION OF REMARKS

OF

HON. LLOYD SPENCER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ADDRESS BY HON PAUL V. McNUTT

Mr. SPENCER. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Paul V. McNutt, Federal Security Administrator, before a banquet meeting of the Rural Electrification Administration and Food for Defense Conference, at the Washington Hotel, Washington, D C., September 5, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Half a dozen years ago, while I was Governor of Indiana, the Rural Electrification Administration got under way.

We had in Indiana at that time some rural electrification. Eleven percent of our farms were electrified—one farm in nine.

Indiana's electrified farms were for the most part near cities. Or they were in concentrated prosperous farming areas. Or they were farms that happened to be along some main transmission lines which led to such urban or concentrated areas.

But the great majority of Indiana's farmers still depended upon the windmill or the chugging gasoline pump for their water supply. They still read by the flicker of the coal-oil lamp. Wheezing engines cut their ensilage. A few farmers had installed home generator systems, but this was no substitute for the heavy-duty possibilities of 110-volt main-line current.

The tractor, the truck, and the harvester had brought some mechanization to the job of the farmer in the field. But in the kitchen and in the barns the farm job had not changed much. Electricity had not made its contribution to the farmer's home.

So your program appealed to the farmers of Indiana. They felt themselves able to take advantage of the opportunity which the Rural Electrification Administration was extending to them.

They were better able to take advantage of this opportunity than they might have been in other times—better able than the farmers of many States. Through the Indiana Farm Bureau, the Grange, the Farmers' Union, and other organizations they had joined to market their products. They were purchasing their fertilizer, gasoline, and oil cooperatively, by specifications. In league with other farm organizations, even tractors were among the products which farmers, through cooperation, were selling to themselves on their own terms.

Yes; Indiana farmers were organized. Large-scale management was not unknown to them. Indiana farmers knew how.

So, Mr. Slattery, when your program came along they were ready for it. There was nothing esoteric about a pole or insulator. Transformers were certainly less awe-inspiring than tractors and gasoline engines. If farmers could market their products to the very doorstep of the consumer, certainly they could run a power-distribution system.

So the farmers of Indiana reasoned half a dozen years ago.

Today they have worked with you for 5 years. Many cooperatives have been established. I can give you the result of their mature judgment: There probably won't be any more rural electrification cooperatives in the State of Indiana.

Why? Well, I will have to tell you. But I wish some of our good down-to-earth farmers from around Reelsville, Ind., were here to tell you. The Tri-County Electric Cooperative Association is having its first pole setting this month. Its Clay, Putnam, and Owen County territory, Mr. Slattery tells me, probably preempts the last area in the State of Indiana which affords the possibility for cooperative power development.

That's why there won't be any more rural electrification cooperatives in the State of Indiana. All the hitherto unserved areas have enlisted 100 percent under the banner of rural electrification or have been served through the extension of private lines.

That does not mean, I am sorry to say, that all our farmers now have electricity. Lines are still in the process of building. Some cooperatives, like the Tri-County Co-op, are just beginning to set their poles. The job is not finished. But with the Rural Electrification principle of "area service" established, with cooperative claims laid out all over Indiana, the job will be finished. Save perhaps for a few isolated farms in the hill regions and forest areas, Indiana will attain some day the better than 90-percent farm electrification already reached by one or two of our States.

You, Mr. Slattery, who have devoted your life and distinguished public service to the conservation and wise use of America's natural resources, must find in this record a great satisfaction.

And the farmers who have taken part in the development of this program must feel similar satisfaction. They take their place with the pioneers of America's industrial and commercial development.

Nearly 50 percent of Indiana's farms are electrified today. More farms have been electrified in the past 5 years than in all the 40 years' previous history of the electric industry. Over 30 percent of all America's farms are electrified today, as contrasted to 10.9 percent at the end of 1934. That is achievement.

It is, moreover, being done on a sound financial basis. It has been done within half a dozen years after the leading old-line spokesmen of the industry declared that it could not be done. It was impossible.

So American farmers and farm organizations take their place with the Wright brothers who did not know that heavier-than-air transportation was impossible. You take your place with the Henry Ford of 1910 who did not believe that automobiles must remain forever outside the reach of the ordinary man. You take your place with the pioneers on every front of geography, industry, and agriculture who have been willing to doubt authority and try their hand at doing the impossible.

Your success stems indeed from an old American tradition. America itself is a triumph of the amateur. All the best au-

thorities of 1776 knew that democracy itself could not be done—that it was an impossible dream. American farmers helped crack that superstition, too.

In achieving this broad success you have applied the methods of agricultural cooperation to a new field. You have streamlined the construction of rural transmission lines. You have, in the words of Dave Lilienthal's immortal pun, "made two globes of glass glow where only one glew before." You have made contribution not merely to policy. You have made a contribution to the technical problems of rural power distribution. You have passed from journeyman to master.

This is no mean contribution. But you as irrepressible amateurs have made another contribution—a contribution made by every American workman. You have contributed to the strength and unity of the American Republic itself. An old constitutional principle has found a new application.

One hundred and fifty-four years ago that little band of patriots who met through the sweltering summer at Philadelphia wrote into the Constitution of the United States a provision for the establishment of post offices and post roads Theirs was no commercial concern. Theirs was a concern for the unity of the country.

There must be no part of that United States which stretched from the Bay of Passamaquoddy on the north to the St. Mary's River on the south, from the Atlantic to the Mississippi, which should not be served by communication, i. e., in 1787, the post system. The letter and the printed page were the instruments they knew.

This land had free speech, free press, free religion. It must also have clear and open channels for translating them into reality.

Post offices and postal service are not to be measured by the standard of profit. They were to be measured by the standard of national interest. And national interest demanded unity. National interest in a democracy demanded information—the exchange of opinion.

Those principles have grown with the growth of our American industrial technology. Freedom of the air. Local service for every State and community. Those principles govern radio. Not commercial standards, but public standards set the postal rates for newspapers and magazines.

You may have noted, too, that postal service—like the electric service of the R. E. A.—is an area service. It would be possible to create huge profits out of the postal system by cutting off distant rural communities. One nineteenth-century zealot indeed established a postal service—an express service between Boston and New York. He wanted to prove that he could handle mail cheaper than the Post Office Department. He did. Certainly he could between such towns. He recognized no obligation to serve the semiprofitable villages in between which were the bedrock of the American way.

I speak with feeling on this criterion of service—a criterion which was present in the fundamental American community of our fathers. It was unhappily lost in the days when unit cost accounting began to replace common sense in the administration of our human affairs.

It is an evil present in many fields. In my final message to the Legislature of Indiana in 1937, I said:

"In our zeal and anxiety to balance the budget we have come dangerously close to forgetting some of the human values and social responsibilities which lie behind the budget and for which, indeed, the budget exists. Unless the interests which have to do with the bodies, minds, and spirits of men, women, and children are safeguarded, economic recovery will prove a barren achievement. It is quite as important to prevent social deficits for the future as it is to prevent financial deficits for the present."

"Cream-separator distribution" is another expression of that same danger. Skimming the cream of a market, as some companies habitually have done, is not a unique evil of the power-distribution industry. In my address to the National Nutrition Conference, I said:

"I would not want any representative of industry to feel happy about the whole thing until the American system of distribution—with the skill and leadership that only the food distribution industries are now equipped to offer us—can work out a pattern of distribution that reaches everybody.

"Some industrial policies aim to skim off the cream of a market. Under such a policy, advertising is aimed at the 30 percent of the market that has the most money to spend. Costs and prices may be geared to that selected market. The result may be a residual market that can't be developed economically by anybody. 'Cream-separator distribution' that selects only adequate-income groups may pay money dividends. But it can be a bottleneck to national health."

In distributing electric power it is not only new areas that must be served. Present users must be better served. Increased normal consumption on the part of each householder is a vital element in any forward-looking power policy.

In the year 1939, the latest year for which figures are available, the average Ontario, Canada, farmer taking his power from a public system consumed 1,687 kilowatt-hours annually at an average cost of 2.5 cents per kilowatt-hour. In that same year consumption among farm customers of American companies averaged 1,127 kilowatt-hours annually and the cost averaged 4.4 cents. So for 43 percent less money per kilowatt-hour our Canadian farm neighbors used 50 percent more magic kilowatts.

There is no reason why the American household should not surpass the Ontario load. Means must be found and you are helping create those means.

The way is pragmatic. I come to you with no doctrinaire support of any type of development—public, private, or cooperative. There is no eternal a priori that demands this public function be chartered to private companies under regulation. There is no eternal a priori that dictates its retention under public management. The test must be the test of practical experience.

But let success be not measured by the height to which stock quotations can climb above actual investment. Let success be not measured by the height to which dividends can climb above a fair and reasonable return.

Let the test be a consumer test: That system which can soundly serve the most people in the broadest area, with the most kilowatts at the lowest cost is the most successful system of power distribution.

That, I believe, is essentially the test you apply in developing R. E. A. projects. In "area service," in load building, that is your objective.

Where do these things fit into nutrition? What relation do they have to the full fruition of America's freedom? What conceivable relation do they have to defense?

The answer is not difficult. Anything which helps make American farm life more vital contributes to the strength of America.

The American farmer is no believer in isolationism — personally speaking. Good roads have put him in touch with markets. Good cars have given his family new mobility. And with the lines of rural electrification come better roads, running water, well-lighted yards and barns and houses. Radios that put the news, drama, music of the whole world at his fingertips. New equipment that brings the level of life on the farm to the essential standards of city life.

In the past few years we have teamed up agriculture and health as never before. Through the food-stamp plan, through school lunches, through the development by the distribution industries of cheaper and better mass-distribution methods, headway is being made toward that goal.

Farmers have another problem. Farmers have first the problem of fitting their production to their own needs. Transportation and communication were blessings, but a society, like a man, is apt to become intoxicated by new possessions. We began to produce for distant markets. Farmers produced cotton or corn or hogs for folks that lived thousands of miles away, and bought string beans and peas and tomatoes that had been canned at the far corners of the continent.

So, one job is to give the modern farm that four-square self-sufficiency of the old-fashioned farm. And electricity can help. Electricity can make it possible for farmers singly or in groups to replace the tedious methods of conserving foods with methods that match the standard of the best commercial canneries. Joint action and planning can see to it that those methods conserve the food values which might otherwise be lost.

Farmers' organizations, with their long-time skill in education, can stimulate the production of protective foods. They can make a real contribution by helping to bring such foods within the reach of low-income families.

Farmers' organizations can help to carry on these programs in every farm community. Every farmer and his wife can participate. The reserves of home-grown, home-consumed foodstuffs will insure a better fed rural America. They will release distant workers and transportation facilities for the service of the defense program.

The Rural Electrification nutrition centers recently outlined by your Administrator, Harry Slattery, provide a constructive and workable plan for achieving these ends. You are familiar with that plan. Many of you no doubt contributed to its creation. In many of your communities there are probably already electric food-processing centers set up on that pattern.

Your cooperatives are today serving some 20,000 rural schools. The 3,000,000 people who live on Rural Electrification Administration financed power lines and the additional millions of coming customers will be the winners.

Don't think that because this isn't guns, tanks, and planes it isn't important.

Don't think that food is an unimportant part of the defense program. "An army," said Napoleon, "travels on its stomach." It does, indeed. But there is a vast difference in America's approach to food conservation in the last war than in its approach today.

Then the demand was not merely to save food through conservation. Eat less. Drop from the diet or reduce to a minimum your consumption of vital food. Twenty-five years ago there was an idea that everything should be saved for those at the front.

Today our battle cry is production. But it is also consumption. Better consumption. Consumption which will provide the best possible nutrition not only for the soldier at the front but for the man and woman at home.

We have learned that the vitality of a nation—yes, down to the last humble worker or the most solitary farm—is important to the Nation.

This is total defense. It is not merely those in the front lines who fight it. We all fight it. We all have to be tuned to defense.

For every man in the front line there are 30 behind the line directly serving him. Equipping him. Supplying him with food,

munitions, clothing, materials that will tune his mind and body; make him a reliable front-line man.

There was no error—no then known error—in the emphasis on the last war. Vitamins were unheard of in those days. So were other important elements of satisfactory diet. The knowledge of nutrition, like the knowledge of military science, has changed our approach.

We have learned just how many of our poor have had unbalanced diets. We have learned the consequences of the "hidden hungers" which arise from improperly balanced diets. We know that not only obvious physical health, but morale, mental stability, efficiency may depend upon good food.

Along those thin lines of wire that carry power to the farm is moving a whole agricultural revolution. It is as fundamental a revolution as that which electricity brought to the cities.

We talk here about canning, processing, conserving vital foods. But that is only one element in the decentralization electricity makes possible.

You have in your hands an instrument which will not only keep farmers on the farms; it may reverse the trend of industrial centralization and start the march of industry back to the villages. Yes, even to the farm itself.

Industry need no longer go to power. Power can come to industry. "Megalopolis"—as Lewis Mumford has dubbed our frenzied and congested cities — "Megalopolis" is doomed.

Hitler has pushed rural electrification and founded rural industries upon rural electrification. Little plants, widely scattered. Country population. These are not easy targets for bombs.

What many have recommended as a social measure Nazis adopted for its strategical importance.

Britain has its vast system of subcontracting "bits and pieces" of tanks and planes and other defense equipment. Thus, not just the great factories but the full productive resources of Britain serve its defense effort.

And along your lines in the next few years may grow the far-flung and invulnerable little industries of America. Along those lines we may in times of peace see again the modern counterpart of the little industry of the New England village.

In the days to come, in many a rural schoolhouse and community center you will take this first step in our effort—the conservation of the total food resources of America.

And on your wall, on the walls of those who must subcontract our defense production, on the walls of every factory in America might well go these words. Carlyle wrote them apropos of the desperate situation of the young French Republic—of a France that forgot them nearly a hundred and fifty years later:

"In this humour * * * then, since no other serves, will France rush against its enemies. Headlong, reckoning no cost or consequence; heeding no law or rule but that supreme law, salvation of the people! The weapons are, all the iron that is in France; the strength is, that of all the men, women, and children that are in France. There, in their 250 shedsmithies, in garden of Luxembourg or Tuileries, let them forge gun barrels, in sight of heaven and earth."

Above the clang of forges and the din of machinery—in small towns and at country crossroads, in garages, and in factories the size of cities—will be heard the singing and shouting of citizens—men, women, and children—given a chance to feel that they are part and parcel of a noble enterprise—the defense and the continuance of the American dream.

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

LETTER FROM REV. A. WENDELL ROSS

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated July 25, 1941, written by Rev. A. Wendell Ross, pastor of the Pleasant Hill Baptist Church, of Los Angeles, Calif.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PLEASANT HILL BAPTIST CHURCH,
Los Angeles, Calif., July 25, 1941.

To the Senate of the United States,
Washington, D. C.

YOUR HONORS: It is with humble approach that I take this God-given privilege to address you, who stand at the head of our great Nation as one of the lawmaking bodies to govern a great nation and to perpetuate its welfare and prosperity.

For 31 years I have been a leader of my race with but one desire—to direct my people to be true Christians and patriotic citizens. We know no land or country as our own but the United States of America, and we want no other. We love our land and Nation. We have been ready to answer every call, and on all battlefields on which we have had the opportunity to serve our bravery and loyalty is attested by blood.

But, now, Your Honors, I feel that you should know the true spirit of the American Negro. That spirit is that as a true patriotic and loyal citizen we feel that the time is now when the Negro should be given all constitutional, civil, legal, political, and economic rights that all other Americans enjoy and exercise.

I feel that the 750,000 Negro boys that have been drafted to the Army or to the call of the Nation have the right to say to their Government, "We are ready"; but not until the Nation has moved all national and State Jim Crow laws, all national and State segregation conditions, can we take up training for a defense of that which is not our own to enjoy and exercise.

Your Honors, I am calling upon you in the name of Almighty God to speak to the Congress of our Nation, to the States of our Nation, to the peoples of our great Nation, requesting that the disgraceful laws (Jim Crow laws), separate railroad cars, denial of civil rights, accommodations, public services, public schools, accommodations, and all segregation legislations be abolished now and forever.

God will bring national destruction on our Nation if this disgraceful, ungodly, undemocratic condition is not immediately corrected.

We are made the mockery of the world. It is invoking the curse of Almighty God upon the American people. Your Honors, if you will lead us in this timely demand and just procedure, liberty and freedom will be reborn to mankind here and everywhere. God Almighty will have an opportunity to champion our cause, and no power on earth can withstand God.

Your Honors, the Negroes of America are not defeatist, not subversive. He is not guilty of treason. He is not a slacker. He is loyal and patriotic and true to his country.

The Nation cannot endure much longer and retain its place of honor in the world as leaders of true democracy when 12,000,000 or more citizens are denied the privileges of America's program of full democracy.

As a representative of God Almighty I call your attention to this condition. Now is the time for action.

Prayerfully yours,
Rev. A. WENDELL ROSS.

The Petroleum Situation

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

STATEMENT BY RUSSELL E. SINGER

Mr. ANDREWS. Mr. President, I desire to have inserted in the Appendix of the RECORD a statement of Russell E. Singer, general manager of the American Automobile Association, before a subcommittee of the Senate Committee on Commerce investigating the petroleum situation. The statement was made last Monday.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On behalf of the American Automobile Association and its 750 affiliated motor clubs and branches throughout the country, I want to express to this committee our very great appreciation for the opportunity afforded us to appear before you today.

As you know, we favored this investigation. We did so because conditions involving gasoline had reached the point of almost hysteria among the 8,000,000 owners of passenger cars in the Atlantic Seaboard States. Conflicting statements were coming from a variety of sources. The average car owner was unable to know whether to take the threatened shortage seriously and plan to curtail the use of his vehicle or to ignore the situation and proceed with normal travel. Therefore, we believed that a congressional committee would be in a position to perform a great public service if it could clarify the facts regarding the threatened oil shortage and dispel the confusion that afflicted the public mind.

Already we feel that this committee has done much toward the fulfillment of these basic objectives. Already machinery has been set in motion and there has been an all-round quickening of the effort to relieve the threatened shortage through all available means.

We fully appreciate that yours is a fact-finding body. We recognize that you are desirous of bringing order out of what had become chaotic conditions. Naturally, as a consumer organization of private passenger-car owners, we are not in a position to throw any light on petroleum statistics or tank-car surpluses or movements. The viewpoints we present here today pertain wholly to some of the conditions which are of vital concern to the millions of motorists along the Atlantic

seaboard and to other millions planning to come into this area.

We would like to submit recommendations to the committee, with supporting evidence on the basis of available facts, as follows:

1. That this committee continue its functions with such interim reports as it may deem desirable, to assure a carrying-through of the steps already taken to relieve the oil shortage and also to guarantee to the public that all concerned meet their responsibility to the users of petroleum products.

2. That this committee find that the present night closing of gasoline filling stations is not in the public interest and is not justified as a means of gasoline conservation. It is already evident that none of the savings by retail outlets in the form of lower operating costs are being passed along to consumers.

3. That the committee recognize that the passenger automobile is no longer a vehicle of pleasure, as emphasized by Federal and private agencies concerned with the petroleum problem, but is an important utility of the home, office, and factory. Our whole defense effort would be seriously impaired if workers were denied the use of their automobiles for transportation.

4. That the committee use the full weight of its great influence to see that any threatened gasoline shortage is not used as a means of boosting prices. Figures already submitted to this committee by the Price Administrator and Director of Civilian Supply clearly show that2 profits of the petroleum industry by reason of the increased volume of business are more than enough to absorb any additional expense to date.

5. That the committee definitely recognize that automobile travel has become an integral part of our economic and social system and any serious disruption would have a far-reaching effect on the $5,000,000,000 travel industry, including resort and hotel interests.

Before going into detail on our recommendations, we believe that it is in order to review some of the conditions leading up to this investigation. We recognize that you have been given the viewpoints of those directly concerned with the control, transportation, and distribution of petroleum products. However, we believe that a brief summarization will be helpful to the committee.

Early in June the Petroleum Coordinator for National Defense warned the people in Eastern States that due to the diversion of tankers a shortage of petroleum products, particularly gasoline, was in the offing. The term "gasless Sundays" was widely thrown about as a warning. We promptly informed motorists that conservation of motor fuel through care of the automobile and better driving practices might avert drastic restrictions.

On June 7 our president, Thomas P. Henry, addressed a letter to the Petroleum Coordinator urging that gasoline conservation on a basis of voluntary cooperation be tried before any restrictions were imposed. The facilities of our organization and its affiliated motor clubs were offered in such a campaign. Mr. Ickes generously accepted this offer and expressed the hope that "we can work out this whole difficult problem by good, old-fashioned American cooperation, but we shall all have to help." We immediately began tests to show that proper mechanical adjustment of the car would mean motor-fuel savings of 15 percent with additional savings in gasoline by better driving. Many of our clubs, particularly those in populous States, joined wholeheartedly in this campaign and undertook to arouse public support.

On July 31 the Petroleum Coordinator, on the basis of a resolution adopted by the industry's marketing committee, recommended the closing of all retail outlets in 12 Atlantic Coast States and the District of Columbia and in parts of 5 other States from 7 o'clock at night until 7 o'clock in the morning, 7 days weekly, and effective Sunday, August 3. It was generally recognized that this was done for the psychological effect in bringing home to motorists that the threatened shortage was real. It resulted in a daytime rush to keep gasoline tanks full, and consumption moved upward.

On August 15, at the instance of the Petroleum Coordinator, the then Office of Price Administration and Civilian Supply issued an order calling for a curtailment of 10 percent in the delivery of motor fuel by suppliers to resellers. In effect, this was a rationing of gasoline to retail outlets. The burden of satisfying consumers was placed on the shoulders of filling-station operators. Confusion was rampant.

Then, on August 20, the Acting Petroleum Coordinator issued a press statement to the effect that in the previous week there had been a drop in stocks of gasoline on the east coast of 893,000 barrels. This release further stated that 20,476,000 barrels of gasoline were in storage, but of this amount, roughly 14,000,000 barrels were unavailable for use because of being at the bottom of tanks full of sledge, in technical process in refineries, and so forth. We are advised that this was the first time any such breakdown in figures pertaining to gasoline stocks had been used. The public was told that it meant that only 6,476,000 barrels of gasoline were actually available for use, equivalent to a 10-day supply. This "10-day" statement was left hanging without qualifying explanation that there was day-to-day replenishment of stocks. Headlines in newspapers screamed of a gasoline famine within 10 days. An already confused public became more confused. The railroads were claiming that an ample number of tank cars were available and the Petroleum Coordinator's office was claiming they could not be found.

Unable to advise motorists as regards the true situation, the American Automobile Association on August 24 asked Congress to investigate the gasoline situation and if Federal control of supplies is necessary to set up the machinery for an orderly handling and apportionment of available motor fuel with due regard for the rights of all users. And, as I have already said, this investigation has to date had a wholesome influence on the whole situation.

Now, as regards our recommendations: The easing of the public mind and the actual steps taken to relieve the threatened gasoline shortage, notably the agreement between railroad and petroleum interests to utilize available tank cars, is evidence enough that this committee is achieving results. On the basis of the facts already developed, you are undoubtedly prepared to make preliminary recommendations to Congress. But, from all indications, the threat of a petroleum shortage still exists. Experts have testified that it will continue to exist so long as the international situation remains acute. They have advised that even weather conditions will have an influence on available petroleum. In other words, if we have a severe winter, the requirements for household fuel will tax the transportation facilities for petroleum products. This would, of course, mean less transportation facilities for gasoline.

As a result, we very strongly believe that your committee should enlist for the "duration." The mere fact that you would be ready to continue hearings at a moment's notice would have a heartening effect on users of petroleum products. It would undoubtedly provide a guaranty that railroads and petroleum interests would "make good" on the things they say they can do to relieve the present situation. It is our earnest hope that the committee will find that the public service requires the continuation of its functions.

It is our studied opinion that the night closing of gasoline stations has no real effect in the present situation. The recommendation for closing of stations from 7 p. m. to 7 a. m. was made by the Petroleum Coordinator prior to the curtailment of deliveries to retailers. Gasoline consumption figures are concrete evidence that the night closing of stations has not had the effect of reducing consumption. Motorists who normally purchased motor fuel as it was needed now keep more gasoline in the tanks, and stations are crowded just before the curfew hour. Over a period of years, filling stations have been built up in the public mind as a great service utility. Many large operators have established the reputation for having service available at all hours. As a result, retail gasoline stations have virtually the same place in the American scene as the police and fire stations.

There has been no uniform system devised whereby motorists can secure emergency supplies of gasoline at night. As a general rule, the practice is for motorists to secure permission from police departments to purchase motor fuel for emergency use. This is placing an unwarranted burden on police officers and is not justified by the present situation. Bootlegging of gasoline from pumps under cover has been reported from widely scattered sections.

While the night closing has lowered operating costs for retail outlets, there has been no evidence that any of this reduction has been passed on to consumers in the form of lower prices. Therefore, as night closing of stations has not proven practical as a conservation step, as it is an unnecessary inconvenience to motorists generally, and as filling stations are virtually a public utility, we strongly urge that the committee find that the present night closing is unnecessary.

From the very beginning of the program to reduce gasoline consumption emphasis has been placed upon the automobile as a pleasure vehicle. Although owners of private passenger cars use only 30 percent of all petroleum products, they, and they alone, are asked to bear the whole brunt of conservation of gasoline. In fact, all motor vehicles—trucks, busses, and passenger cars—use only 40 percent of all petroleum products and 89 percent of all gasoline. Passenger cars use 66 percent of all motor fuel.

What are the facts as regards automobile use? Surveys have shown that 77 percent of all trips by automobile are for necessary purposes, such as in connection with earning a livelihood or closely related business pursuits. Fifty-five percent of the total mileage of automobile travel can be labeled as necessary. More than 2,300 cities with a population in excess of twelve and one-half million depend upon private cars for transportation, being without local mass-transportation systems. Members of the committee will recall that when the great industrial city of Detroit was recently without any form of mass transportation for 5 days due to a strike private passenger cars were used, with the result that there was no great break-down in the normal activities of a great American city. So far as automobile-owning families are concerned, the picture of workers' homes clustered about mill or factory is obsolete. On the contrary, 70 percent of workers in car-owning families go to work by automobile. Automobiles are now owned by 76 percent of American farmers, and 78 percent of farm-car trips are for necessity use. Certainly, these figures do not jibe with the generalization of automobiles as pleasure vehicles.

For the information of the committee, I would like to furnish copies of an exhaustive factual survey of automobile use issued by the Automobile Manufacturers' Association, and based upon questionnaires by State highway departments and the United States Public Roads Administration.

The part of the automobile in defense production cannot be overestimated. Plants and training centers vital to the defense program are in the main well off of mass transportation lines. Due to housing conditions, hundreds of thousands of defense workers are traveling from fifty to seventy-five miles twice daily. Traffic figures alone indicate the important part of the automobile in defense production. For example, establishment of a large plant at Charlestown, Ind., increased traffic over one State route from 700 to 14,000 vehicles per day. At the Consolidated Aircraft plant in California, located on a heavily traveled highway, 15,000 employees park 5,500 cars daily in a lot across the highway from the plant. At times the congestion completely ties up traffic on this main artery. Traffic volumes on highways in the important Norfolk, Va., area show increases so far this year ranging from 50 percent to 242 percent as compared with 1940. These tremendous movements are defense workers going about their daily job and it is evident that if they were denied the use of their automobiles defense activities would most seriously be retarded.

The motorists of this country are ready to respond to any demands upon them due to the national emergency. If curtailed gasoline consumption is necessary, car owners should be given the true facts and true reasons why they should cooperate. If the situation becomes so that gasoline supplies demand a drastic cut in motor-vehicle use, then an orderly system should be worked out with due regard for the interests of all. The mere statement that supplies will be cut for pleasure cars is not enough.

The same condition holds true as regards gasoline prices. As between a shortage and boosts in prices due to higher transportation costs, there is no doubt that motorists prefer the latter. We are fortunate that Leon Henderson, Price Administrator, is on top of this situation. He has posted fair prices for 40 key cities. We are cooperating fully with the price administrator in advising motorists as regards these prices and through our affiliated motor clubs in checking on fair-price variations. On last Saturday, through telegraphic reports from our clubs, we found widespread disregard by gasoline retailers of the fair-price schedule. We immediately dispatched the following letter to Mr. Henderson.

"The American Automobile Association has asked its affiliated clubs along the Atlantic seaboard to send us every week on Friday a telegraphic report on the extent to which the retail price for regular gasoline conforms to the fair-price schedule posted by you for 40 cities.

"While our coverage is not complete, the reports this week clearly indicate that there is a widespread disregard by retailers of the schedule you have set up. Out of 18 cities reporting to us as of September 5, the retailers in 11 of them were charging the motorists more than the fair prices, the differences ranging as high as 1.6 cents in Burlington, Vt., and 1.5 cents in Philadelphia and Norfolk. It should be pointed out, of course, that not all retailers in these cities are charging higher prices, but at the same time it is significant that comparatively few retailers are selling below the fair-price level.

"We realize, of course, that you are dealing with an extremely difficult problem with limited powers. What more can be done than you are doing to protect the motorists against profiteering it is difficult to say, but it would seem in order to consider the feasibility of suppliers, withholding gasoline from retailers who persistently refuse to conform to the schedule. Aside from the question of public policy involved, I know you will agree with us that profiteering at the expense of the motorist is all the more reprehensible in view of the high profits made by every element in the oil industry this year.

"We take pleasure in enclosing for you, herewith, copies of telegrams received by us and a tabulation showing the prevailing price as compared with those you listed."

We believe that the activities of the Price Administrator's Office, with the full backing of this committee, will do much to see that any threatened gasoline shortage is not used as a means of price boosting and profiteering. It is our earnest belief that the price situation is an added reason for the continued functioning of this committee.

We are fully alert to the threatened shortage. We heartily agree with the Government's position that everything that is humanly possible should be done to build up a safe reservoir of gasoline. We also agree that this problem is so all important that there are so many national and international contingencies, so many unknown factors, that we feel that this committee should continue to watch over the situation.

We are hopeful that this committee will take definite action to place the responsibility for failure of the oil industry and railroads to get together earlier on steps to relieve the oil shortage. The following facts stand out:

As early as June 25 the Petroleum Coordinator urged that oil companies on the Atlantic seaboard "give immediate attention to possibilities of this greater use of tank cars and proceed as rapidly as possible with such plans as you are able to develop in view of cumulative effect of lost time." On August 23 another appeal was made by the same governmental agency to the oil companies suggesting—

"That the companies responsible for distribution on the Atlantic seaboard place actual orders for more tank cars than they are now using, and so place suppliers under the necessity of either delivering cars or acknowledging inability to do so."

However, it was not until September 4, 1941—2 months and 10 days after—that the oil companies publicly acknowledged their willingness to utilize "all available tank cars as rapidly as they can be supplied by the tank-car companies and moved by the railroads * * * regardless of whether this proved to be 20,000 [tank cars] * * * or some other figure."

It is further significant that it was not until your hearings were started that representatives of the oil and railroad companies met to discuss rate revisions for movement of petroleum products during the national emergency and that it only took 1 day to reach an agreement on new rates involving cuts from 25 to 50 percent under prevailing rates.

In conclusion, we believe that the conflicting statements which have been made as regards the availability and nonavailability of transportation facilities and other phases of the petroleum situation have resulted in a great deal of scepticism on the part of many concerned. This is particularly true with reference to those who have undertaken the job of working out State conservation programs. Thus we strongly urge that the findings of this committee set forth clearly the true situation for the guidance of everyone.

We believe it appropriate to suggest that this committee insist that great care be exercised by all governmental and private agencies concerned with this problem in the type of public statements issued, to the end that there may be an avoidance of scare headlines and hysteria, which is bound to affect public morale and confidence.

To quote the words of a former President of the United States, Calvin Coolidge: "Faith in the American people means a faith in their ability to form sound judgments when once the facts have been presented to them clearly and without prejudice."

Dr. Witold Putkowski

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

Mr. CANFIELD. Mr. Speaker, the House will recall my remarks on June 28, when I discussed the tragic case of Dr. Witold Putkowski, native-born American citizen of Passaic, N. J., who had been a virtual prisoner of the Russian Government in Soviet Poland for almost 2 years following the day when Warsaw was blitzkrieged by the Nazi armies. He had been serving in the Warsaw Hospital, and he had tried to get his wife, a Polish national, and his 4-year-old daughter, the latter an American citizen, away from the area being bombed and blasted. They were separated in the panic, but wife and child were later located in the Polish capital while the doctor was in Lwow under the dominion of the Soviets and was unable to cross the Nazi frontier.

For close on to 2 years the American Government has been asking the Soviet Government to permit Dr. Putkowski's release so that he could return to the United States, join his ill and long-suffering mother, Mrs. Sophie Putkowska, in Passaic, and proceed to effect the return of his wife and child. During this period I have made frequent visits to the State Department and I have been in constant touch with its officers, always hoping and praying with Mrs. Putkowska that the Soviets would cooperate and a reunion of this family would soon be brought about. Our Embassy at Moscow was given the proverbial run-around. Finally, on June 28, 1941, when I read that Mr. Constantine Oumansky, the Soviet Ambassador in Washington, had called on our Acting Secretary of State Sumner Welles, to inform him of the Nazi invasion of his country and had been assured his every request for aid would be given prompt and friendly attention, I took the floor to tell the story. Why, I asked, could not prompt and friendly consideration be given our Government's repeated requests for the release of this American citizen?

Some action followed for on July 10 the State Department phoned me Mr. Oumansky was getting action from his home government in Moscow. Mr. Welles confirmed this on July 16, writing me in part as follows:

> The Soviet Ambassador advised me on July 9 that Dr. Putkowski had been released by the Soviet authorities and that he would be issued an exit permit.

Many of my colleagues, who had become interested in this most appealing case, have asked me to keep them posted. Today, I am sorry to have to advise them as well as the mother and friends of Dr. Putkowski, the Soviets did not effect Dr. Putkowski's release nor did they accord

him an exit permit to leave Russia and return to America.

Our Secretary of State, Mr. Cordell Hull, now writes me, in part:

In a telegram dated August 15, the American Ambassador at Moscow advised the State Department that the Commissariat for Foreign Affairs had informed him on that date it had been unable to obtain any information regarding the present whereabouts of Dr. Putkowski, that the Commissariat assumes that he was located at Lwow at the outbreak of the Soviet-German war, but that due to the occupation of that city by German military forces during the first few days of hostilities it is no longer under the control of the Soviet authorities.

In the circumstances a telegram has been dispatched to the American Embassy at Berlin requesting it to endeavor to obtain and to report information with respect to the present whereabouts and welfare of Dr. Putkowski and concerning the possibility of him proceeding to the United States. You and Mrs. Putkowska will readily appreciate that a considerable delay will be experienced.

I appreciate what Mr. Hull means, and I understand our Embassy at Berlin finds it practically impossible to make investigations of this nature.

The Soviets did not produce, and their failure in the Putkowski case is a distinct loss to them.

While the mother of this man of medicine feels she may never see him again, sometimes holds that he no longer lives, I cling to the faith justice will be wrought, and this family will be reunited in our land.

All America Salutes the Postman

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. CANFIELD. Mr. Speaker, I am sure the House will be interested in the following editorial in last Monday's issue of the New York Times and will concur in its conclusion:

[From the New York Times of September 8, 1941]

CONSIDER THE POSTMAN

A citizen of this town has been in felony court on a charge of assaulting a postman. The case seems to be unique. Why should anyone wish to molest a carrier of the mails? Once a month, true, he stuffs our mailboxes with bills; nevertheless, he deserves tender treatment, for doesn't he bring us checks, now and then, to pay them with?

He is democracy incarnate, the servant of great and small alike. He is service in person, footsore yet faithful, climbing all stairs, out in all weathers, stayed from his duty by neither rain nor anything else. He is a living catalyst assuring a healthful working society, making the whole world kin. Though we remove to the uttermost parts of town, or dwell in some vast wilderness, or manufacture mousetraps of the better sorts on remote mountain tops, he finds our door and links us with our kind.

To those who venerate the swiftly fading past he has high sentimental value; he is almost the last pedestrian. Moreover, he is the least self-seeking of toilers; he walks much, but never walks out. And though he wears a uniform, he goes unarmed, his defenselessness made the greater by the heavy mailsack on his shoulder. If any man on earth should be everlastingly safe from felonious assault, surely that man is the postman.

Commendation

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM PITTSBURGH (PA.) PRESS

Mr. COCHRAN. Mr. Speaker, under leave to extend my remarks in the RECORD I am inserting an article taken from the Pittsburgh Press of June 1, 1941, commenting on our colleague the Honorable J. BUELL SNYDER, of Pennsylvania:

[From the Pittsburgh (Pa.) Press of June 1, 1941]

TEN BILLION DOLLARS

(By Fred W. Perkins, Press Washington correspondent)

WASHINGTON.—The House is working on next fiscal year's Army appropriation bill of almost $10,000,000,000—the largest sum that ever has been proposed to Congress in a single measure except just once before, in the World War.

In charge of this epochal appropriation is a western Pennsylvanian, Representative J. BUELL SNYDER, Democrat, of Perryopolis, who is chairman of the War Department subcommittee of the House Appropriations Committee. He is, therefore, a key man in national defense, and his policy is to give whatever the Army chieftains say is necessary for the unprecedented peacetime support and development of the Military Establishment.

But he appreciates the meaning of this tremendous spending, and its effect for many years on the individual taxpayer. It may be encouraging to the taxpayer to know that Mr. SNYDER is not doing his job casually.

"I confess to being disturbed about its magnitude," said Mr. SNYDER of this big spending bill, "and to being disturbed by the enormity of the amounts we have been appropriating ever since we were admonished by the President early in January 1939 that we should look to the adequacy of our defenses. But I am more disturbed about seeing that we provide beyond a doubt for everything essential for our defense in this emergency."

When that has been attended to, continued Mr. SNYDER, "we then may turn our talents and energies to reconstructing and reordering our domestic affairs. I have faith that though the way may be fraught with hardships for us all, a way will be worked out which will give to our people just cause to give thanks that they are privileged to be citizens of this great and glorious land."

The former school teacher from Upper Turkeyfoot in Somerset County has developed during his 8 years in the House to where he is looked upon as one of the solid men of that body.

He has developed parliamentary and legislative finesse that now qualifies him for pilotage of the huge appropriation bills for the Army.

Railroad Workers Are Entitled to Requested Wage Increases

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

STATEMENT BY MR. A. F. WHITNEY, PRESIDENT OF THE BROTHERHOOD OF RAILROAD TRAINMEN

Mr. SMITH of Washington. Mr. Speaker, the railroad workers have made out a very meritorious case in support of their request for wage increases to meet the increased cost of food, clothing, rentals, taxes, and the rising spiral of all living costs. The railroad companies are doing the largest volume of business in their history, and Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, has issued a statement setting forth pertinent facts and figures which are unanswerable. In the view of the widespread interest in this matter, by the unanimous consent granted by my colleagues, I insert at this point Mr. Whitney's statement, reading as follows:

REPLY BY A. F. WHITNEY

I feel it would not be appropriate to permit Mr. Gurley's statement to go into the record without demurring. In other words, as I interpret it, his remarks were a sort of diplomatic appeal to these railway workers to give consideration to some of the factors that have been entering into the railway picture, and I want to merely suggest that some of the people that the railways represent, or at least who are interested in the securities of the railways, do not agree with Mr. Gurley.

I have before me the address of a man who is very well posted in railroad securities—Patrick B. McGinnis—who delivered an address in Cleveland, Ohio, July 18, 1941, at the Mid-Day Club.

Mr. McGinnis is probably as well posted as any man on the question of railroad finances, and I read from his statement:

"Well, after I get through with this part of the speech in most places they say, 'Everything you say is fine, but labor is walking away with the railroads.' So I have had to develop the facts and figures on labor. I went to Washington and talked with the A. A. R. and saw the headquarters of the brotherhood and the rest of the unions got exactly the same figures, but their interpretations were different.

"You pick up the newspaper and you read about wage increases going to wipe out all the net. Some of the newspapers got so high they wiped almost all the gross. You will find if you read between the lines there is a lot of propaganda in a lot of newspapers. Anyway, here are the figures:

"Last year, 1940, the railroads did 97½ percent of the business that they did in 1930

in ton-miles. That is what labor does, moves freight. How many miles did you carry that ton of freight? That is the business of a railroad. Last year they did about the same as in 1930 with a half million less men; and the wage bill was down $600,000,000; over a 10-year period, the same business, a half million less men, the wage bill down $600,000,000. You can look those up in the January 4 issue of Railway Age of 1941, and that certainly is not a labor mouthpiece.

"The other figures are relatively important, too. The next important one, however, is this: That the total wage bill of a railroad, of all the railroads, is almost always in exact percentage proportion and a constant percentage proportion of the gross revenue, and that figure is 47 percent. In only 1 year out of 23 years has the percentage of gross paid out in wages fluctuated over 1 percentage point, from 47 percent, so that in the best year the railroads ever had, 1926, their gross was $6,300,000,000. Their wage bill was $2,900,000,000, or exactly 46 percent. Take the depression year 1932, their gross had dropped to $3,100,000,000 Their wage bill was $1,500,000,000, or exactly 48 percent. In 1937, a little better, up to $4,100,000,000. The wage bill is $1,900,000,000, or exactly 48 percent, and last year, 1940, the gross was $4,300,000,000, the wage about $2,000,000,000, or exactly 46½ percent.

"Now the third statistic to explain this wage thing: My conception is that wages are academic. They are always a percentage of gross and all this stuff you hear about them is so much ignorance There are reasons. I will explain. I am not making a speech for management or labor I am making a speech for bondholders, and they want to know the facts so they can determine what to do with their securities, both bonds and stocks.

"Getting down to the third, the ton-miles per dollar, how many units does the man do for each dollar he gets? In 1921 he did 111 ton-miles per dollar wages. In 1930, 145; in 1939, 178; in 1940, 190; and the first quarter this year—I just got the figures today—220 units of work for each dollar.

"In other words, as we learned in our second year of college, the railroads are a business of increasing and decreasing returns. In other words, the engineer gets the same money, and plenty, to take 70 cars filled with 40 tons of freight as he does 20 cars filled with 10 tons.

"Now, this is a tremendously startling thing when you stop to analyze it. It was accomplished because in the last 10 years and 18 years the average freight-car capacity has been increased from 42 tons to 50 tons. The speed has been increased from over 50 percent, from 10 up to 17, more than 50 percent. The train load has been increased 25 percent, from 600 tons to around 840 tons. The freight cars in the train have been increased from 38 to 50, or about 31 percent, and the ton-miles per train-hours about 100 percent up to 14,000, as against 7,000 in the old days. Fuel cost has come down."

The railroads agree with that. I was reading a statement on that this morning.

"They have been able to do this because of heavier rails and heavier ballast and elimination of curves and grades; better equipment. All the equipment has been turned over in the last 12 years. You have mass shopwork, you have treated ties. You have maintenance-of-way crews motorized, and one of the big things, if you know, going on among railroads is spot welding. The joints get worn, the rail ends wear. In the old days you had to take them out, cut them off, put them on a branch. In 1935 spot welding was developed to where the weld could be bordered. You go along with a machine and fix it up. In other words, they replace the worn rail ends with welding machinery.

"Then the switches in the wintertime are heated by oil and electricity, all those efficiency factors that you never heard about because everybody in the statistical field has left the railroad. You don't hear any other side of the wage problem. You sit down and read the paper, and you say, 'I don't want any railroad bonds.' You don't sit down and look up the other side. There is more knowledge in Louisville, Ky., I think, than New York City, at least judged by the bond purchases they have made in the last 18 months."

Now, I want to show you railroads that this distinguished gentleman at least disagrees with you to the tune of 10 percent:

"Now, I think the railroads ought to give them a 10-percent increase for the duration. I think everybody does. I think we all need it, judging by the price of commodities * * *.

"Going back to income last year, $4,300,000,000 gross, this year probably $5,100,000,000, so that they are taking on an additional $800,000,000 worth of gross. They can take most of that down into net, and it could absorb easily a 10-percent increase, which is $200,000,000 a year. I am not worried about the wage thing at all."

The picture that was drawn by Mr. Gurley here this morning with reference to what would happen to the Atchison, the New York Central, the Burlington, and the Pennsylvania Railways, of course, is a speculative picture, and I say that, Mr. Gurley, with all due respect to your compilations, because there is no living man, with all due respect to the economists and statisticians and the operators and the rest of us, who can forecast what will take place in the way of rearrangements of operations and reductions in expenses in the event of a wage increase or in the event of any other change taking place that would be to the benefit of the railway workers.

Apparently stockholders of the Burlington were not worrying about the red when in 1921 they issued a stock dividend of $60,000,000.

Or the Delaware, Lackawanna & Western apparently were not considering the question of reducing the tariffs when they pyramided their capitalization by stock dividends in 1921 to the tune of $42,220,550.

And we note down here that the little Richmond, Fredericksburg & Potomac Railway in 1923 issued stock dividends to the tune of $5,417,400.

The Pittsburgh & Lake Erie in 1928 issued stock dividends to the tune of $7,197,120.

The Nickel Plate issued stock dividends in 1927 to the tune of $16,667,800.

The Nashville, Chattanooga & St. Louis issued stock dividends in 1930 in the amount of $7,600,000.

And the Oregon Short Line issued stock dividends in 1935 in the amount of $62,527,087.

Just a handful of railroads—12 in number—that issued during this period, 1921–35, in stock dividends a total of $261,137,837.

Now, that is only part of the picture. That was a gratuity to the stockholders. They pyramided the capital stock on their properties and now appear before the public in sackcloth and ashes, with tears rolling down their cheeks, talking about the hard-boiled brakemen and switchmen, enginemen and conductors who have the effrontery to ask for an increase in wages which might interfere to some extent with the payment of dividends upon blue-sky or watered stock. Dividends paid on stock dividends; on excess value in 1921 to date, the Delaware, Lackawanna & Western paid in stock dividends in 1921, $61,642,003; or, in other words, more than 130 percent of the total gratuity.

The Burlington—and we hear a lot about the agricultural railroads, the grange railroads, and their desire to be helpful to the farmer, about the handicaps they are under because they are not operating in the manufacturing districts and because the territory which they serve is not as densely populated as the eastern territory; but the Burlington stockholders apparently with great satisfaction to themselves took down a total of $88,851,453 in dividends paid on stock dividends. In other words, they were able, through the action of their board of directors, to lure themselves into issuing stock dividends to a total of $60,000,000 in 1921, upon which they have collected over $88,000,000 in dividends since that time.

And the Louisville & Nashville stockholders collected $34,650,000 on the $45,000,000 stock dividends issued in 1923.

The Richmond, Fredericksburg & Potomac stockholders have collected $5,714,953 in dividends on the stock dividends of $5,417,400 issued in 1923.

The Cincinnati & New Orleans and Texas Pacific stockholders have received cash dividends on stock dividends in the amount of $11,332,100 on the gratuity of $5,180,000 which they received in 1926, and the poor Pittsburgh & Lake Erie, a subsidiary of the New York Central System, has paid cash dividends of $11,659,334 on the stock dividend of $7,197,120 issued in 1928.

The Nickel Plate has paid a cash dividend of $25,997,710 on the stock dividend of $16,667,680 issued in 1927.

In other words, and I am not reading them all, but the total amount in cash dividends paid on this blue-sky stock, dignified by the directors of these carriers as stock dividends since 1921, brings us to the staggering figure of $249,605,845.

Now, when we combine these two figures, stock dividends and dividends paid on stock dividends equal $510,743,682 paid out unnecessarily and at the expense of the resources of the railroad companies involved.

It is not my purpose to take up very much more time. I believe these figures will apply on practically all railroads, and when I take you back into history and point out where bond issue after bond issue has been floated by certain railroads, you will realize it has been a most expensive experiment insofar as the industry is concerned.

I don't mean by that there were times when the railroads did not need money, but I mean that in order to borrow money the extravagant commissions paid that were grafted by the bankers were so staggering that an industry, unless it was a powerful industry and was fortunate enough to secure a lot of business, could not long stand up under that racket.

I am not blaming the railroads for that because they possibly had to go to the banks to get the money, but there is a picture that can be drawn in connection with the financial affairs of these carriers that was reflected in the statement I made the other day when I advised you gentlemen that, according to Standard Statistics, the worth of class I railroads in America today is not over $11,000,000,000. Their stocks and bonds can be bought on the market today at approximately that figure, and you can't laugh that off.

I agree with Mr. Gurley that no one knows what will happen with reference to the several matters that he so intelligently discussed this morning. As a matter of fact, we are just human beings, and clamoring, if you please, in the dark; we don't know what the afternoon of today may have in store for us. Everything that we approach, even to life, is so uncertain that if we would stop to reflect or if we were the type of people who were inclined to worry, we would not enjoy many minutes of the day. But we hope for the better, and not knowing what may overtake us, we carry on. But we do know that at this time the tendencies are to increase wages. We know that the whole country is permeated with that feeling; we know, as we said the other day, that just as sure as we are here this morning, the wage structure is bound to be increased. What may happen a year from today or 10 years from today will have to be met at that time. We hope that we

are all here to meet it, although some of us are growing gray and some of us are growing weary of this thing of constantly trying to keep our heads up and to keep the wages of the men we represent high enough to enable them to live respectably.

I am not concerned about the stockholders of the American railroads. When I purchase 100 shares of stock in the Great Western, or even one of the richer railroads of the country, I do it willfully, maliciously, with malice aforethought, as a gambler, and if I cannot make a profit on that purchase, I will just mark myself up as a sucker as far as that transaction is concerned. Some of us have done some gambling, and the stock market, as far as the railroads are concerned, especially the common and even the preferred, does not hold out very many attractions to the investor, but it does to the gambler at times during these periods of fluctuation if men guess right.

Your interest bill has stood about the same for 20 years, running around $535,000,000 a year. The railroads just won't get out of debt. They don't want to get out of debt. The people that have money and have money invested in your securities want the interest. They don't want the railroads to pay off the debt. I noticed in the papers the other day that the New York Central tried to pay something like $16,000,000 on some debt, and they had to plead with the bank to take the money; of course, the bank didn't want it. The vaults of the banks are bulging over with money. Money is cheap at this time.

Now, gentlemen, as we said the other day, I presume that every gentleman on the other side of the table is fully familiar with this question of productivity and these other matters we have mentioned, the question of what constitutes loyal service and good service and all those things, and the question of serving the people so that you will get the business and keep the business, and it appears that there is nothing that could be added at this time that would change the picture.

As a matter of fact, we have your answer, and, as Mr. Johnson so aptly said, we appreciate the fact that you gave us your answer promptly.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

Mr. LAMBERTSON. Mr. Speaker, remember, when thinking of aggressors, that Poland was invaded from two sides.

My last pain-in-the-neck is to hear the fightless British leaders talk about our duty.

Those who accuse us as partisan because we oppose war should run on independent tickets in '42.

The late chairman often said, "If the House Appropriations Committee does not zealously protect the Public Treasury, who will?"

Wish there were nothing worse to face than the purge by a leader whose lifetime batting average as a standard-bearer is zero.

My colleague, FRANK CARLSON, and his flood-control friends pulled a banquet in Concordia while all their rivers were running brim full.

Gratitude was deified by the youthful Leah Vaira who took part of her annual leave and paid all of her expenses to attend the funeral of her sponsor, Congressman Taylor.

We have attended 25 picnics and fairs in 3 weeks. My nearest competitor is an all-out aid beneficiary of Farm Security in Marshall County who had made 18 out of 19 in his area.

Sara Delano Roosevelt was a strong woman and no doubt acted as a governor after the father was gone. How tragic, immediately after her death, to have an uncontrolled declaration of participation in Europe's war.

Floods on the plains delayed the funeral train causing the burial of Edward T. Taylor to be after dark; a rock slide near The Divide held up his returning friends 6 hours and a heavy pre-season snow fell. Such were the difficulties he met and surmounted from the grasshopper days in Rooks County in the early seventies to the end of over 50 years of distinguished public service.

Secretary Morgenthau on Inflation

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

Mr. COCHRAN. Mr. Speaker, next to war, in my opinion, the most important subject confronting this country is the question of inflation. Nothing would be more disastrous.

The Secretary of the Treasury's address on this subject Tuesday evening at Boston contains a great deal of sound logic. Mr. Morgenthau is well qualified to approach this subject. Therefore, Mr. Speaker, as part of my remarks I include the speech referred to. It follows:

Mr. Chairman, only 20 miles from here, at Lexington and Concord, the men of New England first proved that Americans could defend their homes and their freedom. Today, the people of these States are proving that they are still New Englanders. In army camps and naval stations, in hundreds of factories and shipyards from Connecticut to Maine, the men and women of New England are responding magnificently to their country's needs. I am glad to be here tonight to pay my tribute to the great work that New England is doing, like all other sections of the country, to arm America.

I am glad also that my host tonight is the Advertising Club of Boston, for the advertising profession is a mighty force in creating public understanding. We cannot make ourselves the arsenal of democracy and the defender of freedom unless our people understand the tremendous issues involved in this battle for the world. In the same way, we at the Treasury shall find it more difficult to accomplish our task of financing the defense program unless the public sees clearly the need for greater sacrifice and for greater effort.

In particular, I think that clear understanding is needed if we are to avoid the economic evils that might otherwise spring from a defense program as great as ours, a program that is making such enormous demands upon our productive resources. The worst of those economic evils has been constantly uppermost in my mind as Secretary of the Treasury. That is the evil of inflation and that is the subject which I should like to discuss with you tonight.

We have been talking about inflation for a long time as if it were a threat remote from our daily lives. It is a distant threat no longer. We are facing it now and we must deal with it at once.

If we are selfish or shortsighted in facing this issue, the consequences may haunt us and our children for years. But if we look at the problem with clear vision and firm resolve, we can beat this thing. If we keep always in mind the interests of our country as a whole, if we provide promptly the appropriate means and use them vigorously whenever necessary, we can prevent inflation from fastening its grip upon us.

That task calls for alertness and mental toughness on the part of every one in the executive departments of the Government, every one in the Halls of Congress, every one of us here in this room, and every one who may be listening to me tonight.

The word "inflation" is cold and lifeless, so cold that even you advertising men here tonight might have difficulty in making it real, but the thing it describes is treacherous and cruel. Memories are so short that I suppose many of us have forgotten what happened the last time a price inflation struck us 25 years ago. The effects of that inflation, however, lasted for many years and brought untold heartbreak and misery in their train.

Let us look at the record to see what happened a generation ago. In 1916 the cost of living began to rise sharply but there were few who saw its significance. It was only when prices had risen by 70 percent that President Wilson recommended any steps to prevent inflation. In fact, the country was so blind to its dangers that as late as June 1917, Congress actually hastened the rise in prices by reducing the reserve requirements for member banks of the Federal Reserve System.

The consequences were so serious for every American that there must be many housewives even today who can remember them. By 1920, a 10-pound bag of sugar cost $2.67, a dozen eggs cost 92 cents, a 10-pound bag of flour cost 88 cents, a pound of butter cost 76 cents and a pound of pork chops cost 50 cents. By that year prices had skyrocketed to twice the level of 5 years earlier. The money the housewife paid for one loaf of bread in 1914 bought only half a loaf in 1920. The money she paid for a pound of bacon in 1914 bought only half a pound in 1920. The money she paid for a yard of cotton cloth was enough to buy only one-third of a yard in 1920. The consumer found that food, fuel, shelter, and clothing which cost a dollar in April 1916, had risen to almost two dollars by 1920. The family with no increase in income found its purchasing power cut in half.

We have now, as we had then in 1916, a moderate rise in the cost of living, a great rise in wholesale prices, and a still greater rise in the prices of basic commodities like wheat, hogs, cotton, and lumber. It is the rise in the prices of basic commodities that constitutes our red light, our warning signal, today, for such a rise is always the advance guard of an increase in the cost of living.

If we fail to use the controls at our disposal now; if we fail to do the specific things which are in our power to check inflation now; if we allow prices to go on rising as they

did from 1916 to 1920, we may find that food, fuel, shelter, and clothing which now cost a dollar will once more cost almost twice as much before the process has ended.

The rise in prices is by no means confined to foodstuffs and clothing. I have before me, for instance, the actual figures on the cost of constructing a standard six-room frame house in one of our typical cities. This home that could have been built a year ago for $6,000 now costs $7,140 to build. Here we have an increase in prices of nearly 20 percent; and if it goes along the 1916 pattern, we are only at the beginning of the story.

Not only is the cost of building homes rising but higher rentals are also on the way for the millions who do not own their homes. In scores of areas where industrial expansion has first taken hold rents have already risen 10, 20, 30 percent, and even higher.

I have brought with me tonight a pictorial chart which I wish the radio audience could see, because it shows so plainly the road we traveled once, and the road which we must not travel again. The chart shows how the buying power of your dollar shrank from 1914 to 1920, how your dollar bought less food, less clothing, less shelter, less heat and light because prices were allowed to run away. It shows how your dollar is already buying less in 1941 than in 1939, and it leaves a big question mark for the space showing what your dollar may buy in 1942. The answer to that question is in our keeping as Americans, whether we are officials of the Government or private citizens. And I have written on the chart, alongside the question mark, the words: "Answer depends on us." We must decide now, this year, we in Washington and you in the country at large, whether we shall have the common sense and determination to avoid what we went through 25 years ago.

Let it not be said of us, as David Lloyd George said of his people in 1915, that we were "too late in moving here, too late in arriving there, too late in coming to this decision, too late in starting with enterprises, too late in preparing."

There is no excuse for us to be too late in meeting this threat of inflation that faces us. We now know, or ought to know, what is going on; that is perhaps the greatest difference between conditions today and in 1916. This time our eyes are open to the dangers that lie ahead of us. We now know that the time to do something about inflation is before it occurs, not after it has gathered momentum. We should profit by our greater knowledge and take prompt and effective action now.

There is no need for me to remind this audience in detail of the reasons why prices have already risen. The reasons are plain for everyone to see. Our economy today resembles an overloaded steam boiler. The fire under the boiler is being fed by billions of additional purchasing power in the hands of the public. The fire is growing hotter and is generating more steam than the boiler can safely hold. If we are to prevent the boiler from bursting, we must damp down the fires by diverting spending away from those articles or commodities in which there is a shortage, actual or potential. We must damp down the fires also by increasing the flow of supplies of goods available to the consumer.

We can, as I have said before, defeat this threat of inflation, just as we can defeat and destroy the forces of evil that have been let loose upon this earth. But we need to understand the issues, and we need to see clearly the consequences of inaction or delay. I should like, therefore, to point out, first, what we have done, and then, what we need to do, in order to stop prices from rising further.

In the first place, Congress is on the point of passing a huge tax bill designed to raise almost $4,000,000,000 in additional revenue, thus withdrawing a great amount of purchasing power that competes with the defense effort.

Secondly, the Treasury in its borrowing program is trying to obtain as large a portion of its funds as possible from current consumers' income.

Through a new form of note—the tax anticipation note—it is seeking to increase the effectiveness of the income tax as a check on current purchasing power, and I am happy to report to you that more than a billion dollars' worth of these notes were sold in the month of August.

The Treasury has also begun a program of selling defense savings bonds and stamps to people of moderate and low incomes. The people have responded to a tune of a billion and a quarter dollars in 4 months, without coercion of any kind; and in making that response possible the advertising profession has been of truly invaluable help.

The President has recently issued an order authorizing the Board of Governors of the Federal Reserve System to control consumers' installment credit.

The Congress is considering, and I hope will pass without undue delay, a bill to limit price rises, and to supplement the efforts of the Office of Price Administration to limit those rises by voluntary cooperation.

All these are useful steps to a necessary end, but they are not enough.

We shall have to tax ourselves much more heavily next year than this year, great and far-reaching as the present tax bill will be.

We shall have to invest much more widely and systematically in defense savings bonds and stamps. In particular, the rising pay rolls of the past year have been a clear call to the wage earners of America to set aside a portion of their earnings each week for their own good and their country's good.

We may have to extend general controls over bank credit and create controls over selected capital expenditures.

I hope that we may extend the social-security program so as to increase the flow of funds to the Treasury from current income during the emergency and increase the outflow of funds when needed in the post-defense period. In addition, I have already suggested the creation of what I have called a separation wage—that is, an entirely new form of contribution out of which a worker may draw a regular wage for a stated period in case he loses his job. These measures would be good and desirable in themselves, but they are especially necessary at this time, for they should help us to decrease certain forms of purchasing now, and increase them in the future when they may be needed.

We must, as I have said many times, reduce nonessential Federal expenditures. We must also appeal for economy in State and local government expenditure and a curtailment of their borrowing for nondefense purposes. The President pointed the way a month ago when he vetoed a bill calling for $320,000,000 worth of highway construction. By this action he demonstrated that there is a clear distinction nowadays between the spending that is necessary for defense and the spending than can be postponed until a later day.

The country should congratulate itself on the President's veto of this measure, and also upon the Senate's action only last week in approving the creation of a joint committee of the taxing and the appropriating agencies of Congress to study the possibilities of economy all along the line in nondefense activities. I have several times suggested the creation of such a committee, and I am very happy that my suggestion has been adopted by the Senate at last. I hope now that the House will also approve the idea because it seems to me that such joint action is the only sensible way to proceed if we are to cut the costs of government and clear the decks for defense spending.

All of the measures I have so far suggested for combatting inflation would attack the problem by reducing the demand for goods now and by helping to build up a backlog of purchasing power for the post-war world.

But we should also attack the problem from the opposite direction. We must make every effort to increase the supply of goods available to the consumer wh rever this can be done without encroaching upon the defense program. Above all, we must make full use of those supplies that are available, not only in defense production but in the provision of civilian goods which do not compete with defense output.

This is a time when we must flatten the peaks and fill up the valleys in our economic picture. If we reduce undesirable purchasing now and keep prices down now, we shall be helping to provide for the day when these vast defense expenditures will end and when our defense workers will take up the work of peace again.

The most effective way to prevent a damaging rise in prices is, quite simply, to release surpluses from storage.

I wonder if the housewife knows, when she pays 15 percent more than she did a year ago for a bag of flour, that our supply of wheat is the largest on record, and that 498,000,000 bushels of several years' crops are available in our neighbor democracy of Canada. It is true that only 3 months ago a rigid quota was applied to the importation of wheat from Canada, with the ultimate objective of keeping up the price of wheat in this country. But it is also true that only the other day the quota on sugar from Cuba was enlarged so substantially as to absorb most of the reserve stocks in that country. It seems to me desirable and necessary that we now follow the example set in the case of Cuban sugar and permit the entry of Canadian wheat in larger volume.

Here in this country we have large reserve stocks of farm products of many kinds which should be released for consumption as fast as necessary to prevent unreasonable price rises.

The Government now holds or controls 7,000,000 bales of cotton in reserve, and cotton prices have risen from 9½ cents a pound on August 1, 1939, to over 17 cents a pound at the present time. In spite of this rise of not far from 100 percent in 2 years, Congress recently send to the President a bill to freeze Government stocks of cotton and wheat for the duration of the war, and thus to prevent the Government from disposing of any of the surplus wheat and cotton it had acquired. The President promptly vetoed the bill, because this measure would have aggravated the danger of inflation and might have frustrated our efforts to fight it.

We ought not to withhold cotton surpluses, or any surpluses, from the market in times like these. The housewife ought not to be made to pay a tribute to profiteers and speculators when she buys a cotton sheet for her home or a shirt for her husband or a suit for her child.

Millions of people still go without the milk, butter, and eggs which, according to the testimony of food experts and the dictates of plain common sense, are necessary to good health and good morale. Yet the reserve stocks of butter, cheese, beef, and pork now held in this country are far higher than they were a year ago and far higher than the average of the past 5 years.

This has been historically a land of milk and honey. There is still plenty of milk and honey, but too much of it is in the warehouses. Let's make it flow. If we were to let it flow to the public, we would not only help in keeping prices stable but we would be doing something even more important—

we would be helping to make our people healthier and happier.

It is sheer folly from the farmer's point of view to push prices up by creating scarcities in times like these. The farmers suffered cruelly for 12 long years after the collapse of the inflation of 1920 and 1921; they should not be made to suffer again.

It is sheer folly in the same way for labor leaders to seek new increases in wages every few months—new increases which, in turn, produce higher manufacturing costs, higher prices, and a higher cost of living.

It is short-sighted for a landlord to charge all that the traffic will bear in defense centers, where housing space is at a premium.

It is poor business, in the long run, for any businessman to seek exorbitant profits in this period of defense spending.

It is bad banking, in the long run, for any banker to exploit the present demand for funds by seeking to charge unreasonable interest rates.

There are always selfish groups in any country which think they can profit from inflation. They are wrong.

Inflation does more than merely to rob the wage earner of a portion of his earnings. It does more than saddle the farmer with a load of debt which he cannot repay. It is more destructive of morale than any other single force. Inflation divides the country. It sets up producers against consumers, workers against employers, the people who owe money against the people to whom the money is owed.

No group in a community profits from inflation in the long run except the "three horsemen"—the speculator, the profiteer, and the hoarder.

These are truths that should be self-evident. They should be especially so now, in view of the fact that rising prices will only add to the cost of our defense program and make the arming of our country steadily more difficult. They should be self-evident now in the light of the experience that we suffered only 25 years ago.

We Americans have more than 150 years of self-government behind us. We are a mature Nation, and we should be able to face up to our responsibilities as mature men and women. My plea to you tonight is that we should learn from bitter experience My hope and my belief is that no group among us—whether farmers, workingmen, or businessmen—shall be tempted by the illusion of selfish gain into allowing prices to rise unchecked.

The cost of inflation is too ruinous to producer and consumer alike for anyone in authority to tolerate it now. I can give you only this pledge: That this administration will do everything humanly possible to prevent inflation. But in this fight the administration must have the firm support and the clear understanding of 130,000,000 Americans behind it. If we have that support and that understanding, I know that we shall not fail.

Mr. Speaker, at this point I shall insert the text of the chart Secretary Morgenthau displayed in his speech:

COST OF LIVING—CHANGES IN BUYING POWER OF YOUR DOLLAR, WORLD WAR AND NOW

TOTAL COST OF LIVING

(What Your Dollar Would Buy—1914 Base) World War—	Percent	(What Your Dollar Would Buy—1939 Base) Now—	Percent
June 1914	100	June 1939	100
June 1916	92	June 1941	94
June 1920	48	June 1942	Answer depends on us.

COST OF LIVING—CHANGES IN BUYING POWER OF YOUR DOLLAR, WORLD WAR AND NOW—Con.

FOOD

(What Your Dollar Would Buy—1914 Base) World War—	Percent	(What Your Dollar Would Buy—1939 Base) Now—	Percent
June 1914	100	June 1939	100
June 1916	90	June 1941	88
June 1920	44	June 1942	Answer depends on us.

CLOTHING

(What Your Dollar Would Buy—1914 Base) World War—	Percent	(What Your Dollar Would Buy—1939 Base) Now—	Percent
June 1914	100	June 1939	100
June 1916	89	June 1941	97
June 1920	33	June 1942	Answer depends on us.

NOTE.—All other items of cost of living included in total.

Morale Wins Wars

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM THE ARMY AND NAVY JOURNAL

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article I placed in the Army and Navy Journal under date of March 29, 1941.

The reason I am including this article at this time is that according to all the information we can get from different sources in Germany and in the countries that Germany has conquered during this war, we find that in spirit, if not in fact, the statement that I made in the following article is coming true.

The article is as follows:

[From the Army and Navy Journal of March 29, 1941]

Recording history shows that the morale of the people and soldiers of a nation wins wars in the end. Of course, they must have food and munitions, but as in the case of the Italian troops in northern Africa for the last 3 or 4 months, where they had men, munitions, and equipment equivalent to or stronger than the English, they were conquered without much effort because their morale was gone.

We only succeed when we fall in love with our job. The Italian soldiers did not like their job. They lost their morale. They said what is the use. They said we lose all if we continue to fight. We may have a chance in some avenue in life if we quit fighting.

No nation can keep up the morale of its people and soldiers if that nation's motives are to destroy the rights of others.

Might rules only till right is ready. Our colonial forefathers won against the French and the English of that day because our forefathers were fighting for the things that preserve civilization; freedom of speech, freedom of press, and freedom to worship God according to the dictates of our conscience. Napoleon lost because his motives were to destroy those liberties. Hitler will lose for the same reason.

The morale of the people, the common people, the workers, the mothers, and soldiers, of the 10 or 12 conquered nations that Hitler has under his iron heel, is breaking down. It will continue to break, not only as it did in Italy, but in Hitler's other conquered countries. Every succeeding day it will take more soldiers and more force to rule and guide the people in the conquered nations and it follows that every day that such force is used, the morale of the people is weakened.

The $7,000,000,000, plus the $4,000,000,000 appropriation by Congress this week was the straw that broke the camel's back. Hitler and his cohorts are now convinced that the United States of America is going to not only be the arsenal for material equipment to bring about the preservation of our sacred institutions and liberties, but the morale arsenal for all those nations who believe in the principles and the practices of our way of life.

Hoskins Attacks Douglas Dam as Unfair to Section

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM THE KNOXVILLE (TENN.) JOURNAL

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the

Knoxville (Tenn.) Journal of September 7, 1941:

[From the Knoxville (Tenn.) Journal of September 7, 1941]

HOSKINS ATTACKS DOUGLAS DAM AS UNFAIR TO SECTION

The proposed construction of Douglas Dam, part of the T. V. A. chain, is a threat to the social and economic structure of a large section of east Tennessee, President James D. Hoskins said last night in an open letter.

Drawing on sources available through departments of the university, President Hoskins in an outline replete with statistical data voiced his objection to the construction of the French Broad River Dam (near the Jefferson and Sevier County lines) and warned that with the construction of Douglas Dam "we are ruined utterly."

Hoskins' report said the 31,000-acre reservoir of the proposed dam would cover some of the finest agricultural land in east Tennessee and would ruin the annual production of about $1,250,000 worth of crops, livestock, and fruit now produced in the area. The reservoir also would necessitate the relocation of 5 canning plants and 3 flour mills employing more than 2,000 persons and would dispossess 3,251 people, the statement said.

Hoskins, a native of Jefferson County, pointed out that the University of Tennessee always had cooperated with T. V. A. and that no objection had been raised at the construction of hitherto approved dams. The University of Tennessee president called attention to the T. V. A.'s purpose to "develop the region" and "to preserve democracy" and raised the question whether the construction of the Douglas Dam would serve either purpose. President Hoskins' statement:

"The proposed construction of the Douglas Dam on the French Broad River above Knoxville and near the Jefferson and Sevier County lines raises an important, even a critical, question involving the welfare of a large section of Tennessee.

"Should this dam be constructed?

"I address myself to this question as a lifelong resident of east Tennessee, thoroughly in accord with our defense efforts, and as a friend and supporter of T. V. A. and its great program. Also, I should note that I have no personal interest at stake and that I am approaching the matter from a disinterested viewpoint.

"Let us observe the immediate factual results that will arise from the construction of this dam. Immediately flooded will be some 31,000 acres of land and an equal amount will be directly affected. Some 3,000 and more persons will be removed from their homes. Several large industries, including 5 canning plants and 3 flour mills, will be eliminated.

"These are but the rough outlines of damage that will reflect a serious illness of the community, as an abscess may be but the simple and visible evidence of cancer. May I illustrate how deeply the statistical wounds cut into the vitals of a whole area.

"The 31,000 acres of land to be flooded is not merely land. It is the best land in Jefferson and Cocke Counties that is capable of supporting a culture and a government. Throughout east Tennessee the river bottoms afford almost our sole agricultural resource. Blessed with forests, minerals, and power, we are nonetheless dependent upon the soil—and the soil of the river bottoms—for our standard of living. It is not pleasant to contemplate the permanent impoverishment of a region that must begin to import its vegetables and truck crops—to say nothing of the disruption itself. Yet throughout east Tennessee the following areas have already been flooded or now await the rising water:

	Acres
Chickamauga	39,400
Fort Loudoun	14,900
Norris	40,200
Cherokee	31,100
Watts Bar	41,600
Hales Bar	5,760
Total	172,960

"While I do not presume to say that every acre flooded in these areas was a 10-barrel-corn acre, it is obvious that most of them were river-bottom acres. It is now proposed to add 31,000 additional acres to this amount.

ACTUAL SOIL LOST

"The actual soil lost to these dams—as significant as this loss is—is perhaps less tragic than the removal of families from their homes. East Tennessee, even in its lush river bottoms has no corner on soil. Good soil exists elsewhere and for a price it can be had. When a home is destroyed, however, the loss may be irretrievable. People do not easily build new homes, founded upon the soil. If one thinks in terms of moving-day in the city, the loss of a given dwelling may seem insignificant. But farm homes thrust their roots deep within the soil. Above ground grow the habits and traditions and social affiliations that constitute culture. I am speaking not in terms of happiness or trifling comforts for a few individuals or families. I mean that east Tennessee and its culture, and its political institutions, are built upon the family, and the family is rooted in the soil.

"What provision can be made for these dispossessed? Is a Government check or ready cash any solution of their problem or of the community problem? What wounds will this money heal? What new community, and where, can be founded upon cash? Even if the Government should survey America from one end to the other in search of a whole area to be carefully planned as a community it would achieve only a poor substitute for a community of growth and tradition. Yet no such survey is feasible or possible. The flooding of these lands destroys a community, breaks it into bits of flotsam and jetsam humanity, and makes no adequate provision even for them—for families or for individuals. There is more than damage here. There is destruction, irreparable destruction, irretrievable loss for some 3,000 persons.

WHAT OF OTHERS?

"And what of those that remain, the main stock from which the stem is broken? Upon them falls the burden of government. The assessed valuation of Jefferson County alone is $7,450,929.23, that to be flooded some 16 percent of this amount. Under the present tax rate there would be lost to the annual revenues of Jefferson County some $26,000 annually. This, mind you, is not the total loss but the annual loss from this time henceforth. And will these lands removed from the taxable wealth of these counties result in any economies for the county government and its institutions? Rather, the contrary is true. The economic dislocations and upheavals will be expensive in themselves even if they bring no added institutional burdens in care of the dispossessed.

"And why speak of the assessed value of land alone? The industries to be removed represent a large assessed value. When you consider that the weekly or monthly pay rolls of these industries go to some 2,000 workers, thence to the merchants, thence to transportation, banks, and appear in all the factors of exchange, we wonder what will hereafter flow through the veins of commerce. It is not to the people of the flooded lands that these benefits go—but to all the people of the communities—the counties and the wider areas. Will these industries relocate on the banks of the new lake? Can any sort of contract enforce their continuance in the county? The answers are obvious.

CONSIDERABLE SLICE

"Altogether, this proposed dam will cut a considerable slice from east Tennessee—from its body politic, from its body social, from its body economic. And altogether, too, let us observe, it is a seizure of common wealth for special purposes.

"And what is all this for? What are the benefits to accrue that would make this social and economic destruction worth while? What is our democracy contemplating in thus altering the face of nature and the course of human affairs?

"There are many advantages, of course. Otherwise, the proposal would be an absurdity on the face of it. The French Broad is a contributary to the Tennessee River system. It is a power potential—a defense potential. And it lies within the purposes of the Tennessee Valley Authority to develop this region.

"Here let us pause before a most critical question. Let us be careful of our words. If it is the purpose of the T. V. A. to develop this region, what is the meaning of the word 'develop'? If it is democracy we are to defend, what is the meaning of 'democracy'?

IS THIS THE WAY?

"Can we achieve development—can we preserve democracy—by destroying the homes, the common wealth and community life of our people? And is it a democratic principle that the most good for the most people (even if it could be established that more people would be thus benefited) justifies the total destruction of minority interests? Is it a democratic principle that one section of the country should be totally destroyed in order that a thin benefit can accrue to the whole? Let us suppose that an additional dam is needed. Shall we then conclude that east Tennessee which has already contributed more land to national defense than any other equal section of the country—shall be the only contributor?

"Why then have we not objected to the flooding of other lands? Why raise this question now? For the very democratic reason that our people of east Tennessee can be expected to make equal—even greater—sacrifices than others. They can give much but they cannot give all. To surrender its richest land to one dam is a hardship that we can expect to bear. With a second and a third dam we are impoverished. With now another dam—the Douglas Dam—we are ruined utterly.

APPEAL MADE

"I appeal to the Tennessee Valley Authority and to the Federal Government for a proper development of this region—for a development that leads to a fuller life for our people—to the welfare and security and defense of our democracy. I submit that democracy has deeper and more enduring purposes than the immediate manufacture of powder and shot. I submit that democracy should defend itself by nurturing its own inner strength. Our country is more than an aggregate of separate parts. It is a living organism and its members are not separable and destructible at will. The hand cannot say to the foot, "I have no need of

you." The function of east Tennessee is that of a democratic community essential to the welfare of the whole. I beg of you preserve it in this right."

Products sold from farms affected by proposed Douglas Dam Reservoir

GENERAL CROPS SOLD

Corn, 107,770 bushels, at 90 cents	$96,993.00
Small grain, 33,247 bushels, at $1.10	36,571.00
Hay, 1,177 tons, at $20	23,540.00
Tobacco, 496,000 pounds, at 20 cents	99,200.00

VEGETABLES SOLD

Sweet corn, 4,750 tons, at $12	53,000.00
Cabbage, 4,079 tons, at $9	36,711.00
Peas, 1,059,840 pounds, at 3 cents	31,795.20
Lima Beans, 552,755 pounds, at 3 cents	16,581.65
Green beans, 15,127 bushels, at 65 cents	9,832.55
Other vegetables, 3,574,000 pounds, at 1 cent	35,740.00

LIVESTOCK AND LIVESTOCK PRODUCTS SOLD

Hogs, 1,503,619 pounds, at 10 cents	$150,361.90
Cattle, 2,433,283 pounds, at 9½ cents	231,161.88
Lambs, 78,635 pounds, at 12 cents	9,436.20
Poultry, 98,589 pounds, at 14 cents	12,802.46
Eggs, 339,966 dozen, at 28 cents	95,180.48
Milk, 3,767,136 pounds, at 2 cents	75,342.72

FRUITS SOLD

Total number pounds food products	42,449,373
Grapes, 120,000 pounds, at 2½ cents	$3,000.00
Apples, 30,000 bushels, at 90 cents	27,000.00
Peaches, 1,000 bushels, at $1.10	1,100.00
Total, 44,019,373 pounds	1,045,350.04
Value of farm products consumed by families living on farms in reservoir	226,100.00
Total value of all products sold and consumed	1,271,450.04

INFORMATION PERTAINING TO DOUGLAS RESERVOIR

Total number of farms	324
Total number of acres	60,742
Total number of families living on farms	757
Total number of people living on farms	3,251
Total number of people employed:	
Full time	997
Part time	1,139
Total time	2,136

INDUSTRIES AFFECTED

Stokely Bros. & Co	(1)
Bush Bros. & Co	(1)
Alfred Swann	(2)
Flour mills	(3)
Total number of workers employed in plants affected	2,002

[1] 2 canning plants.
[2] 1 canning and food-processing plant.
[3] 3 plants.

COMPARATIVE QUALITY OF LAND—3 RESERVOIRS

	Norris	Cherokee	Douglas
No. I land, percent	2	6	26
No. V land, do	22	11	2

Class I land is the best agricultural land—produces high yields of a wide variety of crops and can be cropped almost every year.

Class V land is adapted only to the production of timber.

Assessed valuation, Jefferson County	$7,450,929.23
Total land tax, Jefferson County	159,032.99
Tax on farms in proposed reservoir or 16.23 percent of total	25,817.77

WHERE DOES DOUGLAS DAM GET NAME?

How did the proposed T. V. A. dam on the French Broad River nead Dandridge get to be known as the Douglas Dam?

President James D. Hoskins, of the University of Tennessee, who is protesting building of the dam—and a native of Jefferson County—said he didn't know the origin.

Maurice Henle, brass collar of the T. V. A. information staff, likewise couldn't comment on the derivation.

Came James Myers, Knoxville photographer and a Jefferson Countian, to the rescue:

"Ho," said James, "they don't know? It's because there's a Douglas settlement there."

Letter From Congressman Hall to Justice Deyo

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

LETTER FROM HON. EDWIN ARTHUR HALL, OF NEW YORK

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C.

Hon. MARTIN W. DEYO,
Supreme Court Chambers,
Binghamton, N. Y.

MY DEAR JUDGE DEYO: You have permitted my libel suit against the Binghamton Press for injury to my good name and reputation to stand.

As Congressman, I have always welcomed legitimate and constructive criticism of my every public act from the people of this district. You have drawn the line distinctly between fair comment, with which most citizens scrutinize my record in Congress, and the deliberately organized smear campaign leveled by certain politicos last February against me. You reestablish justice by defending a duly elected official from blasphemy launched by ruthless political foes, whose inability to dictate to me left them frustrated to the point of seeking vengeance.

By your action you approve the right of a Representative to carry out his constitutional duties such as voting on great issues without undue interference from those even in high places, who, for their own good, ought to be strengthening instead of weakening constitutional procedure.

In reaching your conclusion in this whole unpleasant occurrence, it is obvious you have given heed to a famous passage which reads:

"He that stealeth my purse stealeth trash, but he that stealeth my good name stealeth that which enricheth him not at all but maketh me poor indeed."

Your Congressman,

EDWIN A. HALL.

The National Committee for Agriculture—Washington Farm Letter

EXTENSION OF REMARKS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

LETTER FROM F. L. ROBINSON, CHAIRMAN

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting a letter written by the National Committee for Agriculture giving a brief analysis of the 1941 farm-credit bill, H. R. 5336, along with some additional information about the operation of the wheat program.

The Agricultural Committee of the House, of which I am chairman, will hold hearings on this very important bill during the early part of the fall, at which time notice of the actual dates of the hearings will be given to the press.

The letter follows:

THE NATIONAL COMMITTEE
FOR AGRICULTURE,
WASHINGTON FARM LETTER.
Washington, D. C., August 25, 1941.

DEAR FRIEND: Introduced in Congress is a bill for the reorganization of the farm-credit system—H. R. 5336, by FULMER, of the House. Write your Congressman if you want a copy of this important bill, which probably will come up for consideration this session

Announced basic objectives of the bill are: (1) Obtain for farmers the lowest interest rates possible "consistent with sound financing and operating practices"; (2) permit land banks and farm-mortgage corporation to adjust certain of their loans to the true ability of the borrower to pay; and (3) to provide a method for farmers to repurchase farms at their real value, which they are now unable to repurchase for want of adequate credit facilities.

Federal land-bank system would be reorganized on a membership and patronage basis instead of present stock basis Borrowers would become members of national farm-loan associations; farm-loan associations would become members of Federal land banks. All outstanding stock of banks and associations would be retired at par. New memberships would be acquired by payment of a fee equal to 2 percent of the unmatured principal of their obligations held by the bank.

Bill would not become effective until at least 75 percent of borrowers had paid or agreed to pay the fee. Then land bank and loan associations would operate as a cooperative system of membership corporations. Stock now held by land banks, plus amount contributed by the Government as paid-in surplus of the banks, would be converted into a single, flexible, revolving fund of Government capital available for allocation within the system at those points most needed.

Former borrowers who have not received par value for their stock in the past would be paid the difference between what they received and par value.

Loan associations would have three major sources of income: (1) Preference distributions up to one-eighth of 1 percent of the unmatured principal of the obligations of their members to the bank (associations would also have authority to issue additional preferential distributions out of net earnings with approval of F. C. A.); (2) patronage dividends from net earnings of the system; (3) compensations for services to land banks and mortgage corporations.

Losses previously falling upon local associations would be limited in future to 50 percent of the losses incurred.

Idea is to spread costs and losses on a broader cooperative membership basis. F. C. A. analysis of bill claims new plan would eliminate the concentration of losses, which in the past has wrecked more than 60 percent of associations. Hope is "to provide reasonable assurance that local losses resulting from uncontrollable local causes cannot wreck the local units as they have in the past, and to permit the system's profits to be shared more evenly among its members."

New bill provides loan rate of 3½ percent up to July 1, 1946. After that loan rate would be computed on average cost of funds, banks and corporations get through sale of bonds to finance loans plus 1½ percent charge to cover operating costs and losses. Farm Mortgage Corporation would charge an additional rate sufficient to maintain the rate on land-bank Commissioner loans one-half of 1 percent above rate on land-bank loans.

Loans made between time act goes into effect and July 1, 1946, would be computed on similar basis after 1946, but would be subject to a top limit of 4 percent.

Important provision of bill is one on refinancing excessive indebtedness. Bill limits this authority to cases in which land bank or mortgage corporation is a creditor. However, authority is granted in such cases to refinance a borrower's whole indebtedness up to, but not beyond, the appraised value of the land.

Bill also provides that committees selected by the local national farm-loan associations have responsibility of reviewing applications for refinancing. "They are to determine and to certify to the bank or the corporation," says F. C. A. analysis, "whether the farmer has any reasonable expectation of being rehabilitated through adjustment of the terms of payment of the amount he owes, and whether he would be able to carry out the obligations required of him if he should be refinanced on the basis of his application.

"If the application is granted, the farmer would be required to transfer title to his property to the bank or to the corporation and operate it under a lease for a period of 5 years, at the end of which, if he has carried out the requirements of the lease and demonstrated his ability to carry on with the obligation, the property would be retransferred to him subject to a mortgage for the balance remaining after crediting an appropriate part of the amount he has paid as rent during the lease period."

Similar refinancing method would be followed with persons whose debts have been scaled down by the courts under Bankruptcy Act, and who had established the right to refinance or repurchase their farms.

National Committee for Agriculture sponsored good-will tour of 450 western wheat farmers riding on two special trains into eastern Ohio and western Indiana early this month. Object was to get low-down on eastern protests to wheat marketing quotas, to give easterners views of western growers who depend almost entirely on wheat for livelihood.

First stop was at Dayton, Ohio, where more than 400 Buckeye farmers met special trains, toured them through Army Air Corps' Wright Field, then drove them in individual cars into some 15 surrounding counties to talk with farmers. Next stop was at Anderson, Ind., where Hoosier farmers were hosts in similar manner.

Westerners found opposition to quotas dying out; volume of opposition much smaller than indicated by press reports of quota protest meetings; heard numerous comments of quota flames being fanned by disgruntled politicians wanting opportunity to regain spotlight by discrediting farm program.

Touring farmers found Hoosiers and Buckeyes excellent hosts; crashed front pages with news and pictures all along the route. Both eastern and western farmers felt tour contributed much to greater understanding of wheat problem and need for maintaining quotas.

Sincerely,

NATIONAL COMMITTEE FOR AGRICULTURE,
F. L. ROBINSON, *Chairman*.

Generoso Pope Turns Against Mussolini

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM THE NEW YORK POST

Mr. DICKSTEIN. Mr. Speaker, I have asked unanimous consent to extend my remark in the CONGRESSIONAL RECORD by publishing an article contained in the issue of the New York Post on Monday, September 8, 1941, concerning Generoso Pope.

I am making this request particularly because so much controversy has been stirred up by my previous remarks concerning the patriotism and the public services of Mr. Pope, that it gives me great pleasure to see a newspaper making a round-about-face and acknowledge in no uncertain terms that Mr. Pope is no Fascist but, on the contrary, a true, loyal, and distinguished American.

The article follows:

[From the New York Post]

GENEROSO POPE TURNS AGAINST MUSSOLINI

Generoso Pope, publisher of Il Progresso and in past years generally regarded as a stanch supporter of the Mussolini government, said today that "my attitude has changed."

"The quicker Hitler and the Axis Powers are destroyed the better off the world will be," he told a New York Post reporter. "And when I say Axis Powers that includes Mussolini."

Pope's statement followed the publication yesterday in Il Progresso of an interview with Laird Archer, foreign director of the Near East Foundation, in which Archer said that Italian forces occupying Greece share the Greeks' hatred of the Nazis. In forwarding copies of the interview to other New York newspapers, Pope commented that "Italy is today as much a victim of the Axis as a member of it."

NOTHING IN COMMON

Asked today if this indicated a change in his viewpoint, Pope said in his offices, 30 Rockefeller Plaza:

"The Italian people have nothing in common with the Germans. My attitude toward the Italian people has not changed. My attitude toward the Government has changed."

Il Progresso's interview with Archer, who was in Greece during the invasion and afterward, quoted him as picturing a "total job of destruction" by the Nazis both in Greece and Crete.

FAUCETS TAKEN AWAY

"When the Italian authorities started to take over the duties of patrolling the occupied areas in Greece after the Nazi blitzkrieg they found conditions deplorable," he said. "Furniture, food, war material, industrial equipment, and even faucets from public and private places were taken away by the departing Nazis.

"Women and children were underfed. The monetary situation favored the Nazi soldiers in the ratio of about three to one as compared to the Italian soldiers. Germans bought up everything at bargain rates in relation to the value of Greek money. They stripped the country bare.

"The Italians, appalled, voluntarily helped the Greek people in their recovery efforts."

THE BARBARIANS

"They shipped 48,000 tins of milk to feed the women and children. The Italian ship left Brindisi with this supply, but the Germans had got news of the arrangements. The Nazis were bitter against the Greek people because the latter referred to them as barbarians. They thought that if the milk supply reached the Greeks the Italians would be looked upon as great humanitarians and the Nazis as beasts. So, when the ship reached the Greek port, the Nazis immediately confiscated the supply for themselves."

The Greeks, he said, learned about this, and appreciate the fact that the Italians are trying to help them

"VICTIMS OF CIRCUMSTANCES"

"The Greeks consider the Italians to be victims of circumstances," Archer said. "One gets the impression that both the Italians and the Greeks mistrust all German moves."

He said he had been informed that the Italian soldiers when they invaded Greece had been told that the Greek authorities would submit to occupation.

"There does not seem to be any doubt that the Italian soldiers were deceived," he said. "All the talk that has been going on about the lack of bravery of the Italian soldiers is not true. They lacked the proper equipment and the proper organization for a war against Greece. They were ready only for a military parade."

Transcontinental or Super Highways

EXTENSION OF REMARKS
OF
HON. J. BUELL SNYDER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am once again calling attention to the necessity of transcontinental or super highways. Public sentiment has reached a place now where the vast majority of our people, regardless of where they live or what they do, are in favor of such highways. The super highway in Pennsylvania, running from Pittsburgh to Harrisburg, has demonstrated to all that a highway system, such as my bill H. R. 3461 calls for, is not only advisable, but would be an economic procedure, as well as a big factor, in national defense.

Mr. Speaker, if we go down to the railroad station and hook a well-steamed engine to a thousand cars, we find it takes only a few seconds to get up speed and be off toward Baltimore at a rapid rate. But if we hook the same engine to a hundred well-filled and weighted-down

cars, we find it takes a lot of puffing—taking up the slack—and it takes many minutes before we get up full cruising speed.

We find the same thing true in Congress. If we introduce a worth-while measure of magnitude, it takes time to get momentum to carry on.

I introduced in 1936 a bill calling for super highways across the Nation. My bill called for 3 highways running east and west and 6 running north and south—each about 8 lanes wide. It called for these highways to bypass all cities, to be as straight as possible, to be cut down at either side level with the surface of the highway a distance of 250 feet. It is estimated that the roads in my bill would make a total mileage of 16,000 miles, and the average cost would be $500,000 a mile.

Mr. Speaker, you will recall that I advocated that we start building such roads in 1936, and I again advocated it in 1937, and again in 1938, and each year since. I said that it would put a million men to work each year, and that if and when an emergency would come, these roads would add 25 percent to our national-defense efficiency and economy, and at all times would benefit the Nation's producers and consumers in a like manner.

The measure was not adopted, but I am happy to say that more than half the Members of this House, believe in a system of highways, such as my bill calls for. They believe, with me, that it should have been done before this time. But now is not the time to start building these roads. The time to start to build them will be immediately after the mills and factories that are now turning out national-defense equipment will be shut down, after this emergency. We must expect that at least four or five million men will be out of work when national-defense emergency equipment is no longer needed. That will be the time that we should have this engineering and surveying work completed, so that we can turn these men right over to building these roads.

Mr. Speaker, I am revising my bill so that it will incorporate the necessary language that will enable the survey to be made, the engineering work done, and the blue prints ready to start work on such highways when Hitler says "nuff."

Mill-Town Miracle

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM THE READER'S DIGEST

Mr. BRYSON. Mr. Speaker, I am proud of the district I have the privilege to represent in the Congress. I am proud of the men and women I have the privilege to serve in this greatest legislative body in the world. The men and women of my congressional district, true to the traditions of the South, are a great and hospitable people.

Many of you have already read the September issue of the Reader's Digest, but this morning I rise to invite the attention of all to the article entitled "Mill-Town Miracle," which concerns the work and achievements of a distinguished educator of my own home town. I want every Member of Congress to read about L. P. "Pete" Hollis, of Greenville, S. C., because he is one of those leaders with vision and capacity who has helped the South march to new milestones of progress in education and social welfare. In Greenville we are all proud of "Pete" Hollis and I am sure you will understand why after you have read the article which I ask be printed in the permanent RECORD of Congress.

The article follows:

[From the Reader's Digest of September 1941]

MILL-TOWN MIRACLE

(Condensed from School and Society)

(By George Kent)

Not many years ago the 14 mill towns around Greenville, S. C., were as dismal as their names, such names as Union Bleachery or American Spinning. The houses were clapboard boxes standing bleakly at attention within earshot of the factory whistle. Company police kept order; company schools purveyed perfunctory education which ended abruptly in the fifth grade.

Then a man named L. P. Hollis was appointed district school superintendent and things began to brighten up. Hollis, called Pete by everybody, set out to educate each one of the 25,000 inhabitants. "It is not enough to teach children," he said. "You must also teach the parents." To do this he created a school system which is the center of all community life and has made the dreary towns attractive and happy places to live in, changed a listless people into self-respecting, purposeful citizens. The schools now are wholly independent of the mills.

Hollis' community education may be seen at work any day in the 14 towns. It may be the library on wheels, which rolls from door to door. It may be a schoolmobile with a woman inside baking biscuits to show women the value of electrical appliances. A full-time psychiatrist goes through the district giving parents expert advice on the management of their children. A few years ago illiteracy was a problem: Hollis sent 9 teachers to hold classes in homes, schools, and factories. At the end of that year 435 adults had learned to read and write.

Broken bottles and tin cans once disfigured the front yards of the towns. Pigpens added reek and ugliness. Today, although family incomes average less than $1,000 a year, you see pleasant lawns, gay and individual with shrubbery, lily pools, and home-made garden furniture. Of their own accord the mill-workers laid sidewalks, created public rose parks. The cost of these improvements came out of their pockets voluntarily.

Pete Hollis, who started all this, had never taught school a day in his life. He is a tall 200-pounder now in his middle fifties, the son of a cotton farmer. He came to the neighborhood as a welfare worker. It was not long after his arrival that everybody realized he was the man to go to in time of trouble. If a house burned down, Hollis pledged his personal credit for new furniture and clothing. If expensive sickness came, he helped out. His secretary complains, "He never has a dime, because he is always lending money." But in all that concerns the schools and the community he is a careful, farsighted planner.

Hollis' appointment as head of the school system was virtually forced on him. When the schools of the 14 towns consolidated as the Parker School District in 1923 no educator could be found to take the job of superintendent. The buildings were run down, the budget meager. In desperation the job was given to Hollis, the community wheel horse.

The new superintendent first set about to clean the old buildings within an inch of their creaky lives. He ripped out the seats. In the carpenter shop the boys knocked together a lot of plain tables and chairs. These were easily moved, could be stacked in a corner, or arranged in a circle informally about the teacher. On these cheap tables no child was afraid to spill paint or smear clay. Small, low-cost improvements, they made a big difference in the attitude of the children.

Before Hollis took charge the youngsters threw stones at the schoolhouse windows. Today they linger long after dismissal, reluctant to leave their reading, hammering, and research work. Scores arrive in the morning before their teachers to get in a lick on some treasured project.

In much the same spirit Hollis overhauled the teaching system. He begged the use of a vacant summer camp and invited his entire staff to spend 6 weeks there working out plans for improvement. The cost was so low and the possibilities for fun so enticing that 160 teachers came. Mornings were given to study; afternoons and evenings to sport. In this atmosphere most of the 160 became fired with Hollis' enthusiasm for community education.

Hollis pays salaries above the State average, lends teachers money when they are broke, organizes picnics when they go stale. On these occasions Hollis is chef, boyishly proud of his skill with a steak and an open fire. A few years ago he took 26 teachers to New York for the summer session at Teachers College. They all lived at one apartment house, meeting over home-cooked meals to discuss their discoveries. The school paid half the expense and was amply repaid by the ideas that emerged.

One afternoon Hollis was stopped on a Greenville street by a wealthy merchant. "Pete," said the man, "what would you do with $1,000?" Hollis mentally checked down his list of necessities and remembered the babies born on kitchen tables, the large number of mother and infant deaths due to ignorance and poverty, and replied, "I would do something for women who were going to have babies."

The merchant wrote out a check for $1,000; this enabled Hollis to take over a 5-room frame dwelling, put in beds, engage nurses and start in a small way the now famous maternity shelter. Later, funds from the Duke Foundation and the American Woman's Hospital enabled him to expand its facilities.

In 10 years some 2,400 babies have been delivered in this school hospital. Foundlings and ailing infants born elsewhere have been taken care of, and several thousand women have come to its clinics for prenatal attention and birth-control advice.

Senior high-school girls go to the shelter each morning to bathe babies, make up formulas and help mothers. If their parents consent, the girls may watch a delivery. They study nutrition and physiology. In this atmosphere facts of sex and reproduction are learned naturally and wholesomely. After 20 hours at the shelter the girls earn coif and apron, become health couriers. Armed with mask and thermometer they go from house to house preaching the importance of proper screening and eating, reporting any illness that needs attention.

Second only to the shelter in interest is the People's College, whose slogan is "All sorts of classes for all sorts of people." Some 3,200

men and women attended last year, learning everything from how to sing in a choir to the art of setting a table. One class arrived to find quarters of beef hanging from the ceiling and a local meat cutter ready to lecture—as he cut and sawed—on what to look for in a butcher shop. The school lights blaze until past midnight. There is a complete textile plant and machine shop to which mill hands come after work to learn skills that will mean advancement.

In the schools the Hollis system is to supply materials, opportunity, and incentive. The rest is up to the boys and girls. Science study begins with some personal interest—an enthusiasm for airplanes or a desire to repair the family electric iron. Whatever it is, it becomes the student's private door opening into the vast world of science. Three boys bought a model T Ford for a dollar, brought it to the schoolyard, dismantled it, carried the parts one by one to their third-floor shop. There it was reassembled with the aid of blueprints and a visit to an assembly plant. Then the car was again taken apart, again reassembled in the yard, and driven off.

Some years ago a group of boys, after visiting the children's museum at Washington, N. C., proposed to build a museum of their own. It was to be a log-cabin museum; a campaign to sell logs at a dollar each was successful, the museum was built and, in the course of time, filled with treasures that only curious, ferreting youngsters can find.

One feature of the Parker School District is the year-end science fair. Everything is there from windmills which actually pump water to tomatoes grown in chemical solution. At the last fair, visitors were welcomed by a 24-foot-long electric sign, student-built, which spelled out "Parker" in letters 4 feet high.

When older students quit school, Hollis gets them half-time jobs in the careers they wish to pursue. The rest of the day they spend studying subjects tied in with their main interest. At present, there are 16 classes meeting in the factories, under working foremen with a gift for teaching. Hollis' young people wait on you in department stores and beauty parlors. They straighten your fenders, print your visiting cards, work in offices.

The whole program of community education in the Parker district is carried out through funds raised by local taxation supplemented by some State support. And Hollis spends each year only $54.05 per pupil, whereas education throughout South Carolina costs $67.21 per pupil.

Here is education without frills at low cost, producing fine citizens and restoring family life. The Hollis achievement can be duplicated in any community. All that is needed is a shoestring for capital and a belief in the willingness of men and women to help themselves.

Six Years of the National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, September 11, 1941

ARTICLE BY H. A. MILLIS

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article written by Dr. H. A. Millis, Chairman of the National Labor Relations Board, entitled "Six Years of the National Labor Relations Act," published in the August number of the Labor Information Bulletin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Labor Information Bulletin of August 1941]

SIX YEARS OF THE NATIONAL LABOR RELATIONS ACT

(By H. A. Millis, Chairman, National Labor Relations Board)

The beginning of the year 1941 marked two significant changes in the activities of the National Labor Relations Board. The number of new cases coming to the Board, which had been declining during 1940, began to increase abruptly. Second, the hitherto normal predominance of cases containing charges of unfair labor practices by employers was shifted to a predominance of petitions for employee elections. More than anything else, the reversal of two such important trends in the activities of the Board signifies the value and accomplishments of the National Labor Relations Act in the field of labor relations.

In the nearly 6 years of the existence of the N. L. R. B. there were only two periods in which the Board received more than 1,000 new cases a month. The first time this occurred was in May 1937, immediately after the act had been upheld by the Supreme Court. The second period began 4 years later, in May of this year, when 1,075 new charges and petitions were filed with the Board.

It will be remembered that in 1937 complaints against antiunion activities were uppermost in the minds of American workers. Two-thirds of the issues presented to the Board in May of that year concerned unfair labor practices. In May of this year, however, the workers filed more election petitions than they did charges and were apparently principally concerned with the problem of establishing majority claims for representation at the bargaining table with their employers.

What causes underlie this shift? The answer lies in the growth of collective bargaining as an accepted and living practice in industrial relations. Unfair labor practices are not a part of collective bargaining. On the contrary, they impede and retard the normal processes of collective bargaining. Worker elections, on the other hand, are an integral part and a necessary first step in collective bargaining. The rapid displacement of unfair labor practice cases by petitions for elections thus reflects a fundamental change toward sound labor relations during the course of the past 4 years. All the other operations of the National Labor Relations Act seem to buttress that conclusion.

The act has emerged from its testing period as a seasoned instrument. The Board's interpretations of the act have been largely clarified by the courts. Employers now know their responsibilities under the law, and workers can define the scope and limits of protection which the act affords them. More and more employers have therefore come to accept the act, not only as a matter of compliance with law but in the affirmative belief that collective bargaining alone can maintain fair and stable relations between American workmen and management.

CLARIFICATION BY COURTS

The National Labor Relations Act has probably undergone more legal interpretation during the 4 years since it was declared valid than any other national law during the same period of time. The Supreme Court has passed on 34 of its cases and the circuit courts of appeals on 191. The procedure of the Board has been reviewed and declared fair and proper by the Supreme Court. Its jurisdiction has been thoroughly tested. Upon each of the unfair labor practices specified by the Board has been built a body of legal precedent covering many detailed situations and serving as a guide to proper observance of the act.

The field is too vast for extended treatment here. A few examples will illustrate the new code of labor relations, including the rights and duties imposed by the act and enforced by the courts.

Workers now know through court rulings that they lose the protection of the act if they seize their employer's plant or if they deliberately attack fellow workers during a strike. On the other hand, they also know that picketing and a minor brawl on the picket line need not of themselves deprive them of their rights. Workers likewise know that they may claim reinstatement if union activity was the cause for their discharge, but that discharge for ordinary breach of plant discipline lies within the rights of their employers and will not be handled by the Board.

Unfair practices: Employers for their part are informed by court precedent that connivance with some of their workers to enter into illegal employment contracts will not be permitted. Employers are now aware that the words of the act saying that the employer may not "interfere with, restrain, or coerce employees" mean concretely that he must not hire labor spies, must not close down his plant as a means of discouraging workers' organizations, show favoritism toward one of several competing labor organizations, hastily grant concessions to forestall organization, give direct financial support to an employee organization, or refuse to hire a worker for the sole reason that he is on a blacklist.

These and many other unfair labor practices found by the Board and approved by the courts fall under the general category of "interference" and are subjected to testimony, rebuttal, and cross-examination in open hearing. Six years ago many employers opposed the act on the ground that its definition of unfair labor practices were too general. Today the precedents are specific, and no employer need unwittingly break the law.

The provisions in the act which makes it unfair for an employer to refuse to bargain collectively with the representative of the majority of his employees was at first thought by many to be too vague for legal definition. The courts, however, have had no difficulty in setting up guideposts, for ascertaining whether or not an employer is attempting to negotiate in good faith. A point-blank refusal to bargain, conscious procrastination, reluctance in offering counter proposals, and a refusal to sign a written contract when its terms are mutually acceptable—these have all been found to be in violation of the collective-bargaining clause. The act, however, has no concern with the terms of an agreement, and an employer who bargains in good faith is not compelled to accept or reject particular demands made on him.

While stress is laid on the employer's duty to bargain collectively, it must not be forgotten that the individual worker must pursue a long and regularized course of action before he may enjoy the benefits of collective bargaining. Under the National Labor Relations Act the worker must find enough of his fellow workers to make a majority in his bargaining unit; he must abstain from illegal conduct in obtaining recognition of that majority; his representatives must offer their terms and weigh counter proposals offered by the employer. The Labor Board has ruled on these situations, and the courts have interpreted and applied these rulings in sufficient detail to make their meaning clear to all parties.

Compliance: While the constitutionality of the National Labor Relations Act remained in

doubt during the first 2 years, employers as a rule refused to comply with decisions of the Board. After the law was upheld by the Supreme Court in the spring of 1937, compliance became a necessity in cases where Board rulings were upheld by the courts. The number of consent decrees whereby the employer agreed to have a Board ruling entered in a circuit court of appeals without contesting it before the Court has also greatly increased.

During the fiscal year ending June 30, 1937 (the end of the fiscal year in which the act was upheld), there were 17 court decisions and 2 consent decrees. During 1938 there were 27 court decisions and 11 consent decrees, showing that compliance was still grudging and had to be enforced by litigation. A year later there were 45 court decisions but the number of consent decrees had risen to 147. During the fiscal year ending June 1940, there were 69 court decisions and 173 consent decrees, and preliminary figures for the fiscal year of 1941 show a continuance of the trend which has made the entry of Board orders by consent numerically of far more importance than cases enforced by court decisions.

It should also be noted that many of the unfair labor practice decisions of the past 2 years cover events which actually occurred in 1937 and 1938 and have required that long to proceed through the regular channels of hearings, decisions, and litigation. The relative decrease in the numbers of unfair labor practice cases coming to the Board, and the increasing willingness of employers to end cases by consent decrees, combine to form the conclusion that the Board may hope to expend less and less effort on enforcing the unfair labor practice provisions of the act and more time in conducting employee elections.

Unfair labor practice cases which run the whole course of formal procedure amount to only 10 percent of all Board cases. Any analysis of the services rendered to labor and to employers by the N. L. R. B. must therefore place major emphasis on the compliance with the act obtained by the Board through informal negotiation. About 40 percent of all the 28,000 cases the Board has closed during 5 years represent issues either dismissed by the Board or withdrawn by originators of the case. Another 50 percent has been settled in the field informally and with the agreement of all parties concerned.

The enforcement of the unfair labor practice provisions of the act, whether through court decisions or informal discussion under the supervision of a Board field representative, represents the negative side of the Board's work. It is a clearing away of obstructions which hinder both parties of the industrial relationship from getting together, Those obstructions removed, workers are free if they wish to express their choice for bargaining representatives through the secret ballot.

EMPLOYEE ELECTIONS

Defense production has vastly increased the use of the Board's election machinery. Even though employers and unions are showing an increasing disposition to arrange elections by consent, the number of the representation cases which have gone to formal hearing has doubled during the past year. This makes for industrial peace, not only because it offers the ballot box as a substitute for an otherwise contentious dispute, but also because it advances the collective bargaining procedure that much further on its way to establish sound and peaceful relations between labor and management.

The essence of a successful solution of a representation dispute is speed. When the consent of all parties can be obtained, the Board is able on the average to conduct an election 3 weeks after the petition is filed. To speed proceedings where consent cannot be obtained, the Board announced last March that it would give priority to cases involving defense industries. Among the cases so advanced were, for instance, those of the Ford Motor Co. and the Bethlehem Steel Corporation.

The Ford case is a foremost example of the beneficial results which follow the free choice of representatives in a secret election. On May 21, 1941, Board agents conducted elections at the River Rouge and Lincoln plants of the Ford Co. in which a total of 77,000 valid votes were cast. At that time there were 9 outstanding cases of unfair labor practices pending against the company. In 2 of these the Board's ruling had been upheld by the courts, the other 7 being in various stages of hearing and litigation. Less than a month later the Ford Motor Co. signed a contract with the United Automobile Workers of America, which was chosen by an overwhelming vote to represent the workers. At the same time all 9 cases against the company were written off the books upon terms acceptable to the Board, the company, and the automobile workers' union.

The Bethlehem Steel Corporation had agreed, as one of the terms of a strike settlement covering its Lackawanna plant, that it would cooperate in the holding of a Board election. That, likewise, resulted in a company agreement with the union chosen by the majority, and within a few weeks elections were held at six more Bethlehem plants upon mutual consent.

WRITTEN AGREEMENTS

In enacting the National Labor Relations Act in 1935 the Congress of the United States expressed the expectation that the act would result in mutual benefits to employers, workers, and the general public. The expected benefits were stability of plant operation, employment terms reached by negotiation and established for a definite period ahead, and open channels for the adjustment of grievances without fear of retaliation. All these are now generally included in most written collective agreements. It is not the worker alone who benefits through submission of all shop problems to a signed document. Employers with long experience under contracts rarely desire to return to the uncertainties of a shop kept in a state of worker restlessness because of the absence of a written document embodying the pledge of mutual responsibility.

The written contract has the virtue of including within itself the cure of many problems which otherwise might have to find their solution on the picket line. There is a growing disposition to write into them a mutual understanding that there shall be neither strikes nor lock-outs during the life of the contract and that all disputed points shall be settled by peaceful means, with voluntary arbitration when a settlement can be reached in no other way. Contracts often provide for continuous dealing between worker and employer representatives. Wage scales, seniority regulations, vacations, and other contentious matters are put down in black and white. The flexibility of written contracts to meet new conditions is shown by the fact that many now contain provisions for reemployment and seniority in case a worker is called to military service.

While the National Labor Relations Act does not specifically mention the written contract, its statement of findings and policy cites the public necessity to achieve "the stabilization of competitive wage rates and working conditions." The Supreme Court has interpreted the act to mean that the terms of any labor contract, provided it is mutually agreeable to the employer and to the union, should be reduced to writing and signed by both parties.

Protected Camp Immorality

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, I believe the statements contained in the editorials which appeared in the well-known Catholic periodical America, entitled "Protected Camp Immorality" are of sufficient importance to warrant the attention and active interest of the membership of the Senate and the House.

The conditions existing in our Army camps as revealed in this article come to me as a great shock as it must to the entire membership of this House. It is our plain duty to demand that the military authorities take prompt action to end this vicious practice which tends to destroy the morals of our young men.

The editorial follows:

[From America of August 2, 1941]

PROTECTED CAMP IMMORALITY

When a million young men are gathered from all parts of the country and put in military camps, social problems of the most difficult nature at once arise. The average man at home has his job, his hobbies, and his recreations. He is a clerk, student, a beginner at a trade, a businessman. His hobby may be music or stamp collecting or work as an amateur carpenter. For recreation he occasionally visits a moving-picture theater, attends a dance now and then, and sits in at a baseball game as often as he can find the time.

All these activities are forcibly set aside by the necessary discipline of a camp. The soldier lives with companions whom he has not chosen and is taken up with occupations which, at best, he may barely tolerate. The old self-chosen life has ended, and he finds himself in a life of which 12 months ago he never dreamed. Obviously, the situation demands an adjustment which in some cases will be reached only with considerable difficulty.

No doubt the military authorities are even more keenly aware of these difficulties than any civilian can be. They know that men are not a herd of brutes who can be trained, at least in some fashion, by a show of force. Their problem here is to ease the young recruits into their new life, with only the degree of compulsion which military experience has shown to be useful. A new recruit is not exactly paralleled by a new boy at a preparatory school, but the conditions of the two have much in common.

One approach to a solution of this difficult problem is through a program which provides the recruits with facilities for athletic games and with such amusements as moving pictures and dances. To many of the newly fledged soldiers these devices are very helpful. Occasionally the men are granted leave to amuse themselves outside the military camps, and the authorities try to keep the immediate neighborhood free from resorts which furnish opportunities for the intemperate use of alcohol and especially for sexual irregularities. In taking this desirable precaution, the authorities do not profess to act as censors of moral conduct. Their sole purpose is to keep disease out of the Army.

With that purpose we do not quarrel, for it undoubtedly prevents much disorder. What we do protest, however, and vigorously, is the apparent belief of the authorities that to prevent disease they are at liberty to use means and methods which are themselves immoral, and which, at least in some cases, even suggest that immoral practices may be indulged in provided that precautions against disease are taken.

It is decidedly shocking to know that, under Army regulations, quartermasters are required to have on hand at all times a stock of mechanical devices which are supposed to protect the user against disease arising from sexual promiscuity. The new recruit is warned against immoral courses, not only by the chaplains but also by the Army regulations. Should he contract a disease in consequence of violation of these regulations, he is subject to severe punishment. What is banned by the regulations is not, then, immorality but the disease which frequently follows it. In this respect the recruit may lead as immoral a life as he can manage, in view of the restrictions upon his liberty, but if, with the aid of devices furnished him by the Army, he escapes disease, he incurs no censure.

How many parents know of this practice? With sorrow and fear they watched their sons march away, but they were willing to give them to protect and defend their country. What do they think of the protection given their sons by the Army?

The arguments urged for this vile practice are not new. They were urged 24 years ago, when the armies were recruited for the first World War. They shocked the Christian conscience then, and they shock the Christian conscience today.

But it is a worthless shock unless it stimulates us to action. We suggest, therefore, that you write your protest at once to your Senators and to the Congressman from your district. Let him know that you approve the action of the military authorities in putting all evil resorts out of bounds for soldiers, but that you object vigorously to the practice of furnishing these young men with devices which may lessen their fear of sexual immorality by protecting them against disease. Congress can change the regulation which requires the quartermasters to purchase these devices, and Congress must change it.

Should there be any doubt in the minds of anybody as to the bad effect this policy of our military authorities may have on the morals of our young men, I suggest the reading of our article entitled "Morals Versus Health of the Men in the Camps," by Rev. Paul L. Blakely, S. J.:

[From America of August 9, 1941]

MORALS VERSUS HEALTH OF THE MEN IN THE CAMPS

(By Paul L. Blakely, S. J.)

In an editorial published last week under the heading "Protected Camp Immorality," this Review directed attention to an Army practice which is causing much uneasiness to thousands of American fathers and mothers. The editorial was written under a grave sense of duty. No decent man cares to mention this immoral Army practice, still less to discuss it. But in this case silence is not a virtue but vicious cowardice.

Not parents alone, but all of us want our young men to come back to us improved physically, mentally, and morally. We are eager to support any movement which can help these young men to make their months of service a period in which they will not sink in the moral scale but rise. For this very reason we feel obliged to protest any military regulation which can lead the young soldier to conclude that sexual immorality does not matter much provided that mechanical and chemical means are taken to avoid the diseases which commonly follow promiscuity. And it seems to me that some, at least, among the young recruits will reach exactly that conclusion if the Army continues to hand out to them "practical mechanical protection against venereal infection" and to erect prophylactic stations open to them at all hours of the day and night.

Most of us know by heart the reasons which have been alleged for the course made mandatory by the Army Regulations. Despite all that can be said by the officers, including the chaplain, some of the men, it is argued, are going to expose themselves to infection. This is regrettable, of course, but they say they can keep a bad matter from getting worse by providing, first, a mechanical protective device, and, next, a place in which the man who has run the risk of disease can be aided. With this man's morals, they claim they have no direct concern, but what can be done to keep down the incidence of infection will be done.

It is quite obvious that these Army Regulations do not take morals into account. If they did, they would not prescribe methods which to not a few of the young men far removed from the moral and social restraints of home are a direct incitement to vicious courses.

Let us turn to the Basic Field Manual: Military Sanitation and First Aid, published last year by order of the Secretary of War. There, under the head of "Control measures," we read that all "post exchanges are required to stock condoms of approved quality" and that "some one of these (prophylactic tubes) will be stocked by the post exchange." This gives us no exalted idea of moral standards in our new Army. But that is not all. In addition, "the Medical Department is responsible for operating sufficient prophylactic stations to serve adequately each command," and at these stations "any soldier may apply for treatment regardless of the hour." Evidently the Government is not quite sure of the efficacy of its mechanical and prophylactic devices.

The psychological effect on the young soldier of this elaborate set-up cannot but be bad. It conveys, almost irresistibly, the impression that the Government expects him to indulge in riotous courses from time to time, and has no objection, provided that precautions are taken against disease.

It is no justification to say that these "precautions" are taken in all armies. At least, the contention is no stronger than the rejoinder that they should be taken in none. But our position is that we are unable to approve the theory that it is lawful to do evil that some good may result. This position was so well explained by the Most Reverend J. B. Simonds, D. D., archbishop of Hobart, Australia, in a public address on November 28, 1940, that I am presuming His Excellency's permission to quote liberally.

"I have the unpleasant duty of speaking plainly in criticism of the action of our public authorities in sanctioning a regulation which cannot fail to have a subversive effect on the moral tone of the community. It has come as an unpleasant shock to many people to learn that contraceptive devices are regularly issued to the soldiers of the A. I. F. and militia camps of Australia. In Tasmania, public tenders were recently called for the wholesale supply of rubber contraceptives to the military authorities, and they are now regularly handed out in great numbers to all the men who request them. This sordid matter has been made the subject of complaint to me by parents of young soldiers, who are distressed to find that their sons have been corrupted by the easy road to vice which officialdom has opened to them.

"The demoralizing effect which this action of the Government will have on the youth of Australia is incalculable, and the regulation which empowered it is a disgraceful one with which no decent government should be associated. The distribution of these things to men in camp is stated to have been undertaken in order to protect them from the danger of infection from venereal disease.

"Does the Federal Government, then, accept as a principle the vicious theory that the end justifies the means, no matter how immoral these means may be?

"Under the pretext of protecting the physical health of a relatively small and undisciplined minority, our leaders have chosen the depraved course of handing out to the young men of Australia hundreds of thousands of instruments of immorality. Surely it is not too much to expect that as they are rightly solicitous for the physical health of the troops, they would be equally solicitous for the moral health of the youth of the country, and would refrain from spending the people's money to provide them with incentives to sin.

"We cheerfully resign ourselves to the oppressive burden of taxation which is imposed to carry the present war to a victorious issue. But it is a most depressing thing to learn that any of the money wrung from the people or begged from the poor in war savings, is allocated for purposes of immorality.

"The religious leaders in the various States are doing their best to maintain the spiritual and moral standards of the men in uniform. Their people have made splendid sacrifices to build, equip, and maintain many church huts where the spiritual needs of the men can be met, and their recreation taken in a clean and healthy atmosphere. The Federal Government has no money with which to assist this fine uplifting work, but it does not scruple to spend the public money to break down the moral standards of the youths whom it invites or conscripts to defend the ideals of the Nation. It is little wonder that cynicism so often greets the assertion that we are fighting to uphold the Christian standards of life.

"We Catholics have a clearly defined principle to guide us in judging this action of the Government. It is a principle given to us by the Holy Spirit through the pen of Saint Paul, who strongly reprobated the theory that we may do evil that some good may result (Romans iii: 8). On this principle we must take our stand, even though it should prove to be as unpalatable to modern paganism as Saint Paul's insistence on justice and chastity was to the Roman governor Felix."

I do not see how anyone who respects the principles of Christian morality can dissent from the views so frankly and bravely stated by Archbishop Simonds. It is certainly the duty of the Government to take every possible precaution to guard the health of these young men, but—unless we go all-out totalitarian and assert that the Government is not bound by any law—it is also obliged to do what lies within its province to safeguard their morals. When it fails in this important duty, then, as the archbishop says, its assertion that it is fighting to uphold the Christian standards of life is apt to fall on cynical ears.

It is clear from the Government manual from which I have quoted, that the military authorities realize the difficulty inherent in the age-old problem of keeping an army free from venereal disease. Yet it is impossible to escape the conclusion, after studying the manual, that in the military scheme too much reliance is placed on prophylaxis and upon mechanical devices, and too little on the influence of factors which are of another nature. A military observer has recently said that probably seven-eighths of the drafted men in a given camp are amenable at all times to military discipline. The remainder constitute the dregs of the camp. In spite of the wisest administration of discipline, they will break through, and can be controlled only when sent to prison.

Archbishop Simonds probably had some such conclusion in mind when he said that the Government had provided an immoral and disgraceful plan "of protecting the health of a relatively small and undisciplined minority." The American military regulations apparently assume that this plan must be applied to all the men.

The sixth chapter of the Basic Field Manual ends by prescribing methods which can be used whenever an excessively high venereal rate is found in a command. Were these precautions taken from the beginning, the alleged need of mechanical devices in this fight against disease would probably disappear. "Stringent control measures may be necessary. These may include all or any part of the following: (1) Placing red-light districts and all places selling liquor out of bounds. (2) Patrolling of restricted districts by military police. (3) Limiting passes to 4 hours; granting no passes after 9 p. m. (4) Classifying passes. (5) Routine bed checking." These regulations, but especially the first two, ought to be applied from the outset, and enforced consistently, instead of being held back until the camp is rotten with disease. Military police, properly trained, can search out places of evil resort as often as they are reopened in another district, and again put them out of bounds. That degree of supervision, surely, should be found possible.

Only a tyro in the knowledge of human nature will think that the solution of this problem can be easily reached. But it must be held for certain that no solution can be found in a method which is itself a violation of the moral law. When a government distributes contraceptives in its military camps, it acts on the immoral principle that evil may be done for a good end, helps to break down the soldier's moral sense and, as Archbishop Simonds has said, engages in a disgraceful business with which no decent government should be associated.

Every approach to a solution must be controlled by moral and religious principles. If these principles are held to be of secondary importance to the mechanical devices recommended in the Army regulations, a decrease in the incidence of venereal disease may be secured, but at the cost of undermining moral standards. The Army practice may produce healthy animals, but the ideal which we are entitled to demand of the Government is the soldier who is a Christian gentleman, faithful to his country, because he is faithful to his God.

I wish to thank the House for the unanimous consent which makes it possible for me to insert in the CONGRESSIONAL RECORD this timely article on a most serious condition now existing in our camps which must be and should be stopped at once.

So Casey Was Struck Out

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 11, 1941

ARTICLE FROM THE CONSUMERS UNION REPORTS

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the August issue of Consumers Union Reports:

SO CASEY WAS STRUCK OUT

"One of the great problems facing the American people today is to retain for the American workingman the benefits which should flow from the vast industrial program of the present emergency, and to see to it that the present boom, if it may be called that, is not a boomerang.

"Millions of dollars a day are being expended in the national-defense program. The unemployment list is dropping, and I think that this body is duty bound to see to it that the money which goes into the pockets of the workingman, whether he be a laborer in industry or a farmer, shall not be snatched from his pockets by inexcusable and artificial rises in price."

With these words Representative JOSEPH E. CASEY, of Massachusetts, asked the House last April to set up a five-man committee to investigate the rising cost of necessities and, if need be, propose remedial legislation to Congress.

Mr. CASEY didn't minimize the importance of the work of existing administrative agencies in regulating prices—Leon Henderson's office of Price Administration and Civilian Supply and Thurman Arnold's Antitrust Division. But, said he:

"* * * regardless of how many agencies in the executive departments are interested in prices, a committee in the legislative branch should make it its duty to act as a watchdog in the interest of decent prices for vital goods—particularly those necessities of life, such as food, and clothing, and medicine."

We agreed with Mr. CASEY when he introduced his resolution. Through Bread & Butter we urged members to write to their Representatives and call upon them to vote for the resolution.

We were all for it, but we didn't get it.

Consumers—who certainly would have benefited from a responsible inquiry into price rises—weren't strongly enough organized to force the passage of the resolution against the strong opposition that developed. The measure was defeated last month by a vote of 200 to 100.

Where did the strong opposition come from? Well, in part it came from that group of legislative hacks ("one eye on the vote and the other eye closed") whose stand on anything in the national interest is so invariably opposed that their words on one issue are much the same as on any other.

But any decent proposal runs up against opposition from that source. It took more to kill the Casey resolution. Most of all, an apparently predetermined campaign to misrepresent the whole purpose of the resolution was responsible for its defeat.

Such tactics are ancient and familiar: You set up a straw man and then you point at him with alarm and then you knock him down. And then, if you're a legislator, you tell the homefolks how valiantly you've battled to protect them.

The straw man this time was the charge that the Casey resolution was aimed at the farmer. Mr. CASEY was accused of wanting to father a committee which would take money away from the farmer by urging cuts in agricultural prices.

We have read the debate and we wish to note both admiration and sympathy for Mr. CASEY's hard fight to make the boys talk to the point. Alas, it was no use. Mr. CASEY had expressed an interest in "decent prices for vital goods." And that is a delicate subject in these days of profiteering. So Mr. CASEY had to be struck out.

Here's how he was struck out. We quote a few passages from the CONGRESSIONAL RECORD:

"Mr. COX (Georgia). * * * There are lots of us * * * who have a suspicion that this is something of a drive against the people who stir the soil and make it produce the food that feeds the people. * * *

"Mr. COFFEE (Nebraska). * * * I am convinced that this is no time to investigate agricultural or livestock commodity prices, for markets are jittery. Everybody is jittery. The markets are so sensitive that an investigation of this nature would be reflected in lower prices to the farmers and livestock producers of the country. * * *

"Mr. CASEY. * * * The idea that I am advancing a resolution like this to hurt the farmer is ridiculous. * * * There is nothing in this resolution that will hurt the farmer, but on the contrary there is a lot about the work of this committee that will help the farmer. * * * The farmer is the consumer, we are all consumers. * * *

"How * * * can the farmer be hurt by a publication of the truth as to the difference between the cost of production and the price paid by the ultimate purchaser * * *?

"Mr. COOLEY (North Carolina). * * * We have been trying to advance the price of farm commodities and have been appropriating millions of dollars for parity payments, but the very moment it is indicated that the price of farm commodities might advance somewhat, some people are getting excited about it.

"Mr. CASEY. This is going to help the farmer to get more of the purchasers' dollars into the hands of the farmers. * * * I do not see how the gentleman can be greatly concerned about an investigation of the spread between the cost of production and the price that the consumer pays. How can that hurt the farmer? It will surely help him.

"* * * What I want to do is to have this information as to actual costs go before the consumers of this country so that they can know what it is all about and stop all attempts to gouge the people with unconscionably high prices.

"* * * we have no legislative branch of this Government that seems to care * * * about the consumer or the price that he pays, and we want to find out the reasons for the spread and what it is between the price paid to the producer and the price paid by the consumer.

"Mr. TABER (New York). I think we are making things ridiculous by passing such a resolution, putting everybody who is trying to do a legitimate business in the wholesale or retail trade on the spot all the time by * * * investigations.

"Mr. KNUTSON (Minnesota). This is clearly an attempt to pound down the prices of food products. * * * I hope all who have the best interests of the farmer at heart will vote against its passage, because it may upset the market if we delve into it at this particular time.

"Mr. MURRAY (Wisconsin). * * * The merits of this legislation are not being properly considered."

And so it went. And so it will go again when, as, and if any other proposal to check up on runaway prices comes along. The honorable gentlemen of the lower House react strongest to the pressure that's hardest, and the people who profit from runaway prices have proved over the years that they know how to apply the pressure.

Consumers had better learn. A flood of letters for the Casey resolution would have changed the vote. Since the flood didn't come, one modest weapon in the fight against the high cost of living was lost, and consumers will pay for the lack of it.

The President's Address

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

ADDRESS DELIVERED OVER NATION-WIDE BROADCAST THURSDAY, SEPTEMBER 11, 1941

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the President over a Nation-wide broadcast on last Thursday evening, September 11.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The PRESIDENT. My fellow Americans, the Navy Department of the United States has reported to me that on the morning of September 4 the U. S. destroyer *Greer*, proceeding in full daylight toward Iceland, had reached a point southeast of Greenland. She was carrying American mail to Iceland. She was flying the American flag. Her identity as an American ship was unmistakable.

She was then and there attacked by a submarine. Germany admits that it was a German submarine. The submarine deliberately fired a torpedo at the *Greer*, followed later by another torpedo attack. In spite of what Hitler's propaganda bureau has invented, and in spite of what any American obstructionist organization may prefer to believe, I tell you the blunt fact that the German submarine fired first upon this American destroyer without warning, and with deliberate design to sink her.

Our destroyer, at the time, was in waters which the Government of the United States had declared to be waters of self-defense—surrounding outposts of American protection in the Atlantic.

In the north, outposts have been established by us in Iceland, Greenland, Labrador, and Newfoundland. Through these waters there pass many ships of many flags. They bear food and other supplies to civilians and they bear matériel of war, for which the people of the United States are spending billions of dollars, and which, by congressional action, they have declared to be essential for the defense of their own land.

The United States destroyer, when attacked, was proceeding on a legitimate mission.

If the destroyer was visible to the submarine when the torpedo was fired, then the attack was a deliberate attempt by the Nazis to sink a clearly identified American warship. On the other hand, if the submarine was beneath the surface and, with the aid of its listening devices, fired in the direction of the sound of the American destroyer without even taking the trouble to learn its identity—as the official German communique would indicate—then the attack was even more outrageous. For it indicates a policy of indiscriminate violence against any vessel sailing the seas, belligerent or nonbelligerent.

This was piracy—legally and morally. It was not the first nor the last act of piracy which the Nazi government has committed against the American flag in this war. Attack has followed attack.

A few months ago an American-flag merchant ship, the *Robin Moor*, was sunk by a Nazi submarine in the middle of the South Atlantic under circumstances violating long-established international law and every principle of humanity. The passengers and the crew were forced into open boats hundreds of miles from land, in direct violation of international agreements signed by the Government of Germany. No apology, no allegation of mistake, no offer of reparations has come from the Nazi government.

In July 1941 an American battleship in North American waters was followed by a submarine, which for a long time sought to maneuver itself into a position of attack. The periscope of the submarine was clearly seen. No British or American submarines were within hundreds of miles of this spot at the time, so the nationality of the submarine is clear.

Five days ago a United States Navy ship on patrol picked up three survivors of an American-owned ship operating under the flag of our sister Republic of Panama—the steamship *Sessa*. On August 17 she had been first torpedoed without warning, and then shelled, near Greenland, while carrying civilian supplies to Iceland. It is feared that the other members of her crew have been drowned. In view of the established presence of German submarines in this vicinity, there can be no reasonable doubt as to the identity of the attacker.

Five days ago another United States merchant ship, the *Steel Seafarer*, was sunk by a German aircraft in the Red Sea 220 miles south of Suez. She was bound for an Egyptian port.

Four of the vessels sunk or attacked flew the American flag and were clearly identifiable. Two of these ships were warships of the American Navy. In the fifth case, the vessel sunk clearly carried the flag of Panama.

In the face of all this, we Americans are keeping our feet on the ground. Our type of democratic civilization has outgrown the thought of feeling compelled to fight some other nation by reason of any single piratical attack on one of our ships. We are not becoming hysterical or losing our sense of proportion. Therefore, what I am thinking and saying does not relate to any isolated episode.

Instead, we Americans are taking a long-range point of view in regard to certain fundamentals and to a series of events on land and on sea which must be considered as a whole—as a part of a world pattern.

It would be unworthy of a great nation to exaggerate an isolated incident, or to become inflamed by some one act of violence. But it would be inexcusable folly to minimize such incidents in the face of evidence which makes it clear that the incident is not isolated, but part of a general plan.

The important truth is that these acts of international lawlessness are a manifestation of a design which has been made clear to the American people for a long time. It is the Nazi design to abolish the freedom of the seas, and to acquire absolute control and domination of the seas for themselves.

For with control of the seas in their own hands, the way can become clear for their next step—domination of the United States and the Western Hemisphere by force. Under Nazi control of the seas, no merchant ship of the United States or of any other American republic would be free to carry on any peaceful commerce, except by the condescending grace of this foreign and tyrannical power. The Atlantic Ocean which has been, and which should always be, a free and friendly highway for us would then become a deadly menace to the commerce of the United States, to the coasts of the United States, and to the inland cities of the United States.

The Hitler government, in defiance of the laws of the sea and of the recognized rights of all other nations, has presumed to declare, on paper, that great areas of the seas—even including a vast expanse lying in the Western Hemisphere—are to be closed, and that no ships may enter them for any purpose, except at peril of being sunk. Actually they are sinking ships at will and without warning in widely separated areas both within and far outside of these far-flung pretended zones.

This Nazi attempt to seize control of the oceans is but a counterpart of the Nazi plots now being carried on throughout the Western Hemisphere, all designed toward the same end. For Hitler's advance guards—not only his avowed agents but also his dupes among us—have sought to make ready for him footholds and bridgeheads in the New World, to be used as soon as he has gained control of the oceans.

His intrigues, his plots, his machinations, his sabotage in this New World are all known to the Government of the United States. Conspiracy has followed conspiracy.

Last year a plot to seize the Government of Uruguay was smashed by the prompt action of that country, which was supported in full by her American neighbors. A like plot was then hatching in Argentina, and that Government has carefully and wisely blocked it at every point. More recently an endeavor was made to subvert the Government of Bolivia. Within the past few weeks the discovery was made of secret air landing fields in Colombia within easy range of the Panama Canal. I could multiply instances.

To be ultimately successful in world mastery Hitler knows that he must get control of the seas. He must first destroy the bridge of ships which we are building across the Atlantic, over which we shall continue to roll the implements of war to help destroy him and all his works in the end. He must wipe out our patrol on sea and in the air. He must silence the British Navy.

It must be explained again and again to people who like to think of the United States Navy as an invincible protection that this can be true only if the British Navy survives. That is simple arithmetic.

For if the world outside the Americas falls under Axis domination, the shipbuilding facilities which the Axis Powers would then possess in all of Europe, in the British Isles, and in the Far East would be much greater than all the shipbuilding facilities and potentialities of all the Americas—not only greater but two or three times greater. Even if the United States threw all its resources into such a situation, seeking to double and even redouble the size of our Navy, the Axis Powers, in control of the rest of the world, would have the manpower and the physical resources to outbuild us several times over.

It is time for all Americans of all the Americas to stop being deluded by the romantic notion that the Americas can go on living happily and peacefully in a Nazi-dominated world.

Generation after generation America has battled for the general policy of the freedom of the seas. That policy is a very simple one, but a basic, fundamental one. It means that no nation has the right to make the broad oceans of the world at great distances from the actual theater of land war unsafe for the commerce of others.

That has been our policy, proved time and time again, in all our history.

Our policy has applied from time immemorial—and still applies—not merely to the Atlantic but to the Pacific and to all other oceans as well.

Unrestricted submarine warfare in 1941 constitutes a defiance—an act of aggression—against that historic American policy.

It is now clear that Hitler has begun his campaign to control the seas by ruthless force and by wiping out every vestige of international law and humanity.

His intention has been made clear. The American people can have no further illusions about it.

No tender whisperings of appeasers that Hitler is not interested in the Western Hemisphere, no soporific lullabies that a wide ocean protects us from him ca· long have any effect on the hard-headed, farsighted, and realistic American people.

Because of these episodes, because of the movements and operations of German warships, and because of the clear repeated proof that the present Government of Germany has no respect for treaties or for international law, that it has no decent attitude toward neutral nations or human life, we Americans are now face to face, not with abstract theories, but with cruel, relentless facts.

This attack on the *Greer* was no localized military operation in the North Atlantic. This was no mere episode in a struggle between two nations. This was one determined step toward creating a permanent world system based on force, terror, and murder.

And I am sure that even now the Nazis are waiting to see whether the United States will by silence give them the green light to go ahead on this path of destruction.

The Nazi danger to our western world has long ceased to be a mere possibility. The danger is here now—not only from a military enemy but from an enemy of all law, all liberty, all morality, all religion.

There has now come a time when you and I must see the cold, inexorable necessity of saying to these inhuman, unrestrained seekers of world conquest and permanent world domination by the sword, "You seek to throw our children and our children's children into your form of terrorism and slavery. You have now attacked our own safety. You shall go no further."

Normal practices of diplomacy—note writing—are of no possible use in dealing with international outlaws who sink our ships and kill our citizens.

One peaceful nation after another has met disaster because each refused to look the Nazi danger squarely in the eye until it actually had them by the throat.

The United States will not make that fatal mistake.

No act of violence or intimidation will keep us from maintaining intact two bulwarks of defense—first, our line of supply of matériel to the enemies of Hitler; and, second, the freedom of our shipping on the high seas.

No matter what it takes, no matter what it costs, we will keep open the line of legitimate commerce in these defensive waters.

We have sought no shooting war with Hitler. We do not seek it now. But neither do we want peace so much that we are willing to pay for it by permitting him to attack our naval and merchant ships while they are on legitimate business.

I assume that the German leaders are not deeply concerned by what we Americans say or publish about them. We cannot bring about the downfall of nazi-ism by the use of long-range invectives.

But when you see a rattlesnake poised to strike you do not wait until he has struck before you crush him.

These Nazi submarines and raiders are the rattlesnakes of the Atlantic. They are a menace to the free pathways of the high seas. They are a challenge to our sovereignty. They hammer at our most precious rights when they attack ships of the American flag—symbols of our independence, our freedom, our very life.

It is clear to all Americans that the time has come when the Americas themselves must now be defended. A continuation of attacks in our own waters, or in waters which could be used for further and greater attacks on us, will inevitably weaken American ability to repel Hitlerism.

Do not let us split hairs. Let us not ask ourselves whether the Americas should begin to defend themselves after the fifth attack, or the tenth attack, or the twentieth attack.

The time for active defense is now.

Do not let us split hairs. Let us not say, "We will only defend ourselves if the torpedo succeeds in getting home, or if the crew and the passengers are drowned."

This is the time for prevention of attack.

If submarines or raiders attack in distant waters, they can attack equally well within sight of our own shores. Their very presence in any waters which America deems vital to its defense constitutes an attack.

In the waters which we deem necessary for our defense American naval vessels and American planes will no longer wait until Axis submarines lurking under the water, or Axis raiders on the surface of the sea, strike their deadly blow—first.

Upon our naval and air patrol—now operating in large numbers over a vast expanse of the Atlantic Ocean—falls the duty of maintaining the American policy of freedom of the seas—now. That means, very simply and clearly, that our patrolling vessels and planes will protect all merchant ships—not only American ships but ships of any flag—engaged in commerce in our defensive waters. They will protect them from submarines; they will protect them from surface raiders.

This situation is not new. The second President of the United States, John Adams, ordered the United States Navy to clean out European privateers and European ships of war which were infesting the Caribbean and South American waters, destroying American commerce.

The third President of the United States, Thomas Jefferson, ordered the United States Navy to end the attacks being made upon American ships by the corsairs of the nations of North Africa.

My obligation as President is historic; it is clear; it is inescapable.

It is no act of war on our part when we decide to protect the seas which are vital to American defense. The aggression is not ours. Ours is solely defense.

But let this warning be clear. From now on, if German or Italian vessels of war enter the waters, the protection of which is necessary for American defense, they do so at their own peril.

The orders which I have given as Commander in Chief to the United States Army and Navy are to carry out that policy—at once.

The sole responsibility rests upon Germany. There will be no shooting unless Germany continues to seek it.

That is my obvious duty in this crisis. That is the clear right of this sovereign Nation. That is the only step possible, if we would keep tight the wall of defense which we are pledged to maintain around this Western Hemisphere.

I have no illusions about the gravity of this step. I have not taken it hurriedly or lightly. It is the result of months and months of constant thought and anxiety and prayer. In the protection of your Nation and mine it cannot be avoided.

The American people have faced other grave crises in their history—with American courage and American resolution. They will do no less today.

They know the actualities of the attacks upon us. They know the necessities of a bold defense against these attacks. They know that the times call for clear heads and fearless hearts.

And with that inner strength that comes to a free people conscious of their duty and of the righteousness of what they do, they will—with Divine help and guidance—stand their ground against this latest assault upon their democracy, their sovereignty, and their freedom.

Editorial Comment on President's Address on September 11

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

COMMENT FROM LEADING UNITED STATES NEWSPAPERS

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD editorial comment by leading United States newspapers on the President's radio address of Thursday, September 11. These expressions from newspapers of every political faith are taken from the Washington Star of September 12.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

New York Times (Independent-Democrat): "We believe that the course which the President has chosen to follow * * * will have the support of a great majority of the people of the United States. For we believe that this great majority, now recognizing clearly that we shall have no peace and no security, no respite from alarms, and no return to normal life until Nazi Germany is defeated, is prepared to accept any necessary risk to accomplish that defeat."

New York Herald Tribune (Independent Republican): "There will be * * * no doubt about the overwhelming relief, the new confidence, the new purpose and unity with which the people of the United States will see the evasions thus cleared away, the plain facts announced, the situation crystallized as it actually exists, and their Nation's policy placed upon that firm foundation which is the best—the only possible—answer to the horror and menace into which Hitlerism has plunged our world."

Syracuse (N. Y.) Post-Standard (Republican): "A step of incalculable aid to Britain was announced last night by President Roosevelt. It is stated in these few words in his speech: '* * * Our patrolling vessels and planes will protect all merchant ships—not only American ships but ships of any flag—engaged in commerce in our defensive waters.' The lines can be interpreted in only one way. President Roosevelt said he had no illusions about the gravity of this step. It is, in truth, one of the most serious the Nation has ever taken."

Douglas (Ariz.) Daily Dispatch (Republican): "The American people will support

firmly and gladly the policy President Roosevelt has enunciated of protecting our ships, even by 'shooting first,' as should have been the rule earlier. The great majority of loyal Americans will say 'Amen' to the policy the President has enunciated. We are for it."

Idaho Daily Statesman (Republican): "The subtle phrases with which Mr. Roosevelt drove home some points immediately arouses speculation as to the full meaning. Hitler, not we, should puzzle and fret over the answers. We may stand assured that the American Navy knows them and will act accordingly. Our Commander in Chief has issued to his forces a determined order. Our duty as Americans is to stand by the Commander in Chief."

Los Angeles Times (Republican): "Many, not all of them isolationists, will say the President's address * * * amounts to a declaration of war on Germany and Italy, so far as it lies within the Executive power to declare war. It does not. It is a declaration of intent to defend * * * our safety and our rights against a proven and already undertaken program of wanton assault upon both. * * * A show of righteous force more often than not tends to discourage gangster bullets."

Portland Oregonian (Independent Republican): "If Hitler's war craft, wherever they are found, are agents of piracy, and if the British Navy must be supported in order to prevent these pirates from ultimately overpowering us, then our defensive zone properly extends to the ends of the oceans. It remains for the President to say whether he still feels our defensive zone stops at a pencil mark down from Iceland."

Cleveland Plain Dealer (Independent Democrat): "This rather halting step * * * fails short of what the Nation had a right to expect. * * * The menace to supplies going to Britain is not in the American 'defensive zones' but in the stretch from Iceland to the British Isles. * * * The President may still ask for repeal of the Neutrality Act when the House of Representatives reconvenes next Monday. It would be the logical follow-up on this address, and one which the President would be fully justified in requesting."

Newark (N. J.) Star-Ledger (Independent): "Clearly the President is not looking for war. Just as clearly he is unwilling to subscribe to the doctrine that Hitler is entitled to deprive us of freedom of the seas merely because he cannot win the war without doing so. If we are on the way to war it is because we were placed in the path of war the very moment that Hitler acquired power in Germany and turned the resources of that aggressive country on the road to world conquest."

Rochester (N. Y.) Democrat and Chronicle (Republican): "It must be said that the President's order follows logically on the declaration of the wide defensive zone, on the occupation of Iceland and Greenland to forestall threats to that zone, and on the authorization of the lease-lend policy by Congress. The country must expect to take whatever further risks these decisions imply. But the implication of further risk still is subject to prudent vigilance and reasonable restraint. The limitation the President himself implied in the careful language describing his order should be maintained in the execution of the policy decreed."

Providence Journal-Bulletin (Independent): "Surely Nebraska, Montana, Arizona have for their particular interests as vital a stake as has Rhode Island, or any Atlantic seaboard State, in supporting the President's policy to shoot when necessary to keep the seas free for the American flag. It is an American declaration, essential to our economy and security. As a nation we live, we thrive, not by land alone but by sea as well. We are not seeing because we are at the water's edge some fantastic nightmare of invasion. But we live where we see what goes out over the seas and what comes in, and we know that all America cannot exist as America unless it shoots, if it must, to keep the seas free for our flag."

Knoxville Journal (Republican): "This is the first day of America's shooting war. * * * At long last, our backing and filling, our moving sidewise, our progressing toward a fixed point by following a curve; these things are at an end. * * * We have been sidled into this conflict on the theory that by putting up enough money we could avoid the killing of millions of our men. All signs now point to our paying for the war and fighting it, too."

Boston Globe (Independent): "The difficulty in writing about the President's address is that no interpretation is required. From beginning to end it is clear. * * * Mr. Roosevelt has done what two of his predecessors in the Presidency did. John Adams, without consent of Congress, gave orders for the United States Navy to sink, capture, or seize all armed French ships. * * * Thomas Jefferson, without Congress, also gave an order to the Navy as its Commander in Chief when he ordered the fleet to end the attacks on American ships by the pirates of North Africa."

Augusta (Ga.) Chronicle (Independent-Democrat): "Hitler now has a clear understanding of the nature of the provocation which will lead this country into active war against him. He knows the exact point at which the green light changes to red. If with his customary cynicism he decides to force us into a shooting war, the responsibility will be his, not ours."

St. Petersburg (Fla.) Times (Democrat): "Public reaction, we believe, will fully sustain Mr. Roosevelt in the bare-fisted manner with which he dealt with the totalitarian menace to the United States vessels on the high seas. * * * Thus Germany and Italy are put on notice * * * henceforth we shoot first."

Boston Post (Democrat-Independent): "One matter which the Congress might well consider is an investigation of the *Greer* incident since the President made it the outstanding cause of his address and the resultant shooting order to the Navy."

Boston Herald (Republican): "The United States is no nearer this morning than it was yesterday to participation as a belligerent in an all-out war against Germany. Indeed, the probability that we shall become involved in unrestrained hostilities against her seems less than it was. The President did little more than to issue a stern caveat to Germany. He did not go nearly so far as it was thought he would."

Worcester (Mass.) Telegram (Republican): "Whether or not one is disappointed in the speech, one must approve his order to keep German and Italian warships out—that order is inevitable. The preservation of our national safety and national honor demands it. If the Germans and Italians disregard this warning—it means war with the United States."

Baltimore Sun (Independent-Democrat): "Mr. Roosevelt's speech last night was a grave and stern definition of American policy which will compel Herr Hitler to bow to the United States in the North Atlantic—and in other areas—or to face us in a naval battle. The Sun believes this declaration of American policy to have been justified. We believe it to be wise."

Richmond (Va.) Times-Dispatch (Independent-Democrat): "Mr. Roosevelt carried the United States to the very brink of all-out shooting war with the Axis last night, for he apparently has ordered the American Navy to fire on any German or Italian warship found in the North Atlantic between this country and Iceland or in the South Atlantic between South America and Agrica. Obviously, the Navy now will shoot, if it sees an Axis warship in any waters which America deems vital to its defense, for the mere presence of such a vessel constitutes an attack. It is high time that such orders were issued."

Nashville Tennessean (Democrat): "In the face of unrestricted naval warfare by the enemy of freedom the policy laid down by Mr. Roosevelt is in the American tradition. It reflects the convictions of realistic and patriotic citizens. * * * Instead of writing notes America will use that medium of expression by which the totalitarians have torn the world asunder—force."

Hartford Courant (Republican): "The long road down which the Nation has traveled since the repeal of the embargo nearly 2 years ago is coming to an end. When the Lease-Lend Act was adopted, the Nation declared its purpose to accomplish the defeat of Hitlerism, and the orders now given to the Navy to shoot the warships of the Axis on sight simply constitute means to make the intention good. That such a purpose could hardly be carried out without shooting was pointed out at the time, and the correctness of the prophecies then made is now borne out. The shooting is at hand."

San Diego (Calif.) Union (Republican): "In warning Hitler that he can have war with the United States if he wants it, and that his desire will be indicated by his continued invasions of Western Hemisphere waters, Mr. Roosevelt has stated a position which Americans must approve. If Hitler wants to see history repeated, let him continue the course he evidently has chosen."

San Francisco Chronicle (Independent-Republican): "The President's declaration that any German or Italian warships will enter American defensive waters at its own peril is our recognition of the fact that there is no peace for us in a Nazi-dominated world. This means the Navy has been ordered to shoot at sight. This is an American declaration, an American warning to the Axis desperadoes. * * * We approve this action. We believe the President could do not less. We believe he should do more."

Dallas (Tex.) News (Independent-Democrat): "With legalistic precision he (the President) has moved for the defense of American shipping and American trade on the historic principle of freedom of the seas. * * * Clear-thinking Americans endowed with the courage that made this country free and great will echo the ringing defiance of Nazi-Fascist piracy. * * * If the aggressor nations of Europe desire to keep the peace, there is no challenge of their security."

New Orleans Times Picayune (Democrat): "President Roosevelt announced in terms of unassailable clarity an American policy. * * * The consequences of any decision on Hitler's part to resist the United States purpose of clearing the sea lanes of sea raiders would resolve into a general warfare of the seas. The choice is with Hitler and Mussolini."

Huntington (W. Va.) Herald-Dispatch (Republican): "By his affirmation of a naval policy of positive action to rid the sea lanes in the American defensive area of the menace of the U-boat, President Roosevelt has resolved the battle of the Atlantic. Hitler is the loser. When the history of his defeat is compiled the chapter written last night by the President will mark the real turning point in the battle of the forces of democracy to defeat the forces of totalitarianism."

Memphis Commercial Appeal (Independent-Democrat): "This issue is defined and the decks cleared for action. We will not be intimidated by Nazi threats, torpedoes, or bombs. * * * The die has been cast and

the forthrightness of the decision is in the American tradition * * *."

Cincinnati Times Star (Republican): "Mr. Roosevelt's last two speeches came very close to being personal declarations of war. Thursday's address, for all practical purposes, was exactly that. Congress and the people apparently are to have no part in the final decision."

Columbus (Ohio) Dispatch (Independent): "The President's address last night takes the Nation another long step toward actual participation in the European war, without the formal consent of Congress or the people. * * * Neither Congress nor the public has been willing to follow the President into the war. * * * His speech * * * lays the groundwork for further future incidents and developments which probably will result in open and formal warfare for the United States."

Indianapolis News (Independent Republican): "The President's speech * * * is a plain warning that he is ready to take the final step into war. * * * There will be general regret that the President did not lay this question before Congress. * * * The President, however, elected to take this bold and decisive step on his own responsibility. This course is in line with his record. He has consistently asserted the power of the Executive in fields hitherto regarded as the province of Congress and the courts."

Montgomery Advertiser (Democrat): "President Roosevelt was properly conscious of the gravity of his responsibility when he pointed the clear, if dangerous, course which the American people must pursue if they are to meet that rendezvous of honor with their ancestors."

Tampa Tribune (Democrat): "There can be no misinterpretation of the President's language. He reasserts, with all the emphasis of an ultimatum, the historic American principle of free seas for free nations. Thus is an arrogant, aggressive power warned that it assails that principle at its peril. The United States Navy is at war * * * for the maintenance of the American idea, the preservation of world freedom."

Albany (N. Y.) Knickerbocker News (Independent Republican): "The serious step taken by the President * * * is predicated upon his opinion that Germany has challenged us. That opinion might not be shared by Congress. And Congress, under the Constitution, is the only power that can commit us to war and, logically, to the acts inducing war. In this step, Mr. Roosevelt, by Executive leadership, has declared a policy that many will think should be defined by Congress. That policy of defending our supplies would be logical if it were positive Germany is challenging us."

Rochester Times-Union (Independent): "The President was on firm ground when he reasserted the historic American doctrine of freedom of the seas, and our determination to maintain it. * * * Nevertheless, we are forced to view with serious misgivings the manner in which our Chief Executive has gone about serving notice on Hitler and the Nazis that, having gone thus far, they shall go no further. * * * In acting without the prior sanction of the Senate and the House, the President has assumed a grave responsibility."

New York World-Telegram (Independent): "'The speech was a little more than pessimists had expected, yet a little less than optimists had anticipated.' That, from the London point of view, isn't a bad size-up of the reaction here, as between the interventionists and the non. * * * The President in this latest move does not declare war, technically. But actually he comes so close to shooting—and in his own phrase 'shooting means war'—that Congress should speak on the policy the President has expressed."

New York Sun (Independent): "* * * For the average American citizen it (the speech) means just two things: (1) That in the judgment of the President * * * certain acts of Axis submarines and surface craft constitute shooting warfare against American naval and mercantile ships on the high seas; and (2) that by fiat of the Commander in Chief of the Army and Navy the American Navy is actually entering into shooting warfare against armed vessels of Germany and Italy found in waters deemed by the Government of the United States to be vital to the defense of the United States. * * * Assuming its premises to be correct, the speech must be set down as one of the ablest Mr. Roosevelt has ever made."

Philadelphia Inquirer (Independent Republican): "This is not a policy of aggression on the part of the United States. It is as surely a factor in the defense of the Americas as the billions of dollars' worth of weapons which our mills are turning out for the British, and which we, with the means available to us as a nonbelligerent, are resolved shall have safe transport across the sea."

Chicago Times (Independent): "We assume that President Roosevelt means—now, at least—that our Navy is going to keep the western half of the Atlantic, up to and including Iceland and perhaps most of the way between South America and Africa, swept clean of Nazi raiders. For that step we believe the American people have long been ready and will fully support the President."

Newark (N. J.) Evening News (Independent): "The *Greer* episode was the first in the actual shooting war. Orders to our warships and planes to clear American defensive waters of Axis submarines and raiders mean that a shooting war will now be intensified. There is just one act that can prevent it—Hitler's withdrawal from waters considered vital to our defense; in particular from the German-declared war zone around Iceland."

New York Post (Independent): "Democracy spoke last night; it spoke the fact that its opposition to nazi-ism is not based on incidents but on a fundamental distinction between the moral and the immoral. * * * Many of us, not limited by the great but confining horizons of office, free to adventure in our own minds as no President of all the people can be, will not be content. We seek more than was offered last night. We ask instant action to destroy the Nazi menace once and for all; a final joining in the world issue for a settlement."

St. Paul Pioneer Press (Independent): "The conclusion to be drawn * * * is that President Roosevelt believes the United States need not enter actively into the war to accomplish the objective of the defeat of Hitlerism, but that he will not shrink from any shooting that may ensue from standing firm on * * * aid to Britain."

Kansas City Star (Independent): "It was a great speech the President made last night, moderate, reasoned, and restrained. The speech did not invite war. It put the decision up to Hitler. * * * Certainly it is a decision that involves risks. A decision to do nothing would involve greater risks."

Cleveland News (Republican): "The United States today has reassumed its true character as a Nation of 130,000,000 people of independence and dignity, with enough foresight to deserve survival in a quaking world and enough courage to assure it. The policy enunciated last night by President Roosevelt is the least that this Nation may undertake in today's circumstances. The alternative is to begin a gradual surrender of all that we have built in a century and a half, and all that we have dreamed of building."

St. Louis Globe-Democrat (Independent): "The President's declaration was an inevitable expression of American policy, made necessary by the recent manifestations of the Axis decision to engage in unrestricted submarine warfare. Hitler and his satellites * * * have started a shooting war and the United States accepts the challenge. In an informal way, we may now be regarded as at war in the Atlantic with Germany and Italy."

St. Louis Post-Dispatch (Independent): "Does the President's speech mean that shooting will actually occur? It is entirely up to Hitler. * * * If Hitler continues to attack American shipping, shooting will follow, and when shooting occurs, the temper of this Nation will no doubt rise to a demand for total war."

Labor Day Address by Senator Rosier

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

ADDRESS OF HON. JOSEPH ROSIER, OF WEST VIRGINIA

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague [Mr. ROSIER], on Labor Day last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is most fitting that 1 day a year should be set aside to be known as Labor Day. The labor movement in the United States has been one of the most distinctive developments of the last 50 years. This movement has grown out of the creation of large industrial organizations with many thousands of stockholders whose interests have been represented by managers. In the early stages of our industrial development, and even down to the present time, management has seemingly been more anxious to earn large dividends for its stockholders than it has been to improve the conditions of living for labor. The modern labor organization grows out of the fact that an individual worker cannot protect his interests in dealing with corporate management. There have been throughout this period of industrial expansion always a few large industries that have recognized in a generous way the rights of labor by paying wages commensurate with plant prosperity and by various profit-sharing plans which accorded to their workers a just recognition of their services in industry. In this period conservative management has been slow to recognize the rights of labor to combine for the purpose of raising wages and improving the standards of living.

After years of struggle the Federal Government has finally incorporated in the laws of the Nation the right of labor to organize and to bargain collectively with the employer. The act of Congress, known as the National Labor Relations Act, has finally been sustained by the Supreme Court, and industry is now gradually recognizing and putting into practice the provisions of this law. It is not my purpose today to review the history of the labor movement in this country. It is sufficient to say that labor in the last half century, through its organizations, has become conscious of its rights and privileges. No one

would claim that this labor movement has been free from friction and strife. Throughout history it has always been true that any advancement of the welfare of the masses of the people has come about through struggles that are sometimes attended by violence.

Charges of injustice cannot fairly be lodged against either management or labor. It has been a clash of ideas and different theories concerning the relation of management to its employees. In the early days, when the owner of the plant was the employer, he sustained an intimate and personal relation to those who worked in his plant. In sustaining that personal relation, he necessarily had a direct interest in the welfare of those who worked for him. In that period there was a certain fluidity in the movement of labor that made it easy for the workers to go from one plant or community to another. As the large industrial plants came into existence, and corporations were created with thousands of stockholders who were interested only in the dividends from their investment, there developed the board of directors and the various forms of corporate management. In this development the previous personal relations of the employer-owner with his employees ceased to exist. The relation of labor then became an extremely impersonal one. I think it will be agreed that the creation of collective bargaining for large groups of laborers in dealing with their employers was an eminent and just plan for protecting the interest of labor. It is interesting and inspiring to note that in recent years many great industries have finally recognized the principle of collective bargaining and the rights of labor to deal in a collective way with management which represents the collective interests of those who have invested their capital in industry.

We have some students of industrial and economic problems in our country who deplore what they call the class struggle. As I study the history of social and economical development in the countries of the world, I find that progress has always come out of the struggles of certain groups for a larger share in the satisfactions of life and a greater security in the social and industrial world. It has become a dominant point of our present-day life for all classes and professions to organize for the purpose of promoting their own welfare and the advancing of their own interests. The organization of the medical fraternity in a great national association, for the upholding of the standards of their profession and the advancement of their professional interests, is just as much of a class movement as the organization of any great industrial group.

As I observe the great organizations of various groups in industries and professions, and businesses, I am convinced that all such movements have had a distinctive effect upon the progress of all of our people. So, today, we celebrate in a national holiday the advancement of labor in its progressive efforts for improvement of the standards of living and for a greater participation in all of the benefits of modern civilization. Labor, today, has a recognition and a dignity that it has never had before in our history. This has grown out of the fact that, through its organizations and its own efforts, it has set up standards of living that give the laboring people self-respect and a feeling of independence. I am among those who believe that the prosperity and security of our Nation depend upon a wide distribution among all of our people of the benefits and satisfactions of our modern progress. The laborer in his home and in his social contacts is entitled to those pleasures and enjoyments which are acepted as their right by the most-favored people in our communities.

We have founded and developed in this country a great system of public education which opens the doors to culture and opportunity for all of the children of our people. There was a time when such privileges were limited to the children of the favored and the rich. It required a long struggle on the part of those who believed in the rights of our people to establish the advantages of public education to all of the people at public expense. Even now on occasion large taxpayers, who represent the privileged classes, protest against a system of education that provides for the training and development of all of our young people. If our institutions are to endure, it is just as important for the children of our laboring people to have a modern education as it is for the children of the well-to-do. The critics sometimes declare that when laboring people draw large wages they act foolishly in spending their income. Just the other day I heard such a criticism of a group of men who are now drawing large pay. It may be true that there are occasional individuals in our laboring groups who do not have a sense of thrift and of responsibility in handling their incomes.

Those of us who believe in fair wages and equal opportunity for all of our people would not deny this fact. However, when we observe the conduct of our so-called wealthy classes, we would find it to be true that there is just as great a lack of sense and responsibility of many in those groups. What we need in this country, more than anything else, is a sense of values among all of our peoples—both those who labor and those who invest capital in the management of industry. No one has any envy for the capitalist or industrial manager who lives in a fine mansion on the avenue. But those who believe in social justice think there should be some of the modern standards of living set up in the homes of the cross streets and those beyond the railroad tracks. Labor, today, has a right to take pride in the achievements of the last half century. The labor organization has great responsibility resting upon it.

In the years just ahead of us, these organizations will be tested by the leadership which they create. No movement will rise above the intellectual ability and the character of the men who lead it. The labor movement has produced some great humanitarian leaders, leaders of whom we may be proud. It must continue to develop and recognize such leadership. Government itself, in the future, will rise or fall with the men who direct its affairs. The greatest need of our Nation and of the world today is human character. We need in government, in the labor movement, and in the struggles of mankind for better things, men and women of great wisdom, of unswerving integrity, and of outstanding character.

We are engaged, today, in a great program for the defense of our Nation. We are called upon for a united effort in building up our defenses to protect ourselves against a great world danger. We have here a test of our patriotism and our willingness to make sacrifices for the preservation of our rights in a democratic country. There are two conflicting ideas of government and social progress contending for supremacy in the world today. If the Hitler idea of social and economic control should prevail throughout the world, not only labor but industrial management as well will become the serfs of some dictator.

There were those in Germany who, in the early stages, encouraged the Hitler movement because they had some vague idea that that movement would bring the masses of the people under some sort of control. They have found out to their sorrow that the same dictatorial powers, which are now making slaves of the people of that country, are also enslaving them. The Government of the United States of America was established by people who fled from the oppression and tyrannies of the European countries of 3 centuries ago. Here in our country we have established the most advanced civilization in the world. We have created here a government which is under the control of the people under it. From the formation and adoption of our Constitution, down to the present time, the citizens of this country have determined by their choice who shall rule them. We are told by some people that a democracy will not work. We need only look at the history of our Nation to find that our Federal Government has provided greater protection and freedom for its people than any other government. We are confronted, today, with a movement which would set up an authoritarian control of all of the masses of our people. No one should minimize the fact that this movement is a direct threat to our Nation. If the Hitler movement should bring all of the countries of Europe, including Great Britain, under its heel, it will only be a short time until that power reaches into the Western Hemisphere. Our program of defense in this country has in mind not only every possible aid to those nations that are fighting Hitlerism, but it has in mind the freedom of the seas of both the Atlantic and the Pacific Oceans. We are being called upon to put forth our utmost for the development of those material forces and powers that will enable us to repel this power which threatens us. This will require sacrifices on the part of both labor and industry in our country. This is no time for any agency to seek any selfish end. Selfishness and greed must be brought under subjection in this country. The same sacrifices which are being made by our great Army in training should be required back home from those who labor in our industries and those who manage them. The United States of America was created by men with great ideas. If we are worthy of our heritage, we must be willing to make the same sacrifices which our forefathers made in establishing this land of the free.

There are those who say that we have no interest in the struggle that is raging in the world today, that the contest on the European Continent and in the East is no affair of ours. These are the people who are known as the isolationists. They overlook the fact that modern communication and transportation have brought all nations into close relation and association. We cannot separate ourselves from the rest of the world now. We are too close to it. When this Government was founded, crossing the Atlantic Ocean was a journey of weeks; now it is a hop of a few hours. In a large measure the outcome of the present world struggle will depend upon a clash of material forces; but in a still greater measure, in my opinion, it will depend upon contesting theories of society and government.

In our schools and on our public forums we should give more time than ever before to the history and growth of our American institutions and our Government. We need more than ever a deep appreciation of what American freedom and the American way of life mean. The ideals of American freedom must not fail the world in this crisis. We are holding, and must continue to hold, the torch of freedom that will be the beacon light for the oppressed peoples of the world. On this Labor Day I appeal to all of our people for loyalty, devotion, and sacrifices for the ideals of American freedom and opportunity. There must be no compromise with Hitlerism and the ideals for which it stands. We have no stock in the so-called new order which Hitler proposes for Europe and the world. It smacks too much of tyranny and dictatorship. We still believe that the American type of government can be made effective. We still believe that the individual rights of men can be preserved. In that belief we must have 100 percent of national unity not only in upholding our American ideals but in the development of those material forces in the way of national defense that will be necessary to protect and preserve those ideals in the world.

Col. Charles A. Lindbergh

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

ARTICLE BY HARLAN MILLER

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Harlan Miller in connection with the recent visit of Charles A. Lindbergh to Iowa.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVER THE COFFEE

(By Harlan Miller)

DEAR MR. LINDBERGH: When you were here in 1927 I wrote an enthusiastic story about you which sounds rather naive today. I met you, and even supplied, in a minor crisis which arose, some refreshment for you and the flyers of the Eighteenth Squadron. May I presume on this slight acquaintance to ask you a few questions?

First let me say that, despite harsh things said, I still confess a certain regard for you. You were once a candid, reticent, clean-cut young man. You flew the Atlantic, as one of our Iowa boys did the same month. I believe that in a peculiar way you regard yourself as a patriot.

You keep saying that you represent 80 percent of the American people. But 4 months ago, when you began to say that, accurate surveys by Gallup, an Iowan, showed 71 percent of the American people favor convoys to prevent a British defeat, 68 percent favor going to war if it's the only way to beat the Axis. Knowing that, can you continue truthfully to say you represent 80 percent of the American people?

How much were you unconsciously influenced by Dr. Alexis Carrel, the notorious French Fascist, your mentor in the mechanical-heart experiments, whose views helped bring ruin to France? Were you a victim of his foreign "isms"? Have you been influenced or helped on your speeches by Sylvester Viereck, Lothrop Stoddard, or Lawrence Dennis, the pro-Nazi propagandists?

What do you mean by your veiled, subtle cries for an immediate change of government, before the 1944 elections, apparently by some method not provided in our Constitution? Who are your backers? Are they old-guard politicians like Mr. Hoover's Bill Castle, who is so fond of Japan? You were frank about your backers in 1927. Will you be frank about them tonight?

You blundered about the numbers and invincibility of the Luftwaffe. You blundered in June 1940, when you told Senators England would last only 30 to 60 days. You blundered about the weakness of the Russian air force. You blundered when you urged no sale of offensive weapons (bombers) to England, but only defensive weapons (pursuit planes), while Army flyers laughed at you, because both types are both offensive and defensive. Do you still think yourself infallible?

A man who has accused the President of "deception" cannot expect to be handled with gloves, must accept some mild criticism of himself. Why have you said so much to hurt the British, but nothing to help them? Why have you said so much to help the Nazis, but nothing to hurt them? Did you denounce the Russians as Nazi allies? Then why do you denounce them as Britain's allies?

What makes you so positive we are safe from Nazi aggression? In 1917-18 we sent 2,000,000 men to Europe. Why are you so certain the Nazis couldn't send 2,000,000 men to this hemisphere, especially if they had the British, French, Italian, Russian, and Japanese Fleets and shipyards? Is there something in the Nazi ideology that appeals to you? Aren't you horrified by any of it?

Since Germany invaded Poland, you have made 19 radio speeches, 2 in the first 45 days of the war, all helpful to Hitler, all hurtful to England. Why didn't you make any radio speeches in the 3 years after 1936, when you discovered Germany's air strength, to urge America to build an air force? Why were you silent then?

Are you politically ambitious? If so, why not admit it in your speech here tonight? Are your speeches merely an all-out political attack on the President? Where did you acquire your ethnic and strategic data? On what meat hath this our Caesar fed that he hath grown so wise? Have you read Mein Kampf?

Even your severest critics, Mr. Lindbergh, once your admirers, are honestly curious about your position and mystified by it. If some of these questions seem harsh, it is because they reflect the degree of their mystification, their disillusion.

I don't believe the petty, stupid, little stories told against you. I'm unwilling to dismiss you as a wrong-way Corrigan, headed toward Berlin when you think you're headed toward Washington. For good reasons, would you change your mind? Will you answer these questions? Or will this be another Coughlin, Moseley, Pelley, silver-shirt speech? If you are truly patriotic, you will answer them or at least ask them of yourself, when you are alone with your conscience.

SHOCKED EX-ADMIRER.

War

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

EDITORIAL BY JAMES M. LANGLEY

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "War," written by James M. Langley, and published in the Concord Monitor of September 12, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Concord Monitor and New Hampshire Patriot of September 12, 1941]

WAR

The President last night declared war in sea areas of his own choice, for he is the one who decides by proclamation what and where our defense areas are. His declaration was against Germany and Italy. That is the clear intent of what he told the world:

"From now on, if German or Italian vessels of war enter the waters, the protection of which is necessary for American defense, they do so at their own peril."

It was the President's extension of the limits of waters considered essential by him to American defense which resulted in the incidents (the President calls them episodes) which made his announced action of last night inevitable. Having done the one thing he could not long expect not to have to do the other. It has become necessary perhaps sooner than the President expected.

We do not believe that the President's declaration of limited war came as very much of a surprise to the American people, whether they are isolationists or interventionists, or somewhere in between. When the President said the Red Sea was open to American freighters, despite the Neutrality Act, and when he announced the occupation of Iceland, the action he has now taken necessarily became only a matter of time.

Having declared limited war, it now is only a question of time until the President asks Congress to declare unlimited war. The miracle is that with such complete control over this Nation's destiny the President has been prevented so long from making even his limited declaration of war. That he has been is to the credit of the American people. Their refusal to be stampeded by events has already saved many lives.

The President did not define the limits of waters considered by him essential to American defense. Does he intend to stand upon previous definitions? Will the Navy be expected to keep the Red Sea free of Axis submarines, surface warcraft, and aircraft? Will the declaration of unlimited war result in convoying within "defense waters" and abandonment of the "patrol" quibble? Just when did the President issue his orders to the Navy to shoot first? Did he do so last week when he had expected to address the world sooner? Or has the order been of longer standing? Will an incident or incidents in the Far East result in defining the Sea of Japan, through which we are shipping oil in American ships to Russia, as essential to the defense of this country? Are we to understand that if we shoot first that is defense, but if Germany shoots first then it is piracy, even though the shots are fired in the eastern Atlantic?

The answers to these questions somehow reflect upon our self-righteousness, as voiced by the President in his address last evening. For that reason the questions, which came to mind as we listened to him, went unanswered. The explanation which the address was, or justification, was not complete. We wonder whether stark announcement of the President's order to the Navy, without an attempted explanation or justification, might not have been more dramatic and also more effective as notice to the Axis that the United States means business? It would have been less embarrassing to this country than the incomplete explanation the President did make.

Of course, the Axis nations will now do what we have said we will do, shoot first. Long ago Germany defined sea areas necessary to the defense of Germany. She was less ambitious in this respect than our own President has been. As he has repeatedly pushed our definition of areas eastward in the Atlantic they have come to overlap the German areas. From the German point of view United States shipping in the North Atlantic, if east bound, is definitely legitimate war prey, especially following the President's latest action. We have entered the shooting war, and no mistake.

Having declared limited war, the President must not expect the American people to wish to go the rest of the way with the enemy. We cannot as a nation longer make any false pretenses that our shipping is sacred in the North Atlantic. It is not, by reason of the President's action. It is there for defense, but it is there also offensively. An order to shoot first can be described as active defense, but actually it is an offensive action.

When a nation takes the step this country is now committed to by its President it must and does expect to take the consequences. It will expect the limited war to remain a limited war for the simple reason that even limited war means liability to casualties. We have placed our reliance now in the ability of our Navy to outwit and outfight the Axis in the North Atlantic, and in doing so we have abandoned our claim to further indignation if we get hurt.

The Petroleum Shortage

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

ARTICLE BY ARTHUR KROCK

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very interesting column from the New York Times by the able writer, Mr. Arthur Krock.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of September 11, 1941]

HOW A WOLF TURNED OUT TO BE OLD DOG TRAY

(By Arthur Krock)

An inspection of the public history of the petroleum-shortage scare in the East leads to one of these conclusions:

Secretary Ickes, the Oil Coordinator, and his aides produced the scare on the basis of an exaggerated view of what the eastern surplus should be and without troubling to check all possible sources of supply.

Or Secretary Ickes and his aides deliberately magnified what they knew to be the facts in an effort to bring home to the wasteful American people a useful lesson in conservation.

For a third, and more unkind, conclusion that the hullabaloo was a piece of strategy in an effort to stimulate war psychology there is no support in the record.

The history of the case, as related in the press dispatches, does not, however, reflect credit on the manner in which it was conducted by the Government authorities. There is more than a suggestion that many elephant guns went off half-cocked and at small deer.

There is strong evidence that if Mr. Ickes, Mr. Davies, and the petroleum control agency had thoroughly canvassed the situation in advance with the railroads and other branches of the Government, the matter would have been handled more intelligently and effectively.

The result of the methods used has been to arouse a widespread public feeling that an attempt was made to sell motorists a gold brick, which is unfortunate because there really is a serious transportation problem and because, in the great strain the defense effort has put on national resources frugality in their use is both patriotic and necessary.

The following are the highlights in the record:

May 28: Gasoline consumption up 6.2 percent over 1939. May 30: Mr. Ickes forecasts gasless Sundays and "dim white ways" in the East because of a transportation shortage, accounted for in part by the impending transfer of 50 tankers to the Atlantic service. June 3: American Petroleum Institute recommends reduced Sunday driving and lowering of home temperatures by 5 degrees giving the transfer of 50 tankers as an important reason. June 10: The American Automobile Association suggests that slower driving and starting would save 20 percent in motor-gasoline consumption and avoid any need of rationing in the East. June 11: President Farish, of the Standard of New Jersey, says that proper Washington planning and cooperation with the trade should make eastern gasless Sundays unnecessary.

June 13: Mr. Ickes expresses fear that, partly because of the transfer of 50 tankers, eastern curbs are inevitable. The pinch will make itself felt about the time cold weather arrives. June 30: Government experts tell vacationists not to worry over rationing for the next 2 months. July 4: Mr. Ickes asks police authorities to arrest "wasters." "The shortage may become acute by September," he said. July 22: Oil-company executives meet with Mr. Ickes to discuss the diversion of more tankers to Great Britain.

July 28: Mr. Ickes says voluntary curtailment does not seem to be working. August 1: Oil companies asked to close filling stations from 7 p. m. to 7 a. m. and say they will comply. August 7: Mr. Ickes asks trucks to ration their use of gas by cutting down deliveries. August 14: Consumption goes up. August 15; Leon Henderson, at Mr. Ickes' request, cuts supply to retail trade 10 percent in 17 Eastern States. Filling stations are bewildered.

August 21: Mr Davies says stocks are at 10-day reserve level, "a perilous stage." August 22: Oil executives insist eastern stocks are ample unless more tankers are to be transferred. * * * Mr. Davies, at this late date, asks for a survey of idle tank cars. August 29: Mr. Davies says "sinister interests" seek to conceal the shortage.

September 4: Mr. Pelley, of the railroads, says there are enough idle tank cars to supply 200,000 more barrels daily to the East, and that Mr. Davies never asked him for information concerning them. September 5: Oil companies agree to use the cars. September 6: Eastern gasoline stocks increased 167,000 barrels between August 23 and 30. September 8: Mayor LaGuardia predicts early rescinding of curfew law for lack of need of it.

In the course of these developments it was indicated by testimony before Senator MALONEY's committee of inquiry that what Mr. Ickes, Mr. Davies, and Mr. Henderson sought was a huge "odeal" eastern gasoline reserve; that the daily shortage claimed of 174,000 barrels cut down on their own figures to 120,000 barrels, and then revised to 175,000, would be more than overcome by the use of the idle tank cars, whether 20,000, as claimed by Mr. Pelley, or less; that the British never took 50 tankers; and that the shortage represents merely the difference between what Mr. Ickes et al. thought the surplus ought to be at all times and what it will be until the tank cars are put in service.

In other words, Mr. Ickes' wolf, when the spotlight was turned on him, began to whine and wag his tail in the friendliest fashion.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

AMUSEMENT AND GAMING DEVICES

Mr. DIRKSEN. Mr. Speaker, for the first time, Congress has officially recognized the existence of coin-operated machines which are designed either for amusement or gaming and has provided for a tax on such machines. This provision does not in any way nullify the validity of local ordinances or State laws which make such devices illegal, but merely undertakes to impose a tax on them if and when and where they might exist. The new taxing act divided such devices into two classes. On the first class, which are operated solely for amusement and are known as pin-ball machines, the tax is $10 per year and is payable by the person who maintains such a machine for use or permits its use on his premises. The second class as defined by the bill itself includes "so-called slot machines which operate by means of the insertion of a coin, token, or other similar object, and which by the application of the element of chance may deliver or entitle the person playing or operating the machine to receive cash, premiums, merchandise, or tokens." The tax on these devices is $50 per year and payable by the person who maintains the machine for use or permits his premises to be used for its use and operation. The Senate Finance Committee originally proposed a tax of $200 per year on so-called slot machines. This was reduced to $50 when Senators from a certain far western State assailed this tax as ruinous to a well-known town called Reno.

JOBS IN DEFENSE

Many persons, actuated by sincere and patriotic motives, would like to devote their talents to the Government service at a time when the world is in crisis. Perhaps a note of explanation might prove helpful. All civilian workers in any defense agency, whether it be the War or Navy Department, the Office of Production Management, the Civilian Defense Administration, or others, are recruited from civil-service rolls. Only in rare instances, where some type of highly specialized service is required, are persons directly hired by such agencies. When persons are needed, these agencies send a requisition to the United States Civil Service Commission stating the number of persons needed, the type of work to be done, and the qualifications for such work. The Civil Service Commission maintains registers of various classifications of work. To get on these registers one of two kinds of an examination is necessary. The one is called competitive and consists of a written examination which is held at a designated time and place. This type of examination applies to such services as typist, clerk, stenographer, and so forth. The other is known as an unassembled examination. It consists of a statement filed with the Commission showing the experience, education, and training of the applicant for a certain type of work. It applies to such classification as architect, engineer, chemists, and so forth. Complete information can be obtained by addressing a letter to the United States Civil Service Commission, Washington, D. C.

WAR CASUALTIES

There have been very few comprehensive figures on casualties in the present war. Foreign governments have been rather secretive about this matter, and

figures have been hard to obtain. However, a survey was made recently based on figures obtained from foreign embassies in the United States, from the War and Navy Departments, the Congressional Library, and other sources. Total casualties for the first 2 years of the present struggle total 10,324,000. Of this number, 2,520,000 have been killed. The remainder constitute wounded and missing. Greatest tragedy is that 1,052,000 of these casualties were civilians and innocent bystanders in bombed cities. Of this number, 232,000 were killed. Thus does death rain from the skies.

DISCHARGE FROM THE ARMY

Every congressional office receives many inquiries concerning the discharge of young men from the Army, and we believe it will be informative to summarize the essential facts contained in a statement released by the War Department on August 29, 1941. If the foreign situation shows no material change, about 200,000 enlisted men will be released from active duty before January 1. Releases will be made in the following order of priority: First, dependency and hardship cases; second, enlisted men who have served their terms of enlistment; third, selectees and guardsmen requesting release who attained age 28 on or before July 1, 1941, and before their induction into service; fourth, enlisted men other than in the Regular Army who have served a year, who are married, and who request release; fifth, any enlisted man who has served normal term of Federal service. This last class, however, will be released in order of length of service beyond 12 months. The formula for securing release from active duty is simple. The soldier merely states in writing to his company commander that he desires a release and sets forth the reason. It may be a case where the father died, leaving a soldier as the sole support of the family. It may be that the soldier has a family of his own. This request is forwarded to the commander of the division. If the case is meritorious, the division commander orders the soldier's release. One so released is then transferred to the Enlisted Reserve Corps. He remains a member of the Reserve until he reaches age 45 or until he has served 10 years or until he is discharged therefrom.

People of the United States Must Protect Themselves Against Doctrines Which Undermine Our Institutions

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EXCERPTS FROM ADDRESS OF JAMES W. WEIR

Mr. RANDOLPH. Mr. Speaker, recently at the State convention of the West Virginia Department of the American Legion there was an address delivered which I believe should be read by as many persons as possible who are concerned these days with the strange doctrines which are being taught in America and which threaten our institutions.

The speech was given by James W. Weir, prominent publisher and newspaperman. He is my fellow townsman. I quote portions of his remarks with the firm feeling that we need to renew our allegiance to the faith of our fathers. He said:

If these United States have survived the vicissitudes of the struggles of their people for independence of thought and action and the right to enjoy liberty and the pursuit of happiness; if this country has survived the wars and the struggles from within and without since it asserted and gained its independence, and if today we are a free people, it is because of five great American institutions which you of the Legion and your fathers and forefathers by distinguished service to your country in time of war and in time of peace helped to build and to cherish. These institutions are:

The church: Citadel of Christianity.

The home: The citizen's castle.

The Constitution: Charter of our freedom.

The press: Palladium of our liberties.

The school: Crucible of character in which plastic youth is molded to meet his destiny and his obligations to home and country, about which I am to speak to you today under the title of "Educating Our Youth in Americanism."

If these institutions and our Government are to be perpetuated for the common welfare and for a permanent defense against strange doctrines and indoctrination of American youth which will, unless curbed, eventually undermine faith and confidence in the Republic and its founders, it is to you of the Legion we must look for inspiration, guidance, and action—to you as parents, as teachers, as citizens, and as soldiers, who have rendered such great and unselfish devotion to your country in war and in peace.

In accepting the assignment of State Commander A. C. Hall to speak to you on the subject of educating our youth in Americanism, my role cannot be much more than that of a sentry who sounds this call to arms to you: Men of the Legion, be on guard against the danger to Americanism and all that it means and implies in the form of such texts, textbooks, and reference books as tend to impair the child's faith and confidence in America and its institutions.

After all, it is the obligation of the newspaper to act as a sentry and to be constantly on guard against anything which tends to undermine public confidence in the institutions we hold dear, and against any influence which may tend to destroy "the highest values God has given man," for anything which affects or impairs the faith of American youth in this country's institutions tends to undermine the foundations of the Republic and robs youth of his visions.

* * * * *

It is my very great privilege to convey to you, upon this occasion, and for all time, a special message from your Assistant National Americanism director, Mr. Shumaker, in which he says:

"No phase of community service will return a higher dividend in citizenship than the intelligent, active, continued interest of the Legion post in its school affairs.

* * * * *

"A large number of public school and college textbooks have been submitted to the Americanism commission for analysis. A vast majority of the books surveyed teach in the American way and were written by patriotic Americans. However, an extended and critical analysis of the Harold O. Rugg social science series of junior high school textbooks recently completed shows that the Rugg books minimize American values and tend to destroy the child's faith and confidence in the American way of life. The Rugg junior high school books have been withdrawn from many schools, while a critical study of them is in progress in a large number of other communities.

"The National Education Association has adopted a stand that is in line with our longtime efforts. At its most recent Boston convention it adopted a report authorizing the creation of a commission 'to investigate alleged subversive teaching and to expose any teacher whose attitude is found to be inimical to the best interests of our country.' The commission will have other functions meeting with American Legion approval. One of these covers a movement to investigate criticisms of teachers' colleges and textbooks. We commend these authorizations on the part of the National Education Association. But they emphasize, they do not lessen, the need for every American Legion post to check the schools in its community. Only hurt for our future citizens can come because of such a neglect."

Inasmuch as it has been repeatedly charged that there are in use school textbooks and books available in school reference libraries which might create doubt in the minds of the children of the soundness of "democractic and constitutional ideals" on which our country and our American life and liberty have been reared, a few abstracts from the books of Prof. Harold Rugg will suffice to show whether that is true or not and will at least disclose the nature of the things that are being taught in the schools or else used to influence the thinking of the boys and girls in their more tender years.

"Nothing about this story of degradation is clearer than that in any of these decades a fairly decent standard of living could have been had by the people of the expanding West. That it was not and is not today can be traced primarily to the theory and practice of government set up by our fathers." That is a part of Professor Rugg's philosophy.

In another place in the same volume, page 270, the substitution of many foreign practices is advocated in the following language:

"Second, that every form of government on earth today must be regarded frankly as an experiment, tentative, and to be changed as new social and economic conditions develop. The trend has revealed scores of experiments, a great variety of forms and methods of collective living. The danger is that the young nationals of each of the 60 countries will grow up with the conviction that the form peculiar to his country is of proved superiority, rather than that it is one of the many experiments and could very likely be greatly improved by the substitutions of many foreign practices."

After all these years of existence, after all the struggles we have gone through and at a time when other nations have been seeking to impose their so-called "culture" upon this Nation, observe that Professor Rugg says that young nationals are apt to grow up with the conviction that the form peculiar to his country is superior, such as the form in this country—and discourages that by saying that it is likely that our form of government could very likely be improved by the substitution of many foreign practices, thus creating doubt in the mind of our own youth as to whether the American form of government is such a good form after all.

Legionnaires—citizens and parents—what effect must it have on you when you hear this quotation from Rugg's The Great Technology, pages 259 and 260:

"The unthinking acquiescence of educational workers * * * it is this which compels the formal unthinking salute to the flag, and the mumbling of an oath of allegiance which means absolutely nothing to

the young people making it. It is this which, in hundreds of communities, compels teachers to sign oaths of allegiance, to swear that they will protect the written constitution of the United States." And that in the face of the fact that American teachers are loyal and patriotic.

Just what effect is the teaching of such sentiments as those I have quoted likely to have among your children and other people's children and on their respect for our country, our Constitution, our laws, and our flag, which sybolizes all that our country means to us?

What effect does it have on the young people when they read the following on page 479 of the History of American Government and Culture, in Professor Rugg's Social Science Series?

"It was a difficult task indeed that confronted Mann, Barnard, and the other leaders. They faced indifference on the part of the people generally and a great opposition from the churches. Until about 1800 young people were taught to read principally that they might be able to read the Bible, the catechism and other religious books."

It was in protest against such strange doctrines as these and against such attempt at indoctrination of the young that your State commander in the June issue of the West Virginia Legionnaire sounded a call for action and pointed the way in the following message to you all:

"Storms of protest against the Rugg textbooks have arisen in all parts of the country. In scores of communities these books have been eliminated. The voice of patriotic Americans is at last heard.

"As a result some passages have been revised in the Rugg courses. Even titles have been changed. Indeed some laudatory comments on our country and its Founders have been inserted in the books. All of which is a bit encouraging, as it proves the case against the Rugg books. If the charges are not true, why the change?"

* * * * *

Protests such as your State commander has made are by no means confined to West Virginia but are Nation-wide in their scope since the Rugg Social Science Series are in use in approximately 5,000 school systems of the country, including some of the country school systems of West Virginia, either as textbooks for children between 11 and 15 years of age or as reference books.

* * * *

There are what is known as the Rugg and Kreuger books (not in the social-science series) which have been adopted by the State board for supplemental reading. A committee, it is only fair to say, of Kanawha County teachers, headed by Mr. M. R. Dodd, post Americanism officer of John Brawley Post, went over these particular books, and it is understood that nothing in them as such was found to be what is commonly designated as of a subversive nature. But as to the nature of other books or literature in use in the public schools generally throughout the State, there has been no general investigation and no definite information is so far available, so far as known, though it is known that the Rugg Social Science Series are in use in some and perhaps many of the counties of West Virginia at least.

* * * * *

There must be some authority somewhere to eliminate from the public schools textbooks, reference books, and literature which foster disrespect for the constitutions and the institutions we revere but if there be no other remedy, then certainly an aroused public opinion should lead to legislation as a means of guarding in the future against promiscuous admission of textbooks which contain subversive matter or subtle propaganda that the existing social and economic order in this country has failed and that we must follow the pattern of other nations merely for the sake of a change.

* * * * *

Deep beneath the surface, as we have in this country by this time found, is the war of clashing philosophies of life and of government, to shape and bend the life of youth as it has been bended and shaped in Germany, and the effort to inoculate our children with the virus of doctrines, which, measured by standards old or new, are not American, as you and I know it, and are utterly repugnant to every conception of Americanism, as exemplified by you.

Of special importance to the American people—youth and adult alike, here and throughout the land, now and for all times as a permanent defense—is the Nation-wide movement of the American Legion and the press to enlighten the public as to the insidious things which may creep in unaware in the textbooks or otherwise.

What is going on and what has been going on only goes to show the imperative need for sentry service such as the Americanism commission of the Legion and the press are performing, if we are to avert death, destruction, and despair such as has followed in the wake of 20 years of molding the youth of totalitarian countries.

But to check the undermining process in our schools and elsewhere and to revitalize the spirit of patriotism there must be a rebirth of interest in what the children of America are being taught—an insistence on the part of every parent on knowing what his child or her child is being taught—for, as your assistant nationalism director said in his magazine article—

"A great responsibility rests on the American parent in safeguarding that character of freedom which, since the days of Washington and Jefferson, has been perpetuated through an effective program of education. Each parent is charged with the sacred obligation of actively supporting and defending the first line of defense in America—our great public-school system."

In our great public-school system—and it is one of America's greatest institutions—our children are being educated and there is ingrained in the hearts of these young people great love of their own country, from which springs a spirit of patriotism not to be blighted unless at an early age their faith and their confidence in this country and all that it means and may mean to them as individuals is shaken and shattered by such sentiments as these:

"Question. Is the United States today a land of opportunity for all our people? Why? (Rugg's Pupil's Workbook, Our Country and Our People, p. 76.)

"Answer. The United States is not a land of opportunity for all our people; for one-fifth of the people do not earn any money at all. There are great differences in the standards of living of the different classes of people. The majority do not have any real security." (Teacher's Guide and Key, 1938 ed., p. 38, id.)

"Ours is a widespread culture of hypocrisy. A vast hiatus exists between what we are and what we do; what we want and what we say; how we vote and what we believe; what we fear and what we protest. In politics this lack of integrity shows itself in the divergence between party affiliations and inner belief. In business it rationalizes itself in the 'service' and 'community' slogans of chambers of commerce, rotary clubs, and the like. Legal relations are established through patriotism exchange of favor rather than on the merits of impartial judicial decision. The disintegrated character of our culture reveals itself in the conduct of the press and pulpit, in the gap between the program of the national school system and American life." (Rugg's Culture and Education in America, Self and Society: New Objects of Allegiance, p. 240.)

* * * * *

To keep alive the soul of American youth there must be more teaching of patriotism instead of skepticism and greater emphasis laid on the personal duty of the youth of the land to observe the laws, to maintain our constitutional form of government, and, so far as possible preserve our individual liberties.

Lindbergh's Attack on the Jews Unfair

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE NEW YORK JOURNAL-AMERICAN

Mr. BLOOM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial from the New York Journal-American under date of Sunday, September 14, 1941, entitled "Lindbergh's Attack on the Jews Unfair":

[From the New York Journal-American of September 14, 1941]

LINDBERGH'S ATTACK ON THE JEWS UNFAIR

The raising of the racial issue by Charles A. Lindbergh in his Des Moines, Iowa, speech is the most unfortunate happening that has occurred in the United States since the present tense international situation developed.

Mr. Lindbergh said that "the three most important groups which have been pressing this country toward war are the British, the Jewish, and the Roosevelt administration."

The assertion that the Jews are pressing this country into war is unwise, unpatriotic, and un-American.

This astonishing statement, at total variance with the facts, is in nowise softened by Mr. Lindbergh's condemnation further on in his speech of the atrocities committed against the Jews by the Nazis in Germany.

Mr. Lindbergh made another great mistake in stressing "the large ownership and influence [of the Jews] in our motion pictures, our press, our radio, and our Government."

The Jews are an integral and legitimate part of our American business, social, and political life, and have been so since the days of the Revolution.

There has been no more peaceful-minded group in this country than the Jews.

There has been no group more enterprising, more law abiding, and more patriotic than the Jews of America.

From Haym Salomon, who financed the American Revolution, to Bernard Baruch and the late Supreme Court Justice Cardozo, they have been filled with the flame of our democratic ideals.

Mr. Lindbergh in his amazing statement did not adduce one single proof that any noted Jew or group of Jews has been urging this country to go to war.

Mr. Lindbergh makes a still graver charge when he says that the greatest danger to this country lies in the ownership and influence of the Jews in radio, motion pictures, and our Government.

This sounds exactly like things that Hitler said in the early days of his regime, followed by the brutal and incredible treatment of German Jewish citizens, which Mr. Lindbergh himself condemns.

Among Americans who are truly and traditionally American in ideals there are not—and must never be—religious or racial divisions.

Mr. Lindbergh in previous speeches has said he is opposed to hatred, bitterness, and mutual distrust.

But in his Des Moines speech he has done more to incite to hatred, bitterness, and mutual distrust than any other person on either side of this war-or-no-war controversy.

What he said should have no place in the mouth—or mind—of any American.

The Jews of America are loyal, patriotic, and do not want war.

Mr. Lindbergh has made a fool of himself and has alienated many of those well-meaning persons who have sincerely admired him.

Against the American Spirit

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial from the New York Herald Tribune under date of Saturday, September 13, 1941, entitled "Against the American Spirit":

[From the New York Herald Tribune of September 13, 1941]

AGAINST THE AMERICAN SPIRIT

On Tuesday night at Des Moines Mr. Charles A. Lindbergh departed from the American way. For all his circumlocutions, for all his tardy admission that the Nazis' treatment of the Jews could not be condoned, Mr. Lindbergh made an unmistakable appeal to anti-Semitism, to those dark forces of prejudice and intolerance which, dangerous at any time, can be fatal in hours of national emergency

This newspaper has consistently upheld the right of Mr. Lindbergh and those of his way of thinking to speak their minds freely and publicly. It has sustained Mr. Lindbergh against attacks upon his patriotism which it believed were unwarranted by the facts. This it has done in the conviction that the discussion of America's relation to the great world conflict was an American debate, conducted by Americans firmly resolved to maintain the American system and differing only in their concept of how that is to be accomplished. But the Des Moines speech, marking the climax of a series of innuendoes and covert allusions by isolationist leaders, opens new and ugly vistas and seeks to inject into open debate subjects which all good Americans should pray might be confined to the pages of the Voelkischer Beobachter and the addresses of one Adolf Hitler.

To be sure, Mr. Lindbergh did not counsel anti-Semitism. He warned the Jews that they may suffer from it in the event of war—and provided anti-Semites with fuel for their anti-Semitism. He asserted, after the fashion of anti-Semites everywhere, that the Jews were dangerous to the United States because of their "large ownership and influence in our motion pictures, our press, our radio, and our Government." To state that Jews exert an influence in this country out of proportion to their numbers is to state what is unproved and unprovable; to state that their influence is exerted as Jews and not as American citizens is to libel not only the Jews but the whole American system.

The type of prejudice that judges men by the color of their skin, the land of their ancestors or the creed they profess rather than by their individual acts and opinions is not an unfamiliar phenomenon in the United States. The Native American movement, the A. P. A., the Ku Klux Klan have been manifestations of it. Many stocks, many religious groups, have experienced the social ostracism, the economic discrimination, the actual violence that accompany it. But always the great current of American life and thought has in the end swept aside the exponents of intolerance and group hatred.

Mr. Lindbergh, the man who speaks in the name of "America First," presumes to oppose this mighty current. It will sweep him aside with his predecessors. But unless all Americans realize the danger of such sentiments as Mr. Lindbergh has expressed, whatever their source, and resolutely set their faces against them, great miseries may ensue. Those isolationists who have whistled up Old World racial hatreds here, in an effort to attain their professed objective of keeping America aloof from the Old World, have sinned against the American spirit. Let that spirit rebuke them.

Military Demonstration of New War Equipment for Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

LETTER FROM THE SECRETARY OF WAR

Mr. THOM. Mr. Speaker, on June 28 last I suggested to the Military Affairs Committee during the pending of the Army appropriation bill before the House of Representatives that Members of Congress be given a demonstration of new Army equipment at some place near Washington, and I reinforced this with a letter to Gen. George Marshall, Chief of Staff, on the same subject.

Members of the Congress have received letters announcing that such a military show has been arranged to take place at Fort Belvoir, Va., October 2, in the following letter over the signature of Hon. Henry Stimson, Secretary of War:

WAR DEPARTMENT,
Washington, September 13, 1941.

HON. WILLIAM R. THOM,
House of Representatives.

DEAR MR. THOM: The War Department has scheduled a special demonstration of new Army equipment and training for Members of the Congress to take place at Fort Belvoir, Va., October 2. I wish to take this opportunity to extend to you a most cordial invitation to be present on this occasion.

The First Army will present a combat problem under simulated battle conditions, and the Chief of Ordnance has arranged for the exhibition of ordnance from the Aberdeen Proving Ground, including the latest model tanks. The program will also include a visit to the engineer replacement training center during regular training periods and other special events. Lunch will be served in the field and transportation will be furnished to and from Fort Belvoir by the War Department.

Due to the nature of the demonstration, it will be necessary that a transportation schedule be followed. Cars will leave from Capitol Hill promptly at 9 a. m., October 2, and return by 5 p. m. that afternoon.

In order that necessary arrangements may be made, it will be appreciated if you will advise the office of Brig. Gen. A. D. Surles, Director, Bureau of Public Relations, War Department, by September 25, whether or not you desire to attend.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

The President, Not Lindbergh, Speaks for America

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE WATERLOO (IOWA) DAILY COURIER

Mr. GWYNNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waterloo Daily Courier, Waterloo, Iowa, of September 12, 1941:

[From the Waterloo (Iowa) Daily Courier of September 12, 1941]

THE PRESIDENT, NOT LINDBERGH, SPEAKS FOR AMERICA

President Roosevelt in Washington Thursday night declared that the United States will take firm steps to determine that Hitler shall not succeed in his plan to conquer the world.

Charles Lindbergh in Des Moines on the same night urged that Britain be forced to accept what he called a negotiated peace so that Hitler would be one step closer to world domination.

Both declared that they spoke for the overwhelming majority of the American people. In a dramatic way, the people are confronted with the opportunity to compare these speeches, study their own thoughts, and make their choice.

There is no doubt what their decision will be. Lindbergh spoke hysterically of this country as if we lived on a distant planet, as if we could lazily decide to send a rocket ship to Europe or forget that Europe existed. The President, in a mood of calm decision, showed by conclusive example how Hitler's ambitions are at this very moment conflicting with our desire for security and how a German victory will result in domination of the seas and eventually all lands bordering on the seas.

Lindbergh, conjuring up the absurd fantasy of a gigantic plot by the British, the Jews, and the administration to draw us into war,

refused to admit the simple fact that every act the administration has taken on foreign policy has been supported overwhelmingly by the American people.

He spoke of aid to England which keeps the aggressor battling on a distant continent as if it did not serve to defend America. He spoke of this policy as if it were adopted over the protests of the people, whereas as a matter of simple record it was adopted by the people's representatives in Congress and with the approval of the people themselves according to every poll taken then or later.

The President said that when our security depends upon maintaining freedom of the seas and free communication between the mainland and our bases, we will not hesitate to maintain that freedom by force if necessary. There is a cold and irrefutable logic to this argument, as we have said before. Just because there is danger in standing fast in the best strategic position, it were foolish to retire to a position which is strategically vulnerable. This, Lindbergh would have us do.

The flyer serves ideally the purposes of the Nazis. Not only would he have us sit meekly by until Germany is in the most favorable position to attack us, but he also sourly attempts to create bitter internal feuds by his cruel attack on the Jews.

He insults the intelligence of the American people by asserting that they could be drawn into war by British propaganda. He attempts to weaken faith in this administration not only by asserting that it is wrong, which is his privilege, but also by screaming that the President is dominated by the British, which is a malignant falsehood.

He makes the ridiculous charge that newspapers and magazines dare not oppose the administration foreign policy because they are being blackmailed by warmongering advertisers. There isn't an advertiser who ever tried to influence the policy of this paper on that basis who wouldn't testify to the error of that charge.

Thursday night's addresses were a dramatic example of America in action. On the same evening the President outlined a new development in his foreign policy, and his leading critic severely criticized that policy. That is America. It is good.

And it is typical of American democracy that this opposition and criticism does not confuse us, does not stun us, does not immobilize us. With the din of argument sounding blatantly in their ears, the American people are rallying behind the President. He and not Lindbergh speaks for them. He and not Lindbergh is right.

H. R. 10

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. DISNEY. Mr. Speaker, upon the calendar of the House is H. R. 10, favorably reported by the unanimous report of the Committee on Indian Affairs of the House, giving jurisdiction to the Court of Claims to reinstate the cases heretofore dismissed by them on the ground of lack of jurisdiction in the act of April 25, 1932.

I wish to submit to the attention of the House several items which bear upon this case and which do not appear to have been set forth in the report. The items are as follows:

First. An opinion of Attorney General Knox that the Slade-Bender award, so-called, could not be construed as res judicata against the Eastern Cherokees.

Second. A statement of a series of cases in which the Congress under the present administration had authorized appeals in Indian cases to the Supreme Court of the United States.

Third. A statement by Mr. Justice Holmes, representing the Supreme Court of the United States in the case of Carver against United States, that the denial of an application for a writ of certiorari could not be construed as an expression of opinion on the merits of the case in controversy.

Resolved, That the Attorney General of the United States is hereby requested to advise the House of Representatives with all convenient speed in the case of the Eastern Cherokees against the United States whether or not the award rendered under the Cherokee agreement of December 19, 1891, ratified by act of Congress approved March 3, 1893, as set forth in House Executive Document No. 182 of the Fifty-third Congress, third session, and the findings of fact of the Court of Claims of April 28, 1902, is res adjudicata; to review the opinion of the Department of Justice of December 2, 1895, and advise the House of Representatives whether the reasons set forth in that opinion now constitute a valid defense to the payment of said award. (Resolution of December 16, 1902 (H. Doc. No. 309, 57th Cong., 2d sess.).)

Under this resolution, the Attorney General, on January 22, 1903, reporting to the House of Representatives, said:

Neither the agreement nor the provision appropriating money to meet the expense of the accounting authorized an accounting with the Eastern Cherokees or between parties other than the United States and the Cherokee Nation; and if the accounting as had extended to matters outside of the authorization, it is surely in that respect not obligatory upon the United States. Nor is there anything in the findings of the Court of Claims which changes or enlarges the effect of this accounting or makes it res adjudicata between the United States and the Eastern Cherokees. (See p. 2, H. Doc. No. 309, 57th Cong., 2d sess.—Opinion of Attorney General P. C. Knox.)

The right of appeal to the Supreme Court has been granted by the Congress and approved by the President on many occasions, since the adoption of the Judicial Code in 1925, where the constitutional rights of Indian tribes and substantial amounts were involved, for example, under the Roosevelt administration:

Public Resolution No. 49, Seventy-fourth Congress, approved August 15, 1935:

"* * * shall be reviewed on the whole record by the Supreme Court of the United States on appeal from the Court of Claims, anything in the Judicial Code or amendments thereto notwithstanding: * * *." (The Crow Indians of Montana.)

Public Resolution No. 121, Seventy-fourth Congress, approved June 22, 1936:

"* * * shall be reviewed by the Supreme Court of the United States on appeal from the Court of Claims, anything in the Judicial Code, or amendments thereto, notwithstanding: * * *." (Chippewa Indians of Minnesota.)

Public, No. 152, Seventy-fourth Congress, approved June 19, 1935:

"* * * that from the decision of the Court of Claims in any suit or suits prosecuted under the authority of this act an appeal may be taken by either party, as in other cases, to the Supreme Court of the United States." (Various tribes in Alaska.)

Public, No. 410, Seventy-fourth Congress, approved August 30, 1935:

"* * * with the right of appeal to the Supreme Court of the United States by either party, anything in the Judicial Code of the United States or amendments thereto to the contrary notwithstanding, * * *." (Chippewa Indians of Wisconsin.)

Public, No. 413, Seventy-fourth Congress, approved September 3, 1935:

"SEC. 5. Either party shall have the absolute right of appeal (not by writ of certiorari) from any final judgment entered by the Court of Claims to the Supreme Court of the United States, and the Supreme Court of the United States is hereby invested with jurisdiction of such appeals." (Menominee Indians of Wisconsin.)

Public, No. 592, Seventy-fourth Congress, approved May 15, 1936:

"* * * with the right of appeal rather than by certiorari, to the Supreme Court of the United States by either party: * * *." (Klamath and Modoc Tribes and a band of Snake Indians, Oregon and Washington.)

Public, No. 755, Seventy-fifth Congress, approved June 28, 1938:

"* * * with the right of appeal by either party to the Supreme Court of the United States, anything in the Judicial Code of the United States to the contrary notwithstanding * * *." (The Red Lake Band of Chippewas in Minnesota.)

MEMORANDUM WITH REGARD TO THE EFFECT OF A DENIAL OF A PETITION FOR WRIT OF CERTIORARI BY SUPREME COURT

In *United States* v. *Carver* (260 U. S. 482, 490), Mr. Justice Holmes for the Court said:

"The denial of a writ of certiorari imports no expression of opinion upon the merits of the case, as the bar has been told many times. Therefore it is unnecessary to consider whether the libelants' argument is supported by the decisions to which they refer. *The Yankee sub nom. Rivers & Harbors Improvement Company* v. *Latta* (243 U. S. 649); *The Oceana, sub nom. Morse Dry Dock & Repair Co.* v. *Conron Brothers Co.* (245 U. S. 656)."

Shall Agricultural Prices Be Administered

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

RESOLUTION OF NATIONAL COOPERATIVE MILK PRODUCERS FEDERATION

Mr. CRAWFORD. Mr. Speaker, the introduction of H. R. 5479 to further the national defense and security by checking speculative and excessive price rises, price dislocations, and inflationary tendencies, and for other purposes together with the hearings thereon and the testimony submitted by Mr. Leon Henderson has created great interest over the country. Farmers in particular, who have been forced to carry such a heavy debt burden and to sell their labor in the form of the goods which they have placed on the market in recent years below cost of production, are greatly concerned about

some of the statements made by Mr. Henderson. Illustrative of the concern of farmers and farm leaders about this approach and other activities of Government agencies we find in a resolution passed by representatives of the National Cooperative Milk Producers Federation at Chicago at a meeting held August 18–19, 1941. This resolution has been endorsed by certain members of the Farm Bureau Federation and I submit the same for the RECORD:

RESOLUTIONS ON FARM PRICES ADOPTED BY NATIONAL EMERGENCY FARM MEETING—FIVE HUNDRED FARM LEADERS REVIEW POSITION OF AGRICULTURE IN DEFENSE PROGRAM AND MAKE SUGGESTIONS ON WHAT SHOULD BE GOVERNMENT'S POLICY

In the present crisis, precipitated by the national-defense program, farmers of America find themselves facing an uncertain future.

Reopening of world hostilities has had its first effect upon agriculture in America by producing a shortage of available experienced labor. Drawn first into industrial plants and then into the Army, not only are the farm people short-handed but practically all of the farmer-owned and farmer-operated cooperative business enterprises are also feeling the labor pinch. They are unable to compete with defense industries in wage rates, unable in many communities even to compete with public employment agencies such as the W. P. A. and P. W. A.

American farmers in this crisis see others in villages, towns, and cities experiencing the influence of increasingly bountiful incomes, wrought in many instances by force and violence, but always accompanied by rising wage scales and a shorter working week.

Fearful of a future embodying this disparity of opportunity, this inequality of economic position, they are made more distrustful by their knowledge of great changes impending in the administration of government as the national-defense program advances. Some of these changes in Federal policy have come about under existing laws; others, fraught with more dire consequence to agriculture, are in prospect.

For that reason, this, the second national emergency conference of farm leaders to be called this year by the National Cooperative Milk Producers Federation now proposes additional policies to be adopted and acted upon severally or collectively through the respective farm organizations and to be recommended as additional suggestion in regard to what should be the Government's policy:

FARM PRICES

We oppose any Federal policy by the Executive or by congressional enactment which may place maximum prices upon commodities, particularly those of agriculture, until such time as agriculture is on an equal footing with industry and labor. Even under such conditions we oppose rigid price fixing, but suggest a policy of flexible price stabilization rather than price pegging.

Under no conditions should agricultural price parity interpretations be made or be authorized to be made in any so-called price-ceiling legislation unless a relatively perfect balance is established and maintained between the prices of agricultural products and the rates of industrial wages.

Recently Senator GLASS, of Virginia, and Representative STEAGALL, of Alabama, introduced companion bills (S. 1810 and H. R. 5479) whose object is to freeze the prices of all commodities and the rates of rent in many localities. This bill, while offered as a defense measure, specifically states that it is not necessarily a defense measure. Its language clearly implies that its authors intended it to be permanent in character unless terminated by an Executive order of the President or a concurrent resolution of the Congress. Moreover, in the process of freezing, the bill authorizes the Executive to make his choice in the case of agricultural commodities between the prices in effect on July 29, 1941, or a figure to be computed by officials in the Department of Agriculture and to be known as 110 percent of parity.

Trouble for farmers

No new concept of parity is advanced in the bill. No limitation of authority or a legislative "yardstick" is provided the Secretary except that in existing law. And the full flow of imagination is to be permitted the Department's economists in defining interpretations of this interesting, if misleading, method of determining farmer income.

We are firmly convinced that, when under parity rule, a farmer in this day is tied down to the purchase of an equivalent amount of products to that which the commodities he raised could buy in the pre-war period, he is shackled definitely to a lower standard of living than that which other groups are permitted now to enjoy.

We are further convinced that nothing but disaster can come from pinning down the commodity price rates and specifically exempting any control over the rates of wages.

Such a bill carrying with it dictatorial powers cannot but result in further dislocations, further distress, and speed the way to total break-down of our national life.

A flexible formula for agriculture

We consider the present methods used by Government officials to determine parity antiquated and unfitted to meet the present needs of farmers. We resent the very conception that what an American farmer had 10 years before the World War is good enough for him in 1941. We insist that if any program of fixing ceiling prices be adopted over our protest and opposition, it should specifically include in the legislation a formula directly relating agricultural prices to industrial wages. Under such a formula, if wage rates rise or fall agricultural prices will follow along, thus preserving more nearly an equitable relationship between the incomes of the respective producing groups.

DOUGHTON TARIFF BILL

We oppose the enactment by the Congress of the Doughton tariff-control bill (H. R. 5032). This bill would permit various governmental agencies to determine for themselves what commodities are essential to the national defense and authorize the Secretary of the Treasury, upon the request of such agencies, to suspend the collection of all import duties on such commodities and further to remove any import restriction of a sanitary protective character or otherwise. Under its terms this bill would remain permanent on our statutes.

It is a far-reaching, almost unheard-of grant of power wresting from Congress functions specifically designated to it by the Constitution of the United States.

While not giving to the governmental agencies the power to collect revenue, it gives them a veto power over the will of the Congress and opens the way to misuse and abuse which is bound to be detrimental to the interests of the farmers. It will particularly injure that great group of producers depending almost entirely on the domestic market who face competition from the low-wage, cheap-land areas of South America, China, Africa, and other far parts of the world.

ARGENTINA

We oppose the ratification by the United States Senate of the sanitary convention with Argentina. It is intended to break down the severity of the present quarantine established to protect this country from the ravages of rinderpest and foot-and-mouth disease. We oppose what we believe to be the intention of the Federal Government to conclude in the forthcoming trade agreement with Argentina, or otherwise, an arrangement whereby fresh, frozen, and chilled mutton and lamb from Tierra del Fuego may be imported into this country as such action would constitute only another device to weaken sanitary protection against the spread of rinderpest and foot-and-mouth disease from this vast territory under the joint control of the Argentine Government and Chile.

ANDRESEN BILL

We endorse the principles of and urge the passage by the Congress of H. R. 5531, a bill recently introduced by Representative AUGUST H. ANDRESEN, of Minnesota, for the purpose of establishing a permanent system of sanitary inspection and control over importations of animals and their products from foreign countries when there is danger of spreading (in this country) diseases communicable to animals and to humans.

This bill is of the greatest importance to the producers of livestock, including beef cattle, hogs, sheep, goats, and dairy cattle. It is of infinite importance to the consuming public. If passed, it will protect the already high standards in force with respect to our domestic production and interstate commerce in livestock, animal products, milk, and its products. It will take away the power of foreign countries to control the progress of our sanitary programs. This power they now enjoy by virtue of provisos inserted into more than a score of trade agreements executed under the Trade Agreement Act of 1934. We urge widespread nonpartisan support of this bill in both town and country.

SYNTHETIC FOODS

We oppose the practice of permitting Federal Government officials to lend their aid to the producers of synthetic foods as compared with natural foods by attempting to influence consumption trends.

We believe that the function of government with respect to such matters is to protect the public health, to require proper and adequate labeling, to prevent fraud wherever possible, to ascertain and publish the results of scientific research, but not to take sides.

Recently the Consumer's Counsel of the Department of Agriculture, aided and abetted by others in the Federal Government, has conducted a campaign in behalf of the consumption of oleomargarine in preference to butter.

They have even gone so far as to take time on national radio networks. In this way they have incensed the dairy farmers of the Nation and aroused them to protest.

For millions of farm families their major income rests upon the foundation of butterfat prices and sales. For more than half a century makers of oleomargarine have attempted to foist their products upon the public by devious ways of imitation. In earlier days these practices were so nearly fraudulent that the Congress of the United States enacted legislation designed to regulate the making and control of this product and imposed a tax which was then considered prohibitive upon the making and sale of colored oleomargarine. This act in later years has been strengthened, but the problem of control over this industry has not yet been solved.

Cleverly they have evaded, or avoided, in many instances the intent of control laws.

Sell oleo as oleo

We believe firmly that if oleomargarine is to be made and sold in the United States, that it should be required to be sold for exactly what it is, and in no wise be produced and marketed in imitation of or semblance of butter. We urge the Congress of the United States to pass legislation which, among other things, will prohibit the transportation in interstate or foreign commerce of any oleomargarine containing any ingredient causing it to taste or look like butter, or containing any milk or milk product.

We further believe that truthful advertising legislation on our Federal statutes should be strengthened to prohibit oleomargarine manufacturers from using butter color

in their advertisements and prohibiting publishers from receiving or printing such types of advertising, printing books or pamphlets containing such types of illustrations and intended to be transported in interstate or foreign commerce.

In this connection we call attention to what we believe to be grave misuses of power by the Food and Drug Administration now lodged in the Federal Security Agency with respect to promulgation of unwise and unworkable standards of identity for natural foods. We therefore urge the Congress immediately to inaugurate an investigation of the activities of this agency with a view completely to overhauling the powers of the agency and the possibility of Congress itself establishing definitions of standards of identity.

MILK SHORTAGES

We are deeply alarmed over serious disturbances which are occurring within the dairy industry as a result of the effort to supply the Allies with great quantities of dry milk solids, evaporated milk, and cheese. The program in its present uncoordinated stages is causing shortages of cream supply in some dairy plants, particularly in local creameries owned by farmers, and is even bringing up serious problems of milk scarcity in urban milksheds. This problem of interindustry diversion is one which demands prompt and intelligent action by the Federal Government to avert serious losses and even the closing down of many dairy plants.

CONSUMERS' COUNSEL

We are increasingly disturbed by the activities of persons in government who are unfriendly to agricultural interests, and we urge the President to institute immediately a method by which their activities may be revealed and to remove them from all parts of the Federal establishment. We particularly urge the removal from the United States Department of Agriculture of the Consumers' Counsel.

AGRICULTURE

We reiterate the statement of the condition and outlines of a proposed Federal policy to meet this emergency which was presented to the public on May 2, following the first emergency conference on the condition of agriculture called by the National Cooperative Milk Producers Federation. We particularly reiterate the following resolutions which were adopted at that meeting:

(a) We ask that agriculture be given equal representation with industry and labor, satisfactory to agriculture, on all Federal agencies having to do with the national defense.

(b) We urge a Federal policy to restore economic equality as between agriculture, industry, and labor.

(c) Since industry has received a cost-plus guaranty in its production for national defense and the farm groups now being called upon to increase production have received no such guaranty, we insist that such farmers should immediately have prices which will compensate both for current production and increased capital outlay.

(d) We ask for a discontinuance of Federal governmental propaganda designed to mislead the public into believing that farm prices are satisfactory and remunerative to producers.

PUBLIC INFORMATION

The subject matter on which this conference is acting is of such vital concern to every farm family in this Nation that we urge those attending this conference, and farm leaders everywhere, to lose no time acquainting the people in their respective communities with the issues involved, the results of our deliberations, and to institute demands for action by their congressional delegations in harmony with the views of this conference. We urge them to spare no worthy effort in carrying out this task of spreading information.

Employment Situation Due to Curtailment of Production—Automotive Industry

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

RESOLUTION OF PONTIAC (MICH.) LOCAL UNION NO. 653 OF THE UNITED AUTOMOBILE WORKERS OF AMERICA

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Pontiac Michigan Local Union No. 653 of the United Automobile Workers of America of the C. I. O., having to do with the sharp curtailment in production in the automobile industry, which will bring about much unemployment and untold suffering to the workers and their families and dependents unless something is done to offset the same.

The resolution follows:

RESOLUTION RE EMPLOYMENT SITUATION DUE TO CURTAILMENT OF PRODUCTION

Whereas a sharp curtailment in production in auto industry has been ordered by the Federal Government, and this reduction in production is not the result of reduced consumption; and

Whereas this curtailment will cause thousands of workers to be without a job, and this loss of job cannot be construed as the fault of the workers; and

Whereas these workers have in the past either not been working long enough or making enough wages to lay away for a rainy day or have purchased homes, furniture, cars, and other necessities of life on the time-payment plan; and

Whereas any break in employment will cause these people to lose said homes, furniture, cars; and

Whereas it is necessary that the morale of the workers and the people in general of the United States be kept at a high peak in order to insure the greatest effort for national defense; and

Whereas workers losing their equity in their homes, furniture, or cars does contribute toward the breaking down of their morale; and

Whereas these workers should not be made the objects of charity; and

Whereas the Federal Government has been spending billions of dollars in aid to Britain, Russia, and China in order to preserve democracy; and

Whereas provision must be made to employ these workers in other plants, and it will require time for the retooling of these plants, and during that period these workers will have no visible means of support: Therefore be it

Resolved, That Local Union No. 653, I. U. U. A. W. A., C. I. O., go on record as demanding that the Federal Government make some provision to protect the interests of these workers, either by paying them enough wages to take care of their obligations or by declaring a moratorium on their obligations without interest or penalty during said period of unemployment; and be it further

Resolved, That copies of this resolution be sent to the International Union, the National C. I. O., Leon Henderson, Sidney Hillman, William S. Knudsen, the President of the United States, to Michigan Senators, Congressmen, and Representatives and to the press.

JAMES F. LUCAS,
President.
EUGENE G. HILL,
Recording Secretary,
Local 653, U. A. W., C. I. O.

Curb of Installment Buying

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, September 15, 1941

ADDRESSES ON AMERICAN FORUM OF THE AIR

Mr. CAPPER. Mr. President, on Thursday last I asked unanimous consent to have printed in the Appendix of the RECORD certain addresses delivered on the American Forum of the Air at the Hotel Willard, on August 31 on the subject How Far Should We Curb Installment Buying? I am now informed that it is estimated that to print the matter will cost $180. With that statement, I renew the request.

Mr. Theodore Granik presided and introduced the speakers who were: Chester C. Davis, president, Federal Reserve Bank of St. Louis; E. A. Mattison, vice president of the Bank of America and a nationally known credit authority; Boris Shishkin, economist, American Federation of Labor; J. Hudson Huffard, chairman of the board of directors of the National Retail Furniture Association and spokesman for the United States Chamber of Commerce; Mrs. Esther Cole Franklin, representative of American Association of University Women on the National Consumer-Retailer Council; and Rolf Nugent, consultant to the Office of Price Administration.

I also ask that Mr. Granik's remarks when introducing these speakers be printed as a part of this radio program.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

As America's vast defense program gains momentum, as first one then another phase of our economic system is affected, the real significance of arming a nation on an all-out scale becomes more apparent to the average citizen. And tomorrow we will awaken to find new signs along our economic highway—important signs, which bring our defense efforts to the direct attention of every wage earner in the country.

The signs tell of new rules in the field of installment buying.

Under date of August 9, President Roosevelt issued an Executive order empowering the Board of Governors of the Federal Reserve System to regulate consumer credit, in order to promote national defense and to protect national economy.

The regulation adopted by the Board will take effect tomorrow. It prescribes installment credit terms for a list of 24 consumers' durable goods. It contains provisions covering modernization loans, installment cash lending, and related activities.

What does this credit regulation mean to you? How far should we curb installment buying? And in curbing it, will we prevent inflation? Will we increase unemployment? Will this curb impair our standard of living? More importantly, will it help our defense program?

Americans are asking those and similar questions. And tonight the American Forum of the Air, as a further contribution to national defense, has invited six noted authorities to discuss the questions.

Our guests, representing Government, business, labor, banking, and consumer interests, are: Chester C. Davis, president, Federal Reserve Bank of St. Louis; E. A. Mattison, vice president of the Bank of America and nationally known credit authority; Boris Shishkin, economist, American Federation of Labor; J. Hudson Huffard, chairman of the board of directors of the National Retail Furniture Association, and spokesman tonight for the United States Chamber of Commerce; Mrs. Esther Cole Franklin, representative of the American Association of University Women on the National Consumer-Retailer Council; and Rolf Nugent, consultant to the Office of Price Administration and Civilian Supply.

We invite your letters and comments on tonight's presentation. And now our opening speaker, Chester C. Davis.

ADDRESS BY CHESTER C. DAVIS

I hope Mr. Granik intends us to take plenty of latitude under the announced topic. I am willing to talk about how far installment buying should be curbed, but some of the listeners are probably asking why it has to be curbed at all.

External developments have forced the United States to arm on an unprecedented scale. To that end the Government is spending money for materials and men at the swiftest possible rate. Wages are going up. The number of unemployed is falling. National income and consumers' purchasing power are rapidly rising. But the supply of many things is diminishing as men and factories and materials are diverted to make implements for war. Now if this rising income is spent for a diminishing supply of goods, and on top of that we continue to expand consumer credit, this country faces ruinous price inflation.

If that develops, it is the great mass of working men and women who will be hardest hit. We can agree, I think, that the Government isn't going to abate its defense efforts just because of this prospect of inflation. But every future move in the fields of taxation, Treasury financing, direct price controls or credit policy should seek, as one objective, to prevent a runaway price situation. Certainly a balanced program to check inflation must make use of all of them. We are concerned tonight with credit policy. The volume of long-term installment debt is ballooning right on top of swiftly rising incomes. The new regulation of installment credit is a part, and relatively not the most important part, of a broader program aimed to prevent these forces from driving prices out of reach. A further specific purpose is to slow down demand for articles which compete directly with defense for materials, labor, and factory capacity.

Some people fear that regulation of installment terms may take away the poor man's chance to buy the good things of life. It is not installment terms but defense needs that will determine how many automobiles, refrigerators, and other specified articles are actually going to be produced for civilian use. Fewer people, whether rich or poor, will be able to get new cars, for example, regardless of whether installment terms are regulated or not. What the low-income worker really needs to fear—and what installment regulation may help to protect him from—is skyrocketing prices which dip into his pocketbook and cut his real wages.

In order not to pass over tonight's direct question, I suggest that installment terms should be strict enough to bring about during the next year a substantial reduction in the present volume of installment credit extended on articles that compete largely for defense materials. As for credit on articles not so directly competitive, the restraints should be sufficient to prevent a bulge in the volume now outstanding. I would start that way and watch it.

Finally, when the time comes that these civilian goods can be produced again in quantity, the brakes now being placed on consumer credit can be loosened or taken off. This will help to make more jobs and to keep the business machine running in the post-defense period.

Chairman GRANIK. Thank you, Mr. Davis. And now I am happy to present E. A. Mattison, vice president of the Bank of America.

ADDRESS BY E. A. MATTISON

The question which Mr. Granik offers for discussion tonight, "How far should we curb installment buying?" should command the most serious attention of every wage earner in the United States. In the past 6 years our bank alone, the Bank of America, with its 495 branches, has granted over 2,300,000 individual installment loans for a grand total of more than $700,000,000, an average of less than $300 per loan. Multiply those figures by several hundred and you will have some idea of the far-reaching effect of the new Government regulations on installment buying. And it is my hope tonight that our discussion will serve to dispel some confusion surrounding the purpose of this curb. Is it to aid defense production or to control inflation?

If to control inflation, why was one of the smallest segments of installment debt in dollar volume regulated the most drastically?

I doubt if the curb is any aid to defense production, because priorities take care of that.

Further, cash lending has been left uncurbed, and a person with qualifying income and credit rating can get a loan from a loan company or modern bank, without security, for the full purchase price of an article and avoid a down payment or installment contract which uses the article as security.

But my chief concern is the new terms on household appliances, requiring 20 percent down and installments limited to 18 months. This shuts out many credit-worthy persons who have just found steady employment but have had no time to accumulate substantial down payments. Household appliance buyers are not in the minority. It may surprise you to learn that their number is greater than those buying automobiles.

We hear of ceilings on wages as well as on other things, yet these small wage earners are expected to buy defense bonds and meet tax bills they have never paid before. We should be fair and shape our regulations to conserve their remaining buying power. Installment credit has long been the basis of wage-earner buying power and will long remain so. Upon it America's mass-production industry, so useful today, has been built.

These regulations merely shift buying power away from the masses to higher-income groups. Even a dollar or two added to each installment makes a big difference to people of small income, and means to the $1,500-a-year man the denial of articles still available to the $2,500-a-year man.

Bankers feel the Federal Reserve is to be congratulated on the reasonableness of most of the initial regulations. Reaction of dealers, too, on the whole has been good. Provision for local administration, permitting adjustment to local problems, is to be commended.

But, getting back to the question of "How far should we curb installment buying?" I say we have gone far enough, perhaps too far in certain fields. No additional curb should be imposed until consideration has been given to the present effect of denying credit to a group of already limited buying power and leaving it open to others.

With regard to the regulations which go into effect tomorrow, whether they prove good or bad, the Bank of America is pledged to continue its wholehearted cooperation with the Nation's vast defense program and our facilities will be utilized to the fullest extent in making the regulations effective. It is my sincere hope that the general public will accept the regulations issued by the Federal Reserve Board in the same spirit.

Chairman GRANIK. Thank you, Mr. Mattison. And now we present Boris Shishkin, economist, American Federation of Labor.

ADDRESS BY BORIS SHISHKIN

The real measure of worker's income is the buying power of his pay envelope. A rise in the price of any commodity needed in a wage-earner's household takes that commodity out of the reach of the worker's family. Rising prices reduce the standard of living of workers. That is why inflation is labor's deadly enemy. That is why labor is giving its support to measures designed to prevent inflation.

The major cause of inflation is shortage of materials. If we could expand production to meet the increased demand for goods, prices would remain stable. But defense comes first. There are fewer automobiles and radios with more people to buy them. Prices go up unless they are checked.

To prevent inflation it is not enough to put ceilings on prices by Government order. When the supply of goods runs short, pressure is created to circumvent the fixed prices. Immediate use of consumer's buying power must therefore be deferred or diverted. Increased savings through the purchase of defense bonds is a means of deferring consumer's buying power. Increased taxation is a means of diverting it. There are other devices we can use to discourage price increases and to dampen buying power. Some of them are sound and constructive. Others are destructive and therefore objectionable.

One such device is the recent order curtailing installment sales. This order is not drastic. Its purpose was not so much to curb installment buying as to get the public used to the idea. In issuing it the Government was acting like a dentist who tries to convince the patient that when the tooth is pulled it isn't going to hurt.

Is further curtailment of installment buying going to hurt, and how badly? The answer is that it is not going to hurt those who can afford to pay in cash the full price of the automobile, the washing machine, or the radio. Most of us, workers and farmers, do not have the full price of a car or a washing machine. Most of us do not even have enough to buy these things on a hard payment plan of only three or six payments.

This means that the few of us who do have ready cash will be able to buy new automobiles and new furniture, while most of us whose incomes are small and who are compelled to pay as they earn will have to do without these things.

If we knew that this plan, no matter how inequitable, would really check inflation, we might be wise in accepting it, even though it hurt. But will it work? Of this we are not so sure.

The regulations are necessarily such that they will drive much of the consumer borrowing from legitimate credit channels into

the hands of loan sharks. This makes the attempted control ineffective. And ineffective regulation may be worse than no regulation at all. For it will only serve to give an economic advantage to the man with a ready roll of cash against the man with the small pay envelope. In addition, it will place upon the low-income families the further burden of paying out to the unregulated lenders a large portion of their meager income in interest charges.

Even the initial regulation will displace a large number of workers from the jobs they now hold. A more rigid curb will create substantial unemployment. Dislocations resulting from further restriction of installment buying may do much damage to our economy and to the morale of our labor without contributing a great deal to the prevention of inflation. Before we take another step, let us stop to work out a different method of curbing inflation which would achieve economic stability and yet leave the spirit of our people undaunted.

America's war strength is as great as the output of its industry, and of its labor. It is clear today that America is going to fight out and win this war, not on the firing line but on the production line of its industry. In the last count, the defense of democracy depends on the productive strength of our workers. The welfare of our workers and their morale are of paramount importance.

Let us unite in an intelligent defense effort, not a short-sighted one. In carrying out the task let us not destroy the standard of living and the very way of life we have set out to defend.

Chairman GRANIK. Thank you, Mr. Shishkin. And now we present J. Hudson Huffard, chairman of the board of directors of the National Retail Furniture Association.

ADDRESS BY J. HUDSON HUFFARD

As a retailer of furniture and household appliances I have had direct experience with installment credit for a long time. Installment credit is not a new thing. It is a device that has long been used to enable consumers to obtain durable goods having high unit value by making regular payments over a definite period of time. Through installment credit, persons having low incomes can have the advantage of the most modern facilities, both to aid them in their work and for use by their families. Without access to installment financing plans they would necessarily have to do without many present-day conveniences.

It is axiomatic that businessmen must constantly be on the alert to adjust their policies and operations to the times. Without such adjustment no business would long endure. Those who are in the business of selling goods on the installment plan have recognized the need for adjusting their policies as economic conditions change.

In a recent report of a committee of the Chamber of Commerce of the United States, it was aptly stated that "businessmen who regularly grant credit to consumers are aware of the adverse consequences which follow upon unsound credit practices. Whatever form consumer credit may take—open account or installment—those who grant it are most directly concerned that consumers be in a position to meet their obligations promptly."

Long before the recent action of the Governors of the Federal Reserve System to regulate terms of installment contracts, retailers had taken steps to increase down payments and shorten the periods of contracts where it seemed that too liberal terms were being offered. So far as I have had opportunity to discuss the matter with others, there is every intention to keep installment credit within reasonable bounds.

Retailers have already experienced difficulty in procuring such items as refrigerators, ranges, radios, washing machines, and other durable goods. We all recognize that requirements for defense come first, and that in meeting defense requirements, especially for metals, there will be curtailment in the supply of many kinds of consumer goods. Of course, when the retailer has a limited number of articles to sell he will naturally restrict his terms of sale because there would be no logic in extending liberal credit terms to promote sales when the supply is short.

The retailers of the country will abide by the rules which the Federal Reserve Board has recently made to supplement the previous action of retailers in seeking to prevent unsound expansion of installment credit. In thus cooperating, retailers are continuing to support policies considered essential for promoting defense. Already in connection with present defense efforts, retailers have demonstrated their determination and ability to cooperate effectively with national-defense officials in preventing unjustified price increases of available merchandise. I am convinced that they can be depended upon to perform an equally effective job in keeping consumer credit on a sound basis during the emergency period, and they will expect no extension of regulatory measures which the seriousness of the emergency does not logically demand of them. We are determined to proceed with the solution of our economic problem upon a fair and patriotic basis.

Chairman GRANIK. Thank you, Mr. Huffard. And now we present Mrs. Esther Cole Franklin, representative of the American Association of University Women on the National Consumer-Retailer Council.

ADDRESS BY MRS. ESTHER COLE FRANKLIN

It is my function, I presume, to speak for consumers.

May I say at the outset that although I have been dealing with various consumer problems in the past few years, I am in no sense an expert on consumer installment credit. I have, however, some very definite convictions and a number of questions pertinent to our subject this evening. First, I am firmly convinced—after very extensive observation—that the vast majority of American consumers, in their capacity of free persons and loyal citizens, have placed a priority on defeating Hitlerism; and that they recognize the importance of pushing defense production into high gear, even if this means a decrease here and there of civilian supply. My second conviction is that a far greater majority of American consumers than ever before in our history are concerned with the problem of keeping our economy on an even keel through the crisis. It is amazing how many so-called little men and little women are these days saying, "What can we do to prevent inflation?"

We as a people, whatever our interests, are therefore agreed on the general national purposes at this critical period. We know we must cut down the consumption of certain types of consumer goods because the raw materials and production facilities are needed for defense. We know that we must, as far as possible, pay as we go to avoid a post-emergency depression.

But consumers have a right to ask whether the methods used to restrict consumer purchases are effective, whether they are fair, and whether they represent the most desirable methods of preventing inflation while shifting production to defense materials. First, will the installment buying curbs be effective? The answer is, "Nobody knows—but everybody hopes."

Secondly, are the installment curbs fair? The answer here is "Yes and no." All consumers will welcome them insofar as they discourage certain well-known high-pressure merchandising practices which intelligent consumers have long disliked. And consumers like myself, who prefer to pay cash or go without, are happy to be respectable again. Yet if these installment limitations are effective, they will discriminate against the mass of consumers in the low-economic brackets who for the first time have a regular wage and can begin to think about buying that much-needed sewing machine or refrigerator or mattress; and cash customers, fearing what may happen to the supply, may rush in and buy whatever is available whether they need it or not, pushing up prices at a rapid rate, and thereby promoting inflation. The very large group of consumers who have no choice but to buy on credit may justly view with real concern the whole policy of curbing installment credit as discriminatory, seeing in it an indirect and unscientific method of rationing.

This leads to our third and most important question, Are there not other methods to achieve our major purposes which are more effective, more equitable, and more direct in their operation? I should like to phrase my answer to this question by asking other questions of the experts on the panel: If defense production is our goal, why should we not place priorities on any and all materials needed for defense which are likely to be scarce in this emergency period, and supplement these priorities with a direct rationing of consumer purchases determined, so far as possible, by varying consumer needs? If prevention of further inflation is our goal, why should we not immediately institute an effective system of price controls? Give us a chance to participate in a balanced and effective program.

Chairman GRANIK. Thank you, Mrs. Franklin. And now we continue with our informal extemporaneous roundtable panel discussion, "How far shall we curb installment buying?" Mr. Nugent, will you open our panel tonight?

Mr. NUGENT. The participants in this discussion have generally indicated approval of the idea of curtailing installment credit. They represent Government, business, labor, and the consumer. The very fact that they find some degree of agreement on the principle of control indicates that all of these groups that they represent have somewhat of a stake in the objectives to which the control is being directed, namely, to provide defense materials, to restrict civilian demand for defense materials, and to curb inflationary tendencies.

However, I detect in the business representative's comments some suggestion that business doesn't like the restriction of such a control; in the comment of Mr. Shishkin, representing labor, that some laborers may be unemployed if the restraints are imposed too heavily; and on the part of Mrs. Franklin that consumers may be made the goat of the emergency that has led to the introduction of this control.

I would like, first of all, to put a question to the representative of business. Mr. Mattison, hasn't business a great deal to gain from the control of consumer credit? For instance, isn't it highly desirable that we build up, so far as we can now, a backlog of demand that can be turned on after this defense spending splurge is over?

Mr. MATTISON. Well, speaking for the interests of banking rather than the interests of business, as I presume you mean manufacers, I can agree with the objective, and certainly it is worth every possible effort to attain it. It has a number of very difficult problems that must be solved before I think you can safely say that we can bank a certain amount of orders for a certain and definite time when we will be able to turn them on. In my personal opinion, it is difficult to regulate the natural laws of supply and demand so completely.

Mr. NUGENT. But haven't we been through the very strange situation of producing more cars than we have ever produced before and at the same time we have also had to produce more weapons than we have ever produced before? It seems to me to be a rather silly economic situation that produces a very in-

tense demand for both types of steel-bearing and metal-bearing goods at the same time. Isn't it only sensible to try to dampen the demand for the one type of goods?

Mr. MATTISON. I agree with that heartily, but not with the method of dampening the demand, because I don't think you can regulate human desires by any installment regulations. If the steel is necessary for guns, the priorities situation, at least as I understand it, is effective, and the recently announced cut in production of automobiles would seem to bear out the statement that priorities should take care of the defense needs.

Mr. SHISHKIN. That is right, Mr. Mattison. I think you are quite correct there. We have the machinery. It may not be working right, but we are improving it, and we hope it is going to work. I think that in the slow approach to this regulation, we have to bear in mind one thing that is fundamental to this machinery. After all, one thing that we don't realize is that America's war strength is as great as the output of its industry and its labor. We are going to win this war not on the firing line—we are going to win it on the production line, and this adds an unnecessary dislocation. It is a crude instrumentality. It is not going to work out these relationships harmoniously to assure employment and to curtail inflation. It is not going to curtail inflation.

Mr. DAVIS. I would like to break in just a moment to try to set this thing in perspective, if I can. I don't know of anybody who has proposed this as a sole means or a main means of allocating supplies as between defense and civilian purposes on the one hand, or as a sole means or a main means of checking production. It is a part of the whole thing. We don't want to set up a bunch of straw men here tonight and keep fighting with them, such as the implication that this is intended to put an end to installment purchases. Nobody has intended anything of the sort or proposed it, so far as I know.

But I will submit, Mr. Chairman, that it is no use moving on the tax front, on the savings front, or on any of these other means to dampen down consumer buying at this time, leaving the credit avenue completely open to go just as far as you like. I could say a lot more, but I am taking too much time.

Mr. HUFFARD. In answer to Mr. Nugent's question, I am thinking of the defense worker who is jingling dollars in his pocket for the first time in years and is able to acquire some good, second-hand merchandise that he has always wanted and hasn't been able to acquire, that will not have much use value over the period of the emergency. If he is inhibited from procuring what he has wanted during that period, when the day of readjustment comes, the use value of the merchandise which he has wanted will be gone. With the possibility of a depreciated dollar, he will not have the money to buy at that time, and he will be foiled in his attempt right through the whole picture, in obtaining the many things which he has wanted.

Mr. SHISHKIN. Can't we do two things, one, to expand as much as possible production of the civilian goods which are not in competition? For example, the order applies to all furniture. Wood furniture is not in competition.

Mr. HUFFARD. I agree with you there, Mr. Shishkin.

Mr. SHISHKIN. But the regulation of necessity has to be crude, and it isn't going to accomplish the purpose. If we can expand as much as possible this device—it isn't a social-minded piece of legislation because it is regressive. It robs Peter and doesn't give Paul anything. In that sense its effect is going to be bad.

Mr. DAVIS. I want to get in on this regressive business. I want to say that it is not regressive in the same sense that taxation is regressive. It doesn't take anything away from the incomes of the lower-paid groups at all. I want to get this in: You must weigh the present inconvenience to the low-income purchaser of waiting and saving until he can acquire this thing against what will happen to that same wage earner who is extended, as I assume Mr. Huffard and Mr. Mattison would like to see him extended, at a time when incomes fall off.

Mr. SHISHKIN. How are you going to prevent him from going to a loan shark when you exclude him from the ordinary channels, Mr. Davis?

Mr. DAVIS. The same regulations apply to a loan man who asks that his loans be repaid on an installment basis.

Mr. SHISHKIN. I thought the loan sharks weren't regulated.

Mr. DAVIS. Oh, yes; they are regulated.

Mr. MATTISON. Except for this item of considerable confusion to me with respect to cash lending, that the terms are for 18 months, but no down payment is required as long as they don't take security of the article itself, which is the normal procedure on a conditional-sales contract. How, then, do you reconcile the fact that the regulations permit the purchase of those same items, which you are seeking to conserve for defense, on terms that are more favorable than are normally extended by the retail stores? The whole point that I tried to bring forth was that the purchasing power of the individual should be conserved; that the one with limited power should not be discriminated against by such a high down payment. Furniture is only 10 percent, stokers are 15, but these small items of great convenience to the housewife and to the health of the Nation—refrigeration—have been penalized the strongest, and I can't quite reconcile it with cash lending being available with the attractive terms of no down payment.

Mr. DAVIS. I am not going to be drawn into an argument for pokers on the one hand against crankshafts on the other on this thing. I want to say that it is strange to hear Mr. Mattison putting up such a plea on behalf of the retail seller as against the lender when he represents the lender.

Mr. MATTISON. Well, I might say, in defense of that, that I represent both, because about 50 percent of our business that I am particularly interested in derives from dealers discounting their obligations on installment credit, and the other 50 percent is direct lending to the individual.

Mr. DAVIS. Now, Mr. Mattison, I just want to say one thing, and then I am through. My former associates on the Board of Governors of the Federal Reserve System are growing with this thing, just as we all are. They have to learn from the reaction to the different features of this regulation how to work. I am sure that they are willing to amend at any time as these things go along in order to make it workable, with the cooperation of the affected industry.

Mrs. FRANKLIN. Mr. Davis, with respect to the effect of this on prices, the consumers, although they are perfectly willing to participate in a program which does guarantee some prevention of inflation, would like to have some assurance that this is going to keep down prices, or they would like to have something, certainly, to accompany it which would guarantee keeping down prices. I think that consumers feel about this very much that it is putting the cart before the horse when the cart this time happens to be a huge vehicle which should be drawn by six or seven horses.

Mr. DAVIS. I agree with you, but if every cart waits until another one starts, nobody ever makes the start. You can't get direct control legislation, of course, until Congress acts.

Mr. SHISHKIN. Of course, on this point that the regulation could be improved and modified, my only objection to that is that there is such a tremendous hole in the whole structure of the legislation that you can drive a panzer division through it, and I don't think that hole can be patched by any amendment.

Mr. DAVIS. I don't think you have shown that yet.

Mr. NUGENT. In what respect?

Mr. SHISHKIN. In that if the regulation is going to be effective, we are going to curtail automobile production, and we are probably going to have, as Leon Henderson says—multiplying my figure by 2—2,000,000 unemployed by December. Well, 2,000,000 unemployed at this time is going to be quite a big deterrent, and the reduction of wages due to that is going to be probably more of a check on inflationary influence than anything that this regulation can provide.

Mr. NUGENT. Mr. Shishkin, I don't think that 2,000,000 men will be unemployed as a result of the consumer-credit control.

Mr. SHISHKIN. No, no, no. I am not saying that. I said that because of the defense priorities, because of shortages, there are going to be that many; and lowering employment is going to curtail the increase in purchasing power that we had anticipated, as we did not anticipate that unemployment 2 months ago.

Mr. NUGENT. It might be said that we will have a smaller rise of purchasing power than otherwise might have happened, but certainly we are going to have an increase in purchasing power in consumers as a result of defense spending.

Mr. HUFFARD. I would like to ask Mr. Davis a question or two. I take it, Mr. Davis, that in the imposition of these regulations, a good sense of timing is of the very essence. Someone has said that the reason the British do not see the point of our funny stories is due to the 5 hours' difference in time between our country and theirs.

I would like to ask you, is it to be expected that these regulations will continue in force after the period of emergency has passed, on the theory held in some quarters that this type of selling should always have been regulated?

Mr. DAVIS. I can't answer that question. I mean I can't look that far ahead. I said in the concluding sentence that I hoped the time would come when all of the restrictions could be released, and when these goods are available for civilian production, purchase could be encouraged in every possible way.

Mr. HUFFARD. Let me ask you this question in the interest of retailers listening in. Will the 125,000 registered retailers who sell on the installment plan have their records regularly subjected to examination?

Mr. DAVIS. I don't think so. I don't see any reason why they should.

Mr. NUGENT. I would like to go back to a couple of questions that were thrown out and have not been satisfactorily dealt with in my opinion. First of all, as to the social consequences of the control of consumer credit, I think Mrs. Franklin will agree with me that the absence of down payments and the presence of extremely long terms of payment have given rise to a great deal of high-pressure selling which it is strongly in the consumers' interest to curtail.

Going back to Mr. Mattison's comment, I don't believe for a minute that the down-payment requirements under this regulation are so severe in themselves as to prevent people who want goods very badly from buying them.

Mr. MATTISON. Unfortunately, that doesn't happen to be the experience that we have had in dealing with this problem from a practical standpoint. We know, going back to 1934, when the Government-sponsored F. H. A.

regulations, with no down payment, were instituted, that that was the greatest sales-motivating factor that had come along. You can't lightly dismiss the down payment, particularly when you jump from practically nothing to 20 percent, and shorten it from 36 months to 18.

I would like to conclude with just a constructive suggestion for the Reserve Board to consider, if that would be in order. I would suggest that it would be better to liberalize these regulations to permit retailers to sell with smaller or no down payment, because they, like the banks making such loans, extend the credit at approximately $6 a hundred, while for the same type of accommodation the loan companies charge from $17 to $20. That type of accommodation can be extended by the retailer in the normal course of his business, as he has heretofore, if he is competitive on the down payment as against the loan companies with no down payment.

Mr. NUGENT. Mr. Mattison, even at present it is characteristic and inherent in the nature of loan companies that there is no down payment. At the present time you can go to an automobile finance company, and it will require 33⅓ percent or some other similarly large figure for down payment, and you can also go to the Bank of America and borrow without any down payment. You are describing a situation that is inherent in the present situation.

Mr. SHISHKIN. Well, I was just going to say that Mr. Nugent fails to distinguish between the two entirely separate things when he talks about a practice in the industry that is subject to long-term reform and is a matter for policement and inflation control with which we are dealing here. How are we going to curb installment buying, an institution which has developed over the past 20 years, which is just as vital to American life and just as much a part of it as mass production is, and inseparable from it?

Mr. NUGENT. I am a little bit confused by the fact that some of the discussants appear to believe that the limitation will not curtail buying power, and others fear that it will curtail it too much. I am certainly sure that the regulations that have been drafted and are going into effect tomorrow will curtail demand.

Another thing that I think is being overlooked is the fact that we must curtail demand. The fact that public spending for armaments is booming incomes and continually pouring out funds into consumers' hands requires some degree of curtailment.

Mrs. FRANKLIN. But, Mr. Nugent, will this curtailing of demand through the installment curbs offset the tremendous buying power of the cash consumers at present? You see, that is the thing we are particularly interested in in general.

Mr. NUGENT: It will in its secondary effects, because the money that is spent as a result of borrowing from the credit market becomes the incomes of other people, and to the extent that you can prevent the expansion of consumer credit, you will prevent some expansion of incomes.

Mr. HUFFARD. I would like to ask Mr. Davis why furniture was singled out for regulation among the many retail lines which don't involve defense materials.

Mr. DAVIS. I wasn't there when it was done, Mr. Huffard, and I am probably not an authority on that question. I would say that as a general thing, while there are important parts of furniture that do not use metals and do not compete particularly with defense articles, it is one of the important fields in which installment credit has developed proportionate to its interests.

Mr. SHISHKIN. There are a host of questions that may be asked about the regulations, not only about furniture, but about the modernization and repair loans and the limitation of $1,000. It seems that the man with small repairs or who wants to do any modernizing that doesn't compete with defense—it may be just lumber or paint or something of that sort, involving no metal—isn't going to be able to do it except on stringent terms, and the man doing $2,000 worth is going to do it without regulation at all.

Mr. DAVIS. I would suggest that in the time here we cannot take all the details and iron them out.

Mr. NUGENT. You have a practical difficulty, that you want to exclude from your regulation business loans, and the best way to do that seemed to be to draw an amount limitation.

Mr. HUFFARD. I wonder if I could ask Mr. Nugent a question? When Congress had the power to enact the necessary legislation, why was it found necessary to fall back upon the statutory authority which never contemplated the purpose for which it is now being invoked?

Mr. NUGENT. I think the matter of time is one of the things involved. This is an emergency. The inflationary price spiral is already under way, and we want all the forces we can bring to bear to prevent rising prices.

Mr. HUFFARD. In other words, there wasn't time to submit it to Congress.

Mrs. FRANKLIN. Consumers still want to know why, in a time of a seller's market—made so because Uncle Sam made it so—Uncle Sam must pick on the one method which seems to discriminate against the great mass of consumers first, rather than pick the methods which will protect the consumers.

Mr. SHISHKIN. Right, and I think I can say the same for labor.

Mr. DAVIS. Let me say again what I said at the beginning. You simply cannot regard this thing as one act alone. It is a part of a whole program.

Mrs. FRANKLIN. We hope so.

Mr. DAVIS. If you depend on this alone to curb inflation, it wouldn't be successful.

Mr. SHISHKIN. On your question of consultation, I would like to say only one thing—that we would have been delighted to have gone over and advise and counsel with the Federal Reserve Board, but we weren't invited.

Mr. DAVIS. Mr. Shishkin, we published the regulations in the paper; and if you didn't have enough chance after that to express yourself, there was something wrong.

Mr. SHISHKIN. There were conferences with other groups, but not with labor.

Mr. DAVIS. All the distributing groups and all the financial groups were consulted.

Mr. NUGENT. Mrs. Franklin, would you rather impose an income tax on very low income groups than restrain their installment purchases?

Mrs. FRANKLIN. That is an extremely difficult problem which would involve a great many questions.

Chairman GRANIK. Thank you, Mrs. Franklin and gentlemen.

Wolf Creek Dam

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ADDRESS OF MAJ. GEN. J. L. SCHLEY

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Maj. Gen. J. L. Schley, Chief of Engineers, at the ground-breaking ceremony for the Wolf Creek Dam, September 1, 1941:

It is a great pleasure for me to be with this large gathering of Kentucky and Tennessee people to witness the ground breaking for the construction of the Wolf Creek Dam. It was but little more than a year ago that I authorized the district engineer at Nashville to prepare a definite project report on this dam, hoping that your Senators and Representatives in Congress could help you obtain money for it this year—and here we are, gathered today to see the first construction work begin.

During this past year the details of the project have been worked out, plans and specifications have been prepared, bids invited, and the contract awarded. To those of you who are not familiar with the amount of work required in preparing plans for such a project, I may say that to accomplish this much work in a year's time has required careful organization, skilled executive and technical supervision, and many thousand man-hours of work by competent, trained men.

A power project in this section of the Cumberland River has been considered by private utility companies for many years, and applications for permits have been under consideration by the Federal Power Commission at numerous times. Provision for a large flood-control reservoir on the upper Cumberland River has been considered ever since the disastrous flood of 1927 on the lower Mississippi River, and the report to Congress on the need for reservoirs for flood control within the Ohio River Basin after the record-breaking flood throughout that basin in 1937 included this dam. As the result of that calamitous flood and the recommendations made by the Army engineers, Congress authorized in the Food Control Act of 1938 a large number of reservoirs throughout the entire Ohio River Basin, of which the Wolf Creek project is one of the most important and one which will produce the greatest beneficial effect—beneficial effect not only in the Cumberland Basin but also on the lower Ohio and lower Mississippi Rivers.

The total estimated cost of this project, complete with power installation, is $55,000,000. The estimate covers all construction costs including necessary relocations of highways, railroads, bridges, transmission and telephone lines, the moving of cemeteries, and the acquisition of all lands needed for the complete project. Congress will be asked to grant authority for the construction of the powerhouse and machinery in ample time for their installation when the construction of the dam reaches the proper stage.

The Wolf Creek project will provide one of the largest dams and reservoirs east of the Mississippi River. The structure itself will be approximately 1 mile long, will contain about 1,250,000 cubic yards of concrete, about 9,000,000 cubic yards of rolled-earth embankment, and machinery for about 250,000 kilowatts of hydroelectric generating capacity.

Across that portion of the valley now occupied by the river there will be a concrete structure which will include the spillway and powerhouse sections, together with the abutment section which will tie into the high left bank on the one hand and the earth portion of the dam on the other hand. That portion will cover most of the valley floor from the river bank into those hills. The concrete section of the dam will have a maximum height of 242 feet above the river bottom, and the maximum height of the earth portion of the dam will be 191 feet. As I have said, the total length of the dam along the highway which will cross it is more than a mile.

The normal lake will extend back up the Cumberland River almost 100 miles, nearly to the foot of Cumberland Falls. I may state

here that the project was designed so that no adverse effects would be caused to Cumberland Falls under any conditions. The reservoir will have about 6,000,000 acre-feet of capacity, of which about one-third will be for flood control, one-third for power production, and one-third for dead storage, which will always be available for recreational purposes.

From this brief description you can see that the dam will create a very large body of water in a portion of the Cumberland River which is noted for its scenic grandeur. It will really be a lake, unsurpassed for its beauty in this section of the United States.

A project of this nature naturally brings some hardships to those people who have to move from the reservoir area, but it brings vastly greater benefits to the people of the surrounding country as a whole. To those who have to move our Department wishes to give every aid that is permissible under existing law. I can assure you that very careful appraisals will be made of your lands in order that you may receive full and just compensation, and every effort will be made to make your problem of relocation as easy as possible. It is hoped that all land acquisition will be accomplished by negotiation and that resort to condemnation will only be necessary in those cases where lack of adequate title requires that procedure.

The city of Burnside is the only community which will be partially inundated as a result of this project. I wish to assure the citizens of that community that their problem is being given careful and sympathetic consideration and that the district engineer will keep them fully advised on all matters pertaining to that problem.

As you all probably know, Wolf Creek is the key reservoir in any comprehensive system of reservoirs which may be devised for the Cumberland River Basin. The work which you now see before you is the beginning of a comprehensive plan for the entire Cumberland River Basin—an over-all plan to secure the best uses of its natural water resources. Congress has already authorized a navigation project consisting of a system of 24 locks and dams on this river, investigated and adopted at a time when Congress was authorizing the improvement of streams at Government expense for navigation only. Fifteen of these dams have been built, and there now exists a 6-foot navigation channel from the mouth to a point about 23 miles upstream from Carthage. In the Flood Control Act of 1938 Congress approved, in addition to the Wolf Creek project, five other dams and reservoirs in the Cumberland Basin for flood-control and allied uses, namely, Center Hill on the Caney Fork River, Dale Hollow on the Obey River, Stewarts Ferry on the Stones River, Rossview on the Red River, and Three Islands on the Harpeth River. Under existing authority the basic engineering plans for these five reservoirs, which we call definite project reports, are now being pushed to completion by our district engineer at Nashville, Major Walsh, and money has recently been allotted to enable him to go ahead with the preparation of detailed construction plans and specifications on two of these reservoirs so that they may be ready for construction when Congress can be persuaded by your Congressmen to provide the necessary funds for that purpose.

It should not be necessary for me to dwell at this point on the need for additional power for the national-defense effort, because that problem has been fully presented in the last few months in the public press and in numerous statements from Washington. It is sufficient to say that the electric power from these additional multiple purpose projects now approved by Congress could be easily fitted into any major power net which is finally developed in this important region of our country.

For many years now the engineer department has had broad experience in studying and preparing comprehensive plans for river basins. Under authority given us by Congress in the River and Harbor Act of 1927, the department prepared comprehensive reports on practically all of the major streams of this country. These studies, known as the 308 reports, cover possible plans for the development of navigation, flood control, electric power, irrigation, and allied purposes in those basins. The primary object of these reports was to present scientific information on our river basins to be available for the formulation of specific construction programs when the need for them arose. As an example, the initial basin plan for the Tennessee Valley was prepared by the Corps of Engineers of the Army The program now under way in that basin is based in large part on those original studies.

From time to time Congress calls upon the Army engineers to review these 308 reports in designated river basins and to preprepare specific construction programs therein. In 1936 a general flood-control policy was adopted and announced by the Congress and specific construction programs were authorized for prosecution under the direction of the Secretary of War and the supervision of the Chief of Engineers. Before that time, the Federal Government had undertaken flood control at its own expense only on the lower Mississippi River and the Sacramento River. Since 1936 the engineer department has undertaken and prosecuted vigorously a flood-control program throughout the entire United States involving nearly $700,000,000 worth of new work, in which there were included works for allied water uses, such as hydroelectric power, municipal water supply, irrigation, and pollution abatement. On the 18th of last month the President signed a new flood-control bill adding an authorization of $275,000,000 to that amount for similar purposes. It might be mentioned in passing that the department has been engaged in flood-control operations in the great alluvial valley of the Mississippi—i. e., from the mouth of the Ohio River to the Gulf of Mexico—for practically 100 years, and has carried its program in that valley to the point where, in a short time now, that great basin will have a very high degree of protection from disastrous floods.

I am very glad to be able to tell you that the district engineer at Nashville, in accordance with specific congressional directives, completed just a few days ago a thorough study of the entire Cumberland Basin and has forwarded his report to the division engineer, Ohio River division, at Cincinnati. That report, presenting plans for the comprehensive development of this basin, will come into my office in the very near future for further review, and it will soon be submitted to Congress so that that body will shortly have available specific recommendations for projects which will fully develop the Cumberland Valley. These projects can be fitted into the national program for the development of our great river basins when and as rapidly as Congress desires.

I can say that that report on the Cumberland Valley is truly comprehensive in scope. It contains full references to all the work that has been accomplished to date in this great valley, including the project which you now see before you, and it thoroughly covers a specific plan for the further development of this basin to secure the best over-all uses of its water resources. By these I mean the further development of navigation, the control of floods, the generation of hydroelectric power, the abatement of pollution, provisions for recreation, and other allied uses of water. Perhaps some of you do not know that our multiple-purpose reports when they reach Washington are thoroughly coordinated with all other interested Federal agencies, so that the final plan recommended to Congress may be said to represent the best scientific thought of the present day for the future use of the water resources of the valley.

We who are present today are witnessing a very historical event. We are witnessing the beginning not only of one of the great dams of the country but also of the truly comprehensive development of the entire Cumberland Basin. Plans have already been prepared by the district engineer, as I have said, for that development, so that in the future under our representative form of government Congress can authorize the works and provide the funds for their construction when it deems appropriate. You farseeing citizens of this valley are to be congratulated in that you have been successful in having this comprehensive study made by the well-established agencies of the Federal Government and that you can now look forward to the time when the extensive resources of the Cumberland Basin will be developed in a coordinated, scientific, and economic manner for the ultimate prosperity and well-being of its inhabitants and in turn for the well-being of the Nation. I can assure you that the Army engineers are fully prepared to execute the extensive construction in this basin under such laws and regulations as Congress prescribes.

Labor Day Address

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ADDRESS BY HON. CHARLES F. McLAUGHLIN, OF NEBRASKA

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me on Labor Day at the celebration of the Central Labor Union at Omaha, Nebr.:

It is an honor and a pleasure to be able to accept the Central Labor Union's invitation to be a participant in these ceremonies and to have this opportunity of addressing the splendid gathering which is here assembled. I have most satisfactory recollections of the former occasions when I have been privileged to take part in the programs sponsored by the Central Labor Union of Omaha and the auxiliary on Labor Day. On those occasions I have joined with other speakers in pointing out the inspiring history and development of the labor movement; in citing the great strides that have been made in the improvement of the status of those who labor. Only on the last occasion of my appearance on a program sponsored by the Omaha Central Labor Union on this day you may remember that I called attention to the tremendous progress which has been made in organized labor in only a relatively short period of time. Perhaps some who attended that meeting will recall the citation of the case of the group of farm workers, in a country fortunately not our own but nevertheless under an established and well-organized government, less than 150 years ago, who joined together in a concerted effort to secure an increase in wages for the work which they were doing. You may recall the circumstances and the facts surrounding that case; how under the laws of that country at that time such conduct constituted conspiracy which carried with it a heavy penalty, and how, in that particular case, those men were tried on the charge of conspiracy and were found guilty and were sentenced to

expulsion from their native country and to imprisonment under the most revolting circumstances; how the survivors of that little band came back at the conclusion of their prison term, again took up the fight which led to the final success of the labor movement.

The history of unionism in this country is marked by difficulties which were overcome only after tremendous sacrifice and effort. This fight has resulted in the legalization of labor's right to organize, the right of collective bargaining, through representatives of labor's own choosing, minimum wages and maximum hours of employment, workmen's compensation, social security, unemployment insurance, the right of employed persons to work under decent working conditions, the recognition of the fact, which should have been recognized from the beginning, that labor is not a commodity and that the relation between employer and employee is a human relation and not a cold, mercenary one.

Normally this day should be spent in recalling the trials which have beset those who have engaged in the labor movement and the celebration of the victory which they have won. But this day and this time call for something more than a mere expression of satisfaction over goals which have been attained. Earnest and patriotic American citizens everywhere have reason to pause and ponder upon the state of the world and of our own beloved Nation and its future welfare. This is a time that calls for unity on the part of men and women in this country for the common good of the Nation. The world is in a foment, the spirit of ruthlessness and aggression has progressed to such a startling point within a short period of a few months, a period only today to be calculated in terms of years, that no thinking man or woman can disregard the dangers which confront the world as a result of this situation. No serious minded citizen of the United States of America will be so careless of the welfare of his Nation or the welfare of the men and women of his Nation as to close his eyes to the dangers or to fail to recognize the necessity of taking adequate steps to protect against them. The United States of America is the greatest country in the world. Its citizens enjoy the priceless privilege of self-government, a privilege so precious that it should be guarded, if necessary, by the very lives of those who possess it.

It is imperatively essential that all peoples in this country unite for the common welfare of the Nation. Our first job is national defense and we have got to realize it and act accordingly if we are to succeed. Men and women of our country, regardless of calling, regardless of race, of religion, of national backgrounds, regardless of place of residence in this country, must coordinate their efforts to present a solid front for adequate national defense of the United States of America. Adequate national defense means adequate production; production of the things upon which we are dependent for defense. The men and women engaged in labor have not failed their country in the past. They will not fail now. They will produce the goods. They will do the job. It is to their productive effort today that the Nation looks for security and protection. It is essential to the welfare of our land that employee and employer, labor and capital, shall cooperate wholeheartedly for the success of our national-defense program. There is not in this country, strictly speaking, any class of men or women who can be said to be distinctly labor in classification as contrasted to any class which can be said to be distinctly capitalistic in classification. The great mass of people in this country who labor also possess property. Yes; our people own property in greater average amounts than in any nation on earth. The laboring man who possesses a home, an automobile, a radio—who owns some of the many other things so widely and generally owned in this country and which are so much a part of American life, who out of his earnings has bought or is now paying for the defense bonds of his country—that man continues to consider himself proudly as a laboring man, which he is, but to the extent of his ownership of property he is likewise an owner of capital, a capitalist. And by the same token men and women who own property, whether large or small in amount and at the same time continue to work, as the great mass of people in this country do, are not only capitalists, but are likewise laborers. Therefore the interests of capital and labor in the United States cannot be said to be separate, distinct, and antagonistic as they may be in the countries where the mass of those who labor own little, if any, property. This fusion of interest between labor and capital should contribute tremendously to the strength and the greatness of our land. It is a circumstance which should cause mutual tolerance and forbearance on the part of those who work for wages and those who take part in the ownership or management of business enterprises.

Despite the growth and development of the United States under our representative governmental system, there have been in our country groups who would substitute other forms of government for that laid down by the framers of the Constitution. Alluring promises have been made by those who seek this change. The great mass of men and women engaged in labor have not been misled by these false promises. They know what has happened to labor in countries operating under other governmental systems. The best guaranty which labor has for the preservation of her rights lies in a sound adherence to the principles of our form of Government as laid down in the Constitution of the United States and in the Bill of Rights.

In this hour of our country's history, when the future of the nations of the world and, indeed, the future of civilization itself is being weighed in the balance, there is no place in our land for any man or woman who is antagonistic to our form of Government or who is interested in the destruction of our form of Government. There is no place in the United States of America for any "ism" but Americanism—I care not what other form or type of government any man in this country may advocate as against our own constitutional form of Government, that man is not a true friend of his country who at this time is unwilling to put his shoulder behind the wheel and to exert his influence under the American form of Government to push forward our American defense effort to a successful conclusion. Nor is such a man a friend of labor, for if ever our form of Government is destroyed all of labor's gains will be destroyed.

There has been much discussion about labor and labor's activities in the defense program. It is essential to the welfare of the Nation and to the welfare of labor that nothing shall be done to interfere with defense production. Labor has made great gains in the last decade The people now look with hope and confidence to labor. The great body of labor is 100 percent back of our Nation's effort. The responsible heads of organized labor of this country owe a duty to the men and women in the ranks of labor whom they represent, to guard against any movement on the part of any small number of members or groups of members of any labor organization which is subversive in character or calculated to interfere with our national-defense program. The responsible, patriotic men and women in labor do not defend those who may engage in subversive activity or in any activity which may impede national defense and react unfavorably on labor and cause it to incur the danger of the loss of gains which labor has won only after a long, hard battle.

We in the Middle West, we in Nebraska stand ready to make our contribution to national defense in every conceivable way. Two essentials in the success of the defense program are food and the production of defense materials. The farmers of Nebraska will produce the food. The farmer will do his part in the defense program. Labor will do its part. Labor in Omaha and Nebraska will continue to demonstrate its patriotism and its determination to go through to the end, to cooperate to the fullest extent for all-out national defense. We have in our community a project which will shortly be opened for production which will turn out bombing aeroplanes to be assembled by the labor recruited from our own State and surrounding regions. It is one of the only actual war material plants in our immediate area and we are proud of the part that it will play and the part that the men and women there employed will play in our defense program and in our solemn determination to cope with those forces which threaten our Nation's security.

Today the war in Europe has been raging for exactly 2 years. There were those at the beginning who counselled us to pay no attention to it. They said it was not a real war—that it was a "phony" war that never would reach shooting stage. As nation after nation has fallen the awful realization has come to all of us that it was not only a real war but a war of horrors beyond description. The people of this country hate war. They want peace. We have adopted a policy of giving aid to nations resisting aggression, a policy designed to keep our country out of war by keeping war away from our country.

The question has been raised as to whether this country can be successfully invaded. Some have said that because of that doubt we should not give aid to those who are seeking to put down aggression abroad. But the question we face is, Can we take a chance? When the fire roars all about us is it not wiser to help those who are trying to put it out than to wait till it reaches us, or even to just hope that it never will reach us? In the face of varying opinions, in the light of the unbelievable military exploits abroad which seemed fantastic before they happened, but which resulted in the fall of nation after nation, who among us will be so bold as to insist that our country can take the chance that it will never be invaded? In matters of health we call on the doctor. In matters involving his civil rights, the sensible citizen consults a lawyer. Does not prudence dictate that in matters of national defense we should follow the counsel and advice of the wisest men in our military establishments? We are committed to a policy of national defense and have appropriated billions of dollars to make that policy effective. With all respect to those who may disagree, I submit that it would be folly to disregard the recommendations of the trained and experienced heads of our Military Establishment on matters vitally affecting adequate national defense. Although I am an overseas veteran of the last war, I am not a militarist and I came with reluctance to support the program of conscription of men in peacetime, but I am a realist and I cannot close my eyes to dangers which are pointed out in the fate of the other nations which were as peaceable and as peace loving as we and who were as anxious to remain peaceable as we. We have formally adopted the Monroe Doctrine. For sound reasons we have guaranteed the territorial integrity of the nations of this hemisphere. Whether we are invaded or not does not the course of recent developments already make it apparent to every one of us that our liberties will be adversely affected whenever all the countries of the world except our own hemisphere or our own continent come to be controlled by a totalitarian form of government? It is, then, against that possibility that we must defend ourselves, and it is against the dangers of that possibility that the citizenship of the United States should

unite behind the foreign policy of this country under the leadership of our President, Franklin Delano Roosevelt.

Today every man and woman engaged in labor production is contributing to the welfare of our Nation in its national defense. I congratulate labor in Nebraska for its progress and for its record and for the standing which it enjoys through its own efforts. And I join today with the men and women engaged in labor in their pledge, which is shown by the results which they are producing, that our Nation will continue to fight the fight of defense and will cooperate with those nations which are fighting a similar fight.

Let us pray God that our Nation shall not be called upon to engage in any war. At the same time let us solemnly resolve that we shall leave no stone unturned completely and adequately to defend our Nation, to preserve and protect the people and the Government of the United States of America.

Spanish-American War Veterans' Legislation—National Defense

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, by unanimous consent granted by my colleagues, I insert the address delivered by me before the forty-third annual encampment of the United Spanish War Veterans, at Omaha, Nebr., August 18, 1941, as published in the National Tribune, Washington, D. C., August 28, 1941.

The address reads as follows:

Comrade Commander in Chief, my comrades and sisters of the auxiliary, may I express the deep appreciation of Mrs. Smith and myself for the happy privilege of being your guests at this great national encampment. This is the first year my official duties at Washington, D. C., have permitted me to accept the kind invitations which you have so graciously extended since we attended the memorable encampment at San Antonio, Tex., in 1935. We have many pleasant recollections of the delightful time we spent at San Antonio, and we consider ourselves fortunate indeed that we are again able to be with you here at Omaha at what, from all appearances, is going to be one of the most successful national encampments the U. S. W. V. and auxiliary have ever held. We know that we are going to carry away with us many happy and inspiring memories of this fine meeting of Spanish-American War veterans and their wives from every section of our great country.

VALUED FRIENDSHIPS

It has been a real personal pleasure for me to work in close association with your national officers and national headquarters in our National Capital ever since I came to Congress in 1933 and succeeded in being assigned to the House Committee on Pensions, having jurisdiction over the legislation affecting the veterans of the Spanish-American War, their widows, and children. We passed through some rather dark and trying days back in the period following the enactment of the Economy Act, which I opposed and voted against. I made some valued and lasting friendships with many of the national leaders of your organization and the comrades at national headquarters during the fight to gain restoration of the benefits which were temporarily lost as a result of the Economy Act. In 1935 that fight was won and whatever small part I had in the contest has brought me many compensations during the years which have followed. Among those who were particularly active in achieving our victory were Senator Rice W. Means, Judge E. S. Matthias, Judge Leon McCord, Q. M. Gen. Pat Callan at national headquarters, Capt. Bill Mattocks of the National Tribune, Senator Al. Kennedy of New York, Guy Groff of my own State of Washington, our late lamented comrade, Gen. Billy Grayson, of Savannah, Ga., whose recent passing we sincerely mourn, and all the members of the national legislative committee, and many comrades throughout the country.

I also wish to include Brig. Gen. Frank T. Hines, Administrator of Veterans Affairs, who has just addressed you. General Hines has a distinction enjoyed by no other Federal officeholder, of having been appointed and reappointed to his present high position by four Presidents of the United States—Harding, Coolidge, Hoover, and Franklin D. Roosevelt. He is a gallant soldier, a great American, and has always, in my contacts with him, proven himself to be a true friend of the veterans of the Spanish-American War, their widows and dependents.

It has become generally recognized that we were right in the stand we took and subsequent events have justified our original position on the repeal of the Economy Act as affecting the Spanish War veterans. We are still correcting some of the minor inequalities and injustices which resulted from the Economy Act.

TRAVEL PAY

Last year we succeeded in having enacted my bill to pay the so-called Philippine travel pay, which had been pending before every Congress in the past 40 years. Many veterans have been receiving their belated checks. There still are some cases which are apparently not covered which will have to be included in future legislation, but approximately $2,500,000 are being paid to those veterans who have substantiated their claims. This is a belated redemption of the promise which our Government made to those veterans who remained in the service.

Two weeks ago we passed in the House by unanimous consent four bills which were endorsed by your national legislative committee. These bills were brought before the House upon the special recognition granted to me as chairman of the Pensions Committee by Speaker SAM RAYBURN, of Texas, who recognized me for that purpose, following my conference with him and our majority leader, Congressman JOHN W. MCCORMACK, of Massachusetts. I also conferred with Congressman JOSEPH W. MARTIN, JR., of Massachusetts, leader of the minority, and Congressman EARL C. MICHENER, of Michigan, assistant Republican floor leader, and they collaborated with us in passing the bills without any opposition. The members of the Pensions Committee who have labored earnestly and faithfully with me in support of these bills are as follows: CHARLES A. BUCKLEY, New York; NAT PATTON, Texas; JAMES A. O'LEARY, New York; JOHN F. HUNTER, Ohio; JOHN L. MCMILLAN, South Carolina; FRANCIS J. MYERS, Pennsylvania; WILLIAM H. LARRABEE, Indiana; ANTON F. MACIEJEWSKI, Illinois; WILLIAM J. FITZGERALD, Connecticut; JAMES A. WRIGHT, Pennsylvania; WALTER K. GRANGER, Utah; JOHN S. GIBSON, Georgia; F. EDWARD HÉBERT, Louisiana; FRED J. DOUGLAS, New York; CHARLES L. GERLACH, Pennsylvania; A. D. BAUMHART, JR., Ohio; WILLIAM H. STEVENSON, Wisconsin; EVAN HOWELL, Illinois; CHARLES R. ROBERTSON, North Dakota; and JOSEPH CLARK BALDWIN, New York.

WIDOWS BILL

The most important is probably H. R. 2310, which moves up the marriage date of widows for eligibility for pensions from September 1, 1922, to January 1, 1938, legislation which has been sought by the ladies of the auxiliary for several years. This legislation recognizes the principle which we succeeded in having established in 1935 that veterans of the Spanish-American War are to be treated the same as veterans of the Civil War. Figuring that the Civil War ended in 1865 and widows marrying a veteran within 40 years, the delimitation date was fixed at 1905. Considering 1898 as the basis for Spanish War veterans, the same 40-year period ends in 1938, the delimitation date prescribed in the bill which has just passed the House. It is estimated that 8,300 widows will be benefited at a possible ultimate cost of $3,067,000.

OTHER MEASURES

We also passed H. R. 5339 increasing the rate of pay to widows and dependents of Spanish War veterans, approximately 1,000 in number, at a cost of $116,000 for the first year, in service-connected cases.

We also passed H. R. 2096, which increases the age from 16 to 18 years, and 21 years when attending an accredited school, for children of deceased Spanish War veterans to receive the benefits primarily intended for their education. It is believed that 5,900 children will be benefited at an annual cost of $794,000.

H. R. 1782, which also was passed by the House, will provide full wartime rates for those Spanish War veterans who served outside the continental boundaries of the United States in Guam, Cuba, or Puerto Rico, and their dependents, in service-connected disability cases, who are now receiving only 75 percent of the rates provided for wartime veterans. It is estimated that there are about 240 Spanish War veterans who will come within the purview of this bill and the cost will be approximately $62,000 in the first year.

These four bills have now gone to the Senate and we have already made a good start in that body. Last Monday the Senate passed H. R. 5339, increasing the rate of pay to widows and dependents. I believe that letters from each local camp and individual comrades to their Senators will have the desired effect in expediting favorable action on the remaining three bills in this Congress, in backing up the endeavors of the National Legislative Committee and national headquarters. We passed all three of these bills in the House in the last Congress and the Senate failed to act upon them, due, no doubt, to the large volume of national-defense legislation which engrossed the efforts of the Senate last year. In this Congress we have sent the bills over there in ample time to make possible their passage before the adjournment of the Seventy-seventh Congress next year. Senator H. H. SCHWARTZ, of Wyoming, is chairman of the Pensions Committee in the Senate, and has indicated that he is sympathetic with these bills, but he will have to have the cooperation and support of his colleagues in order to secure their passage.

NEED FOR OUTPOSTS

My friends, historians are agreed as to the importance of the Spanish-American War, the Philippine Insurrection, and the Boxer Rebellion, the significance of our winning the war with Spain and its effect upon our

destiny as a world power. However, the present war with its far-flung battlefronts stretching thousands of miles and reaching from one continent to the other, have emphasized in striking fashion the value and strategic importance, for purposes of national defense, of outlying and far-distant possessions as bases for both naval and aerial defense. Indeed, President Roosevelt has said that the Bunker Hill of today may be several thousands of miles away from the continental United States. Therefore, the Philippines which we acquired as a result of our war with Spain, is now our defense outpost in the Pacific which may well serve to keep war away from the United States, and enable us to engage in conflict an attacking enemy far removed from our own country and long before our country is directly under attack. This would be true in both naval and aerial combat. Consequently, of the Spanish-American War veterans it may truly be said, in the words of the poet, "That they labored better than they knew."

SUPPORTS NATIONAL DEFENSE

My friends, world events of the past 2 years have compelled us to undertake the greatest and most costly national-defense program in our entire history. We have had to look some very grim facts in the face and become realistic in regard to the menace which threatens our own future as a democracy and a free people. We have come to realize that aid to Britain and the other democracies is an insurance policy to insure our own safety and security and, if possible, to keep war away from the shores of America.

The Axis dictators' plans, blue prints, and timetables are being rapidly, relentlessly, and ruthlessly translated into actuality. They have proclaimed that the world cannot exist part totalitarian and part democratic and that they intend to make it all totalitarian. It remains to be seen how long Russia can withstand the onslaught of the Nazi war machine.

President Roosevelt and Congress have put forth every possible effort to keep our country out of war and how well we have succeeded is proven by the fact th t we are practically the only nation in the world which has not suffered any loss of life or property. In view of all the threats and dangers to which we have been exposed and the difficulties with which we have had to contend, this is a remarkable achievement. How thoughtless and unreasonable are those who, in the face of this record, can find it in their minds and hearts to accuse President Roosevelt and those who have supported our national-defense program of seeking to thrust us into war. President Roosevelt and Congress have shown more patience and toleration and submitted to greater threats and danger to our safety and future as a free nation than all the war administrations in our history combined, including those of Washington, Lincoln, McKinley, and Woodrow Wilson. Let us reread our histories. I have supported every national-defense measure and aid to Britain because, as I have stated, that is aid to America.

During this national emergency I consider it unpatriotic and thoroughly unwise for us to adopt a policy of indifference to the social and economic welfare of our people. Instead let us continue our program of social justice and economic security and thereby strengthen our national defense by increasing the "stake" which our people have in the preservation of our democracy. Our people then will again prove their loyalty, devotion, and sacrifice as they have always done in the past, and in the vanguard of those who will save and preserve America will again be found the veterans of the Spanish-American War and the first World War and their sons and daughters. Under God, America will continue to live on because America will deserve to live.

Reply of William S. Bennet to Attack Upon Reed Smoot and Willis G. Hawley

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

LETTER WRITTEN TO TIME MAGAZINE BY HON. WILLIAM S. BENNET, OF NEW YORK

Mr. KNUTSON. Mr. Speaker, under permission granted by the House I desire to insert in the RECORD a letter written by Hon. William S. Bennet, of New York, addressed to Time Magazine, in protest against an unwarranted article which appeared in that publication on August 4 assailing the memory of two distinguished Americans, Reed Smoot and Willis C. Hawley. I feel that Judge Bennet's letter should appear in the RECORD because Time Magazine has not, to date, seen fit to print it.

The letter follows:

BENNET, HOUSE & COUTS,
New York, August 12, 1941.

TIME,
Time and Life Building,
Rockefeller Center, New York City.

GENTLEMEN: Your article Death of a Woodcutter in your issue of August 4, is a completely untrue attack on two men who gave years of effort to the United States and both of whom are now dead and defenseless—Reed Smoot and Willis C. Hawley.

You say the least personally about Smoot, merely applying the term "a Mormon apostle" in evident derision. Senator Smoot was an apostle of the Church of the Latter Day Saints of Jesus Christ, and very proud of it, and the members of that church have contributed many able men to government, industry, and agriculture.

In the case of Hawley, you ignore the facts easily accessible in Who's Who, that he was, at different times, president of the Oregon State Normal School; professor of mathematics, head professor of history, economics, and constitutional law in Willamette University and, at different times, its president, vice president, and dean. Willamette University is an educational institution of high scholastic standing, and Congressman Hawley was one of the leading scholars of the country. He had distinct attainments in many branches of learning, he was a devout Methodist, he read his Testament daily, in Greek—so you call him a woodcutter. That kind of cheap, impish journalism is one of the things that keeps many men from going into public life. I doubt if Hawley ever swung an ax for pay. He was the principal of Umpqua Academy at 20, and thereafter was continually in educational work or in the Congress until 1933. He also was admitted to the bar, but never practiced.

The woodcutter episode was this: As you intimate, he had mighty muscles. In the methodical, analytical way which characterized him and which has caused others than yourself to believe him slow witted, he deliberately studied the best way of cutting a log with a two-bitted ax. After theory had been made perfect by practice, he entered a contest; his theories applied by his mighty muscles made him successful and he held the championship for a considerable number of years. Log cutting is a sporting contest for strong men as are, for example, hammer throwing and boxing. They are not commercial.

I have not been able to find, in your article, a single statement concerning the Tariff Act of 1930 which is true, except the implied statement that it became a law in June 1930; the length of time it was in preparation; the amount of data submitted to the committee; the number of witnesses, 2,363 in all who were heard; and the number of pages, 2,800, which the debate on the bill consumed. These sound as if they might be true. I do not believe Cordell Hull wept. He is not the crying kind. It is also true that the Republicans lost their House majority in 1930 for the first time in 14 years. These things have some relation to the Tariff Act of 1930.

Your statement of what happened in Europe in 1931 and thereafter is also substantially correct, but you do not relate it in any way to the United States Tariff Act of 1930, and I shall briefly demonstrate that you could not. It is a clear case of post hoc sed non propter hoc. Let us take your statements seriatim: The description of the bill as "One of the most enormous acts of isolationism in United States history" is mere words. You do not support it by any facts, and there are none. You then say 'Its purpose was to give United States producers a noncompetitive monopoly of the United States market, regardless of the consequences abroad. It was the brain child of Utah's Senator Reed Smoot, * * * and of Oregon's Willis Chatman Hawley." First, it was not their brain child. On June 15, 1930, President Hoover made a public detailed analysis of the tariff bill. It is accessible in many places. In it he pointed out that the bill was undertaken as the result of pledges given by the Republican Party at Kansas City; that to the special session of the Congress he had sent a message on April 16, 1929, recommending an increase in agricultural protection, a limited revision of other schedules, and a reorganization both of the Tariff Commission and of the method of executing the flexible provisions. So the bill was not the brain child of Senator Smoot and Representative Hawley. One was the chairman of the Senate Committee on Finance, on which there were probably 20 other Members; the other, the chairman of the Ways and Means Committee, on which there were 14 other Republicans and 10 Democrats. Most of the committee members worked on the bill and this was particularly true in the Senate where Democrats sat with Republicans on the subcommittees.

Your phrase, "a noncompetitive monopoly of the United States market," implies that the average duties were high. In the preceding 50 years we had the McKinley law with average duties of 23 percent; the Wilson law of 20.9 percent; the Dingley law of 25.8 percent; the Payne-Aldrich law of 19.3 percent; the Fordney-McCumber law of 13.83 percent; the Underwood law (disturbed by war conditions and in full effect only about 10 months), varying from 6 percent to 14.8 percent; the Hawley-Smoot bill percentage was estimated by the Tariff Commission at 16 percent.

You will find these figures in Mr. Hoover's statement, and they are the figures which all economists use. One of the important things about a modern tariff bill is the scope of the free list. The averages of the same bills already quoted were:

	Percent
McKinley	52.4
Wilson	49.4
Dingley	45.2
Payne-Aldrich	52.5
Fordney-McCumber	63.8
Underwood	66.3
Hawley-Smoot	61 to 63

Therefore its free list was one of the broadest in scope, exceeded only by the Un-

derwood law, of brief duration. The Tariff Commission stated that 93.73 percent of the increases of the bill were upon products of agricultural origin measured in values, as distinguished from 6.25 percent upon commodities of strictly nonagricultural origin. Franklin D. Roosevelt, as a candidate for the Presidency, stated in a speech at Baltimore in 1932 that if he were elected the agricultural rates would not be decreased. Evidently he did not regard them as very bad. The average rate upon agricultural raw materials showed an increase from 38.10 percent to 45.92 percent, while the increases on articles of nonagricultural origin were from 31.02 percent to 34.31 percent. Many of these increases were compensatory duties on products manufactured from agricultural raw materials and protective rates added to these in some instances. There were about 3,300 dutiable items mentioned in the bill, of which 2,170 were unchanged, 890 increased, and 235 decreased from the then existing law. It is impossible to base on these unchallenged figures your statement that the purpose of the bill was to give United States producers "a noncompetitive monopoly of the United States market." A bill which leaves two-thirds of the imports on the free list certainly does not do that. President Hoover's contribution to the bill was insistence on a workable, flexible tariff provision. He said in his statement, "With it (the Tariff Commission) the country should be free from further general revision for many years so come." So far that prophecy has proved true. The Democrats in their 1932 platform pledged themselves to repeal the Smoot-Hawley Tariff Act. They are in their ninth year of power and have not done so. They did not repeat their promise in either their 1936 or 1940 platform.

You do not mention the Tariff Commission at all, nor do you state that during the remainder of the Hoover administration 250 industrial items were reviewed upon request by the Commission, the rates in 75 cases found not to be in accordance with the declaration of principle stated in the bill itself, and, therefore, changes were recommended by the Commission in those cases and put into effect by President Hoover.

Not only did the Hawley-Smoot bill have nothing whatever to do with the dire European happenings you list, but what did cause them is known to all men, including, unquestionably, yourselves. They are as follows: As early as 1927, Germany, Austria, Hungary, Poland, Czechoslovakia, and some countries of South America, both governments and citizens, commenced borrowing vast sums on short-term paper. This paper was placed abroad on the assumption that it represented advances upon goods in the export trade. The fact was that a good deal of it had been invested in capital improvements. You will find this all discussed in the report of the Bank for International Settlements made May 10, 1932, after the facts had been ascertained. This report states the amount of such unsound financing as more than $10,000,000,000 at the beginning of 1931, and that "at that time the magnitude of this indebtedness was not known." When this short-term paper commenced to be called, it resulted, so the bank says, in a break-down of confidence. The liquidation in a single year of this short-term indebtedness was more than $6,000,000,000, and a large part of the balance was blocked. As the bank says: "It is unnecessary to emphasize the havoc wrought." In July 1931 over 100 banks in the United States held some of these uncollectible European short-term bills. Mr. Hoover, after the matter was over, discussed it interestingly in a speech in Des Moines, Iowa, on October 4, 1932. Undoubtedly this speech is in your files and you are familiar with it. So existing facts known to you prove conclusively not only that the Hawley-Smoot Act had nothing to do with European happenings but also prove conclusively their immediate cause.

For some reason you do not list in European happenings of that period the message received by President Hoover from President Von Hindenburg on June 19, 1931, pleading for help to keep Germany from collapsing; nor President Hoover's moratorium proposal of June 21, 1931, approved publicly that day by many Republican Senators and the following Democrats: Henry F. Ashurst, James F. Byrnes, Duncan U. Fletcher, Carter Glass, William J. Harris, Pat Harrison, Cordell Hull, William H. King, Claude A. Swanson, Robert F. Wagner, David I. Walsh, Thomas J. Walsh; and by Democratic Representatives Joseph W. Byrns, James W. Collier, Charles R. Crisp, Thomas H. Cullen.

Within a few days a majority of the Members of the House and the Senate wired President Hoover their support, and when Congress reconvened the necessary legislation was passed.

You have a right to your own views on the tariff and world relations, but no right to try to advance them by slandering dead men, misstating facts, and omitting generally known facts known to you to exist, but the statement of which would negative your assertions and conclusions.

Very truly yours,

WILLIAM S. BENNET.

P. S.: Incidentally a Conservative government then in power in England commenced putting tariffs on strategic industries there in 1916; the Labor Party came in and took them off. The Conservative Party ousted the Labor Party and put them on again. This all happened before the Hawley-Smoot bill, so that your statement that England abandoned the traditional free-trade policy because of the Hawley-Smoot bill is false.

W. S. B.

A Sign of the Times

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

LETTER FROM FIRST NATIONAL BANK OF ENGLEWOOD, CHICAGO, ILL.

Mr. HOFFMAN. Mr. Speaker, New Dealers as well as some others may be interested in the result of the administration's domestic policy. Read the following letter, which is but one sign pointing down the road to the destination toward which we have been traveling:

FIRST NATIONAL BANK OF ENGLEWOOD,
Chicago.

STATEMENT OF CONDITION AT THE CLOSE OF BUSINESS AUGUST 20, 1941

Confronted, as we are today, with the spectacle of a nation betrayed by its own public officials, a people divided as never before, not even in Civil War days, and on all sides a resorting to nature's first law of self-preservation, I do not care to continue as the custodian of other people's money. Under these conditions this country could be split wide open. It awaits only a face-saving "incident."

We have, therefore, returned all but $39,000 of a one-time high deposit of over $7,000,000, and we urge the immediate withdrawal of this small balance to enable us to close our books on 52 years of successful banking, at least for the duration of the Roosevelt-concocted emergency.

Whether or not we step out of the picture completely, wreck the building, and make a cash distribution to our stockholders of better than $500 a share will, of course, depend on coming events. Certainly, with a capital structure of over a million dollars and a building entirely written off, we sit in an enviable position to reenter the banking business when, as, and if financial and political conditions warrant it.

FIRST NATIONAL BANK OF ENGLEWOOD,
J. M. NICHOLS, *President.*

Laws Pertaining to the Civil Service Enacted Under the Roosevelt Administration

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. SHEPPARD. Mr. Speaker, I was glad, indeed, to support the deficiency bill reported by the Appropriations Committee, particularly that phase serving as an "enabling act" for the so-called Ramspeck-Mead bill, Public, No. 200.

This bill, evolved by the Bureau of the Budget, upon request of the House Appropriations committee, developed a scientific, fair, and long-over-due system of promotions for Government employees. It cannot be gainsaid but that in these days of rapidly rising costs of living these merited increases in pay will be received by the employees with heartfelt gratitude.

As one long interested in the welfare of those in Uncle Sam's service, I pause here to pay my respects to them. In my many years of business experience I came into contact with representatives of various departments and establishments who contacted me, officially. I learned to respect the judgment of these individuals and as a class it seemed to me that they were most conscientious, painstaking, and utterly honest in their devotion to their respective duties.

Since having been elected to Congress and having thus come into more intimate contact and greater knowledge, my respect and admiration for these employees, the true servants of all our people, have continually increased. My duties in the Appropriations Committee have enabled me, perhaps, to gain a perspective not enjoyed by the average Member in some respects, and I am today confident that one of the great pillars upon which the foundations of our free Government rest is its loyal, patriotic, and able employees.

We on the Democratic side may well take great pride in the fact that during the regime of the present administration, or from March 3, 1933, down to the present day, more legislation strengthening civil service and improving the merit system has been placed upon the statutes

than in all time in previous history. The record proves that this is true, because of the laws pertaining to civil service enacted since, say, 1919, 120 of these, with various amendments—out of a total of 155—have been passed since Franklin D. Roosevelt assumed the Presidency.

I am confident that the basic enactments thus passed bearing upon the important problems of Federal retirement, annual vacation, and sick leave, extension of civil-service status, and so forth, have proven and will continue to be needed modernizations and streamlining, which will not only improve the conditions of employees within the service but, through increasing efficiency, raise the standards of the whole Federal establishment so as to give the taxpayer the maximum service benefits.

Under leadership of the able gentleman from Georgia, the Honorable ROBERT RAMSPECK, chairman of the House Civil Service Committee since 1935, and of various other committee chairmen whose committees have reported measures or amendments bearing upon civil service, we have steadily marched forward toward the desired goal of an ideal Federal employment system, with high standards of ability, education, and experience as essential qualifications for admittance thereto, and equitable pay and working conditions, and a reasonable retirement for the superannuated.

Among other laws thus passed during this period are the following:

March 21, 1935, Public, No. 21, H. R. 6644: An act making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1935, and prior fiscal years, and so forth.

April 8, 1935, Public Resolution No. 11: Making appropriations for relief purposes.

April 27, 1935, Public, No. 46: An act to provide for the protection of land resources against soil erosion, and for other purposes.

July 5, 1935, Public, No. 198: An act to establish the cases of labor disputes burdening or obstructing interstate and foreign commerce, to create a National Labor Relations Board; and so forth.

July 25, 1935, Public, No. 219: An act to create a Central Statistical Committee and a Central Statistical Board, and for other purposes.

August 7, 1935, Public, No. 249: An act to provide for adjusting the compensation of post-office inspectors and inspectors in charge to correspond with the rates established by the Classification Act of 1923, as amended.

August 12, 1935, Public, No. 260: An act to supply deficiencies in certain appropriations for fiscal year ending June 30, 1935, and so forth.

August 14, 1935, Public, No. 271: An act to provide for the general welfare by establishing a system of Federal old-age benefits and by enabling the several States to make more adequate provision for aged persons, blind persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment compensation laws; to establish a Social Security Board; to raise revenues; and for other purposes.

August 14, 1935, Public, No. 275: To fix the hours of duty of postal employees, and so forth.

August 23, 1935, Public, No. 305: An act to provide for the sound, effective, and uninterrupted operation of the banking system, and for other purposes.

August 23, 1935, Public, No. 308: An act relating to the compensation of certain charwomen.

August 26, 1935, Public, No. 333: An act to provide for control and regulation of public-utility holding companies, and so forth.

August 27, 1935, Public, No. 366: An act to provide time credits for substitute laborers in the post office when appointed as regular laborers.

August 28, 1935, Public, No. 383: An act relative to the retirement of certain officers and employees.

August 28, 1935, Public, No. 387: An act to provide for the compiling and publishing of the Official Register of the United States.

August 29, 1935, Public, No. 399: An act to establish a retirement system for employees of carriers subject to the Interstate Commerce Act, and so forth.

August 30, 1935, Public, No. 402: An act to stabilize the bituminous coal-mining industry and promote its interstate commerce; to provide for cooperative marketing of bituminous coal; to levy a tax on bituminous coal and provide for a draw-back under certain conditions; to declare the production, distribution, and use of bituminous coal to be affected with a national public interest; to conserve the bituminous-coal resources of the United States; to provide for the general welfare, and so forth.

February 29, 1936, Public, No. 461: An act to promote the conservation and profitable use of agricultural land resources by temporary Federal aid to farmers, and so forth.

March 14, 1936, Public, No. 471: To provide for vacations to Government employees, and so forth.

March 14, 1936, Public, No. 472: To standardize sick leave and extend it to all civilian employees.

May 7, 1936, Public, No. 575: An act to amend the act to fix the hours of duty of postal employees.

May 20, 1936, Public, No. 605: An act to provide for rural electrification, and so forth.

May 26, 1936, Public, No. 619: An act to provide for adjusting the compensation of division superintendents, assistant division superintendents, and others, in the Railway Mail Service, to correspond to the rates established by the Classification Act of 1923, as amended.

June 4, 1936, Public, No. 641: An act to provide for the appointment of substitute postal employees, and for other purposes.

June 22, 1936, Public, No. 739: An act making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1936, and so forth.

June 22, 1936, Public, No. 740: An act to provide revenue, equalize taxation, and so forth.

June 23, 1936, Public, No. 764: An act to extend the retirement privilege to the Director, assistant directors, inspectors and special agents of the Federal Bureau of Investigation.

June 26, 1936, Public, No. 815: An act to amend the Federal Alcohol Administration Act, and so forth.

June 26, 1936, Public, No. 817: An act to amend section 23 of the Independent Offices Appropriation Act, 1935, to adjust the hourly compensation of employees, and so forth.

June 29, 1936, Public, No. 936: An act to provide for the retirement of employees of the Alaska Railroad, Territory of Alaska, who are citizens of the United States.

June 30, 1936, Public, No. 846: An act to provide conditions for the purpose of supplies and the making of contracts by the United States, and so forth.

February 3, 1937, Public Resolution No. 4: To create a joint congressional committee on Government reorganization.

March 29, 1937, Public Resolution No. 18: For the payment of certain employees of the United States Government in the District of Columbia, and employees of the District of Columbia for January 20, 1937.

April 14, 1937, Public, No. 29: An act to amend an act to extend commissary privileges to widows of officers and enlisted men of the Navy, Marine Corps, and Coast Guard and also to officers of the Foreign Service of the United States, and so forth.

April 26, 1937, Public, No. 48: To regulate interstate commerce in bituminous coal, and so forth.

May 14, 1937, Public, No. 84: An act authorizing allotment of pay by civilian personnel stationed abroad.

May 15, 1937, Public, No. 88: An act to amend the law relating to residence requirements of applicants for examinations before the Civil Service Commission.

May 18, 1937, Public, No. 91: An act to create the office of Counselor of the Department of State.

June 24, 1937, Public, No. 162: An act to amend an act entitled "An act to establish a retirement system for employees of carriers subject to the Interstate Commerce Act," and so forth.

June 28, 1937, Public, No. 163: An act to establish a Civilian Conservation Corps, and so forth.

June 28, 1937, Public, No. 171: An act making appropriations for the Executive office and sundry independent executive bureaus, boards, commissions, and offices, for the fiscal year ending June 30, 1938, and so forth.

July 1, 1937, Public, No. 176: An act making appropriations for the Military Establishment for the fiscal year ending June 30, 1938, and so forth.

July 8, 1937, Public, No. 191: An act authorizing cash relief for certain employees of the Panama Canal not coming within the provisions of the Canal Zone Retirement Act.

July 13, 1937, Public, No. 206: An act to extend the benefits of the Civil Service Retirement Act of May 29, 1930, as amended to certain employees in the legislative and judicial branches of the Government.

July 22, 1937, Public No. 210: An act to create the Farmers' Home Corporation,

to promote more secure occupancy of farms and farm homes, to correct the economic instability resulting from some present forms of farm tenancy, and so forth.

July 26, 1937, Public, No. 212: An act to amend the Civil Service Act approved January 16, 1883, providing no person shall be discriminated against in any case because of his or her marital status in examination, appointment, reappointment, reinstatement, reemployment, promotion, transfer, retransfer, demotion, removal, or retirement, and so forth.

August 10, 1937: An act to provide retirement annuities for certain former employees of the Panama Canal and the Panama Railroad Co. on the Isthmus of Panama.

August 11, 1937: An act authorizing credits to disbursing officers for expenses incident to the creation of subsistence homesteads corporations.

August 12, 1937: An act to authorize and direct the Comptroller General to allow credit for all outstanding disallowances and suspensions in the accounts of disbursing officers or agents of the Government for payments made pursuant to certain adjustments and increases in compensation of Government officers and employees.

August 14, 1937, Public, No. 294: An act to dispense with unnecessary renewals of oaths of office by civilian employees of the executive departments and independent establishments.

August 16, 1937, Public, No. 298: An act to extend the provisions of the 40-hour law for postal employees to watchmen and messengers in the Postal Service.

August 25, 1937, Public, No. 363: An act authorizing the Comptroller General to allow credits in the accounts of disbursing officers for overpayments on Civil Works Administration projects, and so forth.

August 28, 1937, Public, No. 401: An act for the relief of former employees of the Federal Subsistence Homesteads Corporations.

September 1, 1937: An act to provide financial assistance to the States and political subdivisions thereof for the elimination of unsafe and insanitary housing conditions; for the eradication of slums, for the provision of decent, safe, and sanitary dwellings for families in low income, and for the reduction of unemployment and the stimulation of business activity, to create a United States Housing Authority, and so forth.

September 1, 1937: An act to regulate commerce among the several States, with the Territories and possessions of the United States, and with foreign countries to protect the welfare of consumers of sugars and those engaged in the domestic sugar-producing industry; to promote the export trade of the United States; to raise revenue, and so forth.

May 23, 1938, Public, No. 534: An act making appropriations for the Executive Office and sundry independent executive bureaus, boards, commissions, and offices, for the fiscal year ending June 30, 1939, and so forth.

June 23, 1938, Public, No. 701: An act to amend section 9 of the Civil Service Retirement Act, approved May 29, 1930, as amended.

June 25, 1938, Public, No. 720: An act extending the classified civil service to include postmasters of the first, second, and third classes, and so forth.

June 25, 1938, Public, No. 740: An act to amend an act to extend the benefits of the Civil Service Retirement Act of May 29, 1930, as amended, to certain employees in the executive and judicial branches of the Government, and so forth.

June 29, 1938, Public Resolution 127: Providing compensation for certain employees whose compensation is fixed at a rate per day, per hour, or on a piece-work basis, and so forth.

April 3, 1939, Public, No. 19: Reorganization Act of 1939.

June 7, 1939, Public Resolution 20: Providing that reorganization plans I and II shall take effect on July 1, 1939.

June 4, 1940, Public Resolution 75: Providing for the taking effect of Reorganization Plan V.

April 12, 1939, Public, No. 31: An act to amend the Canal Zone Act, relating to retirement.

May 12, 1939, Public, No. 73: An act to provide for substitutes in the pneumatic-tube service.

May 12, 1939, Public, No. 74: An act to provide a differential in pay for night work to pneumatic-tube-system employees in the Postal Service.

May 12, 1939, Public, No. 75: An act to extend the provisions of the 40-hour law to pneumatic-tube-system employees of the Postal Service.

May 15, 1939, Public, No. 78: An act granting postal employees credit for Saturday in annual and sick leave law, and so forth.

May 15, 1939, Public, No. 79: An act limiting working hours of pneumatic-tube-system employees to 8, in 10 hours a day.

July 18, 1939, Public, No. 194: An act granting annual and sick leave with pay to substitutes in the Postal Service.

April 30, 1940, Public, No. 492: An act providing for sick leave for substitute postal employees.

June 25, 1940, Public, No. 662: An act to allow moving expenses to empoyees in the Railway Mail Service.

October 9, 1940, Pubic, No. 823: An act to provide an 8-hour workday and payment for overtime for dispatchers and mechanics-in-charge in the motor-vehicle service of the Postal Service.

June 6, 1939: An act to authorize certain officers and employees to administer oaths to expense accounts.

Juy 15, 1939: An act to authorize the payment of burial expense and expenses in connection with last illness and death of native employees who die while serving in offices abroad, and so forth.

August 2, 1939, Pubic, No. 252: An act to prevent pernicious political activities.

July 19, 1940, Public, No. 753: An act to extend to certain officers and employees in the several States and the District of Columbia the provisions of the act entitled "An act to prevent pernicious political activities," and so forth.

August 4, 1939, Public, No. 263: An act to amend further the Civil Service Retirement Act, and so forth.

August 7, 1939, Public, No. 320: An act to amend the act for retirement of employees of the Alaska Railroad, and so forth.

June 29, 1940, Public, No. 680: An act to amend the act for the retirement of employees of the Alaska Railroad, and so forth.

August 7, 1939, Public, No. 323: An act to amend the act for retirement of employees of the Alaska Railroad, and so forth.

August 10, 1939, Public, No. 369: An act to amend the acts granting increased compensation to civilian employees for the period July 1, 1917, to June 30, 1924.

March 2, 1940, Public, No. 419: An act to amend the Annual and Sick Leave Acts, and so forth.

April 18, 1940, Public, No. 459: An act making appropriations for the Executive Office and sundry independent executive bureaus, boards, commissions, and offices for the fiscal year ending June 30, 1941, and so forth.

April 25, 1940, Public, No. 485: To amend the provision of law relating to the use of private vehicles for official travel in order to effect economy and better administration.

April 30, 1940, Public, No. 499: An act to amend the Subsistence Expense Acts of 1926, and so forth.

June 8, 1940, Public, No. 570: An act to provide for the conservation and transfer of accumulated sick leave and vacation time due classified civil-service employees who succeed to the position of postmaster, and so forth.

June 28, 1940, Public, No. 671: An act to expedite national defense, and so forth.

July 2, 1940, Public, No. 703: An act to expedite the strengthening of the national defense.

July 8, 1940, Public, No. 729: An act to defray the cost of returning to the United States the remains, families, and effects of officers and employees dying abroad, and so forth.

June 29, 1940, Public, No. 676: An act to provide for leave of absence, with pay, for any employee of the United States or of the District of Columbia who may be called for jury service, and so forth.

October 10, 1940, Public, No. 839: An act to provide for uniformity of allowances for the transportation of household goods of civilian officers and employees when transferred from one official station to another for permanent duty.

October 14, 1940, Public, No. 846: An act to amend the Civil Service Retirement Act and other retirement acts.

October 21, 1940, Public, No. 873: An act establishing overtime rates for compensation for employees of the field services of the War Department, and the field services of the Panama Canal, and for other purposes.

November 26, 1940, Public, No. 880: Extension of Civil Service and Retirement Acts.

August 1, 1941, Public, No. 200: Ramspeck-Mead Budget Bureau pay bill.

Nutrition Value of Oleomargarine

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

CORRESPONDENCE WITH FEDERAL SECURITY AGENCY BY PROF. A. W. RUDNICK, OF IOWA STATE COLLEGE

Mr. KNUTSON. Mr. Speaker, under permission granted by the House, I desire to insert in the RECORD a communication from Mr. W. A. Gordon, secretary of the National Association of Local Creameries, St. Paul, Minn.; an interchange of correspondence between Prof. A. W. Rudnick, of Iowa State College, and Miss Helen S. Mitchell, nutrition director of the Federal Security Agency, with reference to the nutrition value of oleomargarine as compared with butter; also a letter from the Algona Cooperative Creamery Co. at Algona, Iowa:

NATIONAL ASSOCIATION OF LOCAL CREAMERIES,
St. Paul, Minn., September 12, 1941.

Hon. HAROLD KNUTSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN KNUTSON: If you will read the enclosed photostatic copies of an interchange of correspondence between Prof. A. W. Rudnick, of Iowa State College, and Miss Helen S. Mitchell, Nutrition Director of the Federal Security Agency, you will probably be as surprised as I was to learn that she is unable to provide any authoritative confirmation of F. S. A.'s premise that oleomargarine made under the new regulation is as equally nutritious as butter.

Probably you will be even more surprised at the frankness with which she makes this known.

I have no doubt but that, after reading the exchange of correspondence you will agree with the sentiments expressed by Mr. M. P. Christiansen, secretary of the Algona Cooperative Creamery Co., in a letter to Mr. Rudnick. A photostatic copy of that letter is also enclosed.

Yours very truly,
NATIONAL ASSOCIATION OF LOCAL CREAMERIES,
W. A. GORDON, *Secretary.*

AUGUST 14, 1941.

HELEN S. MITCHELL,
Director of Nutrition,
Federal Security Agency,
Washington, D. C.

DEAR DIRECTOR MITCHELL: I would like to have several copies of the booklet entitled "Recommended Dietary Allowances" put out by the Federal Security Agency. I do not know whether these come under the regular order of public documents or not. Will you direct this part of the letter to the right office, and I will appreciate it very much?

Since your Department has put out this recommended dietary allowance booklet, we have been swamped with inquiries as to whether butter and oleomargarine with vitamin A added are of equal value. Naturally, the dairymen are interested and many of their wives are interested in this matter. Can you cite to me any experimental data along this line so that I can answer these questions intelligently? So far as I know, I cannot find any references of any experimental work along this line and naturally I am hesitant in saying "yes" or "no" to the questions; but since this matter is put out by your department, you, no doubt, have the material on hand and can supply us with these references.

Thanking you for any information you have along this line which might be of use in answering these questions, I am

Yours very truly,
A. W. RUDNICK,
Extension Dairyman.

FEDERAL SECURITY AGENCY,
Washington, August 21, 1941.

Mr. A. W. RUDNICK,
Extension Dairyman, Extension Service,
Iowa State College of Agriculture,
Ames, Iowa.

DEAR MR. RUDNICK: This will acknowledge your letter of August 14, requesting several copies of the bulletin Recommended Dietary Allowances. I regret to say that our supply of these is exhausted temporarily, but we shall be glad to send you some when they are available. In the meantime, we are forwarding to you reprints of an article which appeared in the Survey Graphic and which gives these dietary allowances as a part of the discussion.

I am interested in the inquiries which you have been receiving regarding butter and oleomargarine. It is my understanding that some ninety-odd percent of the oleomargarine now on the market for table use is reinforced with vitamin A to the extent of 9,000 International Units per pound. This level was chosen as approximately equivalent to average butter, although it is conceded that the vitamin A content of butter varies markedly according to the region and the season. The reinforced oleomargarine would be equivalent in vitamin A, but it may not be equivalent in certain other factors such as the proportion of specific fatty acids present. The physiological significance of these fatty acids is not well understood and until recently no question had been raised as to the difference between oleomargarine and butter except for the vitamin A.

I cannot cite you specific references or give you as detailed information as you may wish, but I suggest that you write to the Dairy Division of the United States Department of Agriculture if you wish further information.

Sincerely yours,
HELEN S. MITCHELL,
Director of Nutrition.

ALGONA COOPERATIVE CREAMERY CO.,
Algona, Iowa, August 25, 1941.

Prof. A. W. RUDNICK,
Agricultural Extension Service,
Iowa State College, Ames, Iowa.

DEAR PROFESSOR RUDNICK: I wish to thank you for the answer to my telephone request. It is evident to me from our conversation and your reply from Helen S. Mitchell, Director of Nutrition, Federal Security Administration, that she is recommending a model pattern diet, for which there is no experimental evidence that it is adequate.

I am under the impression that feeding practices for our farm animals put out by State or Federal agencies are carefully checked by scientific investigations, but the F. S. A. Director of Nutrition does not follow such a rule when putting out feeding practices for our children.

It seems very strange that the F. S. A. Director of Nutrition would make a recommendation of substituting oleomargarine for butter, a practice, for which she has no scientific experimental data to justify her recommendation. That she does not even understand the situation is found in the phrase, "I suggest you write to the Dairy Division, United States Department of Agriculture, if you wish further information." In other words, it looks to me as if our children are not as important as our farm animals to the F. S. A. Director of Nutrition.

Again I wish to thank you for the information.

Yours very truly,
ALGONA COOPERATIVE CREAMERY CO.,
M. P. CHRISTIANSEN,
Secretary-Treasurer.

A Special War Economy Analysis by the Wall Street Journal's Capital Bureau

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ARTICLE FROM THE WALL STREET JOURNAL

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I insert an article appearing in the Wall Street Journal under date of September 13, 1941. The present tax measure, H. R. 5417, will soon be followed by others, each more drastic than the 13 revenue acts that have preceded this, the largest ever enacted by a legislative body in the history of the world.

In the light of the analysis that follows, why not build up our own national defense instead of loaning, leasing, wasting, boondoggling away our national credit to foreign nations? Why not give attention to the defense of our own United States, its credit, its security, instead of rushing unprepared hither and yon throughout the world in a frenzied effort to get into a foreign war?

The article follows:

[From the Wall Street Journal of September 13, 1941]

A SPECIAL WAR ECONOMY ANALYSIS BY THE WALL STREET JOURNAL'S CAPITAL BUREAU

WASHINGTON, D. C.—The United States is at war.

So far it is a little war. President Roosevelt likens it to the little wars against Caribbean and Mediterranean pirates. Only the American Navy is fighting and only in defensive waters.

In the long run, we believe, the little war will be swallowed up by the big war in Europe, Asia, Africa. America will be all the way in. Deep down, Washington expects that to happen, has been preparing for it.

Total war isn't certain. It isn't imminent. It's the long-run probability. We will try to tell you what will happen if that probability becomes actuality, what your personal and business lives would have to adjust to.

Men fight wars. The United States can muster 13,000,000 fighters. They would be chosen from the 29,000,000 men between the war-time draft ages of 18 and 45.

Germany has an Army of 6,000,000 men, nearly her theoretical maximum. For the traditional margin of superiority, the opposing army must number 10 to 12 million men, must force a landing in Iberia or the Middle East. The coast of France is a death trap.

Of this attacking army Britain can furnish less than half. Unless Russia can stand

for 2 years, the United States must furnish six or seven millions.

America has never raised, transported, and supplied an army of 6,000,000 men. To do so would bring an acute labor shortage. Nondefense civilian employment would be lower than in 1933.

Wars are fought with munitions. America's munitions program, huge as it is, still is too small to win a war. O. P. M. thinks Germany spends $25,000,000,000 annually on war. Victory means spending $40,000,000,000 or $50,000,000,000 annually. England cannot better $15,000,000,000 a year. The rest must come from America, even if Russia stands. American munitions production must be at an annual rate at least 5 percent higher than its planned maximum.

The size of the program must increase even faster than its rate of output. The quantity of bombers must triple, tanks double, guns and ammunition triple, chemicals double—at least.

The bigger, faster program must be wrought in factories now built or building. Waiting for new machine tools takes time. Old machines must do, perhaps clumsily and expensively, war work for which they were not intended. The peacetime goods these machines used to make will disappear.

Production of raw materials must expand enormously. Particularly, the United States must pay the price necessary to utilize its low-grade high-cost deposits of strategic minerals.

Wars are paid for with money. No tax bill ever devised would yield the Government revenue enough to pay for an all-out war. Taxes now in force and being enacted will collect only $15,000,000,000 a year. Already surtaxes on small personal incomes are higher than those proposed in Senator CONNALLY'S war-profits tax bill of 1939. So is the normal tax on corporation incomes.

But taxes would go higher incomes would go down. Senator CONNALLY'S bill would take 80 percent of personal incomes over $50,000, 65 percent of all corporation profits exceeding a 25-percent return on capital.

What taxes won't yield, the Government must borrow. It plans to borrow about $10,000,000,000 from wage earners by pay-roll deductions, promising in return to pay them 2 months' salary when they lose their jobs. It plans to borrow still more from them by increasing deductions for old-age insurance.

Already Federal and State taxes take 25 percent of national income. Taxes and borrowing will push this percentage steadily higher.

Nevertheless, all-out expenditures would exceed all this taxation and enforced saving by billions of dollars annually. The rest of the money must be borrowed from banks. Down that road lies inflation.

Because of the Government's voracious need to borrow, the glut of idle money would disappear. Capital would have to be rationed. Companies could borrow money only with Government permission. An Executive order establishing a capital-control committee is already drafted. It is based on the Trading With the Enemy Act.

Wars across the sea depend on ships. America has a merchant marine of 10,000,000 tons. With Britains' aid it cannot feed the factories of the United States and transport and supply an army of six or seven million men. If the men must be transported by this fleet, America must go without essentials from abroad.

Railroads say each soldier in the field requires 35 pounds of supplies a day. To sustain an army of 6,000,000 men abroad would require 300 of the "ugly ducklings"—assuming they could make the round trip within a month.

By next year optimists hope two new ships will hit the water each day. O. P. M. says one ship. To support such an army would require 6 months or a year of shipbuilding, depending on whose guess is right. Maritime officials think they will have the necessary ships before the United States has the expeditionary force.

About some things America hopes it wouldn't have to worry. There will be food enough. Will there be trains and trucks enough to haul the food, the fuel, the munitions, and the troops? You can get into a terrific argument about that. Probably not. In war nothing is as easy as you think it will be.

Important Issues Before Congress

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

RADIO ADDRESS OF HON. JARED Y. SANDERS, JR., OF LOUISIANA

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over stations WJBO and KWKH on September 2, 1941:

Ladies and gentlemen, I am in Louisiana for a few days while the House is in recess and I want to talk to you about some of the issues before Congress. I wish that I could come and see each one of you individually and talk over with you some of the issues facing us. But that will be impossible, and this radio talk is the next best thing.

Let me say right here that this is no time for hysterics. This is no time for Americans to lose their tempers with each other. We all love this great country of ours, and we all want to do all we can to protect it. And today, this country is faced with the greatest danger that has ever confronted it, and it is going to take all of us pulling together, coolly, calmly, and dispassionately, to work out the answer.

PRICE CONTROL

One of the things I want to talk to you about tonight is price-control legislation now before Congress. The purpose of this measure is to control inflation and prevent prices from going so high that economic destruction will follow. This happens when prices get so high that money loses its value. Price Administrator Henderson has stated "before long now there will be more purchasing power running around hunting something to buy than there are goods available. If that occurs * * * no power on earth can prevent inflation. For that reason the Government must sop up some of this extra purchasing power * * * increase taxes—thus helping to pay for defense * * * stimulate savings—thus providing a backlog for the future."

The bill now before Congress is aimed to put some kind of control on this inflationary spiral. Everybody agrees that there must be a ceiling somewhere, but the difficulty is how to put that ceiling on so as not to work a hardship on any one group. I personally doubt that the bill in its present form will do what it is supposed to do. But this is one of the big problems now before the Congress. And the patience and best judgment of the American people, including the Members of Congress, is needed to try and work it out.

TAX BILL

Another thing I want to talk to you about is the tax bill. We have just voted for a tax bill that is supposed to raise some $3,000,000,000 in revenue. This is the stiffest peacetime tax bill in the history of the Nation. In my opinion, this tax bill is just the beginning. We are going to have to pay more and more taxes. The people in every nation in the world are making incomparably greater sacrifices than ours. The people of this country are going to have to make sacrifices, too, if we expect to maintain our independence and freedom of action. The world has gone mad. War and conquest and destruction are rampant. The rulers of Germany, Italy, and Japan set out upon a mad career of conquest. Then what happened? The people of this country looked over the destruction being wrought in the rest of the world, and they, the people, decided upon two fundamental policies. The first was they decided to rearm, to make this Nation the strongest military power in the world for national defense; and the second was they decided that it was in the interest of national defense that the British Empire should not be defeated. So they decided on all-out aid to Britain.

PEOPLE'S DECISION
